

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

+ *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.

+ *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.

+ *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.

+ *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter `http://books.google.com` durchsuchen.

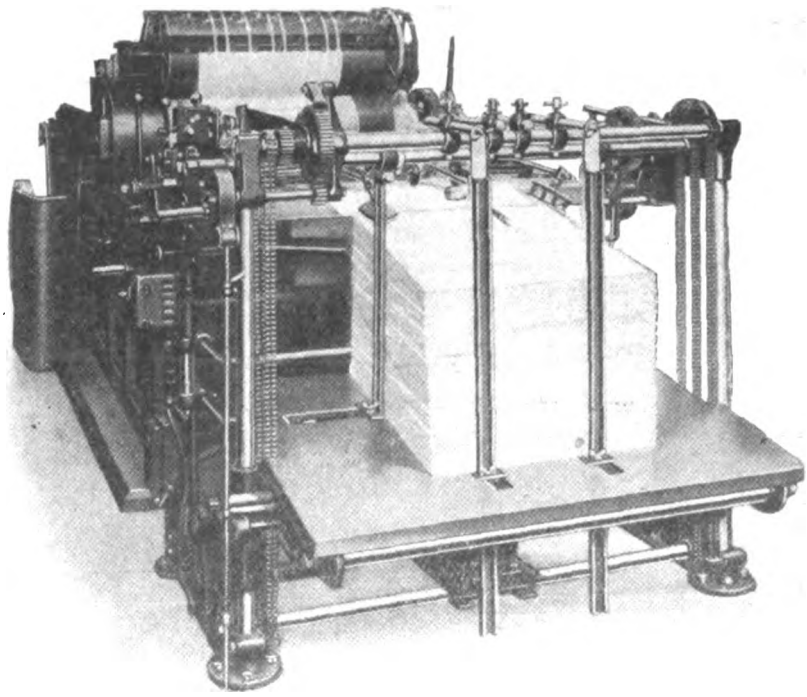
THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

WITH MONTHLY SECTION FOR THE BOOKBINDER.

The Recognised Organ for Printers, Printers' Engineers, Wholesale and Manufacturing Stationers, and Makers of Machinery and Appliances for the Paper Bag, Envelope, Box-making, Bookbinding and all Paper and Board Consuming Industries.



VOLUME 92. NUMBER 1. [REGISTERED AS A NEWSPAPER.] LONDON: JANUARY 4, 1923. EVERY THURSDAY. PRICE TWOPENCE.

"SLOGGER"

METHOD IS THE BEST

and is purely automatic. A labourer can load up the feeder before the machine-minder's time of starting in the morning, so ensuring a full run for the day In the case of shorter runs the loading can be done during meal times or while making ready, thus obtaining the full productive capacity of the press.

JOBS from letter-press to any colour work.

SPEEDS to suit any press.

STOCK from tissue to board.

RUNS from 500 upwards.

"Slogger" Automatic Sheet Feeder

is a pile feeder which stands on the floor at feed end of the press, and is made of a suitable height for the press to which it is attached. (Capacity of pile board is only 20" less than highest point of press lay board).

The Curling of Fine Printing Papers.

By H. H. HANSON and H. H. HACKETT.

A few years ago the curling of paper was almost unheard of, but with the development of automatic printing presses it has come to be a very important factor in the making and selling of high-grade printing papers. The printer demands high speed and production, and in order to get results the paper must lie flat on the press, where the automatic feeders cannot fail to reach it. The initiative in the prevention of curl must come from the papermaker, because while the printer can do much to allay it, he cannot stop it altogether.

Three Kinds of Curling.

It is evident that an investigation of the causes of curling must start by a study of printing press operation, and the conditions in a print shop under which paper curls. We find first of all that the trouble comes almost always in winter, and that it is often particularly bad on very cold days. The atmospheric conditions of most print shops in such weather are high temperature and low humidity, often as low as 20 per cent.

We find further that there are several kinds of curling, as follows:—

(A) SURFACE ACTION.—The individual sheets of paper lying in a pile on the press curl upward at the edges, the top sheet always curling the worst. The action seems to be progressive, several sheets near the top curling a little and each sheet as it becomes the top one, curling badly.

(B) SET.—The whole pile of paper on the press may have a curved rather than a flat set to it. In such a case the individual sheet seems to revert to a former desirable curved shape as soon as it is lifted from the pile by the feeders and is free to move.

(C) STATIC.—The individual sheet may stick to the press so that it is not easily removed after the printing has been done.

There may also be slight variations from or combinations of these three, so that it is not always easy to describe the action. These are, however, the primary movements and their elimination stops curling or at least reduces its effect by a very considerable degree.

Immediate Causes.

The mechanism of the actions described under (A), (B) and (C) is as follows:—

(A) Cellulose is hygroscopic and all paper contains more or less moisture, the amount being directly dependent on the humidity of the air to which the paper is exposed. For example, paper exposed to air at 65 per cent. humidity comes to equilibrium at 8 per cent. moisture content, paper exposed to air at 40 per cent. humidity at 5 per cent. When paper absorbs moisture it expands and when it dries it contracts. Paper taken from a condition of equilibrium at 65 per cent. humidity and brought into a room at 40 per cent. humidity immediately begins to lose moisture, and this action is accompanied by shrinkage. If now only one side of the paper is exposed to the new conditions, or if moisture leaves one side of the sheet more easily than the other, the dried side shrinks more, becomes shorter than the wetter side and in order to adjust itself to this condition the paper curls with the short side naturally concave. Most paper is shipped with a moisture content of approximately 6-7 per cent., that is, in equilibrium with air at about 50 per cent. humidity. It is evident that if brought into a hot dry print shop at, say, 20 per cent. humidity, considerable drying and shrinkage will take place, and if for some reason moisture can leave one side more easily than the other, curling will result. This is what happens when the individual sheets of an apparently flat pile of paper start curling on a press.

(B) Paper very often has a definite set in one direction, and almost invariably it is the wire side that tends to be concave, being a little shorter than the felt side. This effect is generally not noticeable in a pile of paper of large size, but when a ream is cut down to small sizes for printing, it becomes immediately apparent. When the single sheets are fed into the press, the set becomes more pronounced because each sheet is free to conform to its natural shape. The curved shape was originally given to the paper by being dried in this position or by being dried harder on one side than the other. No amount of stretching or pressing in a pile will permanently eliminate this set.

It is advisable here to mention one condition necessary for curling such as described under (A) and (B), namely, the coherence of the paper. No paper will curl if each individual fibre is free to shrink by itself as in a blotter. It is necessary for the individual fibres to be cemented together, so that shrinkage is transmitted to the paper as a whole. The amount of curl may or may not be proportional to the percentage of cementing material depending on the kind of binder and its method of application.

(C) The curling or sticking action described under (C) is due to static electricity developed by the friction of the moving parts of the printing press. Static, of course, is always worse on cold, dry days. The paper manufacturer cannot stop static in a print shop, but he can help its action on paper. Very dry paper is conducive to static troubles. Paper containing 6-7 per cent. moisture will run perfectly safe under severe static conditions.

Fundamental Causes.

Behind the immediate causes of curling illustrated above we must find the underlying causes in order to achieve success in prevention. We believe, as you will see, that almost every operation of papermaking is involved to a greater or lesser extent. It is apparent that the investigation must find the factors which produce two-sidedness and set and those which cause a sheet of paper to act as a coherent unit rather than individual fibres. Machine dried and loft dried papers must be studied separately, because the final operations may have an important effect. Up to the operation of tub-sizing, however, we may consider all papers under one class.

(A) BEATING AND JORDANING.—The moisture contained in cellulose may be of two kinds: it may be present as a mere physical mixture, or it may be in chemical union with the cellulose molecule. In a beater most of the water present is in mere mechanical contact with the stock, but a little is bound to it by chemical ties, and this we call chemical moisture or moisture of hydration. The presence of a comparatively large percentage of moisture of hydration gives us slow or greasy stock. We all know that mechanical attrition in the beater increases it. Technically speaking, its formation is accompanied by a gelatinisation of the fibre wall. The gel acts as a cementing material holding the fibres together in the web of paper. The moisture of hydration can be thoroughly removed only by high temperature drying; it is the last to leave the paper on the drying cylinders and its removal is accompanied by excessive shrinkage of the fibres and web. Moisture of hydration probably acts in several ways to make paper curl:—

1. It cements the fibres together so that shrinkage and expansion of individual fibres are transmitted to the paper as a whole.

2. Unless it is thoroughly removed on the drying cylinders, the paper produced is liable to excessive shrinkage when exposed to the drying atmosphere of a print shop.

3. A third cause has to do with sizing and will be taken up under that subject.

(B) BEATER SIZING.—Rosin size precipitated by alum acts as a cementing material. It does, however, tend to make paper waterproof and should therefore prevent quick changes in moisture content and consequent curling. Unfortunately the suction under the wire acts to partially remove the size from the wire side. Thus the paper is less waterproof on the wire side than it is on the felt side, and when the finished paper is brought into a drying atmosphere it is reasonable to suppose that moisture leaves the wire side more rapidly.

Here we must again bring in the effect of hydration. The greasier a stock is the better the sizing, but also the more important from a curling standpoint, the higher becomes the vacuum in the suction boxes and roll. The sheet is now more compact, less size is drawn through the sheet and a greater proportion is

L&M

LITHO ROTARIES

THE PRESSES WITH SPECIAL FEATURES

THESE LITHO ROTARIES have now been in use for many years, and have fully demonstrated their value to practical printers on all classes of work. When designing and developing these presses, our engineering experts collaborated with practical printers in order to give to the lithographic trade the best machines for direct and offset printing.

We specially invite those houses who at present are engaged solely in letterpress printing, and are considering the possibilities of litho machinery in their own business, particularly offset printing, to permit us to advise them in the matter. We shall be pleased to arrange for one of our experts to discuss the matter with any printer who writes us accordingly.

General printers who intend to extend their lithographic departments by installing Litho Rotary Presses should send for full details of the

LINOTYPE AND MACHINERY LIMITED

9 KINGSWAY, LONDON, W.C.2.

THE ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED.

A Specialised Trade Protection Office for Paper Makers, Merchants, Agents, Wholesale Stationers & Allied Trades.

OBJECTS AND POINTS OF VITAL INTEREST TO THE TRADE.

Enquiries. Precise up-to-date Status Reports furnished by this Society which operates exclusively in your trade.

Collection of Accounts. Trade protection specialisation makes it possible for this Society to render a valuable service in the connection mentioned and, through up-to-date and efficient methods, costs are reduced to a minimum.

Insolvencies. This department will be under the control of an accountant with 15 years' experience in this class of work, and fullest investigations will be conducted and Meetings of Creditors attended free of charge.

The Society will be controlled by a directorate to be elected from the principal houses in the Trade.

Managing Director, Accountant & Valuer: PARKIN S. BOOTH.

Described by the "*Chemist and Druggist*" as "The Live Wire of the Trade Protection World."

FORM OF MEMBERSHIP.

To MR. PARKIN S. BOOTH.

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from .....192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.

All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.

Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.

The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.

In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—

Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.
" Debt " " " " " 1/6 "
The Collection of an unlimited number of Accounts at the following rates of Commission:—
5% on amounts recovered up to - - £20 1% on amounts over - - - £100
2½% on amounts over £20 and up to - £100 5% on amounts recovered in Ireland, Scotland and the Channel Isles.
Special terms in respect to Foreign Debt collections and enquiries.
Representation at Meetings of Creditors free of charge.
Searches of the Registers (unlimited) free of charge.
Legal Advice by the Solicitors to the Office upon ordinary business matters free.

probably removed from the wire side. We thus have a sheet more two-sided from a size standpoint and more liable to curl.

(C) ALIGNMENT OF FIBRES.—The shrinkage of fibres is very largely in the cross-section rather than the length. The fibres tend to align themselves on the wire in the direction of travel and since the curl takes place in the direction of greatest shrinkage we almost invariably find paper curling with the curly edge in the machine direction. Longer or harder beating increases the fraying of the fibre ends and decreases machine direction alignment, but because of increased hydration probably does not help curling.

(D) PRESSING AND DRYING.—Pressing may make paper two-sided. The web coming off the wire is smooth on the wire side and rough on the top or felt side. The first press smooths the felt side and roughens the wire side. The second press, which is usually the last on fine paper machines, does the opposite.

We thus may have the paper going to the driers two-sided in two ways, comparatively less size on the wire side and a smooth wire side. It is easy to see that the lack of size on the wire side will cause that side to dry comparatively quickly. It may also be a fact that the smooth wire side gets better contact with the driers than the rough felt side and further develops the two-sided drying. The effect of these conditions would be greater shrinkage on the wire side and a curl set towards that side.

Hard drying is necessary to remove a sufficient amount of the moisture of hydration. If this moisture is not removed on the machine or by further drying before the paper is shipped, it may cause trouble in a dry, hot print shop.

(E) TUB SIZING.—While tub sizes, both animal and vegetable, have the effect of rosin in giving ink resistance, they differ from rosin in one very important quality, namely, that they are not moisture-proof. Everyone knows that both glue and starch absorb moisture and that when they do they expand very appreciably. It is not so evident to the papermaker, but just as true that when they dry out and lose moisture they contract just as much. Investigation shows that both glue and starch undergo greater changes in moisture content and dimension than does cellulose under similar humidity variations. These qualities do no great harm in themselves, but may if their application or dryness is different on the two sides of the paper.

It is now time to divide the discussion into machine dried and loft dried divisions. Let us first take machine dried. We have seen that paper is two-sided as to rosin size and that therefore it is more moisture-proof on the felt side. It is evident that this condition will induce greater absorption of tub-size on the wire side. If now drying is immediate as on machine dried paper, the size has no chance to permeate the sheet and equalise. The drying on the second nest continues to be two-sided and the paper is in a worse condition for curling than before it entered the tub. Now, we not only lack rosin on the wire side, but we have on that side a comparatively larger amount of a substance more hygroscopic and more liable to large dimensional changes than cellulose.

Tub-sizing does not have nearly the effect on loft dried that it does on machine dried paper. In the first place the size has plenty of time to permeate the sheet so that it is more evenly distributed throughout, and secondly the loft drying is not two-sided.

(F) FINISH.—Finish acts to inhibit curling by decreasing the set towards the wire side. This is probably accomplished not by stretching the wire side, as this would give only temporary relief, but by actually pulling the fibres and bonding material slightly apart. We find therefore that highly finished papers like ledgers and flats give little or no trouble.

(G) POLE-MARK.—One of the worst, if not the worst factor, in the curling of loft dried paper is the set given to the paper in drying over a pole. The tub-sizing operation expands the sheet normally about three per cent. In drying, the paper should shrink about the same amount. That part of the paper hanging down below the pole does shrink unrestrainedly, but that part over the pole is prevented by the weight of the sheets in close contact at that point. After drying, this part is larger than it should be and we have a distinct bubble in the sheet which only high finishing such as is generally not allowable in loft dried bonds, will take out. The bubble may seem to partially disappear in a pile of paper; but when small individual sheets are fed into the printing press, it shows up if printing conditions are poor.

Conclusion.

It is clear that if our work has been well done and conclusions properly drawn, practically all operations of papermaking affect curling. To overcome all the obstacles in the way of producing bond paper that "lies flat" seems in view of this an almost impossible feat. The problem is further complicated by the fact that steps taken to stop curl may seriously interfere with other qualities of paper. For example, a soft, poorly sized paper does not curl but lacks bond characteristics. We believe, however, and practical results have proved this, that by directing preventive efforts all along the line of manufacturing, curling can be stopped. Complete success means proper methods of testing, careful instructions to the workpeople, and everlasting watchfulness by the foreman.

Rubber Latex Tests in U.S.A.

A Washington despatch states that at the request of the Bureau of Foreign and Domestic Commerce, the Bureau of Standards is making an investigation of the effect of adding rubber latex to paper, that a supply of the latex has been obtained, and paper machine runs are being made with sulphate pulp and with a mixture of soda and sulphite pulp. Tests are being made with and without the use of rubber latex, and it is planned to determine the effect of this material on several qualities of paper, and to determine whether the strength qualities are increased.

State of the Dutch Printing Trade.

Mr. R. A. Austen-Leigh in Holland.

Mr. R. A. Austen-Leigh (the president of the Master Printers' Federation) who recently attended a conference of the Dutch Master Printers held in Amsterdam under the presidency of Mr. Korthuis, reports that the most important item on the agenda was the matter of the new contract with the trade unions, which it is proposed should come into force on January 1st, 1923, and continue for two years. Its chief provisions are (1) that wages are to be reduced from 1s. 5d. an hour to 1s. 3d.; (2) that working hours are to be increased from 45 to 48; and (3) that master printers are to be allowed (in case of trade falling off) to dismiss such workmen as they please, instead of as at present the latest man taken on. Further, the proposed contract contains a sliding scale for wages according to the index cost-of-living figure, whereas the previous contract only provided for wages increasing. The new contract is the upshot of long discussions, spread over three months, by a mixed commission (under Mr. Diemer) of employers and employees. After considerable debate it was approved by a very large majority and it now only remains for the unions to accept it. Unfortunately the mens' leaders in submitting the contract to their constituents have declined to recommend it, but considerable sections have already agreed to it. The remaining (but largest) section will now ballot on it.

There appears to be a very considerable amount of unemployment among the Dutch printers, from 2,000 to 3,000 being out of work, out of a total of about 18,000, so that the acceptance by the men of the proposal to increase the number of working hours will show that they possess long-sighted economic views.

Mr. Austen-Leigh says that nothing could exceed the kindness and hospitality of his hosts, some of whom he had already met at Namur last July on the occasion of the Belgian conference, and others at the Printing Exhibition at the Agricultural Hall in May, 1921, of which they retained the pleasantest memories and especially of Mr. Bridges' hospitality.

A NEW Belgian monthly journal of the printing trade has appeared under the name of the *Musée du Livre*. A little 8-page journal, with ornamental headpiece and borders printed by offset, it is devoted to the craft of book-production in Belgium and elsewhere.

AMONGST recently elected members of the Federation of British Industries are: Messrs. Barclay and Fry, Ltd., lithographers, etc., makers of decorated tin boxes, The Grove, Southwark, London, S.E.; Messrs. Marsden and Co., Ltd., printers and lithographers, Windsor Bridge, Pendleton; the Credit Index, Ltd., credit guide printers and publishers, 31, Lawrence-lane, Cheapside, E.C.1.

The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letter-press or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.

Keeps up with the speed of the fastest running machine.

Feeds all kinds of paper from thinnest tissue to cardboard.

Register is assured even at maximum speed.

The only Feeder adaptable for very short runs.

Quick changing from small to large sizes and *vice versa*.

Changing to hand feed in a few minutes.

Purely mechanical Automatic Throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.

The Winkler Feeder is also built with a Stacking Arrangement.

COME AND SEE IT RUNNING IN LONDON.

Trade Notes.

LONDON WAGE-REDUCTIONS.—With the acceptance by the Correctors of the Press of the terms of settlement put forward by the London Master Printers' Association, the whole of the unions in London have now reached agreement, and the second wage-reductions are being made this week.

WE understand that the Lithographers, the Litho Artists, the Machine Rulers, and the Binders have applied to the Federation of Master Printers for a conference at which the wages position in London as affecting their members might be reconsidered in view of recent wage settlements with other unions.

THE Costing Committee of the Federation of Master Printers met on Wednesday and discussed arrangements for maintaining a vigorous Costing campaign, also the programme for this year's Costing Congress in London which it is hoped will rival in interest the first Cost Congress held when the costing movement was instituted.

MR. F. HEDGER took up his duties as additional organiser to the London Master Printers' Association on Monday last.

AT the first gathering this year of the S.W. London Master Printers' Association—which took the form of a New Year's meeting at the Central Hall, Westminster—Mr. J. D. Wise (the president) was in the chair, and Mr. Geo. Eaton Hart, the honoured guest, gave an arresting address on "The Ethics of the Printer." In addition to the various speeches, there was much excellent music and refreshments. A full report will appear in our next issue.

PARTNERSHIPS dissolved of the week include those between: A. J. Shuker and W. L. Hubbard, printers, 93, Dorothy-road, Leicester, under the style of the A.J.S. Press; H. Freeman and F. Freeman, engravers, printers and block makers, 21-23, Farringdon-avenue, London, E.C.4, under the style of Freeman and Freeman; Thomas Henry Wilkins, William Donald Hunton, and Allan Bell, advertising contractors, 49 50, Watling-street, E.C.

TENDERS are invited by the Superintendent, Government Press, Bulaq, Cairo, until January 21st, 1923, for the supply of binding and printing material (cloth, ink, gold, etc.); and by the Central Stationery Stores, Ministry of Finance, Cairo, until January 25th, 1923, for the supply of paper and stationery required for the year 1923-24.

"THE PRINTING ART" is the title of an address to be given by Mr. Harold Curwen, director of the Curwen Press, Plaistow, on Friday, January 12th, at 6.30 p.m., at Stationers' Hall, when Mr. R. A. Austen-Leigh, president of the Federation of Master Printers, will take the chair. Mr. Curwen will have on exhibition examples of his work. The lecture is free to any interested.

THE annual meeting of the Stationers' Social Society is fixed for Thursday, January 4th, at Anderton's Hotel, not January 5th, as was announced.

PROCESS engravers have agreed slight price-reductions effective this month in view of a revised wages agreement.

PROCESS ENGRAVERS' CLUB.—An outcome of discussion which took place at the recent presentation dinner to Mr. Andrew Dargavel is the formation of a club run on social and business lines for the benefit of those interested in process engraving. The first meeting of the club is being arranged for January 9th.

BOOK-PUBLISHING TRADE.—Both the *Publishers' Circular* and the *Bookseller and Stationery Trades Journal* have published classified lists of the books published during 1922. It would appear that, though totals are slightly down upon last year, the book publishing outlook is satisfactory.

AT Marylebone Police Court last week when Mr. G. A. Jennings, unsuccessful candidate for North Paddington at the general election, was examined in respect of alleged frauds in connection with the election, Mr. J. R. Burt, managing director of Morton, Burt and Sons, Ltd., printers, Paddington, stated that Jennings gave orders for the printing of election literature and posters, tendering a cheque which was not met when it was presented.

A BOOKBINDER, George Buckeridge, of Hereford, was remanded at Kingston, on Saturday, on a charge of murdering Mrs. Wilhelmina Eliza Sainsbury, an old-age pensioner, at Pembridge village.

MR. HUGH DELLOW, for 44 years on the London staff of the *Newcastle Chronicle*, who retired in 1919, has died at Biggin Hill, in his 79th year.

THE funeral of the late Sir Edmund Robbins, for more than 37 years manager of the Press Association, took place on Wednesday at Forest Hill Cemetery, there being a very large attendance of prominent newspaper men. Lord Riddell was present, representing the Newspaper Proprietors' Association and the weekly Newspaper and Periodical Proprietors' Association, with Mr. T. W. McAra, J.P., secretary of the Newspaper Proprietors' Association. Mr. Walter Scott, of the *Rochdale Observer*, represented the chairman, Col. Sir Joseph Reed, and members of the committee of management and consultative board of the Press Association. Mr. Robert Keir, chairman of the Newspaper Conference, and representing Sir Alexander Jeans, *Liverpool Post*, was also present. The president and members of the Newspaper Society were represented by Mr. Frederick L. Armstrong, the general secretary, and Sir Roderick Jones, chairman and managing director of Reuter's Telegram Agency, was present. A largely attended memorial service was held in St. Bride's, Fleet-street, where the vicar, the Rev. Arthur Taylor, paid eloquent tribute to the deceased's life-work.

MR. GODFREY WALTER, J.P., for some years manager of the printing department of *The Times*, a director of the Blackfriars Type Foundry, Ltd., and other businesses, who died on September 15th, aged 56, son of the late Mr. John Walter, M.P., and a great-grandson of the John Walter who founded *The Times*, left estate in his own disposition of the gross value of £95,582, with net personalty £34,652.

THE late Mr. Austin Brereton, of Yew Cottage, Chipperfield, Herts, author and journalist, principally known as the biographer of the Irvings, and formerly manager for Mr. H. B. Irving, who died on November 20th last, aged 60 years, left estate of the gross value of £1,152, with net personalty nil.

THE Inland Revenue Authorities have decided to let the back of dog licences to a firm for advertising purposes.

MR. W. T. MORRELL, a book expert, of Hull, has secured over £900 for a completed set of the Pickwick papers as issued in the original parts.

AT a sale of Baxter colour prints last Thursday a print measuring 5½ in. by 2¾ in. entited "Teeth in Age," was sold to Mr. Etheridge, of Birmingham, for £90, a record price for a small print. Another print, "The Royal Arms," which was sold for £4 a year ago, fetched £33.

TO MARK the completion of a history of 130 years the *Observer* has issued a well-produced souvenir book of which the scope is expressed in its title: "The *Observer*, 1791-1921, a Short Record of 130 Years."

THE annual dinner and smoking concert of the *Daily Chronicle* Publishing Department took place on Saturday at the Manchester Hotel, Aldersgate-street.

IRISH WAGE-SETTLEMENT.—Notices had been posted by printing trade employers throughout Ireland, with the exception of Dublin and Belfast, intimating that a wage-reduction of 12s. 6d. would be made, the first instalment to take effect in the week ending December 30th. As the result of negotiations at the eleventh hour a threatened stoppage has been averted, the employers agreeing to make the first reduction of 5s. in the week ending January 6th and to have a conference regarding the subsequent reductions prior to the first week in February. The Typographical Association executive instructed their members in Ireland to accept this position.

COUNTERFEIT POSTAGE STAMPS.—At the home of Alfred Baguet, in Paris, police found a parcel of counterfeit stamps weighing 60 lb., and representing a value of nine million francs (about £145,000), and a complete apparatus for counterfeiting. Baguet was sent to prison for two years.

WE acknowledge and reciprocate the New Year greeting of Messrs. M. C. Modi and Co., of Bombay.

MESSRS. SLATER AND PALMER, of 4, Wine Office-court, Fleet-street, E.C.4, tender their warm appreciation of the loyal support of their numerous customers throughout 1922, and express their hearty good wishes for a prosperous 1923 to them all.

D'ANNUNZIO, it is now formally announced, will found a daily newspaper in Rome.

AN office boy employed by a Paris evening newspaper disappeared on Sunday with a cheque for 30,000 francs.

IN connection with the decision of the Master Printers' Association to reduce wages, a conflict in the Dutch printing trade has begun. At many towns in Holland printing trade workers stopped work on Tuesday.

SWISS PRINTERS' STRIKE.—The printers' strike in Switzerland has resulted (writes a *Daily Herald* correspondent) in a victory for the Printers' Federation, the Swiss union. The printers ceased work because the employers refused to renew the collective agreement, which came to an end in the summer, on the same conditions as were previously in force. The preliminary agreement settles the question of salaries and hours of work in accordance with the terms laid down by the Printers' Federation. The master printers have also been obliged to give way in the matter of re-engaging personnel, their Association having at first declared that only 75 per cent. of the personnel on strike would be taken back. They have now consented not to cut down their staff.

Trade Union Matters.

AMONGST trade union New Year messages published in the *Daily Herald* was one from the London Society of Compositors wishing members of the L.S.C., "Many happy returns of the Jubilee—1848-1923." The L.S.C. message to the general public was: "Before you send your next order to the printers, see that the name of the firm is in the Compositors' Fair List." The National Union of Printing, Bookbinding, Machine Rulers' and Paper Workers also sent greetings to "all members and comrades," remarking: "Let our motto for the New Year be—The industry for the organised worker and every worker an organised member of the industry."

A PRESENTATION has been made by the members of the Cork Typographical Society to Mr. D. O'Carroll on his retirement from the presidency after eleven years in that position.

UXBRIDGE branch of the Typographical Association, having made a request to the headquarters of the Association for permission to allow members to take an extra week's holiday, without pay, in order to relieve the pressure of unemployment, have been informed by the Executive Council that such holidays must be a matter for local arrangement, but that, if they be taken, the members will not be entitled to unemployment benefit for the week.

THE Executive Council of the Typographical Association have informed the secretary of the Redhill branch of the Association that, after discussing the case of the manager of a firm who desired to place a youth in different departments for varying periods with a view to training him for managerial purposes, it has been decided that he could only be allowed to enter the composing and machine departments as a recognised apprentice.

MESSRS. T. G. AND J. JUBB, the well-known printers' metals specialists, of Jack-lane, Hunslet, Leeds, have issued for the benefit of their clients a series of three acceptable hanging calendars for 1923. One is a very serviceable tear-off for office use, a pad being mounted on a handsome board, and showing each day's date in large red figures. Another calendar, bearing two months' dates to a sheet, is illustrated by a very clever series of humorous pictures in colour, by Lawson Wood, whilst the third calendar has a series of comic colour drawings by Harold Garnshaw.

Federation Meetings in London.

L.M.P.A. Approves Levy for Expenses.

By a special general meeting, on Friday at Stationers' Hall, the London Master Printers' Association cordially approved the suggestion to make a levy upon L.M.P.A. members in order to meet the cost of hospitality to be afforded to Federation visitors on the occasion of the annual general meeting and annual cost congress of the Federation, to be held in London at the end of May next.

Mr. A. Langley presided over a small attendance, and was supported by prominent members of the L.M.P.A. Council and others.

Mr. Langley, in opening the meeting, said he was sorry their president, Col. Truscott, was not with them. He was sure their hearts would all go out to him in deep sympathy in respect of the very great loss he had sustained. Proceeding to the business of the meeting, he said it had been customary since the foundation of the Master Printers' Federation to hold the annual meeting of the Federation in the district from which the president of the Federation had been chosen for the year. This year London had been honoured by the selection of their own Mr. R. A. Austen-Leigh as president of the Federation. (Applause). He (the chairman) considered, and he thought the meeting would agree with him, that the Federation was honoured in having such a president. (Hear, hear.) He ventured to say, without disparagement to other presidents, that Mr. Austen-Leigh would leave a brilliant record of his year of office, unsurpassed, at any rate, by any president that had gone before. As London had been honoured, London must honour in return, and it was for the purpose of honouring the Federation in acting as hosts to their fellow members in the country that London members were to be asked to provide the funds. He called upon Sir William Waterlow to put the resolution.

Sir William Waterlow then read the resolution, which was: "That this meeting of members of the London Master Printers' Association authorises the Council to levy an amount not exceeding 15 per cent. of each member's last annual subscription to meet the expenses which will necessarily be incurred by the London Master Printers' Association in connection with the annual general meeting and annual cost congress of the Federation in London in May, 1923." Sir William went on to say that he thought the small number of members present probably testified to the fact that there would not be much, if any, opposition to the resolution. As one who had had the privilege of being present at a great many Federation meetings in various parts of England, Scotland and in Ireland, and enjoying the hospitality that had always been extended by the master printers in the towns visited, he had very great pleasure in moving the resolution. He was a little doubtful whether 15 per cent. of their subscriptions would be sufficient, but he thought the Council had been right in fixing the amount at that figure. and in endeavouring to limit their expenditure in connection with the Federation gatherings to the amount which that would realise.

Mr. Fleming (Drake, Driver and Leaver) inquired what the sum raised would be, and the chairman replied that the amount reckoned upon was about £2,000.

Programme of the Annual Gatherings.

Mr. W. Howard Hazell seconded the resolution, and gave some indication of the probable programme of the annual gatherings. He said they proposed in London to follow on the lines adopted by the Scottish alliance, and other alliances in past years. They would begin with a reception (with the necessary refreshments) on the Saturday evening, for which occasion they hoped to be able to obtain the use of the Guildhall. On Monday the cost congress would be held, whilst in the course of that day there would be a motor trip for ladies attending from the country, and the L.M.P.A. would provide the visitors with luncheon at the Hotel Great Central. On the Tuesday would follow the annual meeting of the Federation, also at the Hotel Great Central, the ladies being on that day taken to Hampton Court or other place of interest. On the Tuesday evening there would be the annual banquet—for which those attending would pay for tickets, thus, more or less, covering the cost. On the Wednesday it was hoped to arrange a trip into the country, possibly up the river to visit Eton and other places, finishing with a dance at the Hotel Great Central. On the Thursday golfing enthusiasts might be able to visit various golf clubs in the neighbourhood of London. Details of the programme would be settled later. Mr. Hazell concluded by stressing the benefit derived from the meeting together of master printers from all parts of the country, and expressed the hope that the 1923 gatherings would be the finest ever yet held.

Sir Cecil Harrison strongly supported the motion, bearing further testimony to the hospitality extended to visitors at previous annual gatherings and emphasising the business value of such occasions. He thought that of all the activities of the Federation, the social side had been the most successful, and in some respects, the most useful.

Mr. Reveirs said that whilst he was in favour of doing all they could to provide suitable entertainment, he was in favour of a voluntary contribution, rather than a levy.

The chairman replied that the levy had been a great success in other places. Glasgow, for instance, had found it most successful.

Mr. Hutchings (*Colliery Guardian*) supported the proposition.

Mr. J. H. Williams (treasurer, L.M.P.A.) endorsed what previous speakers had said as to the splendid hospitality provided at Federation gatherings in the last few years, and added that he thought a levy was the only practicable method to adopt.

Mr. Guilford, who said that he thought the amount aimed at by the levy was on the small side, remarked that he was very interested to learn that the council had the Thames Valley in view, and Thames Valley members would feel honoured by the visits proposed.

In answer to a query by Mr. Guilford, the chairman said he thought London members would have to pay most of their own expenses in connection with the gatherings.

Mr. G. Eaton Hart cordially supported the proposition, indicating that he attached very great value to social activities in creating cohesion and co-operation amongst printers and extending the membership of the Federation and the Association.

The chairman then put the resolution to the meeting, and it was carried *nem. con.*

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

CANADA.

A Canadian manufacturing company, which is in a position to export small printers' and bookbinders' machines, job presses, cutting machines, bookbinders' standing presses, etc., wish to get into touch with United Kingdom importers. (Reference Canadian Government Commissioner's Office, 73, Basinghall-street, E.C.2.)

SPAIN.

The Spanish Mint requires engraving and printing machinery. Further information can be had from the Department of Overseas Trade, 35, Old Qaeen-street, London, quoting reference 6103/34/F.L./E.C.

NEW ZEALAND.

An Auckland firm of agents wish to obtain the representation of United Kingdom manufacturers of soft goods and also printers and bookbinders' requisites, on a commission basis. (Reference No. 668.)

A Christchurch agent wishes to be placed in touch with United Kingdom manufacturers of fancy goods and stationery with a view to representing them, either on a commission or consignment basis. (Reference No. 669.)

ITALY.

A firm of agents and dealers established in Turin are desirous of obtaining the representation for Italy of United Kingdom manufacturers of raw materials for paper mills (felts, wires, etc.); paper and cardboard (especially fine glazed paper for printing, tissue and fine coloured papers and cardboard). (Reference No. 673.)

SWITZERLAND.

A Swiss agent resident in Zurich is desirous of securing the representation of a United Kingdom firm of paper and cardboard makers who wish to obtain business connections with printing works, lithographic works, account books and ledger manufacturers, cardboard boxmakers, etc. (Reference No. 686.)

German Printing Machinery.

SIR,—With reference to the account of a lecture given by Mr. E. C. Bateman, which appeared in your issue of December 14th, we send you herewith a copy of a letter which has to-day been addressed by this Association to that gentleman.

Yours faithfully,
THE ASSOCIATION OF BRITISH MANUFACTURERS OF MACHINERY FOR THE PRINTING AND ALLIED TRADES.
By order of the committee,
G. R. COX,
Acting Secretary.
6, Holborn-viaduct, London, E.C.1.
December 27th, 1922.

[COPY]

E. C. Bateman, Esq., M.B.E., Deputy Director of Printing and Binding, H.M. Stationery Office, Princes-street, Storey's-gate, S.W.1.

DEAR SIR,—The attention of this Association has been drawn to an account in the *British and Colonial Printer and Stationer* of the 14th inst., of a lecture which you gave before the Printing, Binding and Kindred Trades Overseers' Association.

If you are reported correctly, there are certain statements made and opinions expressed by you to which this Association, as representing the English manufacturers of printing and kindred machinery, must take exception, and in view of the important position you hold in a Government department, and the value that may be placed upon your remarks by purchasers of this class of machinery, we consider it necessary to communicate with you upon the matter.

We venture to state that had you made a similar trip in Great Britain, and visited the various works connected with our trade, it would not have been possible to arrive at the conclusions which you appear to have come to. We consider it particularly unfortunate that at the present time, when there is in this country a very large amount of unemployment, anyone holding an important position in the trade should disparage English manufacturers and give encouragement to English purchasers to buy German goods, when similar and perhaps better goods are obtainable here. Unfortunately, there has been little patriotism shown in this country since the war, and therefore that policy needs no encouragement. There are certain classes of printing and bookbinding machinery manufactured in this country which are superior to the German machines, and which has been proved by the fact that the German machines, although manufactured and sold under very advantageous conditions, have not been able to oust the home-made machines from the English market.

We do not wish to use this letter as an advertising medium, and therefore refrain from mentioning any names, but we shall be very pleased to furnish you with the names of English manufacturers of the various kinds of machines in which you were so interested in Germany.

Germany may possibly specialise in certain machines which are not made here; similarly, England specialises in certain machines which are not made in Germany.

In view of the publicity given to your lecture, we propose sending a copy of this letter to the *British and Colonial Printer and Stationer* for publication.

Awaiting your reply,
We are yours faithfully,
THE ASSOCIATION OF BRITISH MANUFACTURERS OF MACHINERY FOR THE PRINTING AND ALLIED TRADES.
By order of the committee,
G. R. COX,
Dec. 27th, 1922. Acting Secretary.

"THE PAPER HOUSE" is a title which Messrs. Martin and Clarke have used during the past year, and we notice they have recently emphasised the claim by a unique sign overhanging the entrance to their warehouse at Joiners' Hall-buildings, Upper Thames street. This new sign is in the shape of a large shield painted white and overprinted "The Paper House" in bold black lettering. At night it might appear that one was looking at an illuminated sign, but a closer view shows that advantage has been taken of the reflected light of an ordinary street lamp.

THURSDAY, JANUARY 4, 1923.

A Backward Glance.

THE printing trade is probably little inclined to indulge in a long-drawn-out retrospect of a year in which trade depression, wage disturbances and other gloomy features have loomed so large. Yet it is hardly fitting to turn the first pages of 1923—a year of hoped-for better times—without just a glance at some of the outstanding things which the finger of Fate has inscribed upon the book of 1922. One thing writ large on printing trade history of the past year is the matter of wages, a subject which for the greater part of the year has been surrounded with strife, leading to enormous expenditure of valuable time, and culminating in several weeks of disastrous stoppage in the provinces. The crisis is now fortunately at an end, and the trade enters 1923 with ground for confidence that the matter of wages will not this year lead to any considerable upheaval in the industry. The memory of the struggle holds some cause for thankfulness in that the organisations of both employers and employed stood severe strain without disruption, and that the fight leaves each set of participants with the reflection that the other side acted, in the main at least, in a spirit of reasonableness and of goodwill.

* * *

Printing Trade Organisation.

ON the side of organisation, indeed, the year has been a fairly encouraging one. The trade unions in the craft have maintained and even strengthened their already very wonderful solidarity. The employers, too, though faced with immense difficulties in view of the varied character of printers' work, have made as much progress as could be expected in a difficult time. In particular, the Glasgow meetings of the Federation of Master Printers were marked by manifestations of a growing community of interest, which holds much promise for the future, and both the Federation and the London Master Printers' Association have enjoyed statesmanlike leadership that has had its effect in encouraging unity of action amongst employers.

Technical Progress.

EVERY year that passes now must show still further advances in the wonderful efficiency to which the science and art of printing has attained. Considerable progress has been made in 1923 in various branches of process work, and there are other advances in view which are leading some to anticipate quite revolutionary developments in the near future. Technical education, too, keeps pace with increasing knowledge, and London particularly has in the past year seen a notable forward step in respect of technical training facilities. The Select Committee's Report on Government Printing was one good indication of the way in which wider knowledge and improved standards of printing are being established.

Postal Rates.

A NOTABLE blot on the scutcheon of the printer's year has been the burden of high postal rates, and the immobility of the authorities in respect of such obviously necessary reforms as the modification of the regulation regarding the wording on halfpenny post cards, and the unfair handicap upon senders of British samples. The year brought a most welcome return—largely due to the printing trade's agitation—to the halfpenny postage on printed matter, but there are yet many respects in which our postal services must be improved if they are to perform their due part in assisting to make 1923 a more prosperous year to the country generally than was 1922.

* * *

Postage in 1923.

THE Post Office authorities have already begun their propaganda to show that it is impossible to make any reduction in postal rates without incurring a loss, but the figures that have been issued so far are by no means conclusive. Mr. A. E. Goodwin, who has studied this question very closely, points out that whilst Post Office apologists state that the increase in revenue has been due to changed methods of accounting, no figures have so far appeared to show what the reductions in costs have been during the year. Mr. Kellaway made it clear to the deputation which waited upon him from the Joint Industrial Council of the Printing and Allied Trades that considerable reductions were anticipated, and there is no reason to believe that these reductions have not materialised. That the volume of printed matter passing through the post has increased since the reduction of postal rates must be evident to every householder. Now that there is some reduction in the cost of printing, and trade is taking a more auspicious turn, it needs only a further reduction in the rates for heavier packages of printed matter to lead to greatly increased use of postal facilities, with consequent benefit to the Post Office as well as to the industry.

* * *

The Paper Market.

THERE was a time a year or two ago when the warning of advance heralded a rush to buy. Things have changed and a different attitude marks the business man of to-day. The belief is in a low level, and there is an irremovable conviction that solid trade is impossible until that low level becomes a stabilised condition in industry. There may be an odd few who temperamentally could not withstand the inducement to speculate at the first sign of a rising market; but the general tendency would be to slacken off except on compulsory commitment and minimised stocks. There is the case of foreign strawboards, for which there was practically no market a few months ago. Then a revival set in; and while orders were moving briskly the market hardened rapidly. For a time all went well and the price rose still higher. From what we gather to-day the demand has fallen off altogether and buyers refuse to commit themselves for forward requirements.

Personal.

THE Prince of Wales has consented to preside at the sixtieth anniversary festival next year of the Glasgow and West of Scotland District of the Newspaper Press Fund.

INCLUDED in the New Year Honours List (not yet complete) are a few gentlemen connected more or less closely with the printing trade. Amongst the new Knights is Mr. Frank McCarthy, C.B.E., journalist, of Burmah. An M.B.E. (Civil Division) goes to Mr. Villiers Hart de Keating, editor of the *Mauritius News*, whilst Companionships of the Indian Empire are bestowed upon Mr. John Arthur Jones, editor of the Calcutta *Statesman* and upon Mr. Keshab Chandra Roy, director of the Associated Press of India.

LORD SOUTHWARK will distribute the prizes to the students of the City of London College at the Mansion House on Saturday, January 27th, at 2.30 p.m.

SIR EDWARD HULTON, the proprietor of the *Daily Sketch*, *Daily Dispatch* and many other periodicals), and Lady Hulton have been presented by the staffs of the concern with their portraits, painted by Sir William Orpen.

THERE promises to be a large and representative attendance at the complimentary dinner which is being given to Mr. James MacLehose, M.A., LL.D., president of the Federation of Master Printers, 1921-22, at the Connaught Rooms on Monday next.

WE tender to Mr. Charles Baker our sincere congratulations on the completion last week of a quarter of a century's useful existence of the *Newspaper World*. It is no ordinary thing for a newspaper proprietor to be able to say that during twenty-five years he has had a contribution in every weekly issue published during that long period.

MR. C. W. BOWERMAN, M.P., was the subject of a short biographical sketch in last Friday's *Daily Herald*, of which newspaper he is now chairman of directors. Due acknowledgment was made of that kindly, "paternal" way Mr. Bowerman has with him, a thing recognised and appreciated by all who know him.

A MARRIAGE is arranged, and will very shortly take place, between Philip A. Waterlow, eldest son of Mr. Edgar L. Waterlow, of Wymondley House, Stevenage, and grandson of Sir Philip H. Waterlow, Bt., of Trosley Towers, Wrotham, and Iris, only daughter of the late Mr. Charles R. Butler, of New Place, Sunningdale, and Mrs. Ernest Fordham, 33, Gordon-square, W.C.

MR. R. R. WHITTAKER, of the literary staff of the *Yorkshire Post*, and formerly of the staff of the *Sheffield Daily Telegraph*, has been appointed editor of the *Yorkshire Evening Post*, in succession to Mr. A. E. Grime, who has been appointed manager of the *Yorkshire Post*.

Mr. W. S. Cowell.

WE regret to announce the death, last week, at Ipswich, of Mr. W. S. Cowell, head of the firm of W. S. Cowell, Ltd., Ipswich, printers and stationers. Mr. Cowell, who was 85 years of age, was able to attend his office up to within a few days of his death. In 1875 he inherited his father's business, which was converted into a limited liability company in 1900. Mr. Cowell held the chairmanship of the directorate throughout his life, his co-directors being Mr. H. Hanson (son of the former manager), Mr. W. Kemp and Mr. R. W. Smith. The expansion of the firm has been a notable feature in the history of the borough during the last half-century. Mr. Cowell, though of a retiring disposition, was for a time an active member of the Ipswich Corporation, and was known locally as a keen and generous supporter of religious and charitable causes.

Great "Tuck" Post Card Scheme.

"The Thunderstruck Postman."

Much interest has already been aroused by the big picture post card campaign which Messrs. Raphael Tuck and Sons, Ltd., have commenced, and which promises to grow to impressive dimensions during the next few months, until the competition closes at the end of April. Preliminary announcement of this interesting campaign was made in our issue of August 10th last, when it was explained that the £5,000 competition was designed to stimulate the general use of picture post cards by the public; to draw attention to the unpopularity of the restriction as to the nature of the five words permissible at the halfpenny rate; to assist dealers in making large sales of "Tuck" post cards (old stock as well as new); and to encourage good window displays by retail stationers. The competition is now being boomed to the general

public by means of all the arts of up-to-date publicity, and when it is stated that the campaign is estimated to cost at least £12,000, it will be seen that important results may be anticipated. We illustrate herewith an example of clever advertising that forms part of the scheme. The picture of "The Thunderstruck Postman," admirably reproduced in colours, will shortly be seen in the form of posters, large and small, which will be spread far and wide on the hoardings throughout the country; it is also being supplied to dealers for window display and distribution in leaflet form. We commend this campaign to the attention of stationers, who will find in it many advantageous features adapted to strengthen their own business whilst at the same time assisting the agitation for further postal concessions, and also helping to boost picture post card popularity, with consequent benefit to all the thousands engaged in a great industry.

"HOW TO BUY PRINTING." New York: Charles Francis Press.

This handsome volume of some fifty or so pages, 10 in. by 7 in.—in cloth boards, with title embossed and bronzed—admirably demonstrates how attractive a printing firm's own publicity matter can be. It has a special interest for us in that it emanates from the big New York printery whose distinguished chief, Mr. Charles Francis, recently visited this country, and made friends with many British printers. Elaborately printed on tinted coated paper, with specially designed borders and ornaments, the book is tastefully planned and beautifully executed. Chief amongst the excellently printed illustrations is a frontispiece showing the New York "sky-scraper" in which the Charles Francis Press has its home. The Charles Francis Press occupies three complete floors of this huge building, which comprises something like two dozen storeys, and claims to be the largest building in the world devoted to the printing and allied trades. Whilst, of course, the Charles Francis Press and its capabilities is frequently brought to the reader's attention in the course of this volume, the various sections are much more than mere publicity matter. They deal in interesting and informative fashion with the many factors which make for good printing and satisfaction to both printer and customer—preparation of copy, the use of illustrations, type-setting, page lay-out, binding, etc.—and should serve not only to attract more customers to this particular printery, but also to educate users of printing so that they may be able to co-operate more efficiently with the printer in the production of creditable work.

A New Type Catalogue.

A handsome and well-arranged quarto specimen book of the type faces produced at the typefoundry of Messrs. Stephenson, Blake and Co., Ltd., has just been issued, and shows the remarkable resources of this Sheffield foundry in providing everything the printer may want in the way of types, borders, ornaments, brass rule, printing material and appliances and fittings for the modern printing office. The book is divided into sections, and the convenience of this systematic arrangement is enhanced by the provision of indexes, which enable any item in the book to be easily turned up. In this edition many new features have been added and there is a considerable increase in the variety of type and material that is provided for the printer, whilst all the type founts offered are cast on the American point system; point body, point line and point set. Among the faces shown there is a fine range of lining, Baskerville old face ranging from 6 point to 72 point; and some good body founts in Georgian old face, a useful type of a pleasing cut and appearance. There is a fine series of lining old style that covers all the needs of the printer in that class letter, and this is supplemented by the lining modern, which gives a great range of sizes to select from. Ronaldson old style, Chippendale, Clearface Bold, Winchester old style, Westminster old style and Italian old style are all useful faces and indispensable in the printing office where a varied class of work is turned out. The founts of shaded letters, such as Winchester shaded and Spartan shaded will be found useful for display work, and be valuable where delicate effects are desired or where refinement and elegance are essential in a job. Printers will be pleased, too, with the beautiful Runnymede series, which is cast in sizes from 6 point up to 24 point. This noteworthy letter is based upon the writings of the early Italian scribes and will at once commend itself to printers of discernment. Borders, ornaments and such like decorative material is shown in a wide range of styles, and the printer who cannot be suited with the selection offered must be indeed hard to please.

A feature of the volume is the finely displayed pages that show how the type faces may be arranged to the best advantage when setting up jobs; many of these are worked in colours or on tinted grounds and a study of them should give ideas to the display hand. The newspaper founts and heading types shown are of clear cut and pleasing face, and are specially designed for the use of the newspaper printer who should appreciate the selection shown here.

The section of the book dealing with material and office fittings shows a great variety of designs and styles in case racks, type cabinets, dustproof cases and galley and furniture racks and cabinets; while the "Hallamshire" sectional rack for standing matter and storage purposes will appeal to printers who desire to keep their material where it can be easily got at. These racks are built up in sections and can be made of any height required. Imposing surfaces, forme racks, drying racks, galleys and the innumerable articles needed by the printer are here catalogued, as well as platen presses, cylinder machines, proof presses, stitching machines and other appliances used in the printing office.

A revised price list is given so that the cost of any order can easily be ascertained, and there is a suggestion given as to the selection of plant to be ordered for a small printing office doing work up to foolscap folio size.

The volume is well bound and titled in gold; it will form a most useful addition to practical printing office literature.

DIVIDENDS AND REPORTS.

ODHAMS PRESS.—The directors of this company announce to the shareholders that in the usual course a half-year's dividend on the 8 per cent. cumulative preference shares would be paid on December 31st, but they consider it prudent to postpone the payment of dividends until the audited accounts for the current year are available.

ASSOCIATED NEWSPAPERS.—Interim dividend for quarter ended December 31st of 2s. per share (at rate of 40 per cent. per annum), less tax on whole of deferred shares, including new capital.

SUN PAPER MILL.—Final dividend of 2s. per share.

BENN BROTHERS have declared interim dividend of 5 per cent. on ordinary shares; same as a year ago.

HUGH STEVENSON AND SONS.—It had not been possible to prepare balance-sheet as at 30th September last in time for meeting on 30th December. Proceedings were, therefore, of a purely formal character.

NEW COMPANIES.

SOUTH AMERICAN PUBLICATIONS, LTD.—Capital £5,000; to collect, complete and publish information respecting South American countries, etc. Private company. Subscribers: S. W. Black and C. A. Wharhirst.

HORNER AND READ, LTD.—Capital £200; farmers, publishers, paper manufacturers, cabinet makers, manufacturers of or dealers in vulcanite, celluloid or metal goods, etc. Private company. Permanent directors: W. R. R. Horner and J. B. Read.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

W. H. HORWOOD, LTD. (printers and stationers, London).—First debenture dated December 8th, 1922, to secure £200; charged on the company's property, present and future including uncalled capital. Holder: Mrs. E. Heiron, 155, Eastern-road, Brighton. Also second debenture of even date, to secure £200; charged on the company's undertaking and property, present and future, including uncapital. Holder: W. Couchman, 6, Alfaxton-avenue, South Tottenham, N.15.

CLARE, SON AND CO., LTD. (stationers, printers, newspaper publishers).—Deposit on December 13th, 1922, of deeds of 9, High-street, Wells, Somerset, to secure all moneys due or to become due from company to L.C.W. and Parr's Bank.

CLOISTER PRESS, LTD. (Heaton, Mersey).—Issue on November 30th, 1922, of £2,000 debentures, part of a series already registered.

THROSTLE CO., LTD. (paper bag manufacturers, manufacturing stationers, etc., London).—Satisfaction to the extent of £500 in November of debentures dated February 8th, 1922, securing £750.

L. P. BARNES, LTD. (musical instrument manufacturers, publishers of sheet music, books, etc., Tunbridge Wells).—Satisfaction in full on December 2nd, of debenture dated January 31st, 1922, securing £500.

UNITED PRESS.—A debenture dated November 30th, 1922, to secure £9,343 17s. 7d., has been registered by the United Press, Ltd. Property charged: The property, present and future, including uncalled capital, of the company for the time being. Holder: M. C. Steedman, of Arkley Court, Arkley, Herts (a director of the company).

BANKRUPTCIES, etc.

Re WM. GALLOWAY KYLE, publisher, Malory House, 16, Featherstone-buildings, Holborn.—The public examination of this debtor was held recently at the London Bankruptcy Court before Mr. Registrar Francke, the accounts showing liabilities £2,166 and a deficiency of £1,189. In the course of his evidence the debtor stated that in March, 1908, with £200 capital he commenced business as a book publisher under the style of "Erskine MacDonald" at 17, Surrey-street, Strand, removing to Malory House in September, 1913. Then in March, 1916, he transferred the business to "Erskine MacDonald, Ltd.," receiving as consideration 466 ordinary £1 shares and 200 founders' shares of 1s. each. He had since acted as managing director of the company, his failure being due to the loss of a libel action brought by him against the petitioning creditor and his liability for costs amounting to £994. The examination was concluded.

French Paperstock Co.

Mr. Justice Eve, in the Chancery Division on the 20th ult., appointed a receiver for the French Paperstock Co., Ltd., upon the application of Becker and Co., Ltd., the holders of the sole debenture.

Mr. Peel, for the applicants, said the respondent company appeared and consented. There were pending contracts, and the amount of the mortgage debt was £8,700.

His Lordship appointed a receiver with liberty to act at once upon giving the necessary security.

Calendars, Etc.

A DISTINGUISHED and tasteful hanging calendar reaches us from Messrs. Coates Bros. and Co., Ltd., of Salisbury-square, E.C., the well-known manufacturers of printing ink, varnish and fine colours. A board measuring 19 in. by 14 in., delicately tinted and printed, serves as a mount to a finely reproduced aquatint showing an interior view of the Guildhall, London. A tear-off pad at the foot bears each day's date in large black numerals, together with a Shakespeare quotation, the whole making an artistic and useful adjunct to the office wall.

A VERY handsome and substantially produced calendar comes from Messrs. Perkins, Bacon and Co., Ltd., the well-known engravers and printers of Southwark Bridge Buildings, Southwark, S.E. Surrounding the monthly tear-offs there is displayed in an artistic manner a scheme of intricate ornamentation characteristic of this firm's special class of work. As was the case last year, the calendar again includes the month of January for the following year.

ST. CLEMENTS PRESS, LTD., of Portugal-street, W.C.2, have issued a very creditable hanging calendar, the tear-off monthly sheets of which bear a most interesting series of views of the various departments of this up-to-date printing office. Each sheet carries not only one month's dates in large size, but also the other eleven months in miniature, and a distinguishing feature is the addition of the well-known "At-a-Glance" sliding marker, whereby the day's date can be marked out from the rest of the month.

MESSRS. MACAIRE, MOULD AND CO., LTD., printers, of 17, Crouch Hill, Finsbury Park, are sending their friends a couple of products of their own printing which are of a distinctly serviceable character and which, by their design and execution, speak well for the office producing them. The one is a large hanging calendar with tinted paper board tastefully printed in two colours and pad of monthly tear-off sheets printed in the same two colours, with the month's dates in large and legible type. The other item is a useful diary pad, with tear-off sheets, allowing for a week's entries to a sheet.

MESSRS. JAS. BROADLEY, LTD., lithographic and letterpress printers, engravers and account book makers, of Accrington, issue a serviceable calendar in tear-off sheets of a month to a sheet, the dates standing out in white upon a dark blue ground.

FROM Messrs. E. A. Braddick, Ltd., of 9, Gough-square, Fleet-street, London, E.C.4, we acknowledge receipt of an office calendar of the hanging type, with daily tear-off pad carrying the date in very bold red numerals. This firm sends also a new year price list, giving particulars and prices of letterpress printers' materials, including frames, dust-proof type cabinets, furniture, chases, imposing surfaces, and many other printing office requisites.

FROM the London School of Printing, Stamford-street, S.E., comes a neat hanging card calendar having on its reverse side calendars of both 1923 and 1924 complete, the obverse bearing an artistic lithograph, and the whole giving good evidence of sound printing craftsmanship.

A DESK memo. calendar comes with the compliments of Messrs. Grosvenor, Chater and Co., Ltd. At the top of each sheet is usefully printed the dates for the whole month.

THE "Forward" Diary and Engagement Book for 1923 (Chas. J. Forward and Son, Ltd.), London, is compact and well bound and fits nicely into the waistcoat pocket.

Lloyd Memorial Home, Deal.

Christmas Festivities.

The Christmas festivities at the Lloyd Memorial (Caxton) Seaside Home at Deal deserve more than a chronicling of the usual Christmas gaieties on account of the change of matronship that has occurred through the unfortunate illness of the late matron. Miss L. M. Gray was beloved by all who had the privilege of her acquaintance, and her many friends are inviting donations to be sent to 80, Blackfriars-road, S.E., where the secretary of the Home will receive these expressions of their sympathy until March 1st.

With the desire to initiate the new matron into what has been aptly described as the freemasonry spirit of the trade, a party visited the Home to spend the holidays with the large number of their less fortunate comrades compelled by illness to pass their Christmas in a convalescent home. The party was received in the same kindly manner that had made the late matron so popular. The large dining-room, under the direction of the engineer, Mr. Chas. White, had been prettily festooned with chains and other decorations, and it gave one the real feeling of homely gaiety. Two long tables, with floral decorations displaying artistic taste, contained all the delicacies expected at this festive time of the year.

The matron, Miss L. Gye, at the head of one table was supported by the secretary and Mr. W. Bell (a member of the committee), the vice-chair being occupied by Mr. E. F. Clark, representing the patients as their "captain." Mr. Alfred W. Paul, presiding at the head of the second table was supported by Mr. Wm. Brett Plummer and Mr. Alf Hudson, who together with their ladies and other friends made up the visiting party.

Mr. Paul, in proposing the matron's health, said it was most gratifying to find that Miss L. M. Gray had been succeeded by so genial, talented and capable a lady as Miss L. Gye. He congratulated the committee on their selection and on behalf of all present thanked the new matron for the very able way she had catered for the largest gathering held in the Home at Christmas time. It was evident that the staff had done their utmost and that harmony existed between them and their matron. The toast was enthusiastically received.

Miss Gye, in response, said it was gratifying to know that her efforts were appreciated. She had done her best to welcome the visitors and to make the patients feel at home and happy. It was her first Christmas as matron of the Home, and she naturally thought of the one who had for many years past taken charge of these gatherings. As they all knew, Miss Gray was ill; she would like, with the permission of all present, to send her the compliments of the season accompanied with the sincere desire for better health and increased happiness in the new year. The suggestion was very cordially endorsed. The matron then proposed that the compliments of the season should be sent to their chairman, Mr. Wm. Trobe McMullon, which was also agreed to. Miss Gye, in conclusion, expressed the hope that her first Christmas at the Home might be the precursor to many, and possibly even more enjoyable and memorable, Christmases still to come.

Mr. Harding, as a patient, desired to say how the matron had made them all feel immediately at home by her cheery reception. As they entered the Home they realised that they would find a friend in the smiling matron receiving them.

Mr. Alf Hudson said that thanks were due to the secretary for the excellent manner he had engineered the function. Mr. H. F. Parker was known to nearly all the athletic associations in the metropolis and greatly respected for the immense good he had been able to do in connection with the charities attached to the printing and allied trades. His name was a household one and there was no exaggeration in stating that he was in every way worthy of the respect and esteem that he had won in that connection. As the secretary of the Home he had done marvellously and deserved the gratitude of patients and subscribers alike. His fertile brain could be traced at the back of many functions designed to benefit the Home and the members of the printing craft. The toast was received with musical honours, the entire staff winding up with the "house howl," somewhat like the "cubs' howl" of the Boy Scouts.

The secretary, Mr. H. F. Parker, in reply, said that all that had been done was with the one idea to show no distinction, but to be useful and to make all equally happy. The Home could not be a success unless one and all gave of their best—secretary, matron, staff, committee and patients alike. Large as this building was, it had proved far too small for the demands made upon it. A wing of 40 beds was absolutely a necessity, and as a result a dinner would be held on Saturday, March 10th, at the Hotel Cecil, over which Mr. J. Gomer Berry had kindly promised to preside. The tickets for the dinner were only 10s. 6d. each, and the committtee heartily invited anyone who wished to be present to buy a ticket and so help the good work along. The wing was to be dedicated to the memory of the officers and men of the printing and allied trades who fell in the Great War. It would be one of the largest memorial schemes in this connection, and as the home sheltered so many of the wounded boys who returned ill and disabled, it was a most fitting place to perpetuate the memory of their fallen comrades. The estimated cost of this wing was £24,000, which demonstrated the importance of the memorial scheme. In conclusion, he thanked the 72 persons present for the kind way they had received the toast, and thanked the matron and the sister of the Victoria Cottage Hospital for the honour of their company on this occasion.

"The Captain," Mr. E. F. Clark, in proposing the health of "The Visitors," said that the star turn of the evening had been Mr. Wm. Brett Plummer, who not only had made a series of original sketches, including those of the secretary and matron, but had also sung some very excellent humorous songs. Mr. Alfred W. Paul had been very humorous and entertaining, and he must also mention Miss I. Hudson and thank her for the talented services as accompanist and as a valuable contributor to the programme. It was invidious to mention all by name, so he invited the company to drink to the health of the visitors.

Mr. Wm. Brett Plummer, in response, said that this Christmas house party will live long in the history of the Lloyd Memorial Home and incidentally in the memory of the new but now thoroughly established matron's first Christmas there. It had been a genuine pleasure for him and his friends to spend the Christmas with the matron and staff from the annexe, who had been thoughtfully invited by Miss Gye to share with the members of her own staff in the good things provided for them by the committee. Mrs. A. Dimmock was sister to the late matron, Miss Gray, and the lady in second command at the Annexe was the mother of Miss I. Haste, the late assistant matron. The staff of the two homes thus meeting together augured well for the continued prosperity of the Lloyd Memorial Home, in whose welfare he was now keenly interested.

Arthur O'Connor Pension.

A new pension has been added to the list of the Printers' Pension Corporation, and is to be named "The P.M.A. (Arthur O'Connor) No. 1 Pension." This is paying a great honour to the secretary of the Printers' Medical Aid Association, Mr. Arthur O'Connor, whose energy in the London printing industry is so well known. He primarily founded the Printers' Medical Aid Association, and in addition has been a strenuous worker in the London Society of Compositors, having served upon the Executive, the News Committee and innumerable conferences. He has also represented them at the Trade Union Congress, the Labour Party, the General Federation of Trade Unions, the Printing Trades Federation, the London Trades Council and similar bodies. He is a Freeman of the City of London, and represents the Parish of Cranham upon the Romford Rural District Council and the Romford Guardians.

Hand-Made Papermaking.

Some of the Processes Described.

From time to time there have been predictions that the manufacture of hand-made paper was on its last legs; but far from the industry dying out it holds a very firm place in this country. Hand-made paper is a specialised part of the industry, and the demand for its products is now rather on the increase, though perhaps not in the same ratio as is the case with machine-made paper. In recent issues of the *Tovil News*, which is published by Mr. J. Barcham Green and Mr. F. A. Brett, Hayle Mill, Maidstone, there appeared a series of interesting sketches illustrating the various processes, and Mr. H. Barcham Green, who was responsible for the sketches, also contributed short descriptions of the processes illustrated.

We have also received from Messrs. J. Barcham Green and Son some particulars of the method of the manufacture as carried out at Hayle Mill, which, it is interesting to note, was built in 1806 and was taken over by John Green in 1810 for the production of hand-made papers, which have been manufactured by the Green family ever since.

To go a little more into the history of the firm, it may be mentioned that in 1839 John Green's nephew, John Barcham Green, took over the business, and on his death in 1883 his son, Herbert Green, who is now the principal, inherited the business. In 1914, Mr. Herbert Green took his son, Mr. John Barcham Green, the present junior partner, into partnership. When the mill was originally built, there were only two vats, but in 1875 the fifth vat was added.

The Process of Manufacture.

Linen and cotton rags are the fibres used in the manufacture of hand-made papers. Great care is taken in their treatment. They are twice dusted and three times sorted, before being boiled in open tanks without pressure. As the rags are of the highest grades, very little chemical treatment is required, so that the original strength of the material is retained.

In the first of the accompanying illustrations there is depicted a girl engaged in the operation of cutting the rags against a knife, while the bag in the picture is provided for the reception of hooks, eyes, buttons, and the various assortment of foreign matter that comes forward with the material.

The second process is the important one of boiling the rags, in open tanks, as stated, without pressure. The stirring stick which is here used, is a bar of copper. After boiling, the rags are again sorted by girls, who throw out any impurities that are left, such as buttons, rubber, black cotton, etc.

The washing of the rags if done in an old-fashioned machine specially constructed to rub out the fibre without destroying the strength, a little bleach being added at the same rime to brighten the colour.

FIG. 1.—CUTTING RAGS BY HAND.

Beating.

The beating of the raw material is carried out in the old type of Hollander and is continued for from ten hours for a good loan paper to 1½ hours for the softest filter paper. From the beater the pulp passes to the chest, and through magnetic separators which extract any minute pieces of iron. Thence the stuff passes through a patent sand trap, which, it is interesting to note, has been evolved by Mr. John Barcham Green, the junior partner already mentioned.

Making the Sheet.

After being subjected to the treatment of a knotter to arrest all knots and strings, the half stuff flows into the vat. Here we come to one of the most interesting processes in the manufacture of hand-made paper, for it is at this stage that the vatman dips the mould into the pulp and by shaking the mould produces the film of pulp known as waterleaf. This is the most difficult movement of the whole hand-made process, and Fig. 2 shows a vatman in the act of manipulating the mould. When the vatman has given his expert "shake," the mould is pressed by the coucher on to a felt, to which the film of pulp sticks. The clean mould is then passed back to the vatman, who repeats the operation of forming the film.

The next stage in the operation is to press the paper between the felts and subsequently to separate them and pile them into packs, which in turn are taken to a hydraulic press and kept under pressure for 12 hours.

The packs have then to be parted, sheet by sheet, an operation which is performed by girls. The paper is then again pressed for 12 hours, and once more parted, only to be again pressed. The object of the parting of the sheets before they are dried is to give an even surface and at the same time to assist in the drying.

The paper is then hung in the loft to be dried by air. If a glance is taken at the loft drying operation, it will be seen that the sheets are suspended in order to be again acted upon by the air. The effect of this method is to give the hand-made papers what is described as a leathery feel.

Process of Sizing.

When dry, the paper is allowed to stand a little while to absorb moisture, and when mellowed it is sized. The wet paper now stands in heaps for a day, when it is parted once or twice and then dried in the loft, being subsequently resized and once more parted before the final drying.

The paper is now allowed to stand in heaps, and, if possible, is exposed to the open air. When it has reached the desired state it is taken to the "picking" room to be looked over by girls, who pick out any specks and knots. The glazing process follows, this being carried out by rolling between zinc or brass plates. The paper is then taken in hand by the "layers," women of great experience who lay out defective sheets, which are sorted by second layers into "retree" and "broken." Thus there are three grades of hand-made paper, namely, good or perfect, retree, and broken.

Special features of hand-made paper mills are imitation parchment, filter papers, bank note papers (which have been made at the Hayle Mill for about 60 years), account book papers and so on. In regard to blue laid account book papers these have been made by the Green family for over 100 years.

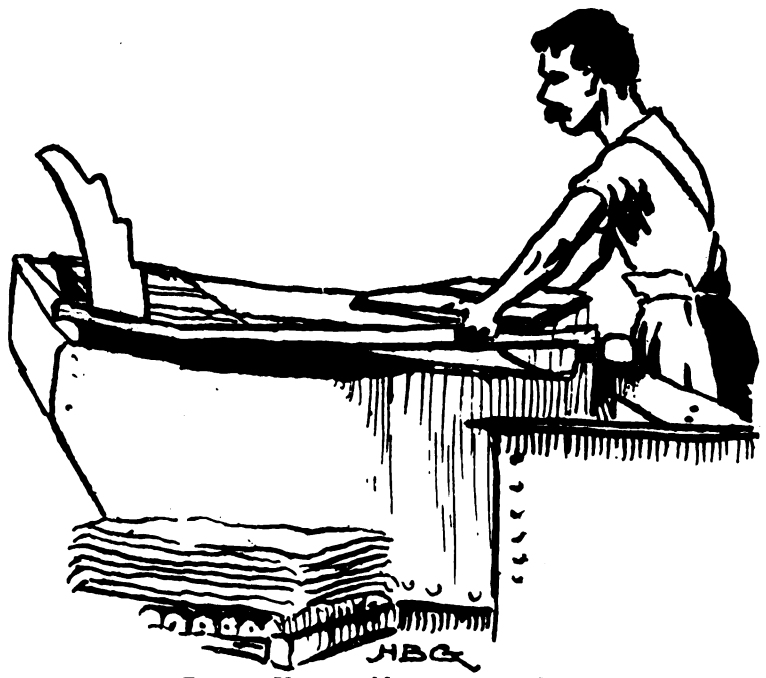

FIG. 2.—VATMAN MANIPULATING MOULD.

It is interesting to note that the output of the Hayle Mill is about three or four tons per week. The personnel of the staff of a hand-made mill, of course, does not change very frequently, and at Hayle Mill there are 24 workpeople who each represent the third generation, the craft having been handed down from father to son. In fact, there are five employees who represent the fifth generation.

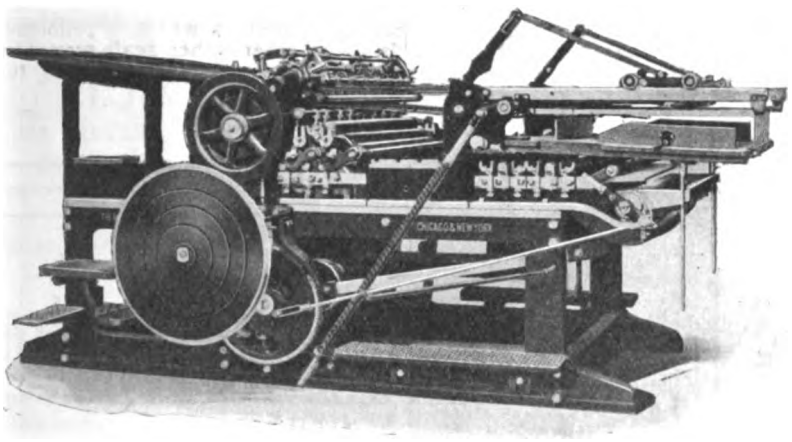
The . . .



American Miehle Company's Three-Roller Two-Revolution Press.

SPECIFICATION.

Type matter locked in Chase, 24 in. × 38 in.

Largest sheet which can be delivered, 26½ in. × 41½ in. (approximately Double Royal).

The Inking arrangements on this machine are adequate for all requirements. The Three-roller Press has a pyramid of eight rollers and riders over the forme, three of the rollers being inkers.

Gear side view of the American Miehle Company's Three-roller Two-Revolution Press.

Over-all measurements:

Width 7 ft. 10 in.

Length with sheet delivery 12 ft. 3 in.

Practicable speed per hour 2,400.

× ×

THE American Miehle Company's Three-roller Two-revolution Press will handle satisfactorily every class of work undertaken by the Jobbing Printer. It will print the heaviest and lightest formes with equal ease. It registers to a hair and delivers faultlessly. It is an American Miehle Company's Press, and is in no way inferior to that Company's regular Four-roller machine and bears the same high reputation.

This machine can be seen running by appointment.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

The Ethics of the Printer.

By GEORGE EATON HART.

Theodore Roosevelt once said that every man owes some of his time to the rebuilding of the profession to which he belongs, which all of us heartily agree with. But how few, comparatively, are there who are ready to make a real sacrifice in so worthy a cause! It cannot surely be urged that it is impossible, because the opportunities of service are so numerous and widespread, and as we live our lives and learn the lessons of life our very experience teems with opportunities, large and small, for passing on to others some of the knowledge which is accumulated through the growing years as they pass: it may be in a kindly word of advice, an inspiring word of praise, or even a remonstrance, or an emphatic reproof; it may be to impart to our fellows the value of education, and to inspire a young man's ambition to excel, guiding his mind and his hand by which craftsmanship and efficiency methods can be handed down to growing generations.

In respect of this alone, how much we are indebted to our fellows for whatever success we may achieve—to whatever position we may have attained! It is, then, in this spirit that I am addressing you, with a whole-hearted hope that some of the ideas and precepts, which I venture to offer, may in some small way tend to the uplifting of our craft, the cohesion and co-operation of my fellow members, and, above all, the well-being and prosperity of the printing industry.

The Printer's Character.

I suppose that as an industry our brethren are about as honest and upright and honourable as any other, but that is not saying very much. If I look back 30 or 40 years I should be rather inclined to believe that perhaps the printers were a little worse than most. There were plenty of good printers, but, compared with the present knowledge of business, of costing, and efficiency methods, we were indeed in a parlous bad way. No printer's job was safe from stupid competition from one month or year to another. It reminded one of a dog gnawing a bone, which is quickly seized by another dog, and yet another, each time the bone becoming smaller.

But since the growth of the M.P.A., the education of the printer, and, above all, the establishing of the Costing System, there has come a better understanding, brought about by co-operation and getting together to discuss and to combine for the prevention of that curse of ignorant competition which only a few years ago threatened the very extinction of the industry—a competition exhibiting some of the direst forms of business jealousy, which in itself is evidence of a low state of craftsmanship, and cowardly timidity of enterprise, leading oftentimes to actual criminal bankruptcy. For, in the aggregate, an industry depends upon its general excellence, which is impossible when blind and jealous competition is practised.

An address delivered on Tuesday of last week at a meeting of the South-West London Master Printers' Association.

The Bad Old Days.

These matters are of great concern to us who remember the bad old days, when profits were practically nil, with all the incumbent anxieties and poverty. Very few printers could buy new plant; they were even unable to replenish and supply material for the production of their output. Quality suffered, whilst economic production was out of the question. It broke the back of the master, and took the heart out of the workmen. It was not surprising to know that the master's only resource was to bring down wages, and thus beggar himself and the workman. Even in the early days of the linotype machine the entire advantage—and considerably more—was given to the consumer, owing to this fear of competition. Why I knew as a fact that linotype composition was sold at 6d. per 1,000 and a farthing allowed on return of metal!

It was not very surprising, therefore, that having been driven to the last ditch of poverty, printers began to realise the need of co-operation, and endeavoured to put the Masters' Association on a better foundation. The London Association was reconstructed, and the greater Federation of Masters throughout the entire country has brought into being a fellowship and a confidence in each other, which has developed a cohesion of interests which are mutual. The Costing System came and opened the blind eyes, and reciprocity and goodwill have been established. Don't for a moment imagine that the good work is completed. The tide is only at the flow. The uplift of the printer, great and small, depends upon himself. He needs Mr. Wise's enthusiasm for the great benefits which the Costing System ensures. I will endorse every word of Mr. Wise's eloquent testimony, seeing that I have established the Federation System in half a dozen of the largest printing businesses, with most gratifying results.

Wise Co-operation.

There are none so blind as those who will not see, and none more stupid than he who refuses to count his cost. If it were only the individual himself who suffered, it would not matter much, but his ignorance and obstinacy affects each one. We are maintained by our industry. Crass competition will ruin any industry. I don't mean that we are to bolster up inefficient plants or numskulls of printers, but to use our utmost endeavours to assist each other to obtain efficiency by intercourse, by education, by co-operation, and by study of the Golden Rule, which teaches us to do unto others as we would they should do to us. Neither do I mean that our friends and customers should not share the benefits of the latest machinery and best methods, but it is unreasonable to think for a moment that the whole, or even the greater part, of the benefit of our enterprise and brains, and capital, belong to him.

Year by year, as this co-operation continues and grows, the greater will be our prosperity, and the greater will be our efficiency, so that the apparently wide divergence of cost which frequently occurs between two houses, will be entirely removed, and a really just and useful competition set up, namely, not the lowest cut price, regardless of cost, but the best product and service, mutually advantageous to both buyer and seller.

There are, however, some points in connection with this cohesion and co-operarion which it is well to emphasise. There must be restraint, and there must be confidence in each other. The printer who has linotypes cannot be expected to support a price for hand work, neither should a printer using flat machines only, expect a rotary printer to charge his customers the higher price. He should, if possible, employ the specialised house to do the work for him, so that the customer might realise the benefit of specialised production. This principle applies to so many sides of the printing business, and is a matter which, for want of restraint and better understanding, has led to a good deal of difficulty and bad feeling.

Importance of Costing.

Costing, however, does play an enormous part in the success of any industry, and this, with the universal gathering in of all printers to the Federation, must be relied upon as the only means of lasting prosperity. The outstanding defect of the printer has been ignorance of cost and general business methods. He is probably a fine printer, and in his enthusiasm for his craft, and his anxiety to excel, loses his business balance, and, therefore, when a Costing System, such as the Federation System, is introduced, let the printer grip it to his heart and mind. It is not an individual system, but common to the whole body of printers. Its adoption can be made to suit any kind of business, and with that co-operation which I have emphasised, facilities are readily given to discuss all the minutiæ of cost, because it is on a common basis, whereby the costs of every department of a printing works may be compared and discussed, to the obvious advantage of each.

TYPOGRAPHY LINOTYPE

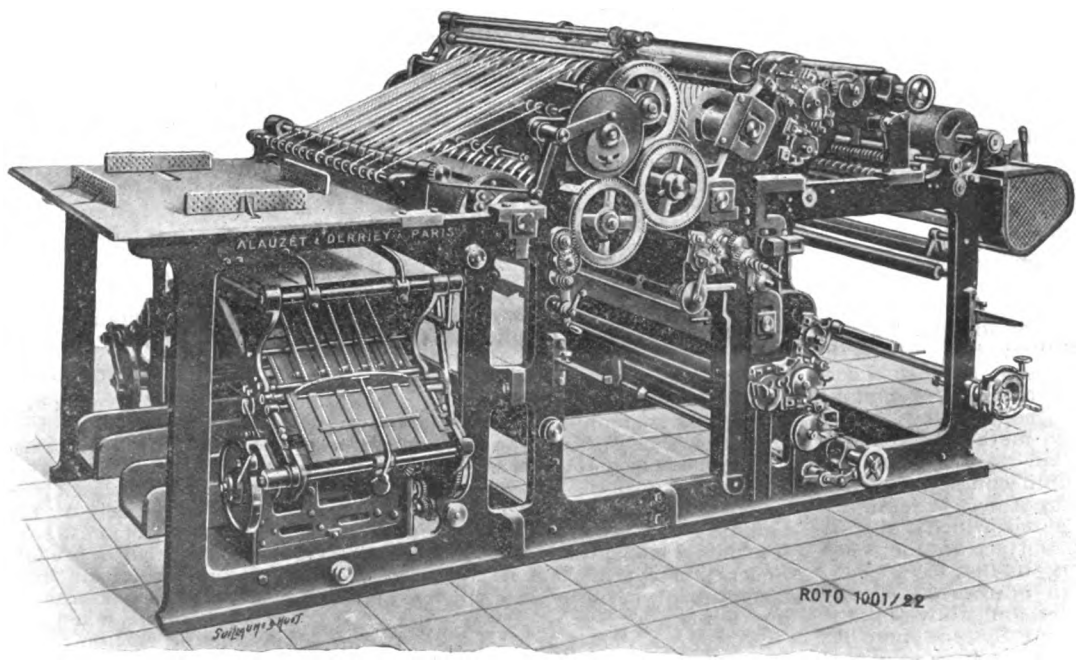
You can set *direct from the keyboard* any job on the Linotype in faces and bodies from 5-pt. to extended 36-pt.

The Linotype is built with varying magazine and distributor equipments to suit individual printers. In this way the user only pays for what he has actual use for, and can extend the equipment when necessity arises.

Over 43,500 Linotype composing machines have already been made and delivered to almost every part of the world. Thirty-six years' knowledge and experience are behind every Linotype sold to-day.

If you are in doubt concerning the best Linotype equipment for your purpose, send us samples of your work so that we can advise you accordingly.

Linotype and Machinery Limited



9 KINGSWAY, LONDON, W.C.2.

ALAUZET & DERRIEY, Réunis.

Materiel d'Imprimerie & Machines Outils (S.A.)

Main Office - - 81, Av. Philippe Auguste, PARIS.

WRITE TO-DAY FOR FULL INFORMATION ABOUT OUR PERFECT ALL-SIZE ROTARY PRESS.

ALL-SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

A Code of Ethics.

Our American friends are keenly alive to this, and some of the reports of the recent Convention in Toronto, are full of enthusiasm for both the better cohesion, and the universal adoption of the Costing System throughout America. Our American friends, too, not only enthusiastically bind themselves together for their mutual interest, but each one subscribes to a code of ethics set forth as a condition of membership. The following are a few of the items, and it would be as well for us to consider such a code of ethics :—

"That no sales below cost of production shall be made."

"That the firms which are members of this Group shall adopt a Standard Costing Accountancy and the rules for estimating adopted by themselves."

"That the spirit of courtesy, fair dealing and co-operation shall govern intercourse between members, and that information given in confidence by one member to another in any matter of business shall not be divulged to customers or others, or used in any way to the detriment of a member."

"Members shall not steal help from each other by promises of excessive rewards."

Non-Federated Unfairness.

In conclusion, I would ask, is it fair—is it honest—for printers standing outside the Association, to take all the advantages which that Association has given, and is giving, in watching the printer's interests nationally, in the matter of education, in regard to maintaining fair prices, and in its manifold dealings with trade unions? Is it fair, I say, that these outsiders should enjoy the undoubted advantages which the Association gives, and to which they neither contribute a penny, nor lift a finger?

Still, it is for us who believe in the value of co-operation to do everything possible to extend its usefulness. United we stand fast—divided we fall.

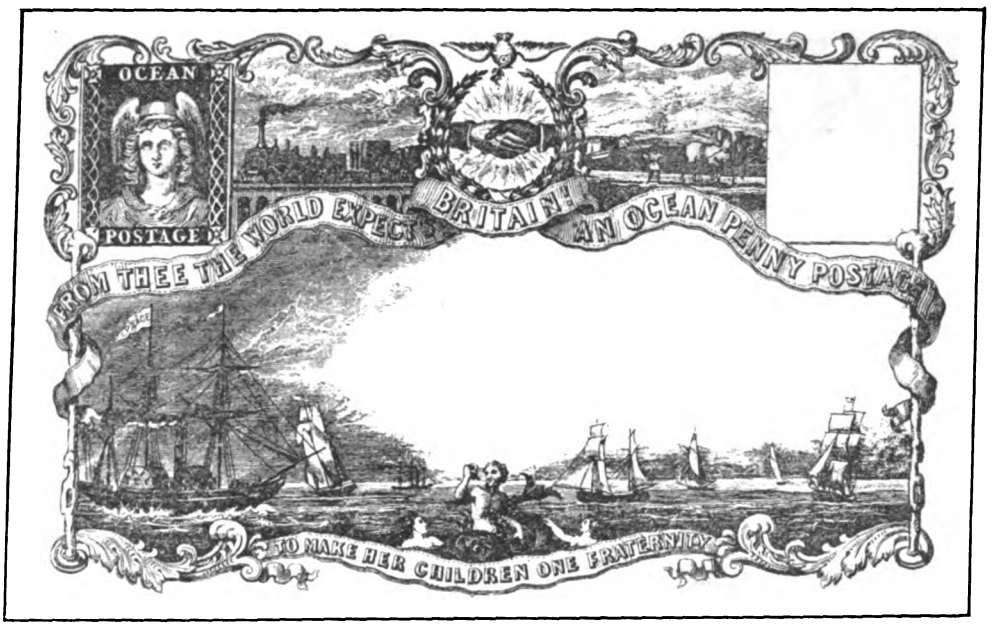
The Printing Trade in Russia.

A Little-Organised Industry.

Outlining the position of printing trade workers in Russia, *Russian Information and Review* states that a section of printing workers has recently been formed on craft lines, groups being organised where more than fifteen members of the section exist. The Central Bureau is in touch with thirty-nine provincial sections.

Wages policy hitherto has been carried out very irregularly and apart from the trade unions. The dispersed and disorganised condition of printing workers has made it impossible to insist upon the specific needs of journalistic and literary workers. The Central Bureau has studied the economic situation of literary work and the existing wages scales have been overhauled. They have now been published as decisions of the Commissariat for Labour and the All-Russian Council of Trade Unions. Printing works are now beginning to regulate the condition of their workers by means of collective agreements. The Central Bureau has worked out a typical collective agreement, which has received the approval of higher trade union bodies, and has been distributed to the localities. The Bureau, in conjunction with the People's Commissariat for Labour, has drawn up a list of special clothing and special foods to be supplied to printing workers, and this has been included in the typical collective agreement.

According to the information of the Central Bureau there are about 1,000 unemployed printing workers, but as they are distributed among various unions measures against unemployment are rendered difficult. So far, unemployment has occurred solely in the capitals and is not known in the provinces. Firms are still not accustomed to hiring workers through the labour exchanges and, consequently, workers do not apply to the exchanges. The fight against unemployment is, therefore, waged by sending workers from Moscow to the provinces where there is a demand for printing workers. Assistance to the unemployed members of the section is given by the trade unions in the usual way, as to all members of the union of Educational Workers.



PRINTED books and geographical maps may be imported into French Togoland free of duty.

Pictorial Stationery & Postal Rates.

Interesting Presentation to Mr. A. E. Goodwin.

The idea of pictorial stationery, notably picture post cards, very naturally links itself at the present time with the question of postal rates, since picture post card postage has been and is a prominent item in the campaign for cheaper postal facilities. Visitors to the headquarters of the Federation of Master Printers may now have an opportunity of inspecting a rare example of pictorial stationery no less than 83 years old, itself an historical link between pictorial stationery and the demand for cheaper postage

The example referred to is an envelope printed in 1840 by the well-known firm of Valentine, of Dundee, to-day one of the largest producers of picture post cards in this country. The envelope bears an elaborately engraved design (reproduced herewith), the aim of which was to call attention to the advantages of universal penny postage. From this design it will be noted that the promoters of that old-time postal agitation believed that the introduction of ocean penny postage would further the interests of British trade—a belief which is shared to-day by those who, both in the printing trade and outside of it, are demanding the return of the penny post for letters, the reintroduction of the unrestricted halfpenny postage on post cards, and a general cheapening of our postal services, which are such a vital factor of present-day industry. This pictorial envelope is, we understand, one of very few remaining copies of the 1840 issue, a rarity now valued by collectors, this issue being claimed to be the earliest example of pictorial stationery ever printed in this country.

An 1840 Example of Pictorial Stationery.

The envelope has been sent by Messrs. Valentine to Mr. A. E. Goodwin, secretary of the Federation of Master Printers, in recognition of the very useful work which Mr. Goodwin did last year in connection with the agitation for postage reduction. The envelope is mounted and enclosed in a frame bearing a tablet which reads: "Reduction in Postal Rates, 1922. Presented to Mr. A. E. Goodwin by Messrs. Valentine and Sons, Ltd., in appreciation of his services." It now hangs in the offices at 24, Holborn, and, though a relic of efforts made in the time of our grandfathers on behalf of cheap postal facilities, it is almost as appropriate to-day as when first printed. It should serve as a silent mentor to present-day printing trade leaders, continually drawing attention to the great part which the postal services play in the promotion of the printing industry and the general commerce of this country.

MESSRS. LINOTYPE AND MACHINERY LIMITED send us a pamphlet which makes impressive demonstration of the excellent effect of Ronaldson type as set by Linotype for book, magazine and catalogue printing.

Printing in South Africa.

The Troubles of the Trade.

Though printers in this country have much to grumble at in the way of bad trade, high costs of production, price-cutting and lack of organisation amongst employing printers, it would seem that printers in South Africa find themselves up against still greater difficulties of the same kind.

South African master printers met in November in annual conference, and from reports of the proceedings as published by the *South African Printer and Stationer* we gather that the general feeling was that the printing industry out there is passing through the worst period of depression in its history and shows no sign of early recovery.

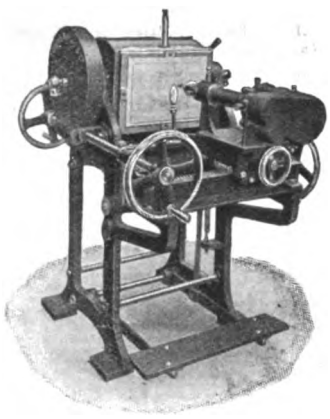
Organising Master Printers.

A step towards the much-needed strengthening of organisation amongst master printers has been taken by the engagement for the first time of an organising and costing secretary, who has, we understand by this time landed in South Africa. He is said to be "one of the finest of printing organisers," with a "considerable reputation" in the United States, Canada, England and Scotland.

We note that one of the troubles of employing printers in South Africa is the small proportion of really efficient men amongst linotype operators. Efforts are being made to establish grades of ability, with graded wages.

In South Africa, as here, organisation of the printing trade is much hindered by the different conditions ruling in regard to newspaper and periodical work as compared with the jobbing trade.

Marking Imported Printing.



The large proportion of printed matter imported is another of the troubles of the South African trade, and although the printers there do not demand protection by tariff, we note that the National Industrial Council of the Printing and Newspaper Industry has passed a resolution calling for the imprint to be made obligatory on imported printing. The terms of the resolution were as follows:—"That the Government be requested to insist on the country of origin being plainly shown on all printed matter imported from overseas by persons, agents, firms, companies or corporations carrying on business within the Union, and, further, that the Government be immediately approached with the request to put the Imprint Act of 1859 into operation; that imported printing be considered as falling under the Act; that the Act be made applicable to the whole of the Union as soon as possible; and that, if the Act proves defective in any particular, amending legislation be introduced next session."

ONE resolution I have made and try always to keep is this: "To rise above little things."
—JONATHAN EDWARDS.

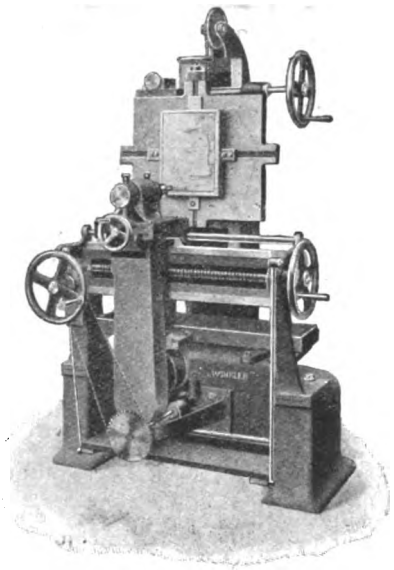
WINKLER Stereotyping Machines

SWISS MANUFACTURE

COMBINED ROUTER.

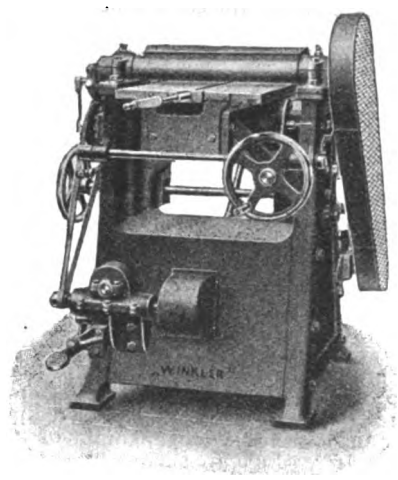
For Curved and Flat Plates. With Horizontal Cutter and Water Cooling.

AUTOMATIC MOULDING PRESS.



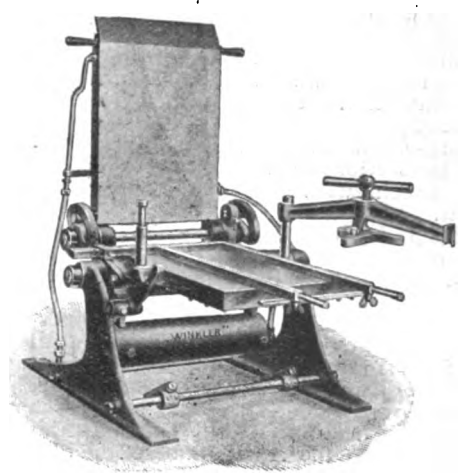
For Fine Art and Newspaper Moulds.

Electric or Steam Heated—for Dry or Wet Flong. Improves moulding results. Equals in capacity 3 Pneumatic Presses. Eliminates the Mangle. Restricts Moulding and Drying to one machine. Saves type, time, labour, power and fuel.



AUTOMATIC MATRIX DRYER.

Electrically or Gas Heated. The entire attendance consists in opening and closing the door of the drum.



ROUTING MACHINE.

For Flat Plates. With Horizontal Cutter.

BACK MILLING MACHINE.

With reciprocating Rotary Cutter. Automatic movement of table. Unexcelled precision of work. Saves make-ready. Eliminates the roughing machine.

BALANCED CASTING BOX.

With Electric Heating and Water Cooling. For type-high and pica plates.

Trade Notes.

WITH regard to process rights in the printing of Treasury notes, we understand there is a likelihood of further and very interesting litigation in the near future.

PARTNERSHIPS dissolved of the week include those between E. F. Hyde and A. V. Hyde, proprietors and publishers of the *Fish Trades Gazette*, 28, Monument-street, London, E.C., under the style of E. F. Hyde and Sons; H. J. Fearnley and N. G. Wilson, printers and stationers, 29, Paternoster-row, London, E.C.4, under the style of Fearnley, Wilson and Co.

CRAFT LECTURE.—In continuation of a series of technical lectures arranged by the Stationers' Company and Printing Industry Technical Board, an address on "The Printing Art" will be given by Mr. Harold Curwen (director, the Curwen Press, Plaistow), at Stationers' Hall, Ludgate-hill, E.C., on Friday, January 12th, 1923, at 6.30 p.m. The chair is to be taken by Mr. R. A. Austen-Leigh, president of the Federation of Master Printers. Mr. Curwen will have on exhibition examples of printing.

OWING to the bursting of a jar of nitric acid a lad named Cottle was severely burned last week at the works of Messrs. Goodman, printing machinery and ink manufacturers, of Crane-court, Fleet-street, by whom he was employed.

MALVERN Urban District Council have adopted the Health Resorts Act, 1921, to come into operation in the district on March 1st, 1923. Under this Act the governing body has the power to levy a penny rate for advertising.

IN the King's Bench Division, where work starts when the courts meet to-day, there are several libel actions in the special jury list including two newspaper actions, Clery *v.* the *Daily News*, Ltd. and another, and Jeal *v.* the *Daily News*, Ltd.

JUDGMENT for plaintiff for £20 and costs was given in Exeter County Court on Tuesday in a case in which William Mogridge, a labourer employed by the City Council, had sued the *Daily Express* and the General Accident Fire and Life Assurance Corporation, Ltd., for £20—£4 a week for five weeks—in respect of a cycle accident, towards which the Assurance Corporation sent a cheque for £4 "in final settlement," which Mogridge returned. Judge Terrell said the defendants set up defences that the action should have been against the Assurance Corporation and not against the newspaper company, but he found that the contract was with the newspaper company, and not with the Assurance Corporation.

PRINTING of diaries for use of members has been discontinued by Marylebone Guardians, who hope thereby to save £100.

PRINTED by hand, and containing spelling mistakes, bogus 10s. notes are reported to be circulating at Dundee.

KAISER POST CARDS.—Announcement is made that the first picture post card of the ex-Kaiser and his wife officially photographed at Doorn, is about to be placed in the markets of all countries at once. The card is to be issued by the firm of Weenenk and Snel, of The Hague, and it is understood that large consignments are now ready for the English market. The publishers are stated to have paid £2,000 for the world rights of reproducing the photograph in post card form. A few days ago they wrote to Messrs. Raphael Tuck and Sons, Ltd., offering them the English rights of sale. Sir Adolph Tuck told a *Daily News* reporter that he had replied, declining to have his firm associated with the sale of the post card.

AS A police inspector was passing the shop of Thomas Chandless, printer, in the Broadway, West Hendon, last week, an explosion was heard, and the window was blown out into the street. Fire was then seen to have broken out, and two people living over the shop were aroused, and were able to escape by the back of the premises. When the fire was extinguished the charred remains of Chandless, a man of 31, were found in the printing room.

PRESSURE on our space compels us to hold over for next week's issue a report of last week's meeting of the South-west London Master Printers at which Mr. George Eaton Hart delivered the address on "The Ethics of the Printer" reported on a previous page.

MR. W. B. HAMMOND, managing director of the Birmingham Lithographic Co., Moor-street, Birmingham, died on Wednesday, January 3rd, at Berrow, near Ledbury. The funeral took place at Bradwood End, Birmingham, on Saturday and was largely attended. Mr. Hammond was prominent as a Freemason.

THE death is announced at Nuneaton of the Rev. David Asquith, aged 78. Originally a ribbon weaver Mr. Asquith studied at Spurgeon's College, London, and later held appointments at Brixton and Nuneaton. Subsequently he gave up the ministry and became a journeyman printer.

THE death has occurred of Mr. Hugh Dellow, who retired from the London staff of the *Newcastle Chronicle* in 1919. He was apprenticed as a printer to Messrs. Mark and William Lambert, the then proprietors of the *Newcastle Daily Chronicle*. When the paper was sold to the late Mr. Joseph Cowen, the boy had the option of continuing his apprenticeship, and elected to do so. Mr. Cowen observed his industry and grit, and eventually gave him a position on the editorial side of the newspaper.

MRS SAWYER, 84, widow of the first proprietor of the *Wellingborough News*, was burned to death at Wellingborough, Northamptonshire, on Thursday afternoon.

THE death occurred at Basford on Friday of James Albert Wood, one of the directors of the well-known firm of Messrs. Wood, Mitchell and Co., Ltd., printers and lithographers, of Hanley.

THE death is announced of Mr. W. E. Ferguson, a Manchester journalist, who had been for some three years on the sub-editorial staff of the *Manchester Evening News*.

THE late Mr. William Palmer, B.A. (53), editor of the *Bedfordshire Times*, formerly editor of *Hazell's Journal*, left £3,725.

MR. JAMES WILLIAM JOHN MAYELL, of Euston-street, St. Pancras, wholesale newsagent, left £35,442.

MR. NEVILLE CHAMBERLAIN, the Postmaster-General, received on Monday a deputation from the Empire Press Union, who desired to obtain a statement of the Government's policy with regard to an Empire wireless system. Lord Burnham (president of the Empire Press Union) introduced the deputation, which was sympathetically received.

AT the meeting of the Association of the British Chambers of Commerce on January 17th, the Exeter Association will advocate the re-introduction of Inland sample post as it at present exists for foreign or colonial post, and modification of inland post restrictions for printed papers.

AT the meeting of the Geographical Association in London on Friday Lord Edward Gleichen, the vice-president, appealed for support for the Permanent Committee on Geographical Names, of which he is chairman. Was it (he asked) Kiau-Chau or Kyow-Chaw, Bucarest, Bucharest or Bukarest? Monthly lists of place names had been issued, but there was a danger of the committee's work ceasing through lack of funds. An income of about £500 a year was necessary to keep it going.

IT is reported from Holland that printing trade employers have decided on a lock-out to begin next week and that in the meantime the strike movement is spreading.

ANOTHER Italian daily paper has just begun publication in New York. Its title is the *Corrière d'America*, and the editor is Signor Luigi Barzini.

THE *Independance Belge* has been acquired by a group of Liberal politicians, and M. Alfred Madoux has been appointed its chief editor. He will continue to act also as chief editor af the *Etoile Belge*.

NATIONAL troops on Saturday night raided the premises where the *Republican Bulletin* is printed, and captured the whole of the printing press, together with a quantity of ammunition and a machine gun.

WE acknowledge and reciprocate the season's greetings sent us by Mr. Louis Flader, editor of the *Photo Engraver's Bulletin*, Chicago.

MESSRS. LINOTYPE AND MACHINERY LIMITED have now issued a well illustrated folder, giving particulars of Linotype Model Six, which has been specially arranged for the rapid composition of text and display matter up to 30 or 36 pica ems wide in bodies from 5-point to 36-point. It is equipped with two distributors and four magazines.

The Guillotine Peril.

Mr. Chas. H. Gillett, instructor of the bookbinding class at the Merchant Venturers' Technical College Workshops, Bristol, sends us the following forceful communication:—

"Reading in your popular journal of the unfortunate accident in which a cutter, employed by a Glasgow firm, lost both his hands, I am made to wonder—for the hundredth time—why the manufacturers of 'guillotines' still overlook the obvious necessity for an adequate safety device to minimise these too numerous occurrences.

"The long-standing method of fixing a 'safety' lever just below the table of the machine, and that for hand manipulation, in my humble opinion borders on the ridiculous. Of what use is such an arrangement to the man who has both hands caught by the automatic clamp? To get an idea of what is required, let us follow up the features of an accident similar to that previously mentioned. The man is about to cut a small quantity of paper (you will note my reason in saying *small* quantity), and after placing it against the guide, he discovers a sheet or two out of position. Naturally, the correct procedure is to take out the paper and 'knock-up' again; but to save time he passes both arms under the knife with the intention of placing the sheets into position with his fingers. By some means the machine is accidentally started, and before the cutter can realise his precarious position, the clamp is upon his arms. Now, of what use is the 'safety' lever as it is placed to-day? Absolutely useless! The cutter's hands are held by the clamp and his right foot is probably on the clamp-treadle.

"It seems to me that a genuine safety device can be worked with the lever in such a position as to be easily put in action with pressure from the outside of the right knee. I say the *right* knee for the simple reason that it is more automatic in its action than the left, and besides, the left leg is carrying the whole weight of the body."

A STRIKE of members of the National Union of Printing and Paper Workers, Machine Rulers and Bookbinders against the introduction of non-union labour is in progress at the three works of Messrs. Samuel Jones, gummed and coated papermakers, of Peckham-grove, Peckham, Upper Thames-street, and Bridewell-place, E.C. About 300 men and women are affected.

A STRIKE of printers in Lyons has commenced, and newspapers are affected.

THE *Wigan Observer* celebrated its seventieth anniversary on Saturday.

Printers' Managers and Overseers ASSOCIATION.

Parent Association's January Meeting.

At the January meeting of this Association, held on Tuesday of last week at the "Old Bell," Holborn, a short but interesting business agenda was followed by an enjoyable smoking concert arranged by the lecture and entertainment committee. There was a good attendance, with the president, Mr. S. M. Bateman, in the chair.

On the reading of the minutes of the December meeiing, Mr. A. W. Hart again raised the question of the relationship of the general fund to the local fund, and said his question at the last meeting had not been understood. What he wanted to get at was the amount of unemployment money paid out to Parent Association members during the year ending October 30th. The general fund report, to which he had been referred, did not meet the case, as the figures therein were up to April only.

The general secretary replied, explaining the difference between the position in London and in the Centres, the latter having to prepare only one balance-sheet in the year, whereas London had to produce two, one in April for the general funds and one in October for the local fund.

A new member was duly elected in the person of Mr. M. J. Odell (W. H. Smith and Son, Stamford-street, S.E.1; overseer—composing department). Mr. J. W. Tilley, elected at the previous meeting, was now present for first time, and both Mr. Odell and he received a personal welcome from the president.

Annual Dinner to be Revived.

The next business was a recommendation by the Council "That the Association Dinner be revived." This led to some interesting discussion, ending in agreement to revive that enjoyable function.

The general secretary explained that the council had discussed the matter and thought it desirable that the dinner should be revived. They had, however, not proposed any date nor gone into the matter of the probable charge. He thought a moderate estimate of the cost would be about £50, which would include the sending of invitations to the Centres. The Council thought that before embarking upon the dinner they should circularise the members by means of reply post cards, whereon it would be necessary simply to fill in whether or not members intended to be present. He moved: "That the Association Dinner be revived, and that the Council take such steps as they deem necessary to that end, the Council to circularise members to ascertain what measure of support would be accorded."

Mr. A. H. Wilson seconded the motion, expressing the hope that if the dinner were revived invitations would be extended to ladies.

The proposition was then put to the vote and carried *nem con.*

Mr. Wilson, at the suggestion of the chair, put as a separate proposition his suggestion that if there were sufficient support to justify the holding of the dinner, ladies should be invited.

Mr. J. J. Smith seconded.

Mr. Bateman recalled a previous occasion on which, he said, it had been proposed and carried that ladies should attend the dinner, but only two ladies had been present.

Mr. W. H. Gill thought that that had been due to misunderstanding as to ladies being admitted.

Mr. G. Phillips recalled that before the war the deficit of the annual dinner had worked out at something like £30. He thought the general secretary was right in reckoning it now at £50, but if they invited ladies that amount would be doubled.

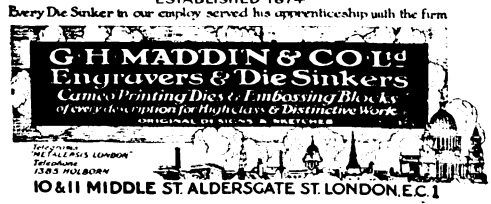
Mr. Whittle explained that he calculated that about £50 would cover the expenses, including invitations to ladies from the centres.

The chairman said he thought the deficit would be between £60 and £80.

A query having been raised as to whether the attendance of ladies would be popular, Mr. E. H. Berryman pointed out that members' recollections of previous annual dinners dated back to before the war. Since that time many important events had occurred, and ladies were now in a position much nearer to equality with men than they were 20 years ago.

It was agreed that the dinner should not be held on a day other than Saturday.

The proposition to invite ladies having been put to the vote, it was carried by a majority of over two to one.



Business having been thus concluded, a beginning was made with the smoking concert, which was heartily enjoyed by those present. The novelty of the evening was a series of clever sleight-of-hand tricks by Mr. J. A. Esler, whose skill in making coins materialise out of the air, causing playing cards to appear and disappear, and various other illusions, thoroughly mystified his audience. Other items by Mr. Esler included some quick-change impersonations of illustrious people, characters in opera, etc., also some bewildering manipulations of folded paper, which was made to assume a surprising variety of shapes. Mr. Russell Coultart's tenor or baritone songs received applause thoroughly well merited; he uses a fine voice with great feeling, and chooses some excellent pieces. Songs by Miss Bertha Willmott and Miss Lily Davis, though in very different vein, were also cordially received, the former being an exceptionally vivacious comedienne. Mr. Harry Hawksbee also gave several songs, including his quaint character piece, "The Poetical Tramp." The pianist and accompanist was Miss F. Martyn.

A vote of thanks to the artistes, moved by Mr. S. A. Dawson and seconded by Mr. J. Acton, was cordially carried.

The president wished all present a happy and prosperous New Year, members then joining hands in the singing of "Auld Lang Syne."

SUBSCRIBERS to the Printers' Pension Corporation will find in the candidature of Mrs. Fanny Allen a good opportunity of bestowing any spare votes they may have for disposal. Mrs. Allen, widow of the late Mr. R Allen, who was a subscriber to the Corporation funds, is seeking election in March, and has the strong recommendation of a large number of prominent gentlemen.

MESSRS. B. WINSTONE AND SONS, LTD., the well-known makers of printing inks and printers' sundries of all descriptions, send us a hanging wall calendar which by virtue of its striking colour scheme stands out in distinction from all other calendars which have this year come our way. The Winstone ship, in brilliant scarlet, is seen progressing over the waves surrounded by a pseudo rainbow of very vivid hues. Whilst startling in execution, the whole design is pleasing and bears striking testimony to the brilliance to which the present-day ink-maker can attain.

WASTEFUL OPERATIONS

are admitted to be the Greatest Obstructions to Profits

THE costliest element in the production of Photo-Mechanical work is the workmen's time. Save time and you save money. Save time and improve quality and you make money. The formula is simple enough and it is no secret.

In making use of the service rendered by Pictorial Machinery Ltd., you have it within your power to standardise Process Photography in a manner that will prove most helpful to you. Standardisation of Process Photography means standardisation throughout the shop.

"Pictograph" and "Lithotex" plant and devices simplify the work, lighten the worker's task, improve quality. There is plenty of evidence at hand to verify these statements.

Pictorial Machinery Ltd., are craftsmen working for craftsmen. They maintain an Instructional Staff of expert process men. They make fine Cameras and Stands—the "Pictograph" Camera Outfit has received the highest praise. Agents for the Douthitt Diaphragm Control, the true friend of the Camera operator.

"Pictograph" Standard Chemicals are reliable standardised products guaranteeing the uniformity of solutions.

"Pictograph" Pedestal Lamps, Economical Negatives, Collodions are all products manufactured solely by Pictorial Machinery Ltd.

THURSDAY, JANUARY 11, 1923.

A Prince of Printers.

WE believe the whole of the printing trade is gratified to learn of the compliment paid to Mr. James MacLehose by way of the dinner which we report on another page, a function which the present president of the Federation of Master Printers fittingly characterised as "a signal honour." During his term as Federation president, Mr. MacLehose earned the respect of the entire industry, trade unionists as well as employers, and his example of statesmanlike leadership remains a valued possession of the craft. The Scottish Alliance had forestalled the Federation by presenting the late president with his portrait, painted by a distinguished Scottish artist, and Mr. MacLehose declined to accept any further tangible recognition of the high services he had rendered. Those services were not confined to labour negotiations, and his powerful advocacy of the claims of the printing trade for fair treatment in the matter of postal rates and railway rates are notable amongst the many activities for which his name will long be honourably remembered.

* * *

Indispensable Advertising.

NOT every firm in our own industry is yet fully alive to the place which advertising plays in present-day business. Non-advertisers would do well to ponder the striking object lesson provided this week by the announcement that the famous blacking firm of Day and Martin, immortalised for the readers of Dickens, is likely to pass into new hands, and that the decline in the fortunes of this world-renowned house is attributed, in part at least, to the cutting down of their one-time extensive use of printers' ink on the hoardings and in the printed page. To achieve success in the trading conditions of to-day it is necessary not only to produce satisfactory goods and to render satisfactory service, but it is essential also to tell prospective customers about it—and to keep on telling them.

Industrial Welfare.

OF all the influences which have been at work in industry during the past four years the industrial welfare movement is perhaps one of the most significant. Directed by a council comprising a member of the Royal Family, captains of industry and leaders of labour, and including among its members the most influential firms in the country, the Industrial Welfare Society can claim a record of usefulness at least equal to that of any voluntary organisation. In that fact is to be seen the secret of the results, far-reaching and involving considerable amendments to current industrial policy, which have been achieved. For industry, as regards its personnel, is working out its own salvation. There is no path of roses to the peace of industry which is essential to the re-establishment of British prosperity. No legislation can remove that spirit of suspicion and antagonism which is the most effective barrier to industrial progress. The Industrial Welfare Society believes that now, when trade conditions are poor, is the time for putting the industrial house in order. The Society's programme in brief is the safeguarding of the health, safety and general well-being of the workers. The sneer of "coddling" is both easy and unintelligent, for it is obvious that, apart from any humanitarian considerations, the financial loss to both employers and workers through sickness and accidents is enormous. The movement appears to be infectious. In one small town in Lancashire of less than 20,000 inhabitants there is an extensive scheme in connection with collieries, another—probably as large—in cotton mills, and a third organised by a firm of manufacturing chemists. It is encouraging to learn that the accident prevention service which is being developed for its member firms by the Industrial Welfare Society is arousing considerable interest among all classes of manufacturing concerns. Each official report on accident statistics which is issued reveals the terrible risks which are encountered by the careless worker. It is impossible to underestimate the importance of educating the workers in safe practices. The number of killed and injured in industry runs well into six figures every year and the result is untold misery for the workers' families, and enormous financial loss through lost time and compensation adds further obstacles to national productivity.

* * *

Australia and Canadian Paper.

NEWS is now to hand which purports to give the result of the negotiations which have been undertaken with a view to obtaining for Canadian pulp and paper more favourable treatment in Australia. It will be remembered that when a preference was given to British paper, our Canadian friends at once took the matter up with a view to obtaining similar concessions. It was for this purpose that the Hon. James Robb, the Canadian Minister of Commerce, went to Australia. Apparently he has now completed his task successfully. At all events the preliminaries for a reciprocal trade treaty are said to have been arranged, the main provisions of which, it is understood, are that Canada grants preference to Australian dried fruits, receiving from Australia similar concessions for Canadian pulp and paper.

MESSRS. SLATER AND PALMER, the printing ink makers of 4, Wine Office-court, London, E.C.4, send us a wall calendar which carries a month's dates to the tear-off sheet, the sheets bearing also half-tone illustrations showing the effect of specified shades of S. and P. ink. They send also a useful diary pad each tear-off sheet of which has ruled sections for six day's entries, with the month's calendar in a top corner, a handy addition at the back of the pad being complete calendars for 1922, 1923 and 1924, together with a selection of postal regulations.

Mr. James MacLehose Honoured.

Brilliant Function at the Connaught Rooms.

The dinner given at the Connaught Rooms on Monday evening in honour of Mr. James MacLehose, M.A., LL.D.—president of the Federation of Master Printers, 1921-22—proved a brilliant and thoroughly successful function, serving to make very impressive demonstration of the high respect entertained for Dr. MacLehose by his colleagues in the printing industry and of their appreciation of his untiring efforts and successful work during his term of office as president of the Federation.

Mr. James MacLehose, M.A., LL.D.

About 150 ladies and gentlemen sat down to dinner, the party being thoroughly representative of the Federation's widespread activities. At the top table were: Mr. James MacLehose, M.A., LL.D., and Mrs. MacLehose, Mr. Alexander MacLehose, Mr. Norman MacLehose, Miss MacLehose, Miss A. MacLehose, Mr. and Mrs. R. A. Austen-Leigh, Sir Frederick and Lady Macmillan, Mr. E. G. Arnold, Sir William Waterlow, Sir James and Lady Owen, Lieut.-Col. H. Rivers, Mr. and Mrs. V. Knapp, Sir Meredith Whittaker, Brig.-Gen. W. Wright Bemrose and Mrs. Bemrose, Mr. Alfred F. Blades, Sir Cecil Harrison, Mr. E. W. Humphries, Mr. Harry Cooke, Mr. Robert Wilson and Mr. W. B. Wykes.

At other tables were—to mention only a few well-known names: Mr. F. Armstrong, Mr. and Mrs. E. C. Austen-Leigh, Mr. H. C. Bolton, Mrs. and Miss Bolton, Mr. J. R. Burt, Mr. C. Clay, Col. G. C. K. Clowes, Mr. W. A. Clowes, Mr. R. B. Fishenden, Mr. A. E. Goodwin, Mr. D. Greenhill, Mr. and Mrs. G. Eaton Hart, Mr. C. T. Jacobi, Mr. and Mrs. A. Langley, Mr. P. D. Michael, Mr. G. Reveirs, Mr. J. R. Riddell, Lieut.-Col. J. R. Truscott, Mr. G. S. Unwin, Mr. W. Whyte and Mr. A. Williamson.

Mr. R. A. Austen-Leigh, the present president of the Federation, was in the chair and proposed the health of the guest of the evening. He alluded in eloquent terms to the splendid services of Dr. MacLehose, his speech being brimful of witty references, which were fully appreciated by those acquainted with the inner working of the Master Printers' organisation.

In reply, Mr. MacLehose referred to the work done by the Federation during his year of office, including the arrangements for a reduction of wages. Speaking of the relations between employers and employees, he said that much had been said in the pulpit and occasionally in the Press about the alleged ill-will that was assumed to exist between the two parties. He would like to say very emphatically that he saw none of this. The questions discussed at conferences with the trade unions were highly contentious, but much was gained by these frank discussions. Not only were settlements eventually reached with all the trade unions, but he would always be proud to remember that, although for many months it fell to him to preside at these constant conferences with more than a dozen trade unions, and that the interests of a quarter of a million workpeople were involved, he had not once to call anyone to order or to ask for the withdrawal of an angry word. He was constantly impressed with the desire of both sides to arrive at a reasonable solution of the particular problem in front of them. Employers and employees were rowing in the same boat, and real progress could only be made if all pulled together. Referring to the question of unemployment insurance, Mr. MacLehose said the conditions to-day were very different from those obtaining a few years ago. Then some people held that every capable workman in the printing industry could find employment. That might or might not have been true a few years ago, but certainly it was not so now.

Sir James Owen, president of the Newspaper Society, proposed the toast of the Federation of Master Printers, and Lieut.-Col. H. R. Fletcher responded.

The guests received copies of an excellent photogravure portrait of the guest of the evening, and the occasion was marked also by a folder quaintly produced in old-fashioned style containing the menu, toast list, etc., this being "Imprinted at London, by S.B., dvvelling at the sign of the Falcon in New-ſtreet sqvare, near to Fetter Lane."

Personal.

SIR WILLIAM and Mr. J. Gomer Berry have recently appointed Mr. Geo. Eaton Hart, managing director of St. Clements Press, their technical adviser in connection with the whole of their printing establishments, with offices at 186, Strand. Mr. Hart will in no way relinquish his interest in, or control of, the St. Clements Press.

CONGRATULATIONS to Mr. John Murray the Fourth, head of the world-famous publishing house, who has just completed the jubilee of his association with the firm, which he joined on January 1st, 1873.

MR. A. E. MIST, the general secretary of the Stationers' Social Society, has been made the recipient of a little surprise testimonial. Recognising his whole-hearted work on behalf of the Society, the president (Mr. Lionel Savory) and the members of the various committees decided to give him a tangible token of their appreciation. Accordingly they presented him with a silver sugar caster and cream jug.

MR. J. PENDEREL-BRODHURST, who for 17 years has been the editor of the *Guardian*, has been the recipient of a handsome gift in silver on retiring from that position. The gift was handed over by the managing director, Mr. W. J. B. Odhams.

MR. WILLIAM HEENAN, who was for more than 50 years a member of the editorial staff of the *Newcastle Chronicle*, recently underwent a serious operation and has left the private nursing home after making a satisfactory recovery.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

The January meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4, the president (Mr. A. W. Hunt) occupying the chair. The attendance was not quiet up to the usual standard, but in spite of this a most interesting evening was spent, a paper being read by Mr. Geo. A. Eden on the subject of the "Church Organ," the author being the late Mr. Thomas Vine, who was for twenty-six years organist at St. James' Presbyterian Church, Wood Green.

Before the actual business commenced the president took the opportunity of extending to the members on behalf of the executive and himself the greetings of the season.

After the reading of the minutes, which were confirmed, several items of correspondence were submitted.

In one letter included in the correspondence it was shown that a member had been able to secure a situation, and the secretary said he was sure the members would feel grateful to Mr. A. S. Long for having brought the vacancy to the notice of the Association.

Mr. A. C. Ware, one of the stewards for the Bohemian Concert to be held on February 3rd at the Talbot Restaurant, London-wall, said the arrangements for that event were completed, and that the tickets would be ready in a few days.

The secretary next read an appeal on behalf of the Lloyd Memorial Home from Mr. H. F. Parker. Mr. J. Lee proposed and Mr. A. J. Daines seconded that a sum of four guineas be granted. The proposition was carried.

The paper was then read by Mr. Geo. A. Eden. It dealt in an interesting manner, first with a description of the intricate construction of the organ, and then with its inception and early association with many well-known cathedrals, churches and halls.

In a subsequent discussion, to which the President, Messrs. Aves, Daines, Cox and others contributed, it was clearly evident—though varying views were expressed as to the merits of the church organ—that the lecture had been of a very instructive character.

Testimony to this was shown by the hearty vote of thanks which was afterwards tendered to Mr. Eden for bringing the subject before the members.

Before closing the meeting the chairman announced that the annual dinner had been fixed to take place on April 21st at the Connaught Rooms.

The Bookbinder

British Pre-eminence in Bible Binding.

It is fitting that our own nation, which has distinguished itself above all other peoples in its reverence for, and popularisation of the Bible, should hold the foremost place in the material craftsmanship of printing and binding which goes to the multiplication of copies of the "Book of books." It is no exaggeration to say that the workmanship to be seen in British-produced Bibles stands as the high-water mark of the printing and binding achievements of the whole world. Of the printing we are not here particularly concerned, though the best Bible printing done in this country is surely a model of what such work should be. One recalls the minute care bestowed upon the accuracy of the printed word—the Oxford University Press going so far as to offer a guinea to anyone who can point out a misprint. Moreover, the pitch of delicacy and perfection of impression to which letterpress printing attains in the production of the small-volume Bibles on paper of the thinnest of substances yet strong and opaque—this, surely, can hardly be surpassed.

It is, however, of bindings that we are primarily thinking at the moment, and here too any one who is familiar with the skilled labour that goes into the covers of the best British-made Bibles must realise how difficult it would be to outshine the craftsmen who do this work. Indeed it would seem that other nations—even the emulative United States—are content to leave the laurels in this class of work to the binders on this side of the Atlantic.

Of the various binderies in this country which handle Bible work it would be difficult to single out one as the most meritorious. The bindings done by the leading Bible printers come at once to mind. Some fine work is carried out at the bindery connected with the Oxford University Press, though we believe most of the binding of Oxford Bibles is done in London; a big expansion of the Oxford bindery is, however, promised for the near future. The Cambridge University Press is in a somewhat similar position, only a little bookbinding work being done at Cambridge and the bulk in London. Then, of course, magnificent Bible work is done by the large bookbinding department of Messrs. Eyre and Spottiswoode, the King's printers, as well as by a number of other firms.

Perhaps, however, the most interesting establishment associated with Bible binding is one which now, we believe, no longer has its own bookbinding department, though in the past it held a unique position in the field—we refer to the house of Samuel Bagster and Sons, Ltd., of Paternoster-row. This famous Bible house claims that its own history is the history of the Bible in its present form, and the firm's association with the Bible is connected not only with the printing of the contents but also, in most meritorious fashion, with the binding. In regard to the inside of the book, by the way, it is interesting to recall in passing that the use of India paper was first made, not by the Oxford University Press, as is commonly supposed, but by the house of Bagster. The first Oxford Bible on India paper was produced in 1842, whereas Mr. Robert Bagster recalls that in the year 1828 the Bagster House printed an edition on this paper. It so happened that in the year 1909 Mr. T. G. Larkin, who for 42 years has been connected with the house of Messrs. Cromptons, of Bury and London, who are the manufacturers of the celebrated "Cambridge" India paper, was inspecting the Bagster early editions of the Bible, and in the particular one referred to was found the following inscription: "This book was one of the two copies printed on India paper for Lord Spencer, date 1828. One copy of this print was sent to Lord Spencer, the second being our file copy." Thus Messrs. Bagster had in their possession an edition on such paper 14 years before the edition of the Oxford Press. In the Rylands Library in Manchester is Lord Spencer's copy, which was originally in the Althorpe Library.

Besides being first in the field in this matter of paper, the Bagster House has pioneered some valuable binding developments. It was in 1816 that Mr. Samuel Bagster, founder of the firm, introduced what has since become so familiar a feature of the Bible, namely, the flexible binding. Before that date all Bibles had been bound with open backs—stiff unyielding, easily broken, and not adapted to lie open. Mr. Bagster made the notable innovation of a flexible tight back, and, by sewing the sheets with a very thin thread, or with silk, secured strength whilst preserving flexibility. The modern Levant morocco, now so common, was then but little known, and he not only used the Turkey grain, but for some years used prepared seal skins, and most of the covers so much admired for the "pin-head" grain were really seal skin and not morocco.. Many of these books were most daintily blind-tooled by hand. Messrs. Bagster have been awarded no less than six medals for flexible binding.

Not every bookbinder knows the origin of the well-known "Yapp" or "Yapped" style of binding. Here is another important innovation which has to be credited to the house of Bagster. It originated in 1865, when Mr. Yapp, an intimate friend of the Bagster family objected to having the corners of his Bibles cut in the style known as "circuit." The new method was named after Mr. Yapp, and soon became universally popular, until at the present day it is calculated that at least nine-tenths of Bibles are so bound.

Other Bagster innovations include the introduction (both in 1892) of Bibles with index on fore-edge and Bibles with button fastening.

It was an enthusiastic love for the Bible that led the first Mr. Samuel Bagster to specialise in Bible production, founding the firm to which the bookbinding trade owes so much. Doubtless it is the British love for the same sacred writings which has given our nation its pre-eminence in the binding of Bibles, a distinction, be it hoped, which future years will see not only maintained but enhanced.

Bookbinding Notes and News.

A Difficult Trading Year.

The bookbinding industry is looking to better results from 1923 than were secured from last year's trading. Not many houses can have emerged from 1922 with a respectable profit, and indeed it is to be feared that the great majority of them must have incurred actual loss. With cut prices, profitable manufacture may result, provided there is a full reservoir of orders. But when idle machinery and cut prices work together profit is a hopeless proposition. Unfortunately, a greater part of the price cutting is being done unconsciously, because exact costs are unknown. It remains for the auditor to demonstrate results. This should be a humiliating position for any business house with any pretence to organisation and control. Not for one moment do we pretend that a system of cost finding and recording will show accurately the result of a period of trading; what it does do, however, is to give a clear and concise indication of what may be expected and the reason why.

A New Year's Resolve.

If there is any New Year's resolve on the part of the bookbinder, it should be to charge out work on a paying basis. That involves knowing the basis. If there are any who do not know it, it is the number of hours a job takes and the cost per hour for doing it—apparently something that every binder in business will claim to know out and out, but in reality something which it has taken twelve years to evolve a plan for finding out approximately. So that if a binder resolves to make his work pay, he by inference resolves to investigate and understand his costs. That is home work of an interesting order, which puts a pleasure into business.

Wages and Other Costs.

The wage drop which took place in the provinces last week marks the last instalment but one towards stability. Taken all round, bookbinding costs are firm and level. Wage drops were accounted for long ago, and costs of production apart from the wage factor are steady and stable. Rents, rates, power, light, heat, salaries and all the elements that go to make up departmental and overhead on costs are not in the least likely to strike a downward track of any noticeable decline. Looking around the markets, one finds the same condition visible, and no marked downward tendency can be anticipated in any direction. Such a state of affairs should inspire confidence on the part of the consumer, and it should strengthen the hands of the bookbinder in his buying of materials. It is well known that a lot of work has been held back on account of price and prospect, while among the larger users of books stocks are low. There is every incentive now to go ahead, and we believe that, granted no unfavourable development, the industry will find each succeeding one a better month of trade.

The Leather Market.

Leather prices are where they were last month and where they have been for the best part of a year. As usual, there are a lot of clearance offers about following stocktaking, some of them of real value and others requiring careful examination. The shrewd buyer tests on appro. before committing himself to leathers from a list and all reputable merchants willingly accede to his requests.

Paste Price Reduction.

From January 1st the price of white paste in the moist form is reduced to 14s. per 2 cwt. cash, a concession which will be appreciated by bookbinders and boxmakers generally.

Board Prices.

Foreign strawboards are quoted round about £9 15s. per ton for 6 to 18 oz. with the usual 25s. per ton extra for heavier weights in the unlined variety. Linings are twice the price of pre-war. First quality glazed leather-boards are listed at £18 10s. per ton, second quality at £18. White wood pulp boards are firm at £20 per ton and stocks are low.

Textile Materials.

Calicoes are on offer at prices ranging from 5¼d. to 7d. per yard 36 in. wide. For bookbinders' account book linings of good quality

Digitized by Google

5¼d. is about the right figure. Cheaper grades for boxmaking and common lining are available at special offers. Bookbinders are anxiously hoping for a general drop in textile materials, but current information does not justify anticipation.

Fancy Papers.

Fancy papers are available in wonderful variety for both boxmaking and bookbinding. The most dainty and effective grades are those of French origin on which a reduction was recently announced. German speciality papers at cheap rates are once again a prominent feature of the fancy paper trade. The most serviceable and cheap popular line that we know is the production of an English mill.

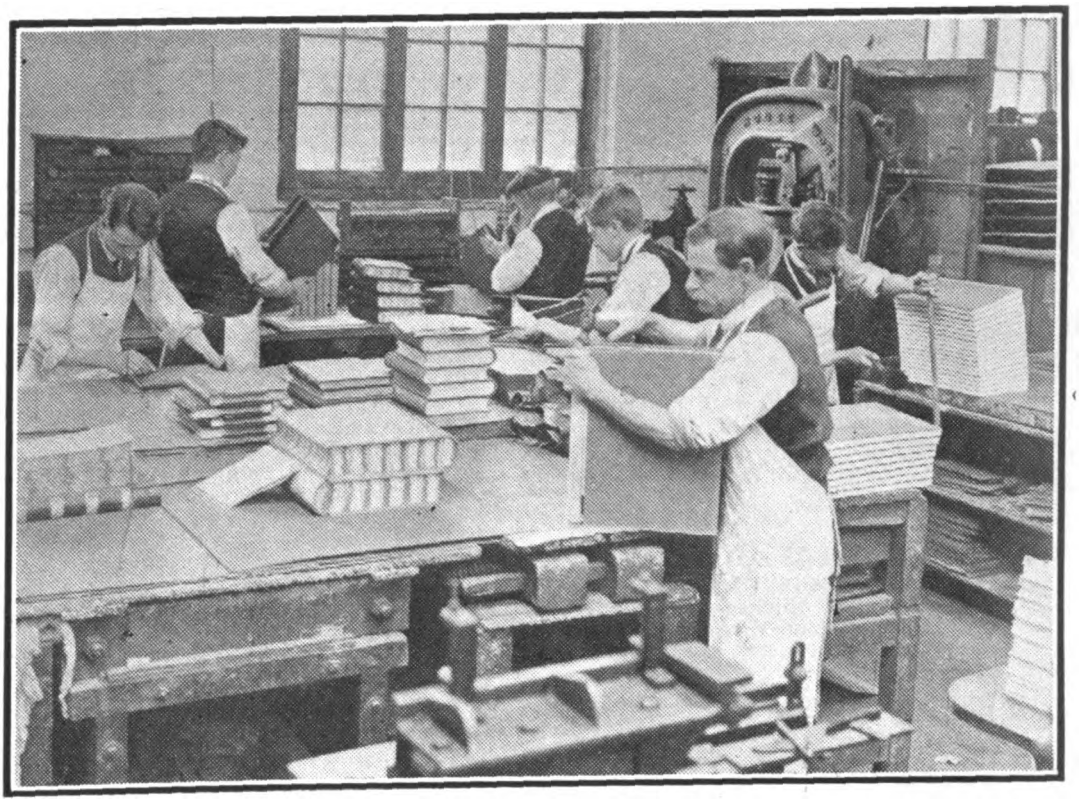
Binding and Printing Material for EGYPT.

With reference to the requirements of the Government Press, Cairo, which invites tenders for the supply of binding and printing material required for the year 1923-4, we are informed by the Department of Overseas Trade that tenders will be received by the Superintendent, Government Press, Bulaq, Cairo, up to noon on January 21st, 1923, and will remain in force for twenty days from that date. A tender deposit or letter of guarantee is required. Local representation is essential. To United Kingdom firms unrepresented there the Department will be pleased to give the names of firms in this country with branches in Egypt who may be prepared to handle tenders on behalf of third parties.

A set of the documents relating to this contract, as well as samples of binding materials, can be seen by United Kingdom firms interested on application to the Department of Overseas Trade (Room 45), 35, Old Queen-street, London, S.W.1. An additional set of the documents is available for loan, in order of application, to those firms who are unable to inspect them in London.

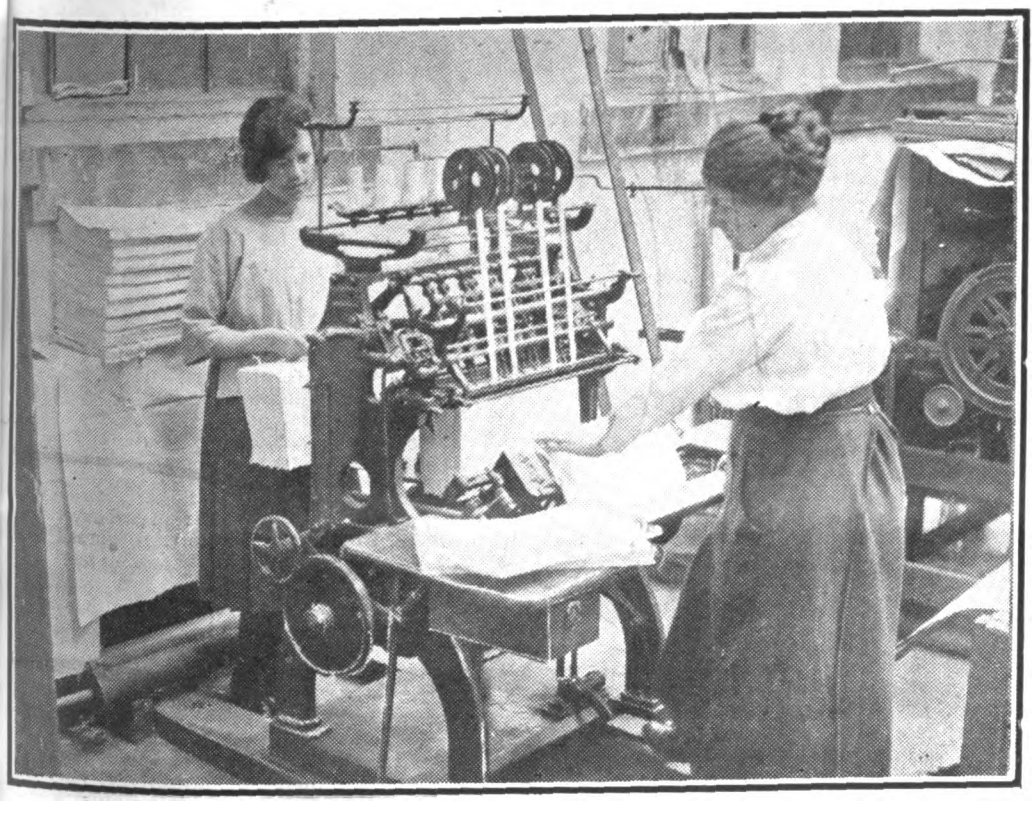
IN connection with the Stationers' Mutual Benefit Society, Mr. T. J. Hunt is arranging to hold a committee dinner at the Falcon Hotel, Gough-square, on Saturday, February 3rd.

A Peep at a Warrington Bindery.



Works of Messrs. Mackie and Co., Ltd.

The works and offices of Messrs. Mackie and Co., Ltd., constitute one of the best-known buildings in the county borough of Warrington, and were opened by Lord Winmarleigh in 1880. This well-equipped and up-to-date printing and binding establishment is best-known locally as the headquarters of the series of *Guardian* newspapers so popular in South Lancashire and Cheshire, but its activities have brought it fame much further afield than its home counties, and several Government Departments figure amongst its widely scattered clientele. The Guardian Press this year completes its first 70 years of existence, the firm having been established in 1853, and to mark the occasion it is issuing a neat booklet giving a brief account of its history with illustrations of its numerous departments.



We are able herewith to show, by courtesy of the company, two views taken in their bookbinding department, views which give an exceptionally natural and lifelike impression of actual bookbinding workshop conditions. Messrs. Mackie and Co. are rightly proud of their bindery, which is a very successful section of the works and covers both letterpress and stationery binding. They turn out a big quantity of account books for which they claim exceptional quality and durability, due to the excellence of materials and the sound workmanship employed. All kinds of bookbinding are executed, library binding being a speciality, for which large consignments of books are received from all over the country.

The managing director of Mackie and Co., Ltd., is Mr. J. C. Coppock, the well-known and popular vice-president of the Federation of Master Printers.

The firm has a London office which is situate at 173, Fleet-street, E.C 4.

Registered office: Sentinel House, Southampton-row, W.C.

COOPER AND HUMPHREYS, LTD.—Capital £1,000, in £1 shares; to take over the business of fine art, technical and commercial photographers carried on by G. W. Cooper and H. Humphreys at 71, Newman street, W., as "Cooper and Humphreys." Private company. Directors: G. W. Cooper and H. Humphreys. Registered office: 71, Newman-street, Oxford-street, W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

FRANK CROSSLEY AND SON, LTD. (paper mill agents and general paper merchants, etc., London).—Debenture dated December 11th, 1922, to secure all moneys due or to become due not exceeding £2,000, charged on the company's undertaking and property, present and future, including uncalled capital (if any). Holders: Mrs. A. J. Crossley, 33, The Drive, Chingford.

COLLEYS, LTD. (manufacturers of tramway and other tickets).—Debenture dated December 20th, 1922, to secure £14,000, charged on 3-12, Marine-street, Bermondsey, S.E., and the company's other property, present and future, including uncalled capital. Holders: J. S. Phillips, 25, Ludgate-hill, E.C.4, and W. H. Gillet, 39, Threadneedle-street, E.C.

BRADFORD AND COUNTY CONSTITUTIONAL PRESS CO., LTD.—Mortgage and as collateral security thereto a debenture both dated November 29th, 1922, to secure £40,008 and further advances, charged on certain land and premises in Bradford and the company's undertaking and property, present and future, including uncalled capital. Holders: Halifax Permanent Benefit Building Society.

COOKE AND NUTTALL, LTD. (papermakers, etc., Horwich).—Satisfaction in full (a) on November 30th, 1904, of debentures dated February 20th, 1901, securing £500, (b) on November 30th, 1917, of debenture dated April 7th, 1914, securing £1,000 and (c) and (d) on October 3rd, 1918, of debentures dated June 24th, 1913, and April 7th, 1914, securing £3,000 and £3,000 respectively.

COOKE AND NUTTALL, LTD. — Debenture charged on the company's undertaking and property, including uncalled capital dated December 12th, 1922, to secure all moneys due or to become due from company to Lloyd's Bank.

F. SHARRATT AND CO., LTD. (box manufacturers, printers and manufacturing stationers).—Debenture dated December 19th, 1922, to secure £1,000, charged on the company's undertaking and property, present or future, includiug uncalled capital. Holder: H. O. Field, St. Heliers, Avenue-road, Highgate, N.6.

JOHNSON, RIDDLE AND CO., LTD. (printers, London).—Satisfaction to the extent of £500 on December 21st, 1922, of debenture dated October 21st, 1902, securing £30,000.

VASE PRESS, LTD. (Northampton).—Charge on certain land and premises, etc., at Thrapston, Northampton, dated December 23rd, 1922, to secure £900 and further advances. Holder: A. C. Finchin, 2 and 3, Charterhouse-square, E.C.

securing the contract for the present printers; but, whatever was the service this specimen rendered in this respect, it undoubtedly was the means of drawing the Treasury's attention to my process and of giving them an idea for the design also.

During the war I received a semi-official notification from the authorities that any mention of my process in connection with paper money printing might be taken to be an infringement of the Defence of the Realm Act. This I thought particularly unfair under the circumstances, as it denied me publicity at a time when publicity in this respect might have been an advantage. I think most printers will remember my medal specimen sheet.

Thanking you for allowing me to take up your space with a somewhat personal matter, which, however, I think will be of some interest to the printing trade.

Yours truly,
FREDERIC T. CORKETT.

Wallington,
December 31st, 1922.

German Printing Machinery.

SIR,—I beg to forward herewith a copy of my reply to Mr. Cox's letter which appeared in the *British and Colonial Printer and Stationer* of January 4th.

Yours fathfully.
E. C. BATEMAN.

[COPY]

G. R. Cox, Esq.,
Acting Secretary,
Association of British Manufacturers of Machinery for the Printing and Allied Trades.
6, Holborn viaduct, E.C.1.
January 6th, 1923.

DEAR SIR,—I am in receipt of your letter of the 27th ult., and in reply thereto may at once say that in the remarks I made during my recent lecture to the Printing, Binding and Kindred Trades Overseers' Association, I had no wish to disparage English manufacturers of machinery for the printing and allied trades. I believe that in many classes of such machinery they are unrivalled, and should like to think they were in all. Unfortunately, I believe they are not, and if the opinions I expressed have the result of rousing the members of your Association to the real position, then the expression of them will have been well worth while.

I mentioned but one class of machines as being superior to the English-made article, and another class as being superior to any make. This latter class, although in fairly common use by English printers, is not, I think, made in this country at all, but is imported from Germany and America.

With your statement that "Germany may possibly specialise in certain machines not made here," I do not disagree, but, at the same time, when there is obviously a demand for them in this country, I do not understand why their manufacture is left to the foreigner. If our English manufacturers are content with this position, it is useless to ascribe a want of patriotism to the English purchaser who, desiring the most efficient machine procurable, is forced to buy from abroad.

The conclusions I have arrived at may be wrong—I hope they are, but, although I have not had the pleasure of visiting the various works connected with your trade in Great Britain, I may claim, from visits paid to exhibitions and to very many and some of the largest printing works both in London and provincial towns, to have a fairly good knowledge of what English printing engineers have done and are doing.

I am, yours faithfully,
E. C. BATEMAN.

British Treasury Notes and the Corkett Art Intaglio Process.

SIR,—There is an old proverb regarding the last straw and the camel's back, and I think to-day, the last day of the old year, that last straw has arrived, for to-day I receive from an old friend in the trade a letter asking for a subscription to his pet fund. He very nicely says, as a hint evidently for me to wake up and think, "now you ought to subscribe to our fund, if for no other reason than that you have made so much money in the past out of printing ration tickets and paper money . . . as every one knows."

Now, I know it is common knowledge that my process of art intaglio was used as stated, and is being used in printing the present 20s. and 10s. Currency Notes, but it will surprise most folks to know that I have never made a cent or received any benefit or consideration whatever either directly or in any way indirectly from either the printers or from anyone else for the use of my printing process for the aforesaid work.

In 1914, early in the year, I produced and circulated to the trade and to the public a portfolio of specimens of my process and among these sheets was one representing a number of medals. As one of these medals was the present King's coronation medal, it was necessary to obtain his Majesty's permission to use same, and I received an appreciative letter from the Controller of the Household giving the requisite permission. On this same sheet was also a representation of the House of Commons. I am told that this sheet, which had been greatly admired by the authorities, was mainly instrumental in

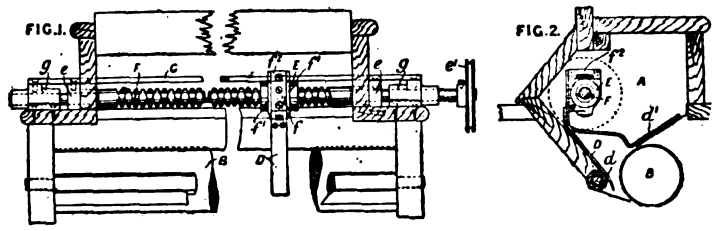
New Inventions

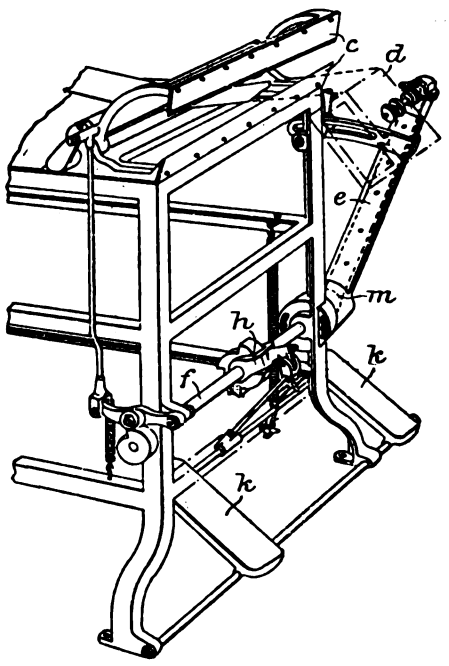
Bookbinding Machinery.



In a machine for binding books, pamphlets and the like, through the single sheets of which one or more threads have been previously drawn, a rotatable twisting member is provided to catch and twist the ends of the threads projecting in a row from the back of the book or the like; a feeding apparatus is also provided which advances a block of books over the twisting member and automatically returns to its starting position to receive another block. As shown in Fig. 11, a number of suitably threaded book blocks 61 with distance pieces 63 are placed upon a plate 31 against a butt-plate 38 with their threads projecting downwards. The butt-plate, connected to a threaded spindle 37, is advanced by the rotation of an internally threaded sleeve 36, and the book blocks are fed forward over a slot containing a wooden block 55 carrying a felt pad 56 to strip the threads backward. The advancing threads are engaged by a twisting member 11 mounted

upon a hollow rotating spindle 7 within a bracket 2. A thread 60 fed from a bobbin 23, Fig. 1, upon a bracket 22 passes through a guiding hole in a rod 15 and thence through the hollow spindle 7 which has a grooved driving pulley 12 at its lower end. The frame 1, 32 of the machine supports a driving shaft 17 carrying a driving wheel 19 and pulleys 18, 33, 34. The pulley 18 is arranged to drive the pulley 12, and the pulleys 33, 34 drive pulleys 43, 42 respectively, loosely carried upon the sleeve 36. A central coupling piece 46 slides upon a key 54 on the sleeve 36, and by means of a pivoted forked arm 48 is arranged to engage either of the pulleys 33, 34. An arm 39 attached at right angles to the butt-plate 38 has collars 40, 41 screwed upon it on either side of a piece 53 attached to the pivoted arm 48. The butt-plate is advanced, when the coupling piece 46 engages the pulley 42, until the rear book block is in the position 61^1, when the collar 41 strikes the piece 53 and throws members 46, 43 into engagement for the reverse motion which continues until the collar 40 strikes the piece 53; this puts the coupling piece into a neutral position to allow more book blocks to be placed upon the plate. The twined threads are glued in passing over a wheel 62 in contact with a glue-conveying sheave 26 dipping into a glue pan 29 heated by an electrical device W. In a modification, the twisting member comprises a hollow tube having end teeth cut in its periphery, instead of the wire spiral shown. The central thread 60 may be dispensed with if necessary. The machine may comprise four twisting members with their accessories, the spindles being arranged in pairs and provided with engaging pinions to produce rotation in opposite directions. The inventor is Mr. G. Isliker-Brauen.

Bronzing.



According to an invention patented by G. Walshaw and Field, Sons and Co., Ltd., the bronze powder receptacle of a bronzing machine is provided with a stirrer adapted to traverse to and fro from end to end within the receptacle. As shown, a hopper A of the

usual kind having a distributing roller B is provided with bearings *e* for a double worm F driven from a part of the machine by a pulley e^1 and carrying a self-reversing nut-member E to which is fixed a stirrer D provided with extensions *d*, d^1, Fig. 2. The member E is in two parts f^1 secured together by screws and enclosing a swivel nut *f*, a cap f^2 fixed to its top engaging a guide rail G fixed to bearings *g* mounted on the worm F and to bearings *e*.

Boxmaking Machines.

An invention patented by Mr. T. Bishop relates to a boxmaking machine of the type in which a rotatable frame *d* for supporting the box during the process of covering or banding with paper is mounted in alinement with the usual pasting rolls and shears *c* on an arm *e* mounted on the bottom spindle *f*. In the construction according to the present invention, the bottom spindle *f* is operated by

intermittent quarter revolutions either from a spring-returned treadle *k* acting through a pawl *h* or by means of a connecting rod reciprocated from a power shaft. The frame *d* is driven from the spindle *f* by a chain and sprocket gearing *m*, enclosed in a casing, the arm *e* being made hollow to enclose the chain. The chain and sprocket gearing may be connected to the frame *d* through a free-wheel mechanism.

Printing Inks.

Under an invention patented by Mr. K. J. Smidt and R. Jaeger, printing ink is made by treating waste sulphite cellulose lyes with nitric acid and a catalyst, preferably metallic copper or zinc, the product being used with colouring matters such as prussian blue and cinnabar, or being treated with sulphuric acid before the first reaction is completed to produce a black ink.

Millboards from Wattle Bark.

A British patent has been granted to Mr. A. T. Masterman, D.Sc., of London, covering improvements in the manufacture of millboard and similar substances. The idea is to use wattle bark and similar waste refuse of the tanyards. The waste bark is crushed, broken, softened and disintegrated in an edge runner, where it is treated with a solution of sodium carbonate or other alkali, the fibres being isolated and the greater part of the tannin extracted. By the addition of alkali the period of treatment is shortened. A mixture of waste paper pulp is added in such proportion as is desired, *e.g.*, 20 to 30 per cent. of the weight of waste paper, and the mixed pulp is then beaten for about two hours with water at 45 to 50 degrees Cent. At about half way through the treatment in the beater a proportion of engine size may be added to obtain special physical characteristics in the millboard, and in the final stage of the operation in the beater alum is added in the usual way until precipitation of the sizing ingredients is effected. By means of the invention it is claimed that millboard is produced which is light, non-conductive to heat, and of less weight than the board made from waste paper alone. It is further claimed that the cost of production is relatively small.

The Printing Crafts' Guild.

"System in the Composing Room."

In the Municipal College of Technology, Manchester, the president (Mr. John Taylor) gave a lecture recently on the subject of "System in the Composing Room." During his discourse he said a common phrase amongst letterpress printers was "the composing room does not pay," the usual addition being that all the profits are obtained from the pressroom, therefore it does not matter so long as the profit and loss account shows a favourable balance, this end justifying the means; or, to put it in the vernacular way, "What is lost on the roundabouts is made up on the swings." Each department in a printing office ought, he said, to be self-contained and the days of rule-of-thumb discarded. If the product of a department was undercharged it was possible for it to secure a surfeit of such work, whilst, on the other hand, if it was overcharged by not knowing the costs, orders would assuredly be lost to a competitor who knew his costs. When a composing room was found unprofitable an attempt should be made to find out the source of such deficiency.

It was a very easy matter to lay down a set of rules, but very difficult to carry them out, owing to so many things preventing their smooth working. Efficiency could be defined in two ways, namely—(1) High percentage of result by scientific methods; and (2) extermination of unnecessary movements. Thus, one could see that the keystone of good management was "Order." The lay of the type cases was variable, some times in the same office, and he did not see why there should not be a universal lay. Whenever a compositor entered a new office he should be given a plan of the cases, and there should be at hand a specimen book of types; also, each compositor should have an alley to himself and be furnished with a supply of spacing material from 6 point to 12 point, thick and thin leads, and a quantity of brass rule. A certain amount of time should be allowed a new comer to study where the various founts of type were ranged, because if he happened to be a temporary hand he probably would not be particular where he placed his distribution if he could not conveniently find the right cases. Where a composing room received its light from side windows, the frames should be so arranged that the light came over the shoulder of the compositor when standing at his frame. As to the proper height of mounted cases there was a difference of opinion, but it was found most convenient to have the lower end of the lower case in line with the elbow. Much had been written about point line and standard line, and although it might have been an advantage to the compositor, yet it spoilt the artistic formation of many downward characters. The British typefounders did not recommend standard line for various reasons. In the choice of types the letters should be simple and void of undue thick and thin lines, and leading between types should not be required for legibility. Every printer should decide upon type faces to suit the requirements of his office, and then order strong founts from 6 point to 60 point of the most useful faces. For example, Cheltenham light face, medium, bold and italic would prove useful. When ordering new type a good guide was to order, say, 6 point, 6lbs.; 8 point, 8 lbs., and so on. Where an office made a speciality of a few series the work from that office had a distinctiveness. Leads should be 1, 2, 3 and 6 point, and double medium rule should be on 2 point body to save time when building up 6 point and other sizes.

Scarcity of type and materials was a common occurrence in many printing offices, and masters should not upset the peace of mind of compositors by having to hunt around, and further, picking time should not be charged to the customer. Too much material was a source of danger, because regular and systematic distribution was neglected. In large offices there was a special staff for distribution; and in smaller offices sometimes the whole staff would be put on distribution for a day, in others the first hour each morning was set apart. Taking the offices of the country the time booked on distribution and clearing was far too long, the average being 40 per cent. of composition time. In the storing of pages some offices had a large bench for all proofing or printing matter, the disadvantage being the finding of the required page and the probability of having to move a number of pages to get to the right one; others used cardboard and built up the pages, and when a particular page was required several pages had to be moved to obtain it. The best system was the interlocking racks, each space having a three-ply galley, and the building could go on for a considerable height, whilst any page could be pulled out without disturbing the others. Those racks could be marked A, proofing matter; B, distribution matter; C, printing matter. For locking-up, many printers still believed in the old method of sidestick and wooden quoin, but these did not give accuracy when locking up for register work. The best mechanical quoin was oblong, and by use of a carriage key the wedged-shaped centre pressed out the sides so that there was a firm grip without any fear of slipping or pulling the border of a job out of square. The time-saving page-fastener had tape attached to an angle-piece and one lap around and tightening made the page firm. It was simpler than tying cord four or five times around the page. The storage of blocks should be in dust-proof trays, customers' blocks being kept separate from the house blocks. The trays should be numbered, also the blocks, and the impression pasted on the guard book should be numbered to correspond.

The lay-out was a vital point, as much time was lost on composition; even where good craftsmen were employed. The overseer or leading hand should lay out so that a distinctive style of print was issued from that office; and they should aim at simplicity in design and know how to omit ornamentation. Where such work was done the greatest economy was made.

DISCUSSION.

Messrs. R. Bates, J. W. Menzies, E. Fisher, J. H. Nuttall, Edmonds and several others having questioned the lecturer on various points, Mr. Taylor, replying, said the lay-out should indicate the character of the man, and one man's idea should govern a job right through so as to obtain a distinctive style. For the washing of formes paraffin should first be used for cleaning, and after removal of wooden printing surfaces a certain soap and plenty of water used for final cleaning. Where nothing but mechanical quoins and cabinet furniture were used the unsightly sidestick and wooden quoin drawers could be put to better service. The block registering device would permit of a 3,000th below and 5,000th above type high according to the requirements of the pressman. The question of pie was a great annoyance in many offices where quad boxes could be found full of anything except the quads for the fount. Some offices arranged that the top right-hand corner of each case be used for dumping wrong founts, and periodically they were cleared out and distributed.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

The Printing Art.

Mr. Harold Curwen Lectures at Stationers' Hall.

Something of the thrill of the ideal, the inspiration of craftsmanship that is the joyous self-expression of the honest craftsman—such was the main purport of the lecture on "The Printing Art" delivered on Friday by Mr. Harold Curwen (director of the Curwen Press, Plaistow) at the Stationers' Hall. The lecture contained also helpful technical information and advice, and, although Mr. Curwen does not cultivate all the arts of the orator, his message was perhaps the more effective in that it was the plain speaking of one who had something definite to say and said it without embellishment. The address, like the style of printing which the speaker advocated, was well fitted to its purpose.

An interesting feature of the occasion was the display, on one side of the hall, of a miscellaneous selection of printing, chosen to illustrate uses of materials and principles of design as advocated in the lecture.

A large audience was presided over by Mr. R. A. Austen-Leigh, president of the Federation of Master Printers, whilst on the platform were also Mr. Edward Unwin, Mr. J. D. Wise, Mr. F. Colebrook, Mr. J. R. Riddell, and others.

In introducing the speaker Mr. Austen-Leigh emphasised the fact that Mr. Curwen's subject was not the printing trade, the printing industry, or even the printing craft, but "The Printing Art." No one, he said, was better qualified to speak on printing as an art than Mr. Curwen. There was just a doubt in his own mind as to whether Mr. Curwen was a printer, or not rather an artist who had chosen typography as the medium in which to express himself. He was glad, however, that Mr. Curwen believed in business methods, believed in costing, and therefore did not sell as "common or garden" printing the products of his art.

The Decay of Craftsmanship.

Mr. Curwen began with a reference to the historic hall in which the meeting was held and, referring to old-time craftsmanship, recalled people's familiarity in bygone days with the tools of various crafts. He remarked that one of our greatest handicaps to-day was that, apart perhaps from the trade in which we might be engaged, we did not know how anything we bought and used—furniture for instance—was made. Even in a man's own trade he was probably familiar with only one section. It was unfortunate, for instance, that compositors were discouraged from learning machining, binding and so on; it was vitally important that the operative should have knowledge of other sections of the craft so as to be able to visualise the work as a whole.

Stressing the value of pleasure in one's work, the speaker said that the great products of past craftsmanship now in our museums, were not made for exhibition—that was the wrong motive—but were made by workers whose joy was in the work itself, and whose work consequently was good.

The difficulty at present in the printing craft was that we did not learn at the outset the simplest elements of the things we worked with. We tried to run straight off, and never learned to work. He had found, for instance, that it was extremely difficult to get a perfectly simple straight proof in a hand press—one with a good impression, even all over. Yet that was the most elementary thing, and until that was done a man could not possibly understand how to work a machine. The same thing applied far more in lithography, where we had people making designs in water-colour, or poster-colour on paper, when they had probably never seen a lithographic stone; thus we got wrong technique, designs that could never be properly reproduced in the process for which they were intended.

All work inevitably expressed the worker's character—a disturbing thought or a pleasant thought, as the case might be. The guiding principle for the production of good work was just to tackle each job in the most simple and straightforward way, without having any aim of making something striking, something different, something new. Every job came up in new conditions, with new requirements. If it were carried out in a perfectly simple and direct way, with straightforward and good materials, variety enough would come of itself.

Printing Types.

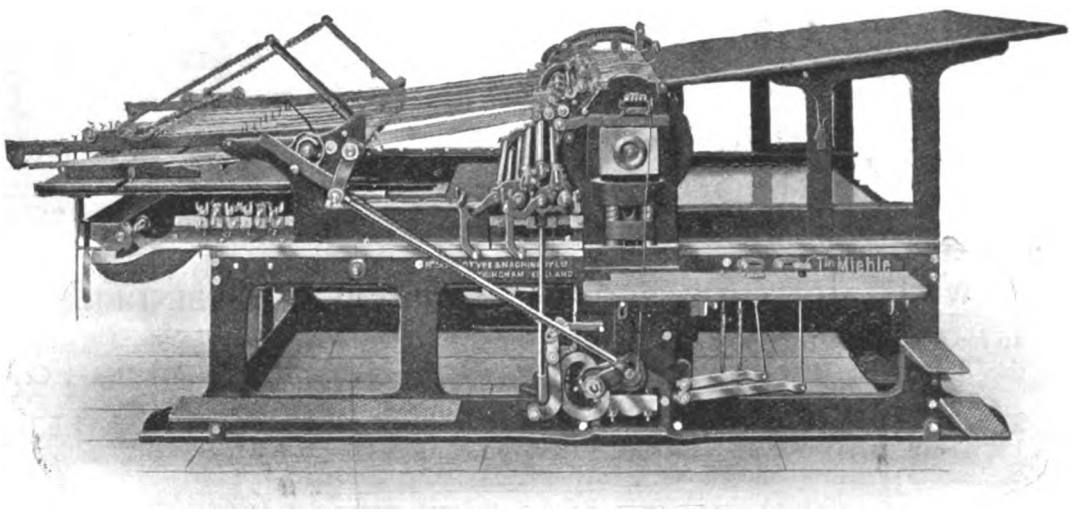
Turning to the subject of printing types, the speaker recalled the fact that in the days of the early presses a man, before he could become a master printer, had to cut a set of steel punches for his own type, as there were no typefounders. That made him study the alphabet. To-day production was so easy that we hardly needed to think about it at all. Type, to look well, could not be designed as one drawing, about 6 ins. square per letter, and then photographed to any size. Nor could it be designed with ruler and compasses. It must be drawn by a man fond of lettering for its own sake, who had studied carefully, and who drew with that freedom of self-expression which came only out of knowledge of lettering. Each character must be drawn several times for different sizes, and should be drawn practically the same size as to be reproduced.

To-day master printers were under very great disadvantages. The industrial revolution, the coming of the machine, had altered the whole way of doing things. We had big factories instead of craft shops, and the man in control of a factory had to devote a large proportion of his time to trivial things, things not fundamental to production—profit and loss accounts, wage agreements, hours and such things—degrading to the soul and an utter waste of time. Yet these things had to be done. That was why he, in the early days, was a very keen disciple of the costing system, and still ran it for all it was worth. It was a most valuable thing, because it enabled people to free themselves almost entirely from the figure side of their businesses and to devote 90 per cent. of their time to thinking about how they were doing their work.

If a master printer had studied lettering under a leading lettering authority, and had tried to draw an alphabet—no matter how badly—he began to know what was good lettering and what was not. This was an economic advantage, as he would be able to choose a few of the best types and not be continually buying new and perhaps "stunt" faces.

Proceeding to criticise "stunts" of all kinds, the speaker referred to binding materials, paper or the like made to imitate skins or paper made to imitate cloth. These things, he said, deceived nobody, and they were nothing like as attractive as a perfectly honest material which did not pretend to be what it was not. Letters printed in facsimile type-writing came under the same criticism.

Like imitations of materials, imitations of designs were also condemned. Copying printed jobs, the speaker said, was futile; it led to stagnation, and fine work could only be done by one who thoroughly understood what he was doing. Of the best work it could be said that it looked as if it just "happened." This was because it had no stunt effect, but conveyed the impression that it was simple, peaceful, sane and right.



Paper.

The same principle should be applied to the choice of a paper. Even a tiny piece of fine paper always looked like fine paper, whereas a large piece of paper made to imitate some other material looked common, and would always look common. The impression conveyed to the recipient by a small piece of printed matter really choicely produced was enormously better than that conveyed by a huge thing done vulgarly.

Paper, he said, had in recent years been finished out of all recognition as paper. Calendering, for the purpose of photo-process printing, had largely caused the murdering of good paper. Yet it was possible, as he had examples to show, to do good half-tone work on a cheap paper not coated nor highly rolled. It was true the results were

There is no reason why you should not have your share of the highest class of letterpress printing—when you have a Miehle two-revolution press.

The press that "advertises itself" also advertises its user by raising the standard of his single and three- and four-colour work.

The Miehle *is manufactured by Linotype and Machinery Limited at their Works in Altrincham, Cheshire.*

It is built in six sizes, from double demy to ex. eight crown.
For full particulars write to the Head Office of the Company.

WRITE TO-DAY FOR FULL INFORMATION ABOUT OUR PERFECT ALL-SIZE ROTARY PRESS.

ALL-SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

Digitized by Google

not quite so sharp as on coated paper, but the general effect was better, more sympathetic.

Referring to the production of half-tone blocks, the speaker put in a plea for less artificial photography. He deprecated the usual painting-out of natural reflections and then painting-in others. He thought that by the use of backed plates and a tidy workshop it should be possible to take simple "portrait" photographs of articles to be illustrated, with very little retouching.

Photo-Offset Printing.

Applying his ideas regarding simplicity and naturalness to other printing processes, Mr. Curwen dealt particularly with photo-offset, and deprecated the attempt to make this process do the work of letterpress or other kinds of printing. It should be used, he said, for its own natural advantages. One thing it gave was a mottled machine texture appearance in flat colours which, instead of being eliminated, should be utilised. Photo-offset could also be used to advantage in covering paper with heavy colour, yet leaving fine, clear-cut whites. Moreover, one could get with this process more transparency and luminosity of colour, though perhaps not so much depth. Also fine copper-plate printing could be done by photo-offset with wonderful sharpness and delicacy.

Study-Courses in "Truth."

An interesting suggestion made was that there ought to be courses of instruction for printing students in the principles of true-to-nature craftsmanship. Carefully-chosen craft enthusiasts—"even, if necessary, in long cloaks and sandals"—should be got to lecture for those who loved their craft for its own sake and would attend the courses apart from their regular training.

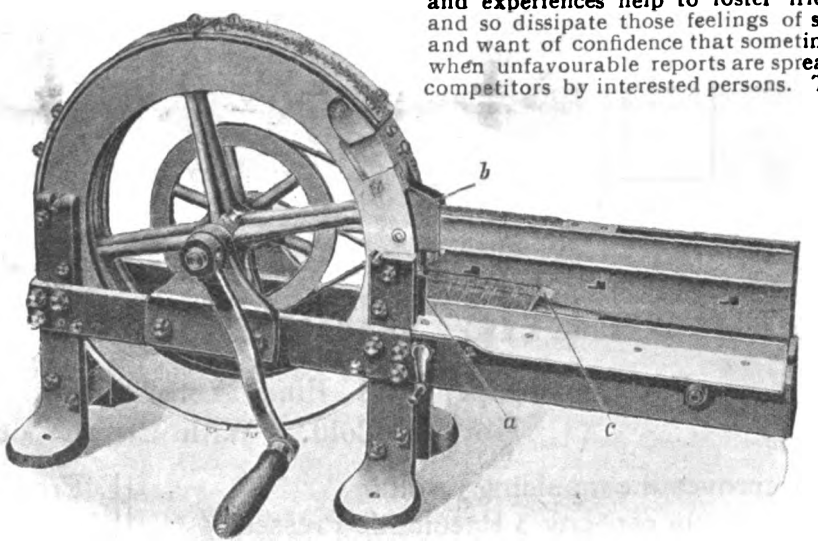
It would have been interesting, had time permitted, to have heard from some of those present, criticisms or comments upon the statements made and views expressed. But as time was advanced, the chairman permitted only questions, and after brief replies to queries by Messrs. Carr, Colebrook and Stuart, a vote of thanks to the lecturer was proposed by Mr. Wise and seconded by Mr. Unwin, after which a similar vote was given, on Mr. Curwen's proposition, to the chairman.

Passing of the DeVinne Press.

The passing of the DeVinne Press, through the giving up of its plant as a going concern, and the projected sale of its physical assets marks the end of one of the most famous printing houses of its day and generation in America, says the New York *Publishers' Weekly*. Theodore L. DeVinne was its founder and inspiration, and through him and by him the printed sheet became the product of an artist rather than the job of a journeyman.

Coming as a youth from Stamford, Conn., where he was born, he started as a compositor in the shop of Francis Hart and Co., where he became known as "Tom Devine." This was in the days before the Civil War. DeVinne, the silent and studious, rose step by step, as foreman, superintendent and partner, until on the death of Mr. Hart he took over the business, and the firm became Theodore L. DeVinne and Co., afterwards reorganised as the DeVinne Press. Then began the development of a standard that registered the best in typography, and made him and the Press famous.

As printers to the Century Co. from its inception forty years ago until 1919, the DeVinne Press was known far and wide for its faultless output, and its artistry was further evidenced in many of the privately printed books of the Grolier Club, of which Mr. DeVinne was at one time president. His studies in the improvement of typography led to the publication twenty years ago of three volumes, "Correct Composition," "Title Pages" and "Modern Book Composition," that are still standards on the subject.



When DeVinne died in 1914, the vital thing of the plant seemed to have passed, and when later on the Century Co. withdrew the production of its magazine and books from the Press, the end was in sight, and few in the trade were surprised at the final collapse of a famous firm.

MR. J. C. STAIRS, who is retiring from bill-posting at Leighton Buzzard, succeeded his father 45 years ago. His grandfather also did the work, which has been in the family for 100 years.

Cleaning Linotype Matrices.

To obviate the slow and tedious process of cleaning by hand the matrices of a Linotype or similar typesetting machine, the interesting apparatus illustrated herewith has been put on the market under the name of the "Benaco."

The accompanying illustration is a front view of the machine. The matrices are placed in a pack in the slot "a" whence, by means of the slide "c" they are automatically fed at the correct speed into the wheel which conveys them through the metal brushes and delivers them thoroughly cleaned into the upper slot "b." No powder, benzine or other cleaning medium is required, it being merely necessary to put in the matrices and turn the handle. It is intended that matrices should be passed through the machine every two to four weeks so as to be kept in perfect condition. The cleaning is quickly done, a fair speed being given as 200 a minute. The machine which is of very substantial appearance, is ordinarily constructed in cast iron, with a series of fine brass wire brushes, but it can also be made in aluminium so as to be easily portable.

"Benaco" Matrix Cleaning Machine.

Nottingham's Printing Trade.

Nottingham printers pride themselves on being conversant with the latest developments in the trade, and during the past year quite a lot of new and up-to-date machinery has been installed—says a writer in the *Notts Journal*. A very large new printing establishment that has been built during the year is that of Messrs. T. Forman and Sons on Hucknall-road. Far from looking askance on the starting of new establishments, the leading firms engaged in printing in Nottingham rather welcome their advent, feeling that the pressure of a number of big printing businesses in the city will be not only to Nottingham's benefit but also to the benefit of the rest of the printing trade.

Somewhat apart from the letterpress printing, and yet of no less importance, is the lithographical and colour printing side of the industry.

While, during the past twelve months, there has been no abnormal increase in this section, it is pleasing to be able to record, on the other hand, that there has been no decrease.

Several large and important firms in Nottingham and district have, especially towards the latter end of 1922, been more than usually busy in the production of calendars, both for business firms and for places of worship. During the trade depression which has to some extent been raised, firms, and more particularly one-man businesses, owing to the stringent need for economy, had to discard the well-established practice of presenting their customers with such reminders, but it can be noted with satisfaction that this practice this season has been revived to a great extent with material benefit to the printing trade of Nottingham.

The Process Engravers' Club.

The inaugural meeting of what is to be known as the Process Engravers' Club was held at Ye Olde London Restaurant, Ludgate-hill, on Tuesday of last week, and proved a very interesting and instructive meeting, 33 members being present.

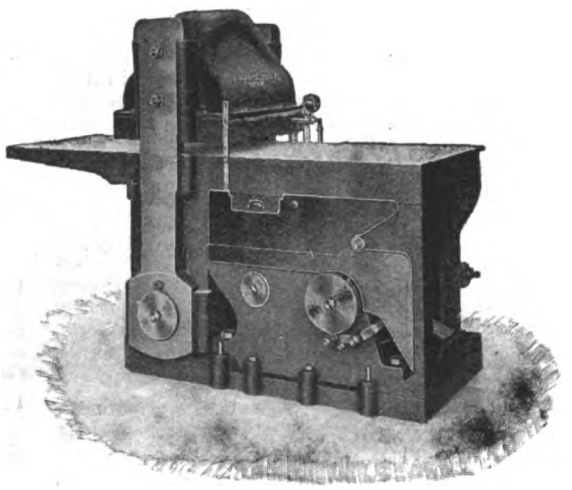
The purpose of this club is to bring together members of the process engraving trade from all parts of the country, in order that they may become better acquainted with each other, and by mutual interchange of ideas and experiences help to foster friendships, and so dissipate those feelings of suspicion and want of confidence that sometimes arise when unfavourable reports are spread about competitors by interested persons. The outstanding feature of this club will be its sociableness, for it is intended to develop that side of it to its fullest extent, though, of course, the technical and business side will not be neglected, but will be discussed, and courses of procedure decided upon.

An enjoyable supper was provided at 6.30, after which the business meeting, which consisted of the final passing of the rules, the election of officers, etc., was proceeded with.

Mr. F. S. Perry, of the Direct Photo Engraving Co., in proposing the health of the president, said it was evident there was a very general desire that the president of the Process Engravers' Federation (Mr. Andrew Dargavel) should be the first president of the club. He spoke of the ungrudging service the president had given to the Federation, and said that by request he had interviewed Mr. Dargavel, and had obtained his consent to occupy that position for the present year, though he regretted that a previous engagement prevented his attendance. When this was put to the vote, it met with a very hearty response.

The following were appointed the first vice-presidents: Mr. Carl Hentschel and Mr. F. E. S. Perry. Mr. Knighton was appointed treasurer, and Mr. T. C. Eamer hon. secretary. The committee consists of the following: The officers and Messrs. Anning, Bellingham, Coombs, Huggins, Parrack, Scrivens, Smythe, and Vincent.

The chairman then called upon Mr. T. J. Eamer, of the Marshall Engraving Co., to tell of his experiences and the impressions gained during his recent visit to the process engraving houses of the U.S.A. and Canada.



In an interesting address lasting over an hour, Mr. Eamer explained the methods being used in the U.S.A. shops, and showed specimens of the work they were producing and manufacturers' illustrations of the various kinds of apparatus in use, some of them rarely seen in this country, others costing sums which seem prohibitive to process engravers here. This address was greatly appreciated, and created so much interest that Mr. Eamer promised on some future occasion to discuss in more detail technical points that may be of interest to the members, and as far as possible to answer the queries put to him.

It is the intention of the club to meet on the first Tuesday in each month, when subjects of topical interest will be discussed, and it is earnestly hoped that everyone interested in the productive side of process engraving will become members.

EXCELLENCE is never granted to man but as the reward of labour.

Trade Notes.

LONDON LITHOGRAPHERS' WAGES. — The Amalgamated Society of Lithographic Printers has applied to the Federation of Master Printers for a conference at which the position in regard to the wages of their London members might be considered, and we understand that a conference has been arranged.

THE Commissioner of Police has taken out summonses under the Lottery Act against J. Weiner, Ltd., lithographers, of Long-acre, W.C., relating to the Poster Ballot Competition, conducted and guaranteed by that firm, in aid of the Combined Hospitals Appeal.

HALFPENNY POSTAGE.—To a deputation promoted by the National Chamber of Trade, requesting the removal of restrictions on the postage of halfpenny matter, the Postmaster-General (Mr. Neville Chamberlain) on Tuesday replied that he had had under consideration a proposal to try to meet the complaint which had been made by an extension of an hour in the latest time for posting. Some discussion followed, and the deputation having expressed the view that the step proposed would not be adequate to remove the grievances complained of, the Postmaster-General promised to give the matter further consideration.

THE Imperial and Foreign Corporation announce that owing to heavy over-subscription the offer of 7 per cent. cumulative preference shares in Cassell and Co., Ltd., was closed early on Wednesday morning.

AN extraordinary general meeting of the *Lady's Pictorial and Sporting and Dramatic* Publishing Co., Ltd., was held at the Connaught Rooms, on January 10th, to pass resolutions reducing the capital from £350,000, divided into 35,000 preference of £5 each, and 175,000 ordinary of £1 each, to £77,291 7s. 6d., divided into 35,000 preference of £2 each and 174,993 ordinary of 10d. each. The reduction is to be effected by cancelling paid-up capital unrepresented by available assets to the extent of £3 in respect of each of the preference, and to the extent of 19s. 2d. in respect of each of the ordinary.

MR. J. H. ROBERTS, manager of the *New Statesman*, states, through a news agency, that it is not true that there is any prospect, as has been suggested in the Press, of the amalgamation of that journal with the *Nation*.

BRISTOL Master Printers' Associatian, which has resumed membership of the Home Counties' Alliance, arranged for yesterday (Wednesday) a special meeting, at which Mr. G. S. Unwin (president, Home Counties' Alliance), Mr. P. D. Michael (secretary, ditto), and Mr. A. E. Goodwin (secretary, Federation Master Printers), were expected to be present.

LAST Thursday Mr. H. J. Haddock, managing editor of the *Rochdale Times*, took the chair at a very successful smoking concert and supper held by the Rochdale Printing and Kindred Trades Guild. About 200 members attended at the Clock Face Hotel, Lord-street, Rochdale, the concert being given by members of the Guild.

THE Lithographers' Auxiliary are holding a bohemian concert under the auspices of the Printers' Pension Corporation at Anderton's Hotel, Fleet-street, on January 29th. The chair will be taken by the executive, and an excellent programme has been arranged.

MESSRS. HULTON'S NEW PREMISES.—Some interesting particulars are given in the *Builder* of new premises which are to be erected at Manchester for Messrs. Hulton and Co., the well-known newspaper proprietors. The frontage of the new building will cover a distance of 200 feet, and the floor area will be about 19,500 square feet, nearly twice the area of the present premises.

THE Stationery Office announces that the price of the Daily Verbatim Reports of the House of Lords and of the House of Commons will be reduced to 6d. net beginning with next Session.

THE *Lancet* will complete its centenary this year. The first number appeared on Sunday, October 5th, 1823, the founder being Thomas Wakely, who was then 28.

THE death took place on Sunday at Chester of Mr. Arthur Edward Ward, head of the well-known firm of Chester bookbinders. Mr. Ward succeeded his late father in the bookbinding business, which was one of the oldest in the city. He was well known in musical circles in the city and district.

THE death is announced at Basford (Staffs.) of Mr. James Albert Wood (59), a member of the firm of Messrs. Wood, Mitchell and Co., Ltd., printers, of Hanley. At the age of 11 he entered the employ of Allbut and Daniel, printers of that town, being apprenticed as a compositor, and later he became the firm's chief traveller. After 28 years' service Mr. Wood became a partner in the new firm of Messrs. Wood, Mitchell and Co., Ltd., Oriel Works, Hanley. Mr. Wood was a member of the local Master Printers' Association.

MR. RICHARD PELTON, J.P., passed away at Tunbridge Wells last week in his 90th year. Coming to Tunbridge Wells about 65 years ago, Mr. Pelton bought a small stationery and printing business, which he considerably extended, and when he retired, 15 years ago, it was one of the biggest concerns of its kind in the town.

MR. G. F. MUNFORD, a well-known Somerset journalist, died recently at the age of 94, a week after he had retired from the editorship of the *Western Gazette* and *Pulman's Weekly News*, which he had held for 28 years.

THE Rev. Dr. James Hastings, D.D., of Aberdeen, originator and editor of the "Dictionary of the Bible" and other important works, and founder and editor of the *Expository Times*, left personal property in Great Britain valued at £11,202.

THE late Mr. John Henry Welch (66), of West Kirby, and of Liverpool, chartered accountant, for many years secretary of the Liverpool and District Master Printers' Association, left (net personalty £3,659) £8,730.

THE issue is announced of a four-volume work—"A Monograph of the Pheasants," by William Beebe—which claims to be one of the most expensive ever published, bare cost of production being about £30,000 and total costs about £80,000. A notable point is that, though the book is of American origin, it is stated that the extremely fine printing needed for the reproduction of the coloured plates necessitated the work being entrusted to London. It has been successfully carried out by Messrs. H. F. and G. Witherby, of Holborn, who have specialised for many years in this kind of work.

BUSINESS EXHIBITION.—A "Business Efficiency Exhibition" will take place at the Central Hall, Westminster, from February 7th to 17th next, and will be officially opened by Mr. Neville Chamberlain, M.P., Postmaster-General, on February 7th, at twelve o'clock.

IN the organisation of some of the trade groups of the British Empire Exhibition there has been a little unavoidable delay, but it is expected that before the end of January communications from the technical committees will have reached the traders in the following, among other, industries:—Printing, paper and stationery, and books. Traders who may not receive the committee's invitation are asked to communicate with the Exhibition authorities at 16, Hobart-place, S.W.1.

ADVERTISING CONVENTION. — Mr. F. A. Wilson-Lawrenson, one of the leading advertising specialists in America, who has come to this country as chairman of the Investigation Committee, appointed by the Associated Advertising Clubs of the World, to investigate the practicability of holding a great international advertising convention in London next year, stated last week that since his arrival in London, and his association with the Thirty Club, he regards it as almost certain that next year the first real world's trade convention will be held on this side of the Atlantic.

WELSH ADVERTISING.—At a representative meeting of the Cambrian Resorts Association, held at Barmouth last week it was announced that the Great Western Railway had decided to subscribe £1 for each pound subscribed by watering-places between Aberystwyth and Pwllheli, with a view to booming the resorts in the daily Press. A resolution was passed that the Association should again adopt newspaper advertising as their principal medium during the coming season.

AT Bangor, last week, Bertie Roberts (22), Bangor, pleaded guilty to stealing £9 from the *Daily Post* and *Echo* office, and was sentenced to six weeks' hard labour, allowance being made for his youth, and for the fact that he was the eldest son of a widow.

ACKLAND Central School, Kentish Town, has received as a war memorial a printing press, and the scholars are beginning the study of type-setting and printing.

THE school magazine of St. James's School, Taunton, is printed by the children from movable rubber type, and illustrated by woodcuts of their own cutting.

BENJAMIN FRANKLIN was born on January 17th, and American printers are joining with other sections of the community in commemorating the birth of a great printer.

GERMAN PRINTING PRICES.—In consequence of New Year increases of wages and continued rise in costs of materials, the German printers' organisation announces that existing prices have to be increased 50 per cent.

AUSTRALIA AND GERMAN BOOKS.—Customs Proclamation (No. 71), dated October 18th, 1922, revokes the prohibition of the importation into Australia of bibles, hymn books or other books or printed matter printed in the German language and intended for use in the Lutheran Church in Australia.

OPERATING through a new literary journal, the *Giornale di Poesia*, and through posters and other publicity mediums, the Italian Fascisti are declaring war upon authors whose writings they regard as immoral.

PRINTERS' wages in Russia are reported as being greatly benefited as the result of the adoption of collective agreements. Returns for August show an increase to nearly double the wages current in January, representing a return to nearly the pre-war scale.

THE Moscow province printers' trade union, after an investigation, has discovered that a third of its registered unemployed members were not members at all. Many were engaged in other employments, and even in speculation, while drawing unemployment pay from the printers' union. As a result of striking off the register these bogus printers, the union is now in a position to increase its benefits to its genuine unemployed members.

A COMPANY has been formed with a capital of 220,000,000 crowns for the printing of bank notes. The majority of the shares are in the hands of the Hungarian Government, the remainder being taken by Messrs. Orel Fussli, of Zurich.

THE Department of Overseas Trade has issued a report on the Economic and Financial conditions in Venezuela (September, 1922), by Mr. H. H. Beaumont, H.B.M. Minister at Caracas (1s. 1½d. post free from the Stationery Office).

THE Swedish Board of Trade's statistics for 1921, which have now been published, show that pulp and paper are now the most important Swedish export goods, these commodities forming 26·2 per cent. of the total exports, while timber represents only 17·5 per cent., compared with 25 per cent. in 1913, when pulp and paper represented 17·5 per cent.

IN regard to Messrs. Stephenson, Blake and Co.'s type specimen book, which was recently favourably reviewed in our pages, the company desires us to mention that it is not altogether a new production, parts of that substantial volume having been printed before the War. Thus type buyers must not assume that specimens issued earlier are necessarily now superseded.

Recent Photo Litho Developments.

Lecture by Mr. R. B. Fishenden.

Mr. R. B. Fishenden lectured at the Central School of Art, Birmingham, on Thursday, January 11th, before a large and representative audience of printers, on "Recent Developments in Photo Lithography." The walls of the large lecture hall were covered with an interesting collection of modern examples of photo offset work.

In the course of his remarks Mr. Fishenden said that the wide range of new effects, as well as the relatively low costs, explained the increasing use of the litho offset process at the present time. So long as the lithographic industry could use only flat bed machines it was doomed to decay, but the introduction of metal plates and more particularly of rotary machines and the offset principle, has made lithography a serious competitor of letterpress work.

Scope of Offset-Printing.

Offset, he said, can produce results which are equal or superior to letterpress in any kind of job, other than actual type printing in which the quality of impression can be obtained only by letterpress. Photo lithography is an essential factor in the development of offset printing. Although the old methods of transferring have been considerably improved, even the most skilful transferrer cannot produce results equal in sharpness to those which are printed down photographically direct on to machine plates.

Ordinary line work presents little or no difficulty, and in the reproduction of letterpress formes the work is frequently further simplified by eliminating the making of negatives, the formes being printed down from specially prepared impressions by the Vandyke or other black and white reversing process. Books are also reproduced by the use of an ingenious patented process which makes it possible to work without camera negatives from pages printed on both sides. These aspects of the subject are of great commercial importance.

Offset and Half-Tone Illustrations.

One of the many advantages of offset printing is the opportunity it gives to print half-tone illustrations on cartridge, bank, or other non-coated papers. Many forms of illustrated books and catalogues are necessary, and there can be no doubt that this method of half-tone printing will have a great future. "Art" or coated paper has many faults, but its use is essential in letterpress printing if the best results are required from the blocks.

The application of half-tone to offset work has led to the perfection of a number of so-called "high-light" processes which give automatic results only to be equalled by blocks that have been fine etched.

In the past, lithography was the only practicable process for commercial colour printing until the three-colour process took away a large amount of the work. Now another change is arriving, when the three colour process is being adapted with great success to offset printing. So far, only a few firms in this country have been able to solve the problems involved, but to achieve success is purely a question of perfecting methods and training staffs.

Duplicating Register Work.

Apart from the processes of photo-lithography themselves, several valuable machines have been introduced which enable register work to be duplicated with far greater accuracy and speed than was formerly possible.

Many of the large lithographic houses have already installed complete equipments for this work, and if the photo-engraving industry does not prepare to meet the requirements of the smaller firms, it will lose a large volume of business in the future.

PRINTING MACHINERY FOR N.Z.—H.M. Trade Commissioner in the Dominion of New Zealand, in his recent report on commercial conditions in the Dominion, states that the bulk of New Zealand's imports of machinery during 1921 came from the United Kingdom and the United States, the respective shares being £1,997,698 and £1,241,118, as compared with £1,251,012 and £1,037,922 in 1920. In printing machinery the U.K. exports were valued at £51,858 (as against £21,231 in 1910), and U.S. exports at £39,277 (as against £25,709).

A Difficult Year Ended.

Leeds Printer's Retrospect.

A review of the past year in the printing trade is contributed by Mr. J. A. Stembridge, vice-president of the Leeds and District Master Printers' Association, to the excellently produced special "Trade Review" number of the *Yorkshire Post*.

The year 1922, he writes, will long be remembered by the printing trade. Depending as it does on the prosperity of other trades, the general industrial depression affected it severely, and during the greater part of the year there was a pronounced shortage of orders, resulting in strenuous competition and price-cutting. A slight improvement in trade was noticeable towards the end of the year, but a considerable increase in the number and volume of orders will be needed before all the Leeds printers can say they are working at full pressure.

Mr. Stembridge next proceeds to outline the history of the wages struggle, in connection with which came the serious stoppage in the provinces. Apropos of this he remarks: "The jobbing printers received wonderful support from the newspapers, many of whom ceased publication, others issuing emergency editions which were triumphs of ingenuity. Their action helped materially towards the settlement, and will live long in the memory of the jobbing printers." The article then continues as below.

Paper and Machinery.

Paper continued to fall in price during the year, to the benefit of the buyers of printing, but many mills are reported to have worked at a loss. Rumours are current of probable increase in price of papermaking materials, but it is hoped that prices of paper will not harden during the coming year, and thus possibly retard the expected improvement in trade. It is to be regretted that the prices of process blocks have not been materially lowered, much catalogue printing having been held back on that account. Printing machine makers are now realising that increased output is necessary in these days of high costs, and many new and improved machines are available. Reports of new processes to supersede type-setting are discussed with great interest by the trade, and interesting developments are promised in the New Year.

State Printing Works.

In view of the expiration in June next, of the three years' probationary period for the Harrow works of His Majesty's Stationery Office, it is interesting to note that a loss of £32,000 was the result of 9½ months trading as disclosed in the recent report of the Auditor-General. This loss has to be borne by the taxpayer, and would have been avoided by letting the Government printing by contract to private firms. No further argument is needed for the closing down of this unnecessary and costly factory. Many of the new Members of Parliament feel very strongly that drastic action should be taken, and searching questions on the matter have been continually on the question paper of the House of Commons.

Printers throughout the country view with grave concern the various proposals for the installation of municipal printing plants. With the unprofitable results of the Government experiment before them, and considering the large capital expenditure required to equip a moderately sized printing works today, public bodies will be ill-advised even to contemplate such a step.

Postal and Railway Rates.

A welcome, though slight, reduction in postal rates came into force on May 29th, and an immediate benefit was felt in certain sections of our industry, notably the picture post card trade. The restriction in the hours of posting for half-penny stamped communications such as delivery notes, advices and invoices, is a distinct disadvantage to the trading community, and to printers in particular, whose work is so frequently of the "rush" order, resulting often in the goods being delivered before the advice arrives. Further concessions are being pressed for.

Reductions to the extent of 25 per cent. have been made from the 100 per cent. advance on pre-war rates for certain classes of traffic, but the rates for "smalls" are still exceedingly high, and add unduly to the cost of our product. Hopes are entertained that from the economies in working owing to the railway grouping further advantages in rates may result. They are long overdue.

Leeds is fortunate in its Printing School, which has a national reputation. In addition to its ordinary courses for apprentices and ambitious journeymen, splendid work has been done in training ex-servicemen as linotype operators under the scheme of the Ministry of Pensions. Mr. S. E. Bottomley and his able staff, in addition to their duties as teachers, find time to do much research work, which is and will be of immense value to the industry.

Printers and Postal Rates.

Further Reductions Demanded.

At the last meeting of the Joint Industrial Council of the Printing and Allied Trades representatives of the Federation of Master Printers brought forward the question of further reductions of postal rates, particularly the rates for printed matter and post cards. Mr. E. W. Humphries moved that the Postmaster-General be asked to receive a deputation as early as possible, and this was supported by Mr. E. H. Dennis (Scarboro) and others. The request since sent forward by the joint secretaries of the J.I.C. has been acknowledged by Mr. Neville Chamberlain, and it is expected that the deputation will be received in a few days.

It is gratifying to learn that the restriction with regard to the posting of printed matter by 3.30 is likely to be rescinded or a later hour substituted. There is plenty of evidence that in many industrial centres the work of sorting would be much facilitated if this differentiation of posting times were removed. The main complaint of the printing trade, however, is that whereas a postal packet of printed matter ranging from 2 oz. to 16 oz. now costs 33⅓ per cent. more than in pre-war days, heavier packages sent at printed matter rate show an increase of 75 per cent. It would be of material benefit to the printing industry if the postal rates on heavier packages were reduced. Many printers are also complaining of the excessive postal charges on parcels, as an extra pound now adds 4d. to the postage, as against 1d. pre-war—an increase of 300 per cent. Packages of printed matter are usually well packed, and can be conveniently handled, and the fact that it is now cheaper to send heavy catalogues, for instance, by passenger rail rates than by parcels post needs to be brought home to the Post Office authorities.

London School of Printing.

Staff Dinner.

For a number of years the staff of the printing school have met for an annual social gathering. This year the function was held at the Connaught Rooms when amongst those present were the Right Hon. Lord Riddell, president of the School; Mr. R. A. Austen-Leigh, M.A., president of the Federation of Master Printers; Mr. W. Howard Hazell, J.P., chairman of the School and president of the London Master Printers' Association; Mr. W. J. Pincombe, J.P., L.C.C.; Mr. T. W. McAra, J.P., secretary of the Newspaper Proprietors' Association; Rev. A. Taylor, M.A., Vicar of St. Brides; and Messrs. E. B. Judd, W. Stevens, G. A. Eden and J. R. Riddell, principal of the School, who presided.

A pleasant evening was spent with songs and speeches, all of which were on a very high level. The concert party was under the direction of Mr. Herbert Townsend, and speeches of an inspiring and helpful nature, lightened by many touches of humour, were delivered by Lord Riddell and Messrs. R. A. Austen-Leigh, W. Howard Hazell, W. J. Pincombe, T. W. McAra, Rev. A. Taylor and the principal, all of whom reviewed the prospects of the London School of Printing and Kindred Trades from different aspects. There can be no question of the success of the School so long as the spirit manifested at this social gathering is maintained. The School is fortunate in having so many good and influential friends behind it and the work it undertakes.

Printers and Co-operation.

Discussion by the South-West London Association.

As mentioned briefly in our last issue, the first gathering of the South-West London Master Printers' Association in 1923 took the form of a New Year's meeting at the Central Hall, Westminster. Although a good deal of the social element was introduced, the members heard a very interesting address from Mr. George Eaton Hart on "The Ethics of the Printer," which was reported in our last week's issue, and a very interesting discussion ensued.

Mr. J. D. Wise, president of the Association, wished everybody a very happy and prosperous New Year, and in extending a cordial welcome to Mr. George Eaton Hart, passed a very high eulogium upon him for his long and varied work in the printing industry. As a compliment to Mr. Hart, representing as he did a large periodical and newspaper printing house, Mr. Wise traced the development of the newspaper press in this country, beginning with the first publication in 1702. The president went on to envisage the prospects for the New Year. So far as they could see, they had a greater chance of peace this year than at any time since the Armistice, and without peace, of course, there was no chance of prosperity. After observing that labour was dear, Mr. Wise insisted that they must make as economical a use of the labour they employed as was possible. They must see that there was no wasted time, and to that end it was necessary to organise their works. Urging master printers to exercise every possible economy, Mr. Wise advised them to build up a balance in the bank or on their books rather than put every penny into their plant.

In extending a welcome to the visitors, the president singled out Mr. Hedger, the new organiser, who, he said, was a craftsman of experience and would be of great assistance to the local associations in London. There was also a kindly word for other visitors, including Mr. W. J. Mizen (North London).

Mr. Eaton Hart then gave his address.

At the conclusion, Mr. Wise emphasised the points of co-operation and costing which had been touched upon by Mr. Hart. He thought they could increase their profits if they did not attempt to do work which was beyond their equipment. It was essential that members of the Association should know what each of them could economically and profitably produce, so that if they were over-run with work or if a job came along which was too big for them they could pass it on to some other printer. That would be a beneficial arrangement all round.

Mr. J. R. Burt (North-West London Master Printers' Association) paid a warm tribute to the respect which the whole industry entertained for Mr. Eaton Hart, and went on to urge the importance of co-operation among printers. He referred to the value of the local Associations, which had brought about a wonderful change in the relations of master printers. At their meetings they had members of the industry meeting round the table consulting and assisting one another, whereas formerly each one suspected and fought his neighbour. When he first came into the printing industry it was regarded as the most cut-throat trade in London or the country, but they had improved upon that. Although they were not yet perfect they had been able to increase the membership of the London Master Printers' Association from 300 to 1,100, which was largely the effect of the different local organisations. With a large percentage of the firms in London still outside the Association they had much work to accomplish in the direction of organisation and co-operation.

At the invitation of the president, Mr. G. W. Young proposed a hearty vote of thanks to Mr. Eaton Hart, who was to all master printers an example and an inspiration. Whilst in agreement with the views as to the importance of costing, the speaker emphasised the necessity of providing for a profit. In this respect, he said, it sometimes paid not to accept a job.

Mr. Simnett, in seconding the resolution, spoke of the practical organisation of the London Master Printers' Association, which carried its work into every district of London. The speaker went on to refer to the small attendance at the district meetings compared with the total membership. For instance, they had something like 100 in the South-West Association, but they never got half of them at any one of their meetings. If their brother printers would only realise the tremendous amount of help they could be to one another they would place more importance upon attendance. By meeting together they would get rid of the feeling of suspicion, and they would help to smooth away the difficulties which were constantly arising. With the aid of co-operation and the costing system, they would be able to help their craft enormously. They wanted not only a thousand out of the two or three thousand printing establishments in London on their membership roll; they wanted every one of them. It was possible to make the industry not only an interesting, but a profitable one, and they could do that by supporting the Association and its branches.

Mr. E. G. Cole, vice-president, supported the resolution, remarking that his father had worked as a journeyman under Mr. Eaton Hart in the late 70's.

The resolution was very heartily carried.

Mr. G. Eaton Hart, in acknowledging the resolution, observed that they could not obtain prosperity unless they had confidence in one another. Co-operation should mean something more than supporting one another in regard to prices. Their monthly meetings ought to be a means of enlightenment and general uplifting. In his estimation there was only one competition that should exist, that was to serve their customers better, to produce better work, and to produce it more cheaply, but, above all, to help one another to make their offices efficient. Thus the only competition should be that little bit of personality which belonged to each individual.

Mr. Eaton Hart went on to urge the necessity of instructing the young people who entered the printing industry, and remarked that the most despicable thing was to be jealous of the ability of one in a lower grade.

The social entertainment provided was of an attractive character, and Mr. Kent and Mr. F. H. Cole were warmly thanked for their efforts in this direction. In addition to Mr. Spring, the following contributed: Mrs. J. M. Gaskell, Mr. Wesley J. Tee (Tee and Whiten and J. Mead, Ltd.), Mr. Gordon Marsh and Mr. W. G. T. Long (at the piano).

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NETHERLANDS.

An agent at Amsterdam is desirous of securing the representation of United Kingdom producers of wax paper in rolls and sheets, paper bags, laced papers, folding boxes, etc., and also manufacturers of advertising tape. (Reference No. 701.)

SWITZERLAND.

A firm established in Neuchatel is desirous of securing the representation of United Kingdom manufacturers of stationery and fancy leather goods. Correspondence should be in French. (Reference No. 20.)

A firm in Basle is desirous of representing United Kingdom exporters of heavy chemicals. (Reference No. 21.)

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines:—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous,

One Insertion 3/-
Three Insertions... ... ... 6/-
For every line exceeding three lines 1/.

Situations Wanted,

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions... ... ... 3/0
For every line exceeding three lines 6d.

Sales by Auctions, Tenders, Patents for Sale, Legal and Financial Announcements,

Per line 1/-

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, JANUARY 18, 1923.

Printing as an Art.

THE lecture by Mr. Harold Curwen, to which we devote our front page this week, was greeted with very cordial expressions of appreciation, and we gather that his audience as a whole heard the address with pleasure and with a large measure of agreement with the sentiments expressed. There are probably some who would wish to join issue with Mr. Curwen on the subject of the proper sphere of photo offset, or on other technical points touched upon. Such discussion is very desirable. There are doubtless many others who, on hearing the enunciation of the general principles which the speaker advocated, will retort at once that these ideas are all right for private presses and the like, for people who have not an inartistic public to please, but that the printer who is dependent upon his customers for his bread and butter has to satisfy those customers rather than gratify his own artistic sensibilities. To this class of objectors the reply of the craft enthusiast is that there is already a growing demand for simple and "honest" printing, printing bereft of all meretricious embellishments; that the customer can, moreover, be educated to appreciate such printing and that the printer who is brave and wise enough to press for purer standards is likely to reap his eventual financial reward besides gaining the satisfaction of advancing the progress of the printing art. The revival of the craft spirit is at any rate a healthy and promising symptom of the present era, and we wish well to every spokesman of this very worthy cause.

County Court Printing.

WE are glad to hear that the Federation of Master Printers is taking up with the Treasury the question of County Court printing. It will be remembered that some time ago official inquiries were sent out to the registrars of the various county courts indicating that changes were contemplated in the style and size of the printed forms employed, and that it was thought that a saving would ensue if these were supplied by H.M. Stationery Office instead of, as in many instances hitherto, by local firms. The proposed change does not appear to meet with the approval of many of the registrars, as although it is possible that by altering the forms some slight economy may ensue, this may involve heavier expenditure on clerical work if local details have to be filled in instead of being printed. There are thousands of formes standing in printing offices throughout the country, and it would appear to be not quite fair to these printers that this work should be taken away from them without giving them an opportunity of quoting for the new forms required.

Converting the Printer's Devil.

ENTERTAINED to luncheon last week, prior to the commencement of a "mission" campaign in London, Gipsy Smith, the revivalist preacher, is reported to have referred to the power of the Press, and exclaimed, "If we could get hold of the printer's devil and turn him into a saint, it would be a great thing." By "printer's devil" the good gipsy can hardly mean what we mean—the humble factotum of the print shop, more often sinned against than sinning, and having mighty little to do with the wielding of the "power of the Press." The preacher probably has his eye on some devil higher up in the establishment, perhaps the inspirer of editorial shortcomings. Or can he be thinking of that other devil, the unseen and mischievous sprite who seems so often to get busy just when there is a special rush for press, and who amuses himself by multiplying the numerous little mistakes and accidents incidental to printers' type, formes, machinery and other apparatus, thus causing many connected with the noble mystery of printing to break good resolutions? Any revivalist who could exorcise or convert that particular devil would indeed be conferring great benefit upon a sorely-tried craft.

Latex In Paper.

TO THOSE who possess paper judgment, there is a noticeable distinction in the feel of paper with and without latex, but practically no difference in appearance. Tests reveal an advantage in elasticity, breaking strain and folding strength. Where these qualities are desirable the paper may be considered an improved product if latex helps to impart and increase them. Where they are unnecessary, latex is only an advantage if it does not add to selling cost. In the end paper sells largely on quality, and an improved quality levels itself out at a market price corresponding to its quality, especially if the factors constituting the quality are tangible, obvious and necessary to the purpose of the paper. If latex helps a pulp board to fold without cracking, the board might bring a higher price; but the manufacturer would have to specify that characteristic for the notice of the user. We believe there is a future for that form of paper selling publicity which sets before the paper buyer the physical and inherent features of the stock in question. If latex adds another 100 to the folding capacity of a loose-leaf ledger sheet, or if it adds 10 lbs. per square inch to the bursting strain of a rope brown or kraft wrapping, there is the basis of sales persuasion. Those papermakers and merchants in search of selling methods might find a fresh field in the region of physical constants. It counts a lot in the mind of the buyer and consumer to be told that such and such a paper will fold so many times without breaking, or that it will rub and crease to such an extent without revealing puncture. In short, the time is ripe for the papermaker to tell and demonstrate to the consumer and the printer what his paper will do and what the printer can do with it.

WORK should be regarded as a privilege and not as an affliction.

Personal.

VISCOUNT BURNHAM, who sailed on the "Olympic" last week, is to spend some time in New York, on his way to Jamaica for the Empire Press Conference.

MR. R. A. AUSTEN-LEIGH, president of the Federation of Master Printers, is expected to attend the annual dinner of the Huddersfield Master Printers' Association to-morrow (Friday).

IT is anticipated that Mr. W. Howard Hazell, who has accepted nomination, will be formally elected by the council as president of the London Master Printers' Association to-day (Thursday) and will take up his duties on February 1st.

MESSRS. G. EATON HART, R. B. Simnet, G. Poulton, J. Brigenshaw, J. A. Drewett and W. J. Mizen all took part on Tuesday in a discussion on recent labour negotiations, at the January meeting of the West and North-West London Master Printers' Association. Some account of the proceedings, which were largely of a private character, will appear in next week's issue.

MR. A. CHADWELL and Mr. W. Bullett were re-elected president and secretary respectively of the Electrotypers & Stereotypers' Managers and Overseers Association at the annual meeting of that body at St. Bride Institute on Tuesday. A new rule was adopted at the meeting creating a new office of vice president, and to fill this Mr. J. Black (Spottiswoode and Ballantyne) was unanimously chosen.

MR. ALBERT J. PAGE (of the London and Norwich Press), was last week presented with a handsome half hunter keyless gold watch by the Norwich Brethren of the Ancient Order of Druids, for his untiring work as secretary in promoting Druidism in East Anglia.

MR. J. C. SQUIRE, author, and editor of the *London Mercury*, has accepted an invitation from the Darlington Burns Association to propose the "Immortal Memory" at this year's celebration.

MR. T. WATKINS, the editor of the *Western Daily Press*, has been presented with a clock and an illuminated address in celebration of his golden wedding and of his jubilee of service with that journal.

MR. DANIEL BERKELEY UPDIKE, author of "Printing Types, Their History, Forms and Uses," and owner of the Merrymont Press in Boston, has been awarded the Graphic Arts Medal for the most meritorious work exhibited in the Honor Hall at the Boston Graphic Arts Exposition. The medal was originally made for the association's printing exhibition in 1920, and the award of the medal to Mr. Updike is its first bestowal since 1920.

MR. KARL A. BICKEL has been elected president of the United Press of America. It was Mr. Bickel who secured for the United Press the series of articles by Mr. Lloyd George now being published.

MR. T. TREVOR POTTS (chemist to Messrs. Robert Fletcher and Sons, Ltd., Stoneclough, Lancashire), will address the members of the Manchester Division of the Technical Section of the Papermakers' Association, on January 30th, his subject being "Notes on the Resistance of Paper to Tearing."

MR. G. C. SWANN, who recently resigned from his position with Spicers, Ltd., after 43 years with James Spicer and Sons, Ltd., as their Manchester representative, has now taken up an appointment with Butt Bros. and Cooke, Ltd., Manchester.

IN connection with the election of Mr. Chas. W. Davidson as president of the Stationers' Social Society, it may be recalled that the house of Davidson has long been represented in the Association by Mr. Chas. W. Davidson himself and by Mr. G. S. Weeks, who for over 50 years has been with the firm in Upper Thames-street.

Trade Union Matters.

THE L.S.C. JUBILEE.—The London Society of Compositors is congratulating itself, and rightly so, upon completing this year an unbroken history of seventy-five years without a break. Plans are being considered for giving due celebration to the achievement.

A T.U. SUGGESTION.—Though rejoicing in a jubilee, the L.S.C. cannot congratulate itself on absence of unemployment, and the January issue of the Society's journal refers pessimistically to the prospects of improving trade. An interesting point is made in this connection in respect of uneven distribution of the work available. "It is curious," says the writer, "how business varies between one house and another. Many firms have been too busy for words, with the walls literally bursting with the overflow of work; yet others there are where business was never so quiet, and where short time takes the place of overtime. Here, it seems to us is an anomaly that might receive attention at the hands of the Master Printers' Federation. Could not the work, by some domestic arrangement, be more equally distributed? As the matter stands, the union secretary is rung up one minute for an extension of overtime, and, refusing, leaves the manager swearing at the other end of the 'phone; and the next minute he is on with someone else, who, for lack of orders, wants to put his men on a forty-hour week—in which case it is the secretary who is left swearing. Cannot the J.I.C. do something to stop this—not the swearing, which is a purely personal matter, but the unequal distribution of work?"

"NATSOPA" AFFAIRS.—The ballot taken on the proposal of a complete revision of the rules of the National Society of Operative Printers and Assistants resulted in a decision in favour of revision, the majority being 2,561. The following officers of the Society are among those elected by ballot for 1923: President, Mr. G. T. Bevan; chairman, Mr. W. Tidmarsh (unopposed); branch secretary, Mr. C. Hollis (unopposed).

AMALGAMATION PROPOSALS.—The desirability of the amalgamation of the Platen Printing Machine Minders' Society and the National Society of Operative Printers has been under consideration for some time past. A draft agreement has been prepared, and is now being considered by the executives of the two societies. After amendment and approval the scheme will be submitted to a ballot of the members.

THE members of the Typographical Association have rejected by a large majority a proposal to hold a special delegate meeting to discuss questions arising out of the strike last summer. The executive council had warned the members that the funds of the Association had been greatly depleted during recent months.

THE executive council of the Typographical Association have had under consideration the report of the secretary of the Belfast branch that a firm had introduced boys other than recognised apprentices on monotype casting machines, and requesting the council to give permission for the members employed at such office to refuse to handle any matter produced from the machines by this labour. The executive council decided that members must not instruct boys in the working of the monotype caster unless they were recognised apprentices.

SOME difference has arisen between the Typographical Association and the Electrotypers and Stereotypers' Society as to which union's members should do the work of mounting plates. The secretary of the Electrotypers and Stereotypers' Society has informed the Association that his society could not cencede their claim to such work, and added that his executive felt very keenly the fact that the T. A. allowed members both to encroach on stereotypers' work and to cut the agreed wage rates. A conference between the two unions has been arranged to discuss the subject.

THE general secretary of the Scottish Typographical Association has reported to his Executive Council the receipt of a circular from the Ministry of Labour concerning the local administration of the Unemployment Insurance Act, and intimating the continuance of the present grant of 6d. in the pound on disbursements. The general secretary has replied to the Ministry accepting the rate of payment under protest, and intimating that it would be impossible to carry on administration if the allowance were further reduced.

MUSIC ENGRAVING AND PRINTING: AN HISTORICAL AND TECHNICAL TREATISE. By William Gamble, F.O.S., F.R.P.S. London: Sir Isaac Pitman and Sons, Ltd. Pages 167 + x.; about 8 ins. x 6½ ins. Price 21s. net.

Mr. William Gamble, who is well known to readers of this journal as an expert in the process section of the printing trade, confers a notable benefit on the printing and musical worlds simultaneously by the production of this important volume, which the publishers announce as "The first and only book on Music Printing in the English Language." Both printers and musicians will find here much to interest and inform.

Of rather unusual, squarish format, the book is excellently printed on good paper and is copiously illustrated with examples of printed music from the earliest times to the present day, and of tools, apparatus and processes employed in music printing by the various methods.

The scope of the book is necessarily wide, and calls for the extensive technical knowledge which the author possesses, for, as is here pointed out, almost every possible method of printing and many kindred arts have been pressed into the service of the music printer.

The first few chapters are mainly historical, dealing with the different methods of representing musical sounds and the development of the application of the art of printing to the production of music. The craft of music engraving is then dealt with in considerable detail, processes and tools being illustrated and explained. The author next passes on to lithographic multiplication of copies, typographic music printing, stereotyping and electrotyping of music. A specially notable chapter reviews "Various Suggested Improvements in Music Printing," with particulars of many interesting innovations, including the recent music typewriters. Another chapter deals with the application of photo-mechanical processes to music printing, and a final chapter explores the position of British music engraving, arriving at the happy conclusion that there are ample facilities in this country for producing all the music needed, and of a quality quite equal to the foreign product

Doubtless there will prove to be a few errata to be corrected in a later edition (one of these is the word "Manul," printed in the index as "Manual"), but from a cursory examination of the book we gather that the work has been well done and that both in matter and manner this volume will be found worthy of the unique position which it apparently holds in the bibliography of its subject.

"PHOTOGRAMS OF THE YEAR." London: Iliffe and Sons, Ltd. Paper, 6s. net; cloth boards, 8s. net.

This is the only international annual of its kind devoted to the pictorial side of photography, and the present issue sustains the high reputation the publication has secured in the past. It is a handsome volume, including upwards of 100 reproductions beautifully printed as art plates, that will appeal to every lover of pictures, and at the same time teach many useful lessons to all who have to do with picture production, whether as photographers or printers. The growth of this branch of work with the camera is evidence of the wider recognition of pictorial photography, and the examples given show what big possibilities there are in this direction. "Photograms of the Year" is international in its scope, and in every part of the globe where the camera is used it exerts its influence in providing inspiration and guidance to all who have realised the possibilities of the camera as a means of artistic expression. The literary portions of the volume have been contributed by authorities in this country, the Colonies and abroad, and will be found to have informative and suggestive value.

THE *Bookplate*, the journal of the English Bookplate Society, appears in its issue dated December, 1922, as No. 1 of a new series, edited by James Guthrie. It is published at the Pear Tree Press, Flansham, near Bognor Sussex.

NEW COMPANIES.

UNITED KINGDOM EXPORT TRADE DEVELOPMENT SYNDICATE, LTD.—Capital £100; to carry on the business of advertising and publicity agents, particularly with regard to the development of the export trade of goods of British manufacture to the British Colonies and dependencies and elsewhere. Private company. Subscribers: J. E. Powell and W. H. Dearman.

W. P. DICKINSON AND SON, LTD.—Capital £10,000, in £1 shares (2,500 10 per cent. cumulative preference and 7,500 ordinary); to take over the business of letterpress, lithographic and general printers, contracting and general stationers, etc., carried on at the Post Office Printing Works, 59, High-street, Maidstone, as "W. P. Dickinson." Private company. First directors: W. P. Dickinson, E. P. Dickinson and P. F. Buggs. Registered office: 59, High-street, Maidstone.

J. BARTON-FAITHFULL, LTD.—Capital £2,000, in £1 shares; to acquire the business carried on by Mrs. H. Barton-Faithfull, at 95, Addison-road, Kensington, W., as "J. Barton-Faithfull" and to carry on the business of white lead, printing ink, oil and turpentine manufacturers and dealers, etc. Private company. Permanent directors: Hildred Barton-Faithfull and H. G. Read.

ADVERTISING NOVELTIES, LTD.—Capital £500, in 2s. shares; to acquire any interests in any advertising and publicity devices, signs and novelties, and to carry on the business of advertising and publicity agents, etc. Private company. Subscribers: A. E. Lees and A. R. E. Pain.

COAL AND IRON PUBLICATIONS, LTD.—Capital £500, in £1 shares; to adopt an agreement with J. G. O'Connell and to develop and turn to account the *Coal and Iron and By-Products Journal*, carried on by the said vendor at 37 and 38, Temple Chambers, E.C.4. Private company. Permanent directors: H. L. Scott, J. G. Dalzell and J. G. O'Connell. Registered office: 37 and 38, Temple Chambers, Temple-avenue, E.C.4.

ALEXANDER COUTTS AND CO., LTD.—Capital £5,000 in £1 shares; to acquire the business carried on by A. E. Coutts, at 199, Upper Thames street, E.C., as "Coutts and Hillary," and to carry on the business of manufacturers of, agents for and dealers in loose leaf books, binders and equipment, account books, paper and stationery, printers, lithographers, etc. Private company. First directors: A. E. Coutts and F. Mason. Registered office: 199, Upper Thames-street, E.C.

SELFIXA CO., LTD.—Capital £3,000; to carry on the business of manufacturers, and patentees of and dealers in advertising signs and devices, and removable or permanent adhesive letters, figures, etc. Private company. First directors: A. J. Coast and L. A. Rand. Registered office: 8, Southampton-row, W.C.

LONDON CALEDONIAN PRESS.—London Caledonian Press, Ltd., was registered as a private company on January 5th, with a nominal capital of £5,000; to carry on the business of printers, stationers, lithographers, typefounders, stereotypers, electrotypers, etc. First directors: Rt. Hon. John Hodge, P.C., M.P., A. Pugh, J. Baker, E. G. Day and W. F. Moss. Registered office: 74, Swinton-street, Gray's-inn-road, W.C.1.

FORD PAPER WORKS (1923), LLD.—Capital £124,700 in £1 shares; to adopt an agreement with the Ford Paper Works, Ltd., and E. W. Edwards, the liquidator thereof, and to carry on the business of paper and paper pulp or half-stuff manufacturers and dealers, stationers, envelope, account book, cardboard and railway ticket manufacturers, dealers in parchment, etc. First directors: L. G. Chater, G. Clapperton, S. B. Dunster, E. W. Edwards and R. C. Wakefield. Registered office: 36, King-street, Cheapside, E.C.

GEOFFREY HOLLAND AND SONS, LTD.—Capital £2,000, in £1 shares; to adopt an agreement with G. Holland and W. M. Smith, and to carry on the business of art and utility advertising, advertising consultants, contractors and agents, etc. Private company. First directors: F. C. Horrocks, J. E. Horrocks, G. Holland and W. M. Smith. Registered office: 32, Investment-buildings, Lord-street, Liverpool.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

A. W. LESLIE AND CO., LTD., wholesale paper merchants, printers, manufacturing stationers, etc., London.—Debenture dated December 19th, 1922, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. E. Finch, 10, Silent-street, Ipswich.

PATRICROFT IRLAM AND CADISHEAD BILL-POSTING CO., LTD.—Satisfaction to the extent of £100 on November 30th, 1920, of debentures dated April 23rd, 1906, securing £650.

ECCLES PATRICROFT AND DISTRICT BILL-POSTING AND ADVERTISING CO., LTD.—Satisfaction to the extent of £250 on November 30th, 1921, of debentures dated February 20th, 1904, securing £400. (Notice filed January 6th, 1923.)

CROYDON TIMES, LTD.—Particulars filed of £15,000 debentures authorised December 28th, 1922, charged on the company's undertaking and property, present and future, the whole amount being now issued.

COPELAND-CHATTERSON CO., LTD. (manufacturers of loose-leaf ledgers, etc., Stroud, Glos.—Satisfaction in full on December 15th, 1922, of mortgage dated November 19th. 1921, securing not more than £5,000.

COPELAND-CHATTERSON CO., LTD.—Particulars filed of £8,000 debentures authorised December 15th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

G. F. LAYBORNE AND CO., LTD. (printers and stationers, Newcastle-on-Tyne).—Debenture dated December 18th, 1922, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: London Joint City and Midland Bank, Ltd.

ALDINE PUBLISHING CO., LTD.—Satisfaction to the extent of £1,000 on January 1st, 1923, of second debentures dated March 27th, 1907, securing £10,000.

WILLMOTT AND SONS, LTD. (machine rulers, printers, etc., London).—Particulars filed of £3,000 second debentures authorised December 5th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £2,200.

LOWE AND BRYDONE (PRINTERS), LTD.—Issue on December 11th, 1922, of £4,000 debentures, part of a series already registered.

IVY MILLBOARD CO., LTD.—Mortgage dated December 8th, 1922 (subject to prior mortgage dated November 2nd, 1922), to secure £100, charged on Tovil, Maidstone. Holder: J. J. Argles, 12, Mill-street, Maidstone.

BANKRUPTCIES, etc.

Re CECIL WM. MALLINSON, publisher, 20 Bucklersbury, E.C.—The public examination of this debtor was held recently at the London Bankruptcy Court, the accounts showing total liabilities £3,211 (unsecured £2,211) and assets consisting of a one-third interest in partnership assets and a commission note for £500, both returned as of uncertain value. The debtor stated that in June, 1920, he entered into partnership with the owner and publisher of a weekly insurance journal known as the *Review*. He borrowed £1,000 and with it purchased a one-third share of the profits of the business, which was continued until last September, when, on the application of a creditor, a Receiver for the partnership was appointed under an Order of Court. Witness attributed his failure to extravagance in living and heavy interest on borrowed money. The examination was concluded.

Re ARTHUR EDWARD TOREAU DE MARNEY, publisher, 12A and 13, Clifford's Inn, E.C.—The public examination of this debtor was held recently at the London Bankruptcy Court, the accounts showing total liabilities £2,603 (unsecured £2,534) and assets, "book debt," £50. The debtor stated that he had carried on business for some years as advertising agent, and for twelve months subsequent to June, 1915, he published a monthly newspaper called *Russia*. In February, 1922, he produced a weekly newspaper styled the *Sporting Illustrated*, but through want of capital he was compelled to cease publishing it in June last. Witness attributed his insolvency to loss incurred in connection with the publication of the *Sporting Illustrated*, law costs, interest on borrowed money and to loss on the sale of furniture. He admitted that he knew he was insolvent in March, 1921, and that he had since incurred liabilities to the extent of £470. The examination was concluded.

THE St. Neots Paper Mill Co., Ltd., have given notice that the company will redeem the debentures issued on March 16th, 1922, at the expiration of six months from the date of the notice, that is to say, on June 1st, 1923.

Printers and Paper Tyranny.

SIR,—How much longer is the printer going to be dictated to by papermakers and powerful combinations or corporations which make some product for which they want to create a market? Of course the pressure is indirect, but it is none the less serious for the printer. Soon the printer will require no knowledge or skill in purchasing paper.

The butcher, the baker, the candlestick maker, or even the local publican comes to the printer with a sample of paper he has received from a papermaker, and requires his twopen'orth of letter headings and a packet of paper for his wife on this paper and will have no other. The smaller printer cannot afford to refuse his fellow-townsman, so agrees to do it. When he comes to purchase the paper he finds he has to put so many reams into stock to supply a job which takes five quires. But the limit is reached when the local tax collector, who has himself received a beautifully printed selection of paper, demands a high-priced watermarked paper for rate books.

We have now gone a step further, and every wild-cat company, copying the substantial firms, demands that its stationery shall contain such and such a product—before any definite result has been obtained as to the advisability of using such product in the class of paper required. Somebody will be putting up Smithfield to insist that all papers they use are animal sized! and the building trade demanding the use of sawdust in all papers they use!

Yours, etc.,
WHOLESALE STATIONER.

A Technical Library for the London School of Printing.

SIR,—May I once again be accorded the privilege of your columns, this time to make an appeal for books on printing and kindred subjects?

At the London School of Printing it is desired to form a technical library of practical value, which will have an influence on the careers of those who aspire to become efficient printer craftsmen. Rare or valuable books are not asked for, although examples of work done during the various periods which mark the evolution of printing will be welcomed as useful acquisitions of educational value. We aim at compiling a library of books which will inspire the embryo printer to study the history, romance, and technique of his craft.

We have been fortunate in obtaining the support of the publishers of technical literature, and the library will contain the latest printing journals and periodicals, and, with the contribution made by the now defunct Institute of Printing and Kindred Trades, a nucleus of a library is provided which, it is hoped, will in time become a bureau of information and knowledge for the printing trades throughout the world.

Will those friends who decide to make gifts of books to the "University of British Printing" previously send information as to their character. It is not our wish to have a number of duplicates (which may be found useful elsewhere).

Hitherto, when friends made us offers of books, they had to be refused, pending the obtaining of suitable accommodation in which to keep them. We are now fitted up in this respect and are quite ready to receive such gifts, which, with the characteristic generosity of those in the printing industry, will, we are sure, be forthcoming.

Kindly allow me to take this opportunity of inviting those interested in technical training to visit the new School, which is now getting into working order.

Yours, etc.,
J. R. RIDDELL,
Principal.

Disabled Ex-Service Men for Printing Trade.

SIR,—A few months ago you were kind enough to give publicity to the need for securing apprenticeship vacancies in employers' workshops for disabled ex-service men who had received, or were receiving, institutional training in the printing trade under the appropriate scheme drawn up by that trade.

In respect of our requirements for the next year, there is a special need for offers of apprenticeship vacancies for bookbinders, lithographers, and process workers, and offers of such vacancies during the next six months would be very greatly appreciated. At the same time we should be very glad to receive advance offers of apprenticeship vacancies in any section of the trade, which will fall due during 1924, in order that men may be placed for their institutional training during this year, and have jobs to go to when their technical training expires. During the past year approximately 100 men have been admitted to institutional training, and a further 100 have been transferred from their technical training to workshop berths.

Many expressions of satisfaction continue to be received from employers who have taken these men, and it is hoped that the sympathetic assistance which has been given by the trade during the past year will be, if possible, increased during 1923, in order that the work of re-establishing these men in civil life may be speedily and satisfactorily completed.

I shall be very glad to supply any further particulars either to yourself or to any of your correspondents, and all communications should be sent to the address below.

Yours, etc.,
E. D. NUTTALL,
Secretary
National Trade Advisory Committee
Printing and Kindred Trades.

Trade Publications.

MARKING PHOTOS FOR BLOCKS.—Many useful hints to users of blocks are to be found in the pages of "Marshall's Message," issued by the Marshall Engraving Co. of 12-14, Farringdon-avenue, E.C.4. One of these relates to the marking of photographs from which blocks are to be made. "Be careful," it is remarked, "how you mark instructions on the back of a photograph. If it is necessary to write on the back, use a soft pencil and without pressure. The best method of marking instructions is to indicate them on a piece of plain paper, and when completed attach it to the back of the original and fold over the face thereof." The advice is driven home by an illustration in which is reproduced a photograph just as it came to the blockmakers. The customer's marks on the back were so heavy that the impression was reproduced on the block.

GOOD CATALOGUE PRINTING. — A copy which we have seen of a new catalogue of electric light fixtures by the General Electric Co., Ltd., is notable for the excellence of its illustrations, and we are interested to learn that the bulk of this catalogue, illustrations and letterpress, was produced by Messrs. John Swain and Son's rotary gravure process ("Swaingravure.") The result seems to us to offer much encouragement to printers thinking of installing facilities for machining this class of work, and such may be glad to know that the house of Swain specialises in the preparing of cylinders for machine gravure printing, such cylinders being supplied already etched and ready to put on the machine.

MESSRS. R. A. BARTLETT, LTD., of 8, Hythe-road, London, N.W.10, send us a new specimen book of their printing inks. This takes the very handy form of a small loose-leaf volume, and whilst containing examples of a large number of Bartlett colours, together with a price list, it allows plenty of room for the addition of further samples. We learn that, in order to meet the night requirements of printers Messrs. Bartlett have just arranged a night telephone service, their number being 1848 Willesden.

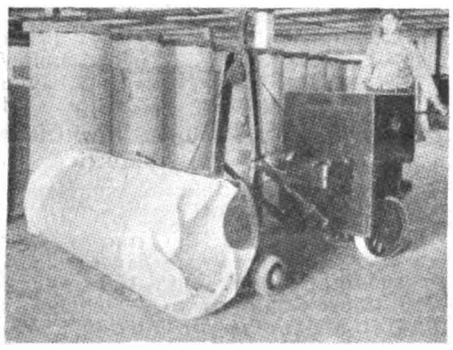
MESSRS. THE T. W. AND C. B. SHERIDAN CO., of 63, Hatton-garden, E.C.1, have just issued No. 2 of "Sheridan Sheaves," a neat pamphlet which includes informative and interesting general reading matter in addition to particulars of the latest Sheridan machinery.

MR. EDWIN W. EVANS, auctioneer, valuer and fire loss assessor, of 150, Fleet-street, E.C.4, has issued a new brochure dealing with fire insurance matters. In the event of a fire, a detailed valuation by an independent authority will save considerable worry and loss. Not only on the question of insurance, but in regard to costing, income tax and rating purposes an inventory will be found of the utmost value. It may be mentioned that Mr. Evans has carried out valuations in all parts of the country to the satisfaction of his clients.

A CALENDAR reaches us from Messrs. G. and G. Ponton, printers, engravers, etc., of Glasgow and Edinburgh, in which colour photogravure has been utilised to provide the picture, which is a reproduction of a painting by James Kay, R.S.W., of the Market Place, Copenhagen. The excellence of the result, with its bright colours and pleasing contrasts, is a fine example of what is already being done by this very promising process.

WE have received from the publishers, the Print Collectors' Club, 5A, Pall-mall East, S.W.1, a copy of their excellently produced volume, "French Etchings from Meryon to Lepère," by Campbell Dodgson, C.B.E., Hon. R.E. It is a crown quarto of 32 pages, with 12 illustrations in collotype, quarter bound cloth.

SOME very up to-date and attractive advertising matter reaches us relative to the Correspondence School of Typography, Farnborough, Kent, the principal of which is Mr. W. E. Chadwick.



VOTES and interest are being solicited on behalf of Mr. William Notcutt Race, aged 73 years, compositor. He was apprenticed at Woolby's, Ipswich street, Stowmarket, and Hayman, Christy and Lilley; afterwards was employed at Crockford's, Greenwich, for 24 years, Boot and Carpenter's 5 years, *Electrician* 13 years, and the Bank of England for a period of 6½ years.

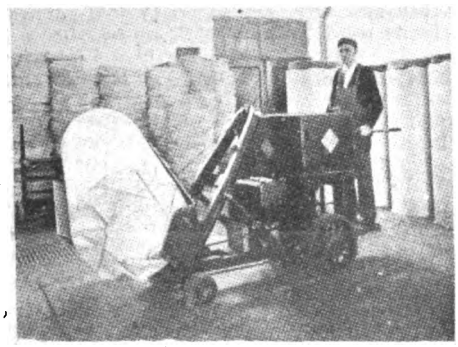
Easy Handling of News-Print Reels.

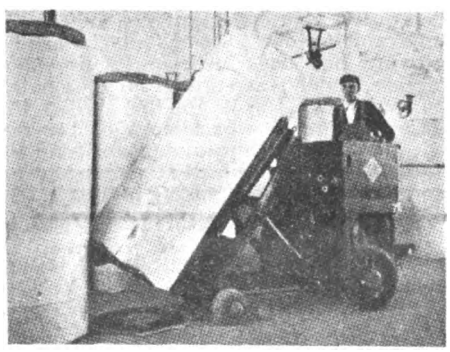


A Useful Electric Truck.

The handling of news-print reels has been rendered an easy matter by the Elwell Parker Electric Co., of Cleveland, Ohio, which has designed and built an electric truck for the purpose. The sole agents in this country are

ROLL IN APRON.

Gillespie Partners, Ltd., 80, Gracechurch-street, London, E.C.3. The truck picks up, carries, and deposits huge news print rolls with wonderful facility. A man, standing on the rear of the truck, by the manipulation of a few handles or buttons, directs the whole of the operations and guides the truck to any part of the paper mill or warehouse. The truck



ROLL BEING REVOLVED INTO UPRIGHT POSITION.

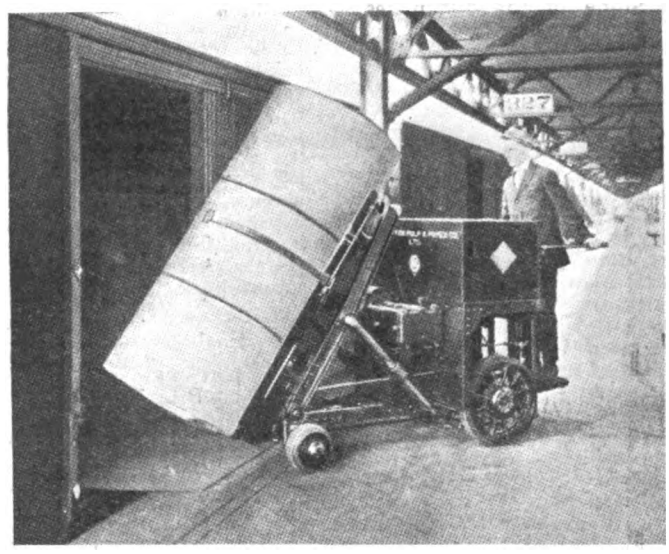
handles 70-in. rolls, or their equivalent in small rolls, without hazard or effort and will deal with as many as 100 to 200 rolls per day.

The equipment consists of the power end of an electric freight car type battery truck, hundreds of which have been used by various railroads for the past ten years.

The power end of the truck consists of a heavy steel hot rivetted frame carried on springs over a steel, full floating type drive axle with a worm gear driven by a direct connected motor receiving current from a storage battery

STACKING NEWS-PRINT.

located immediately above the motor and carried on the truck. The capacity of this battery will be found sufficient for the usual day's work, the size cells or plates being determined by the mill requirements.



The 21½ by 3½ drive wheels steer as well as move the outfit. The power controller is of the self-returning to neutral type, with an interlocked battery switch or circuit breaker which makes it impossible to operate the truck from the floor and is only operative when the driver is in position to control it. If in operating he steps off or for some reason must release controls, the truck will stop within its own length when travelling at full speed—automatically.

There are no fuses on the truck to blow out should the truck be overloaded. On the other hand, the motor will take all the power the battery will deliver without signs of distress. If the truck is overloaded it will stop. It may be driven in either direction.

The roll carrying mechanism consists of a heavy, perfectly balanced steel apron with a chisel into which news-print is rolled. A telescoping quadrant bar is furnished to slip around the roll in the apron if of small size. This apron is attached to a heavy steel casting revolving on large ball bearing and which is supported by a rocking, structural steel A frame pivoted on special axle fitted with two 10½-in. by 5-in. rubber tyred steerable wheels.

With the apron on the floor, the news-print is rolled into it, either one 72-in, two 34-in., or three 24-in. The operator standing at the rear of the truck closes the switch. The apron with the horizontal roll is lifted up six or eight inches as the cable rocks the A frame, which supports it, back toward the truck. As the A frame is pulled back, it rests on a pair of special coil springs. The reaction in these springs is such that as the cable continues to wind in, it revolves the apron and news-print into an inclined position with the load back over the truck wheel base. When it reaches this position, it trips a switch and the hoist motor stops. An especially designed lip keeps the roll in the apron when in a carrying position.

To set the roll on end, it is only necessary to start the hoist motor and let out the cable. The distribution of weight is so finely worked out that the roll moves into a vertical position and is set on the floor in front of the truck. The special end chisel on the apron is of such a design that it can be inserted with small assistance beneath the end of the roll without tearing the end wrapper.

CONVEYING NEWS-PRINT TO RAILWAY.

To Define Standard News-Print.

Efforts are being made by the customs division of the United States Treasury Department to define standard news-print paper in order to formulate rules governing its free admission into the country, under the new Tariff Act, according to a press report.

Standard news print paper is on the free list of the new Act, but the Treasury has met with some difficulty in determining what kind of paper should be considered "standard news print" when imported. Questionnaires have been sent out by the customs division to publishers who are large users of news-print paper, and their replies are expected to furnish the basis for the Treasury's decision, although it is expected that a hearing may be necessary before the question can be thoroughly threshed out.

IN virtue of a Costa Rica Presidential Degree dated September 26th, boxes of tin-plate or cardboard destined exclusively for packing ground coffee for export may be imported into Costa Rica without payment of Customs duty, provided that they are marked, lithographically or otherwise, in such a manner as to be unsuitable for other purposes.

Paper Containers.

Wider Use Advocated.

Since the Armistice, paper-container makers have been able to devote better material and workmanship to this product, and it is now safe to assume that the use of the composite container for powdered goods will grow as rapidly in this country as it is doing in America, says *The Times* (Trade Supplement). Manufactured in standard sizes for recognised weights and quantities, it will be possible for the container maker to keep a stock with confidence. These containers can be labelled by means of a very useful little machine, and in view of the big demand being experienced in the Dominions for this form of package, there should be many openings for the introduction of a machine which will produce automatically a conical container for export.

One important outcome of the round paper container is the paper barrel, which is simply a tube of paper glued and wound round a mandrel corresponding to the diameter required. The resilience and strength of this paper shell are amazing when compared with its lightness (no mean advantage in these days of heavy railway rates). The packer of chemical and other powders will be attracted by the fact that this paper barrel is sift-proof. Pilferage, too, is a virtual impossibility. In appearance it is clean and attractive, and the seeker after advertisement's adventitious aid may use paper of his own distinctive colour.

Wrappers for Bread.

A new market has been found recently for waxed paper in the wrapping of bread. This method of keeping bread free from contamination will prove of real value to the nation, if only to prevent the loaves being handled from the bakery to the consumer by vanmen and boys whose hands are not too clean. Each loaf can be sealed in a waxed or thin-glazed transparent greaseproof bag. The latter could be made from a 16-lb.–17.-lb. paper and attractively printed in bronze blue at an entire cost of ⅛d. or less for a 2-lb. loaf. Not only would this form of bread container be grease-resisting and impervious to dirt, but its printing would also be an effective advertisement.

A simple mechanical contrivance could be fitted to any baking plant, so that as the finished loaves were drawn out of the oven they would be taken along linen travelling bands to a series of grippers holding open the mouths of the paper bags to receive the bread, and then carried aside or below to make room for the next set of grippers and bags. A device similar to that on sweet and caramel wrapping machines could then twist the filled bag, or another machine could seal the waxed paper round the loaf, and the bread is ready for delivery with the guarantee that no human hands have touched it. As most large bakeries have machines which handle the flour, mix the dough, and bake the bread automatically, the entire process could then be advertised as free from human touch until the purchaser removes the loaf from the container. This is but another form of paper container which would have a ready export sale.

A Master Printer's Difficulties.

"The master printer who desires to be in advance of his fellows as regards the conditions under which work is done must do so by himself being content to work harder and to live more sparely than the average master does. If he really desires progress, this will not be a matter of sacrifice—he will enjoy it. Sometimes he will be tired and disappointed by failure, but taking all things together his life will provide himself and others far more enjoyment than is the lot of the average employer." So says Mr. J. Edward Francis in the course of an interesting article in the London Society of Compositors' little monthly, the *London Typographical Journal*.

In enumerating some of the difficulties which face the employer who is out to do his best for his workpeople, Mr. Francis speaks very frankly. "What is a living wage?" he asks. "That depends upon the individual and his circumstances. Some men can live on very little and do a lot of useful work; they are the biggest assets to society. It is suggested, however, that anything below £4 15s. a week for a man with a wife and two dependent children is not a living wage, and the same is true if for man we read woman—as is more often the case than is realised by most people. People can exist below that, but I doubt the average person being able to live. One of the difficulties facing a master printer to-day is to provide such a wage. It is rendered the more difficult because a man is not allowed, if he is a trade unionist, to take less even if he has no dependents, and if that amount has to be found for all the difficulty is to find more for those who need more. What is called the 'Dependent Fund' is the best solution suggested so far."

"What are decent conditions?" he continues. "The first decent condition is that an employee shall not be haunted by the fear of unemployment. The small employer has great difficulty in avoiding this, largely because of trade union rules. These rules insist than an employee must only do a certain bit of the work connected with the industry and none other. For instance, an employee is working on a monotype keyboard. There may be no 'copy,' but the worker is not allowed to help in correcting the matter he or she has already set, but must remain idle while somebody else is called in to do so. That is just one instance—there are many others. There was a case of a man capable of being a layer-on, a machine minder, a gas-engine cleaner and repairer, and a monotype caster attendant—being forced by a trade union to leave his job rather than keep it by being useful on more than one of the jobs which he was capable of doing. The man who was thus forced to leave had learned all he knew in the firm as a boy and before he became a trade unionist."

THE "Tribune Tower" will be the name of what is intended to be the world's most beautiful newspaper building. It will be a skyscraper of cathedral-like construction built to house the *Chicago Tribune*, the design being by Mr. John Mead Howells, of New York (son of the late William Dean Howells, the novelist), who wins the £10,000 prize offered by the *Chicago Tribune* in its architectural contest.

More Latex Experiments.

Book, Writing and Wrapping Paper.

Investigations into the use of rubber latex in the manufacture of paper have been undertaken by the Paper Section of the Bureau of Standards (Department of Commerce), U.S.A., and the results are tabled by Mr. Merle B. Shaw (associate technologist), and Mr. Geo. W. Bicking (papermaker).

The source of the rubber latex used in the work done by the Bureau of Standards was from the 500 gallons of latex coming from the East Indian plantations to the United States Department of Commerce through the assistance of Mr. Kaye.

The most convenient method for analysing rubber latex for mill information is as follows:—First determine weight of 5 cm. of latex as delivered from a 5 cm. pipette. To 200 cm. of distilled water in a beaker add 10 cm. of dilute acetic acid (125 cm. glacial with 300 cm. water), bring solution to a boil, then add 5 cm. of latex from pipette drop by drop into the boiling solution, stirring continuously. Filter through a prepared weighed Gooch crucible, wash with warm water until free from acid. Dry it at a temperature of about 70 degs. F. and weigh as rubber.

Papermaking Equipment Used.

The experimental papermaking equipment available for this work consisted of a 50-pound wood tub beater with iron bars and plate; a 4-plate screen and a 29-inch Fourdrinier machine with wire 33 feet long, having two presses, nine 15-inch dryers, a small machine stack of 7 rolls and a reel.

Book Paper.

The raw material used in this work was commercial bleached sulphite and soda pulps. The first thing done was to make a book paper without latex in order to establish a method of handling stock in the beater and on the machine; also, to have a paper to use as a basis for later comparisons when using latex or any other material which might change the quality of the paper. The weight adopted as weight of paper to make was a 20 pound paper on a folio basis.

The percentage of pulps used in book paper runs was 50 per cent. sulphite and 50 per cent. soda with 3 per cent. of size figured on the total weight of pulp. Alum was added and in every case the stock in the beater was acid to litmus paper. The length of time the stock was in the beater was from four and one-half to five hours. This time allowed for the handling of roll carefully and leaving the fibres with all possible strength, yet being in proper condition to give a well formed sheet of paper on the machine.

The machine treatment, or handling of paper machine, was constant or as nearly so as possible, the stock and how it performed on the wire being the guiding point. The speed at which the machine was run in nearly all cases was between 40 and 45 feet per minute.

The following tests were made on the different papers: Weight (25 x 40-500), weight (17 x 22-500), bursting strength, thickness, ratio of bursting strength to weight (25 x 40-500), breaking strength, elongation, tearing strength, folding endurance, per cent. of ash, per cent. of rosin, per cent. of rubber, number and identification of specks, and sizing quality. The method of making these tests are given in Bureau of Standard Circular No. 107, except the methods used in determining rosin, rubber and sizing quality of the paper. These methods as yet have not been standardised. Great difficulty has been encountered in getting a complete extraction of rosin and rubber from the paper and a separation of the two materials. The work of developing a method is still in progress. The sizing quality of the paper was measured by the curl and Stockigt methods, more as a comparative test, but in a modified form. From data thus collected it was hoped comparisons could be made and effects due to the addition of latex noted.

Adding the Latex.

After making the first run of book paper and establishing the best method of treatment in the beater and on the paper machine, the question of using latex was taken up. The first method of handling was to add diluted latex a short time after furnishing the beater, since one claim made was: "Where the paper is machine sized the latex may be added before, or after, the size and alum, the condition being that sufficient alum is added to throw out the size and rubber completely." This would allow the latex to become intimately associated with every particle of the beaten fibre before the addition of size. It was thought by following the latex with size that not only the fibres but also the small globules of rubber would be surrounded by the size, and then when thrown out or precipitated with alum there would be a greater sizing effect and retention of the rubber in the paper.

The latex for this run was diluted with twenty times its weight of water and filtered through a fine cloth. (The cloth as a filtering medium was not very satisfactory, gumming or filling up of pores making it necessary to wash the cloth many times. After having the rubber technologists of the Bureau examine the latex it was thought desirable to use a 100 mesh screen. This was used in all other runs.) The filtered latex was added to the beater one-half hour after starting up, but not until the stock had been tested for acidity and alkalinity. The stock being neutral, the diluted latex was added very slowly, so as to get a thorough mixing almost at once. The size was added fifty minutes after the latex. Before the alum was added the stock was examined, and small particles of coagulated rubber were noticed, especially in the stock rolling up in back of the beater roll shaft. Some time after the alum had been added, larger particles of rubber were noticed, but it was decided to continue and make the run.

During the run rubber particles were found in the screen stock, press rolls became sticky, and dryer rolls, especially the first roll, were covered with rubber. The calender rolls also became sticky, and the number of rubber particles gathered on them marked the paper badly, giving it a pitted appearance. The strange thing about the run was that the rubber apparently did not stick to the machine wire or felts.

The whole system was then thoroughly scrubbed and cleaned, after which many runs were made and different factors changed. The method which gave the best results under the conditions was adopted. This was as follows: The stock for the machine was prepared, including the size, and then, just before dropping it to the chest, the beater roll was raised and the diluted latex added. The latex, diluted with water one to thirty (making dilution approximately 1 to 100 when figured on rubber content), was screened through a 100 mesh screen, and added to the beater very slowly, fifteen minutes being allowed for this process. Five minutes after having added the latex the alum was added, and five minutes later the stock was dropped to the chest. The time elapsing before the stock went on the machine was about fifty minutes, during which time the stock was continually being agitated in the machine chest. The above treatment allowed sufficient time for a complete coagulation of the rubber.

Machine runs were made using latex enough to give 1 per cent. and 2 per cent. of rubber, figured on the stock. There was no difference noticed in handling of the machine in making these runs, except that the couch and first press rolls became more sticky when running stock containing 2 per cent. rubber. The material collecting on the first press roll was not removed by the doctor, this condition making the surface of the roll rough, which is against all good mill practice. Some of the material was scraped off the first press roll, and after air drying an analysis of it was made. A double extraction on the material was made, first with acetone and then chloroform. The results showed that 60·5 per cent. was soluble in acetone and 11·5 per cent. was soluble in chloroform. (Resins are soluble in acetone and rubber in chloroform.)

The test data collected on the different runs did not show any definite improvements in paper to which latex had been added. The differences were those ordinarily found in any paper. The bursting strength varied one point or more; sometimes the run without latex would test higher than the one with latex and *vice versa*. Tearing strength, folding endurance, breaking length and elongation showed the same conditions as bursting strength. However, the paper having latex in it seemed to be better sized and to take a better finish.

The following statement made it seem advisable to make runs using clay in paper, with and without latex: "It is apparent that the loading matter, such as china clay, will be better retained in a latex paper with lessened loss in the backwater." One run was made without latex using 20 per cent. clay figured on the pulp. The paper had an ash of 10·3 per cent. Another run was made using the same amount of clay but in addition enough latex was added to give 2 per cent. rubber figured on the total weight of pulp and clay. This paper had an ash of 10·4 per cent. These two percentages show that there was no increased retention of clay due to the addition of latex.

Paper containing latex after being made and standing a few days had an odour which would be objectionable to users of paper. One machine run was made having machine broke from other runs for stock, the furnish being 60 per cent. paper with latex and 40 per cent. paper without latex. The finished paper was a very good sheet, having only a few more rubber specks than other paper containing latex.

In this investigation no attempts were made to study the effects of Jordanning the stock, the use of white water in furnishing the beater, or recooking paper containing latex.

Wrapping Paper.

The raw material used for wrapping paper was commercial unbleached sulphate pulp. The handling of the stock was the same as in book paper runs except that a longer time for beating was necessary. This time was established by making a run without latex. The increased length of time in beating gave a real "slow" stock, and when latex was used with it, the paper seemed to handle better on the machine than the book paper runs containing latex, in that it did not stick to the rolls.

Machine runs were made using latex enough to give 1 per cent. and 2 per cent. rubber figured on the stock. The same physical and chemical tests were made on wrapping paper as on book papers.

The test data collected showed that there was no definite improvement in the paper containing latex over that without latex.

Writing Paper.

The raw material used for writing paper was old cotton towels, cooked in our small rotary cooker, washed and bleached.

One run was made without latex, with size and handling similar to book paper runs. The finished paper was not very strong and it was thought hardly worth bothering with but the following statements made it seem advisable to give it a trial: "A paper may be too weak or made largely of waste paper; here rubber latex will give necessary strength." Consequently a run was made with enough latex added to give 1 per cent. rubber figured on the stock.

The latex in this run was mixed with the size solution (and diluted with water to give a ratio of 1 to 30) before being added to the beater. The reason for this was that in many cases sodium resinate soap has been found to make colloids more stable.

The results of this run were very satisfactory in that the paper was a well formed sheet, with very few rubber specks, better

sized and having a good finish. The disappointment was that there was hardly any increase in the strength of the paper over the run without latex. Whether the improvement can be credited to latex is doubtful as an experimental error of testing or slight differences in the conditions of the stock could account for the above variations.

Conclusions.

The test data seem to indicate a slight increase of bursting strength on book paper. The variation of the other strength qualities seem to be within that of testing and of different runs.

Paper Prices Hardening.

It is now common knowledge that prices are hardening, says *Paper and Progress*, the house organ of Strong, Hanbury and Co., Ltd. Several mills have withdrawn all prices, which speaks for itself, while others are already quoting for and booking orders at increased figures. To what extent this will affect prices to the printing and allied trades it is somewhat difficult at present to predict. Phenomenal as it may seem in view of the foregoing notes, there are a few grades where costs have actually decreased.

The prospects for the coming year are undoubtedly good, but as the paper, printing and allied trades are to such a large extent dependent on other industries, the revival may be a little slow; but with so many hopeful signs in all directions we firmly believe it will be sure.

Paper Box Trade.

In a circulated review of trade in the past year, the Leicester Chamber of Commerce refers optimistically to the state of the local paper box trade.

The quantity of cardboard boxes used (it is remarked) must always be governed by the general condition of the staple industries of the city. There are, in addition, a large number of users outside the staple trades and it is quite safe to say that the progress made in Leicester in designs and quality is second to none in the kingdom and business has generally been good throughout the year, comparing the conditions ruling in other centres. The folding or collapsible box is also made in Leicester in huge quantities, which are increasing each year. Now that the railway companies have accepted the modern anti-pilferage packages and boxes this industry has been established here, and as the demand for these packages increases so the industry must grow. Leicester is well equipped with the most modern machinery for the turn out of up-to-date rigid boxes, collapsible boxes containers, and packing cases.

Stationers' Social Society.

Election of Officers at the Annual Meeting.

Mr. Lionel Savory, the retiring president, was in the chair at the annual general meeting of the Stationers' Social Society held on January 5th at Anderton's Hotel, Fleet-street. There was a goodly gathering, and the proceedings were of an interesting character.

Balance Sheet.

The balance sheet, which was submitted by Mr. A. E. Mist, the hon. secretary, disclosed a satisfactory state of affairs, the cash in hand and on deposit representing £190.

After Mr. Matt. Henry had raised the question of outstanding subscriptions, the balance sheet was adopted on the motion of the chairman.

A Treasurer and a Larger Committee.

Mr. J. W. S. Johnston then moved an alteration to Rule No. 1, *viz.*, "That the officers of the Society shall be increased by the addition of an hon. treasurer and also that the committee shall be increased from 7 to 10."

Moving the resolution, Mr. Johnston mentioned that this matter had been considered by the committee some time ago. Having had the pleasure of assisting Mr. Mist for the last two years and having noticed the enormous progress which the Society had made during that period, it had been forced upon his mind that it was impossible for Mr. Mist or himself, with all the various duties they had to perform, to get in all the outstanding money. Mr. Mist, of course, carried out all his work with wonderful assiduity, but in spite of his having written to every member four times there was still a large amount outstanding. If the hon. secretary was to be worried with this matter, it stood to reason that he could not devote the required attention to other affairs of the Society which he (Mr. Johnston) considered more important. The committee had, therefore, come to the unanimous decision that a treasurer should be appointed to take over the entire finances of the Society, apart from the work of the trustees. In the matter of a treasurer, the name of Mr. Steele, of Spicers Ltd., had been suggested; and after being approached by Mr. Kennett, Mr. Steele had kindly consented to accept the office. The committee felt they would be very fortunate in having the assistance of a gentleman like Mr. Steele. (Hear, hear.) Again, in view of the much increased membership of the Society, which had now reached over 400, it was thought that there should be larger proportionate representation on the committee, and, therefore, it was suggested that the committee should be increased from 7 to 10.

Mr. G. S. Weeks seconded the resolution, which was carried unanimously.

Cup Replicas.

According to notice, Mr. M. Relph moved the following resolution: "That the replicas of the golf and bowls cups be given out of the funds of the Society."

The resolution was carried unanimously.

Mr. C. W. Davidson Elected President.

The chairman said it was now his pleasant duty to propose as their new president Mr. Chas. Wm. Davidson. It was at the unanimous wish of the whole of the committee that he (Mr. Savory) was asked to approach Mr. Davidson and ask him to allow his name to be put forward. If they went through the whole of the paper trade he was sure they could not find a better man or one who was more respected than Mr. Davidson, who would prove an ideal president. Hear, Hear.)

Mr. Iago seconded the nomination, and the election of Mr. Davidson was unanimous.

Mr. Davidson, who was cordially received on rising to reply, said he appreciated very highly the honour which the Society had done him, and he desired to thank the members very heartily. He would accept the position with very great pleasure indeed, and would do his utmost for the Society. He thought with the help of all the members they might look forward to a very pleasant year. (Applause.)

The Trustees.

Mr. P. S. Porteous proposed that Mr. Cayzer and Major Craster be re elected trustees. Both these gentlemen had certainly done their work very well, and they kept a careful watch upon the expenditure.

The resolution was carried unanimously.

The Hon. Treasurer.

Mr. Johnston then formally proposed that Mr. J. T. Steele be elected hon. treasurer, remarking that he was an excellent man for the position.

Mr. Weeks seconded, and the resolution was carried with acclamation.

Tribute to the Secretary.

Mr. William Whyte said he had very much pleasure in proposing that Mr. Mist be re-elected hon. secretary. They all knew, and none better than those who worked with him on the Committee, what a tremendous amount of zeal Mr. Mist brought to the work, and how thoroughly well he looked after all of them. (Hear, hear.)

Mr. Johnston seconded, and the chairman, desiring to add a word on his own account, said he did not know what the Society would do without Mr. Mist.

The resolution was enthusiastically carried.

Mr. Mist, in acknowledging the resolution, thanked the speakers for their kindly references to himself. He should have very much pleasure in carrying on and doing his utmost for the Society.

New Assistant Secretary.

Mr. Mist proceeded to say that he believed it was the privilege of the hon. secretary to nominate his assistant. It was with very great regret that he had to announce that Mr. Johnston found himself unable to continue in office, and he (Mr. Mist) was particularly sorry, because Mr. Johnston had been a most valuable assistant during the past two years, both to himself and to the Society. Mr. Mist added that he was able to propose a gentleman for the position whose name he was sure would be well received—Mr. Jesty. (Applause.) Mr. Jesty had promised to come along and assist in directing the affairs of this Society, and he (Mr. Mist) therefore claimed the privilege of nominating that gentleman as his hon. assistant secretary.

The chairman expressed the thanks of the Society to Mr. Johnston who had done an enormous amount of work, and it was to the regret of all of them that he was obliged to give it up.

Mr. Jesty was unanimously elected.

The Committee.

Nominations were then received for the committee, and the following were elected by ballot: Messrs. M. Relph, G. E. Oswick, J. W. S. Johnston, L. E. Lewsey, A. E. Brown, P. W. Kennett, Wm. Whyte, P. S Porteous, E. M. Fells and Harrison Savory.

On the motion of Major Craster Mr. G. H. Wilkinson and Mr. A. E. Jennings were appointed auditors.

Mr. Williams formally proposed that ladies be invited to the next winter dinner. This resolution was seconded by Mr. Weeks and cordially carried.

Thanks to Ex-President.

Major Craster proposed a hearty vote of thanks to their retiring president, Mr. Lionel Savory, not only for his conduct in the chair that evening, but on the many occasions on which he had officiated as their president. They were very much indebted to Mr. Savory for his active interest in the welfare of the Society, and they wished him a very prosperous and happy New Year. They hoped he might long be connected with the Society, which was second to none in the paper trade. (Applause.)

Mr. Porteous, in seconding the proposal, wished to associate himself very heartily with the sentiments Major Craster had expressed.

Mr. Fells, as one who had been associated with the Society for many years, and was the oldest member of the committee, he thought, in the room, supported the motion. They could all congratulate Mr. Savory on the work during the year, especially in his encouragement of the social objects of the Society.

The resolution was very cordially carried.

Mr. Savory, in acknowledging the vote, said his year of office had brought him very great pleasure.

A TABLE prepared by Messrs. Jordan and Sons, Ltd., shows that during the past year two public newspaper companies were registered with a total capital of £5,400,000 and 51 other companies representing a capital of £589,600. Companies representing publishers were two public, with £11,100 capital and 76 others having a total capital of £389,855. Stationers were represented by three public companies (£620,000) and 182 others (£1,312,620).

Mr. Chas. Wm. Davidson.

The New President of the Stationers' Social Society.

Mr. Chas. Wm. Davidson, the new president of the Stationers' Social Society, is the fourth generation of the family which has carried on papermaking in Aberdeenshire for over 100 years A director of C. Davidson and Sons, Ltd., he has charge of the London office at 23, Upper Thames-street. He is a great-grand son of the original Chas. Davidson, his father, Chas. Davidson, being the eldest

Photo, Elliott & Fry, Ltd.

MR. CHARLES WM. DAVIDSON.

son of William Davidson, who was a son of the founder of the business.

Mr Chas. W. Davidson has been associated with the firm since about 1886, a short period in the office of a firm of chartered accountants intervening between the time he left school and his entering the paper trade. In order to become acquainted with the practical manufacture of paper, he went into the mill at Mugiemoss, where he spent two or three years. In 1889 he first came to London, where he spent about a couple of years, and subsequently, after two years in Leeds, proceeded to open a paper warehouse in Edinburgh in 1894. There he remained until 1911, when he came to London, and joined the management side of the business under his uncle, Mr. Alexander Davidson, who, it may be remembered, died in 1920. Mr. Chas. Davidson then succeeded his uncle in the management of the London headquarters.

Members of the firm of C. Davidson and Sons, Ltd., have been associated with the Stationers' Social Society for many years, Mr. John Mackie, a former director of C. Davidson and Sons, Ltd., who died in July, 1911, having been president in 1897. Mr. Mackie, by the way, was also at one time president of the Association of Wholesale Stationers. Mr. Chas. Davidson himself has also been a member for many years, but has hitherto not taken a very prominent part in public affairs. While in Edinburgh he was a member of the Committee of the Papermakers' Association before the amalgamation of the Scottish and the English organisations. He also joined an Edinburgh Lodge of Freemasons, and is an old member of the Queen's Edinburgh Rifle Brigade (Vol.) Royal Scots, with whom he served as an officer for several years.

The firm of C. Davidson and Sons, Ltd., was established in 1796 at Mugiernoss, and has attained a foremost place in the paper industry of this country. In addition to extensive paper mill plants at Mugiemoss and Bucksburn producing a great variety of papers, there are warehouses at Aberdeen, Edinburgh, Glasgow, Newcastle, Liverpool and London, together with connections in Australia. The centenary of the foundation of the firm was duly celebrated in 1896, the limited company having been formed previously in 1875.

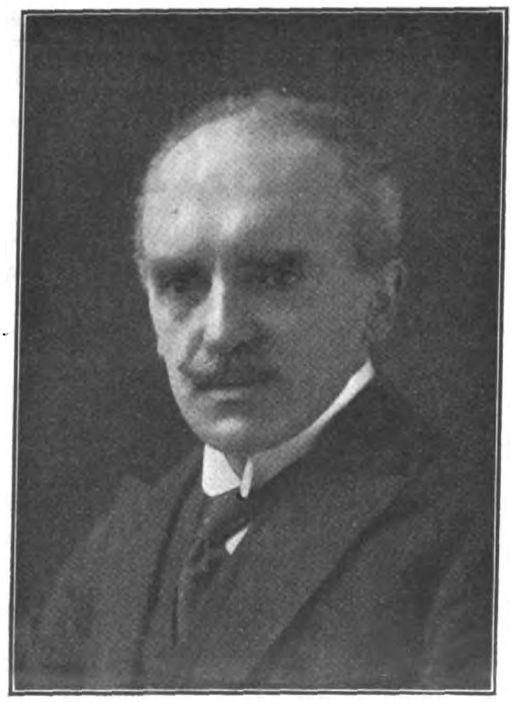
New President of the L.M.P.A.

Interview with Mr. W. Howard Hazell, J.P. (Chairman, Hazell, Watson & Viney, Ltd.).

By electing Mr. W. Howard Hazell to the principal place in its ranks, the London Master Printers' Association confers the highest honour it has to give upon one who has long been marked out as eminently fitted for leadership. In the negotiations with the trade unions and in many other directions, Mr. Hazell has shown himself a man of outstanding intellectual ability; he is one of the most fluent and able speakers amongst the employing printers of the country, and we gather also that his colleagues regard him as a man of exceptional integrity and straightforwardness—qualities which are especially desirable in the leader of a trade organisation.

A Pioneer of Costing.

Without rehearsing the numerous useful services with which Mr. Hazell's name is associated (a recital of these will be found in our issue of March 31st, 1921), we may recall the predominant place he has taken in connection with the development of scientific costing. Mr. Hazell has long been regarded as an authority on the subject of printers' costing, and is the author of several books which hold the position of standard works of their kind. One of these, "The Federation Costing System," has passed through no less than six editions. Mr. Hazell is ever ready also to speak on the subject of costing, and he can claim to have travelled many thousands of miles in his efforts to carry to printers everywhere the gospel of scientific cost-finding.



Optimistic Trade Outlook.

Immediately on his election as president, Mr. Hazell was good enough to grant an interview to a representative of the *British and Colonial Printer and Stationer*, who found him taking a hopeful view of the probable course of trading conditions during his term of office.

Mr. Hazell is one of those who believe that the slump in trade has definitely passed the bottom of the curve and that trading conditions generally are now definitely on the mend. He looks accordingly for increasing demands on the services of the printing industry, which is very quick to respond to any general improvement in trade. One great advantage of this would be the possibility of reducing the large amount of unemployment now unfortunately existing amongst printers.

Printing Trade Desiderata.

The great thing that printers need now, said Mr. Hazell, is a year of stabilisation of wages, so that customers may know what their work is going to cost, and so that employing printers can plan their trading schemes and make their contracts without the uncertainty that has been so troublesome a feature of the past. His hope is that 1923 will prove to be a year not of disputes and difficulties but of constructive effort and general progress, particularly a year of development of the real usefulness of the London Master Printers' Association in promoting trade, assisting technical education, and furthering various movements for the benefit of the printing industry as a whole.

Mr. W. Howard Hazell, J.P.

A very satisfactory feature, he remarked, was the fact that the L.M.P.A. was steadily increasing its membership. He looked to the day when every master printer would be in the Association, for then the L.M.P.A. would have a stronger voice in the affairs of the trade. Some printers thought the subscription was a serious expense. He always looked upon it as the most profitable expenditure his company made. The activities of the L.M.P.A. and the Federation were of enormous advantage to all engaged in the printing trade, and but for these bodies there would be no organisation with authority to speak for the whole industry. Much good had accrued from the organised efforts made in connection with railway rates, postal rates, the costing campaign, debt collecting, negotiations with Government departments on many occasions, besides the negotiations with the trade unions, and this was possible only if there were a strong organisation of employers, for the majority of these matters could not possibly be dealt with by individual printers.

The Joint Industrial Council.

A query as to the Joint Industrial Council elicited the fact that Mr. Hazell has hopes of extended usefulness for that body, which has already done much to justify its exrstence. He hoped, he said, that efforts would be made to find as many points as possible on which employers and labour representatives could agree and discuss in friendly and helpful fashion, and try to minimise the various points on which there was disagreement.

Technical Education.

Mr. Hazell's name has, of course, been long associated with the cause of technical education for printers. A good friend of St. Bride School, to which he gave his services as examiner in costing and estimating besides helping in various other ways, he was chairman of committee of that school, and now serves in a similar capacity for the new London School of Printing. His zeal in this direction is evidently unabated, and it will doubtless be one of his aims as L.M.P.A. president to do all he can to foster the provision of technical education for all engaged in the printing trade, and particularly to assist the London School of Printing. This institution, he claims, is now the finest printing school in the country, provided as it is with a magnificent equipment of machinery and other requisites for up-to date practical training suited for all classes of workers, not excluding sons of master printers or labourers.

Not only as Justice of the Peace for the County of London, but also in his private capacity as company director and employer of labour, Mr. Hazell has shown himself a very able man of affairs, with a keen interest in civic, industrial, and social problems, and we think that it augurs well for the printing industry that he should now be given a greater measure of influence in shaping the attitude of the employers to current questions. We have every hope that Mr. Hazell's leadership will prove a factor making for growing efficiency in the master printers' organisation, and at the same time tending towards general trade betterment.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

Annual Meeting.

This twenty-four years' old Association held its annual meeting on Tuesday of last week at the headquarters, St. Bride Institute, Bride-lane, E.C.4, the president, Mr. A. Chadwell, occupying the chair. Some of the older members present felt no little pride in the fact that it was through their efforts that the Association was founded and also that it had become an organisation of such usefulness to the foundry overseer.

The minutes of the last meeting having been confirmed, Mr. A. E. Wood proposed an alteration to Rule 5, which was as follows: "The affairs of the Association shall be administered by the executive council consisting of president, vice-president, two trustees, treasurer, secretary and seven councillors to be elected annually."

In moving this alteration Mr. Wood said that as the rule stood at present it did not give them a vice-president, but the new rule, if adopted, would enable them to elect a man who could occupy the chair when the president was not able to be present.

The motion was seconded by Mr. H. Filkins and carried.

Mr. A. E. Wood next proposed the re-election of Mr. A. Chadwell as president. He was sure they all regretted Mr. Chadwell's absence from the chair at several of their monthly meetings during the past year. They knew his absence could not be avoided, and he was sure he was voicing the feelings of the members when he said there was no one they would more prefer to see occupying the presidential chair than Mr. Chadwell. He had worked hard for the Association, and by his efforts had been largely instrumental in making it what it was to day.

The proposition was seconded by Mr. G. W. Sharvell and unanimously carried.

Mr. Chadwell briefly returned thanks for the further honour the members had placed upon him.

Mr. Wood next proposed Mr. J. Black as vice-president, which was seconded by Mr. C. H. Ward, and heartily endorsed.

Mr. Chadwell proposed that Mr. W. Bullett should retain his position as secretary.

This was seconded by Mr. W. H. Crosby and unanimously agreed to.

On the proposition of Mr. G. W. Sharvell, jun., Mr. W. Longley was re-elected treasurer.

Mr. F. LeGrys and Mr. G. W. Sharvell were re-elected trustees.

Nominations were next asked for members of the council and the following were elected *en bloc*: Messrs. J. Craske, W. Crosby, W. M. Forsyth, H. Filkins, J. Parker, G. W. C. Sharvell and A. Wood.

Mr. J. Craske next spoke on Mr. H. Crossland's idea of the Association holding a small informal dinner for members only, and after some discussion, confirmation was given to the decision passed at the last meeting that such a function should be held.

It was further decided that the event should take place early in March, and that Messrs. J. Craske, H. Crossland and A. E. Wood be asked to act as stewards.

Mr. Chadwell thought it would be a good plan, as this was to be quite an informal dinner, if one of the members not holding any office in the Association were asked to take the chair.

Mr. W. Bishop, after considerable pressure, consented to act as chairman.

The president drew attention to the next Auxiliary concert on February 5th, and hoped the members would give hearty support to Mr. Wood, who was taking the chair on that occasion.

Mr. Sharvell proposed that five guineas be granted from the funds of the Association in aid of the funds of the Printers' Pension Corporation.

The proposition was seconded by Mr. Filkins and agreed to.

Mr. Wood, in returning thanks said his pensions "stunt" of raffling gold watches among the various chapels was meeting with success. Up to the present thirty-five of these had been disposed of, and he wished to extend his thanks to the chapels that had already given support to his scheme.

Discussing the securing of a chairman for the Auxiliary concert in March, Mr. W. C. Warren advocated two journeymen undertaking the task. By that means they would be more likely to get the rank and file of the trade to take a greater interest in the welfare of the Auxiliary. Mr. Warren considered that it was not altogether a question of getting money; they had done remarkably well in that respect. The trade had supported him excellently with his own festival list and Mr. W. J. Light had also been very successful. Greater interest individually amongst the members of the trade in the aims and objects of the Corporation, he thought was very important.

Mr. Sharvell proposed that a letter of sympathy be sent to Mr. J. Parker who had recently met with a serious accident to his hand while overlooking machinery.

Mr. Warren seconded, and wished Mr. Parker a speedy recovery.

Mr. Bullett announced that at the next meeting of the Association on February 20th they were to be addressed by Mr. E. W. Smith, a director of British Furnaces, Ltd., on the subject of "Fuel Economy." He hoped for a large attendance of members and friends in the trade who would be interested.

A vote of thanks to the chairman brought the meeting to a close.

J.I.C. of the Papermaking Industry.

Lighting in Paper Mills.

A number of interesting subjects were dealt with at the meeting of the Joint Industrial Council of the Papermaking Industry recently.

Considerable time was occupied in discussion of a labour difficulty which had arisen, and the council unanimously decided on a course of action, which, it was hoped, would prevent the matter proceeding to extremities.

At the request of the Home Secretary, the council considered what investigations could be made as to adequate lighting of various processes in the papermaking industry. Miss Rose E. Squire, O.B.E., who was a member of the Home Office Departmental Committee on Factory Illumination, attended and addressed the council. It was decided that steps should be taken in conjunction with the Technical Section of the Papermakers' Association to carry out some research on the subject.

The Safety First Committee presented an interim report, and was instructed to continue with the compilation of data for the purpose of issuing a pamphlet of hints and instructions on safety first in the paper mill.

American News-Print.

Giving November statistics of American news-print production, the News-Print Service Bureau (N.Y.) states: The 48 reporting companies produced 209,680 tons, and shipped 209,127 tons during November. Production exceeded shipments by 553 tons. Production figures include 1,878 tons of hanging, of which 608 tons were made in Canada.

The average daily production of news print paper by mills reporting for November amounted to 95·3 per cent. of the average daily output during the three months of greatest production in 1920 or 1921, with allowances for new machines.

Comparing production during the first eleven months of 1922 with that of the same period for 1921, the United States companies reporting show an increase of 233,394 tons, or 25 per cent., the Canadian companies an increase of 259,860 tons, or 35 per cent., and the total of all the companies reporting shows an increase of 493,254 tons, or 29 per cent. Strikes at the mills in 1921 partly account for the big difference in production during these periods.

Stocks during November decreased 366 tons at United States mill points and increased 828 tons at Canadian mills. Total stocks of all reporting mills amounted to 30,269 tons, or 462 tons more on November 30th than on October 31st, and were equivalent to 3·6 days' maximum production.

THE first number of the *Woman Journalist*, the new magazine of the Society of Women Journalists, has just made its appearance. Amongst those sending messages of congratulation are Viscountess Burnham (president of the society), Viscount Burnham, Lord Riddell, Sir William Berry and Lady Brittain (chairman of the council).

Paper Handling at the Docks.

Price-Cutting Alleged Against Port of London Authority.

Trouble has arisen among the paper trade wharfingers of the Port of London, and the P.L.A. is alleged by members of the paper trade section of the wharfinger industry to have started a rates war.

The P.L.A., after withdrawing its representatives from the Wharfingers' Paper Trade Committee has, it is stated, proceeded to cut the price for unloading ships in competition with the wharfingers to an extent that promises to jeopardise seriously the interests of the latter.

From a responsible quarter the *Westminster Gazette* learns that the Port of London Authority claims to have justification for the action taken, on the ground that the agreement in force between the Port Authority and the paper trade wharfingers had been broken by the latter, and that this infraction cancelled all prior arrangements and left the Port free to undercut the prevailing rates.

Mr. J. Spurling, a well-known wharfinger, complains of the P.L.A., acting as wharfinger, competing with other wharfingers with public money. "On December 1st last," he says, "having without warning or explanation seceded from the Wharfingers' Paper Trade Committee, the Port Authority reduced the rates for unloading ships from 13s. 9d. and 18s. 1d. to 12s. and 14s. respectively. I admit that the previous rates, fixed during the boom of 1919, were too high, and I had already suggested some reductions. During this boom a number of wharfingers came into the business. They did not join the section and have been undercutting the agreed rates; and the Port of London Authority has blamed us for their action.

"It is generally feared that the new rates will prevent wharfingers from getting a livelihood. The Port Authorities can quote exceptional rates because generally they can dispense with lighterage costs, and the December reductions are out of all proportion to those on other classes of goods. Members of old established wharfingers have become alarmed, for it is feared that the attack upon the paper trade industry may be but a forerunner to a general onslaught."

London wharfingers, it appears, are divided into three sections—produce, wood and paper.

Trade Notes.

COUNTY COURT PRINTING.—A deputation from the Federation of Master Printers is seeking opportunity to ask the Treasury that before the work of County Court printing is transferred to the State printing works at Harrow, tenders should be invited from the private firms which have hitherto held the contract.

THE question of wages in the printing ink industry has been under consideration, and no decision has been reached, the matter to come up again at the end of three months.

WHAT is known as "The Great Poster Competition" occupied the attention of the magistrate on Monday at Bow-street, when Joseph Weiner (principal of J. Weiner and Co., Ltd., printers, of Long-acre, W.C.) and Captain Arthur Elliott were charged with publishing a proposal for the sale of tickets in a certain lottery. Mr. Muskett (for the police) described the Poster Competition in connection with advertisements, and said that no less than £5,000 had been deposited by the promoters of the scheme. Prizes were offered ranging from £3,000 to £1. The facts were not disputed, the question at issue being whether the scheme was a lottery. The hearing was adjourned.

WINTERBOTTOM BOOK CLOTH.—An extraordinary general meeting of shareholders of the Winterbottom Book Cloth Co. is called to consider a proposal to convert the existing £19 ordinary and £10 first preference shares into ten £1 ordinary and ten £1 first preference shares.

A SIGN writer named Harold Sharp, aged 21, was sent for trial by the Hull magistrates on Friday on charges of forging and possessing spurious pound Treasury notes, and possessing paper resembling banknote paper.

BRIGHTON MASTER PRINTERS' ASSOCIATION (which in a paragraph last week was erroneously referred to as the Bristol Association), has resumed membership of the Home Counties Alliance and held on Wednesday of last week a most successful meeting which augurs well for the future of the organisation in the Brighton district.

UNDER the auspices of the London Printing and Kindred Trades Federation, a concert in aid of the Greater London Fund for the Blind will be given to-morrow (Friday) evening at Prince's Hall, Lambeth Baths, Kennington-road. Well-known concert artists have promised their services, including the "Palestinians" Concert Party from the Queen's (2/24th London) Regiment, who performed in Palestine, Egypt, and France during their war service.

CAXTON HOME, LIMPSFIELD. — Financial support accorded this printing trade institution was satisfactorily reported on at the January committee meeting. After meeting all liabilities on the ordinary convalescent work, a sum of £600 has been paid off the War Memorial Wing debt. The loan from bankers now stands at £1,800, and donations to reduce this amount will be welcomed. The annual meeting of the Board of Representatives will be held at St. Bride Institute, E.C., on March 10th next.

GIVING details of disputes in the printing, paper, etc., group of trades, the *Labour Gazette* states that there were eight of them in 1921, 3,000 workpeople being involved, the aggregate duration in working days being 4,000. In 1922 there were 14 disputes, involving 16,000 workpeople and representing an aggregate duration in working days of 276,000.

JUDGMENT is awaited in respect of an action by Mrs. Winifred Lamond (professionally known as "Hetty King"), London, against the *Daily Record*, Glasgow (Ltd.), for £3,000 in respect of alleged slander by means of an alleged invented interview.

THE *Kettering Guardian*, a Conservative weekly newspaper established in 1882, announces that it is ceasing publication, together with its allied journals, the *Northants and Hunts Gazette* and the *Wellingborough Post*. The copyrights have been acquired by the proprietors of the *Kettering Leader* and the *Wellingborough News*, with which journals they will be amalgamated.

WHATEVER may be the oldest newspaper, there can be little doubt, says a writer in the *Daily Mirror*, as to which is the one with the longest name. That distinction may surely be claimed by the *Farnham, Haslemere and Hindhead Herald, Alton Mail, Bordon and Longmoor Journal, Liphook and Liss News, and North Sussex Advertiser.*

AN exhibition of prints and drawings from the collection of Mr. Harold Hartley, representing "Book Illustration of the 'Sixties," which is open in the basement of the Tate Gallery, consists of 364 prints and drawings, going back in time as far as Thomas Bewick and coming down to the present century. It is to remain open for the whole of this year.

THE quarterly meeting in London last week of the Association of British Chambers of Commerce, presided over by Sir Arthur Shirley Benn, M.P., passed a resolution pressing for a return to penny postage, and for charges on telegrams, cheque stamps and receipt stamps at pre-war rates.

THE death took place last week of Mr. Frank S. Lees, one of the oldest and best known journalists in Flintshire, associated with the *County Herald*, Holywell, for upwards of forty years.

THE late Mr. George James Ralph, of Lintrathen, Eastwood-road, South Woodford, a director of Messrs. John Gordon and Sons, paper manufacturers, who died suddenly at an installation meeting of the Papyrus Lodge at the Hotel Cecil on November 1st, left £5,142.

MR. JOHN HAWORTH PILLING, of Fair View House, Rawtenstall, mill manager, late chairman of board of directors, North of Ireland Paper Mill Co., Ltd., left £43,588.

DR. TEMPLE, Bishop of Manchester, has become a vice-president of the Simplified Spelling Society.

INSTITUTE OF JOURNALISTS—A letter inviting the support of journalists for the Institute of Journalists has been issued bearing the signatures of Mr. Arnold Bennett, Mr. Robert Donald, Mr. A. G. Gardiner, Mr. J. L. Garvin, Sir Philip Gibbs, Mr. H. A. Gwynne, Mr. T. P. O'Connor, M.P., Mr. F. Peaker, Sir Owen Seaman, Mr. J. A. Spender, Mr. J. St. Loe Strachey, and Mr. Charles Wells.

THE annual meeting of the Northern District of the Newspaper Press Fund was held on Saturday at Newcastle. The secretary, Mr. J. N. Back, read the annual report, which recorded a membership of 107, an increase of five on the year. The committee was re-elected, with one or two alterations; and Mr. J. N. Back was re-appointed hon. secretary and cordially thanked for his services during the past year.

ON Wednesday afternoon, the 10th inst., the children of the workpeople of Fry's metal foundry were entertained to a New Year's party by the office staff. Over 40 children of all ages from six months to fourteen years as well as their parents were present. The programme included tea, games, a Punch and Judy show, a ventriloquist and a distribution of toys from a Christmas tree by Father Christmas. Mr. and Mrs. John Fry, together with other guests were present during the afternoon and the entertainment was a great success.

THE report in an evening paper that a salary of £1,500 a year will be offered with the post of general secretary to the Trade Union Congress, which Mr. C. W. Bowerman is to vacate this year, is entirely unauthorised. Speculations as to probable candidates or salary at the present moment is pure guesswork.

AN UNFORTUNATE PAPER DEAL.—A sitting of the London Bankruptcy Court was held on January 16th, before Mr. Registrar Mellor for the public examination of Frank Charles Thomas, photo-engraver reproducer, 47, Milton-street, E.C. The debtor failed in October last with total liabilities £2,122 (unsecured £1,444) and net assets valued at £173, after deducting £208 for payment of a preferential claim for rent. Replying to Mr. V. Armstrong, official receiver, the debtor stated that he commenced business in January, 1914, and traded with success until June, 1920, when he accepted a verbal order for ten tons of paper, which he purchased and sold in September, 1920. The price to be paid by his customer was £1,238, but between the date of giving the order and that of delivery there was a great slump in prices. His customer repudiated the order, and witness resold the paper at a loss of about £650. That loss caused him to obtain a loan from a professional moneylender, but he continued to trade until last September, when the landlord distrained and re-entered into possession of the premises. Witness attributed his failure and insolvency to the loss on the paper transaction, and to decline in trade during the last two years. The examination was concluded.

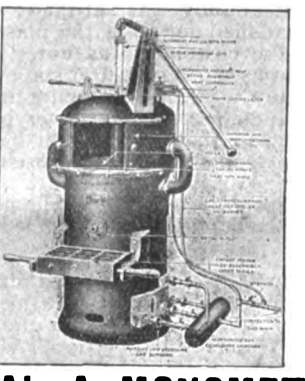
EXPORT OF PRINTED BOOKS.—Printed books were exported from Great Britain during the twelve months ended December to the extent of 276,765 cwts. (of the value of £3,171,834). In the previous year these exports stood at 272,967 cwts. (£3,436,649), whilst in 1920 (twelve months) they reached 286,514 cwts. (£3,770,191).

THE report of the British Manufacturers Representatives' Association of South Africa (Inc.) for 1922 reports a satisfactory increase of membership, being raised to 433 by 62 during the twelve months. Reference is made to the various sample-rooms opened in Durban, Queenstown and East London.

NEW YORK'S PRINTING COSTS.—Cost of book production in New York is heightened still further by an increase of $6 per week given to machine minders on January 1st. The Printing Pressmen's Union is pressing for increases to feeders and other press-room workers, with whom agreements terminated on January 1st.

PAPER bags are used for the sale of coal in the United States, and legislation is being put forward in Massachusetts to regulate their contents.

OFFICIAL U.S. figures show that the average monthly export price per pound of newsprint for September declined somewhat, compared with August, the figures for the former month being 4.4 cents and for the latter 4.7 cents. The figure for September a year ago was 5.3 cents.



IN September last 3,800 tons of paper goods and printed matter were imported into Russia, of the value of 858,000 gold roubles (calculated on 1913 prices).

The "Daily Chronicle" COMPANIONSHIP.

The annual dinner of the *Daily Chronicle* composing room staff was held at the Manchester Hotel, E.C., on Saturday night. About 90 were present. Among the company were Mr. C. A. McCurdy, K.C., M.P. (chairman, United Newspapers (1918), Ltd.), Brigadier-General E. B. Cuthbertson (general manager), Sir Howard Spicer, and Mr. J. H. Parham (business manager). Mr. J. Syred (father of the chapel) presided.

The toast of "Our Guests" was proposed by Mr. J. G. Lyon, and replied to by Mr. McCurdy. General Cuthbertson proposed "The Chapel."

A presentation of an inscribed gold watch was made to Mr. Slyth, late deputy printer, to mark the completion of 44 years' service with the firm.

INSTAL A MONOMETER.

£2000 per annum saved
in metal alone by using a MONOMETER FURNACE.

A large London Printers' have found by test that they get 48½ lbs. less dross per ton of metal melted with a Monometer Furnace.

They melt 8 tons per day, so a direct saving of over £5,000 is effected.

Just calculate how much you melt per day and see what you will save.

Monometer Manufacturing Co. (1918) Ltd.

The Recent Labour Negotiations.

Master Printers' Frank Discussion.

The Association of Master Printers of West and North-West London at their January meeting on Tuesday of last week were successful in securing the presence of a number of prominent printers to deliver addresses on the subject of "Impressions Gathered at the Past Labour Negotiations by Representatives of Various Sections of the Trade." Mr. R. A. Austen-Leigh was prevented from being present, as was also Mr. A. Bonner, but speeches were delivered by Messrs. G. Eaton Hart, R. B. Simnett, G. Poulton, J. Brigenshaw, J. A. Drewett and W. J. Mizen.

The audience was a small one, but included a number of well known gentlemen, amongst them being Mr. A. Langley, vice-president, and Mr. W. Whyte, secretary of the London Master Printers' Association; also Mr. F. H. Cole, hon. secretary, South-West M.P.A.

The chair was taken by Mr. S. Sidders, president of the West and North-West Association. The speakers expressed themselves in rather intimate fashion—at times specifically in confidence—and it was evident that it was their wish to speak as frankly as practicable, with a view to improving the conditions of future labour negotiations.

The opening part of the proceedings was of a social character, refreshments being served from 7 p.m., the meeting proper commencing at 7.30. Routine business was first briefly transacted. One new member was elected to the Association, and the secretary read a communication received from Mr. Howard Hazell, drawing attention to a class in salesmanship which was starting at the London School of Printing. Mr. Hart took the opportunity to support Mr. Hazell's remarks by expressing his own opinion of the great value of special training for printers' salesmen.

Mr. G. Eaton Hart.

After some introductory remarks from the chairman, Mr. Hart addressed the meeting as representing the newspaper and periodical houses. He began by explaining the very difficult position in which the employers in this section of the trade found themselves when the negotiations reached a point where employers were asked to post notices. He went on to say that the trade owed a tremendous amount ef gratitude to those gentlemen who had sacrificed their time, day after day and week after week, to look after the affairs of master printers generally. He knew some of the strenuous times they had gone through, and he took the opportunity of expressing his appreciation of the sacrifices made by those gentlemen, particularly the president of the Federation of Master Printers. He thought that they all should feel they ought to emulate the services and sacrifices that had been rendered on their behalf. He wished the employers throughout the country could have come to a single agreement with their workpeople. As it was, one section had been set against another, and in the variety of settlements which had resulted it was found that nobody was satisfied; the men were not satisfied nor were the masters, and certainly the customer was not. The only possibility of securing a better state of affairs in the future was for employing printers to get closer together and bring everybody into their ranks, so that they might be able to stand firm, man to man, and insist upon a proper return for their work, certainly refusing to undertake any work of which they did not know the actual cost.

Mr. R. B. Simnett.

Mr. Simnett, representing magazine and general houses, said he thought the negotiations cast no reflection upon the London Master Printers' Association, which he thought had done the very best that any Association could possibly do in the difficult circumstances. He thought that the principal point that had to be attended to in view of the future was to contrive that master printers belonging to the various groups—newspaper houses, periodical houses, houses combining periodical and job printing, and purely jobbing houses—should come closer together and understand better one another's difficulties. He did not know whether the work of solidifying these different groups could best be done from headquarters, but he threw out the suggestion that the head office should appoint an organiser, not for the purpose of getting in new members—that was being efficiently done by the present organisers—but a man who would make a special study of the London printing trade and get every printer in London listed according to the group to which he belonged. This would help in getting these groups solidly formed, and strengthen their position when they came to negotiate with the unions. He referred to the excellent organisation of the Leipzig master printers, who had not only built themselves a magnificent building but who were so organised that every new idea and every new development in machinery was taken first to headquarters for the benefit of the trade; moreover, their prices were absolutely uniform. If such an organisation were possible in Leipzig, it should certainly be possible for London to bring its organisation to something of the same level.

Mr. G. Poulton.

Mr. Poulton (representing the open and non-federated houses) began his address by expressing, as did several other speakers, his great appreciation of the ability and enthusiasm shown by Mr. J. R. Burt, the secretary of the West and North-West Association, in his efforts to assist the various Associations in London. After expressing his approval of the constructive tone of the previous speaker's remarks Mr. Poulton proceeded to a severe criticism of the councils of the London Master Printers' Association and the Federation, which he alleged were lacking in constructive policy. He thought the main desideratum was that the Federation council should frame a policy—and there were men on the council well able to do it—and then send out their representatives to carry that policy into effect. He thought their difficulties were purely a matter of organisation and ought to have been solved long ago. It was a mistake to split up the negotiations; the whole Federation should fight as a unit, and make it one of its first points that it was going to settle labour troubles as one Federation.

Mr. J. Brigenshaw.

Mr. Brigenshaw (litho and jobbing), as president of the South-East Master Printers' Association, expressed the thanks of that Association to Mr. Burt for the assistance he had given them. He confined his remarks chiefly to the litho section of the trade. He urged particularly that, before wage negotiations with the unions were entered upon, more time should be given by the employers to finding out the views of the trade, considering their position and collecting the necessary data.

Mr. Brigenshaw's criticisms about insufficient consideration of matters discussed in the negotiations brought Mr. Hart again to his feet, with a reminder of the very great amount of time and study that had been given to certain matters, as, for instance, the linotype piece scale. Mr. Hart went on to refer to the periodical minimum scale now under discussion, and suggested that it was not fair to leave such work to the officials and to subcommittees, and that an expert ought to be engaged who would undertake the handling of such questions as these.

Mr. Brigenshaw pointed out that he had meant to suggest that the same careful consideration should be given to wage negotiations as to the matters Mr. Hart had mentioned.

Mr. J. Drewett.

Mr. Drewett (suburban news and general) said that the outstanding impression he had of the labour negotiations was of the patience and perseverance certain gentlemen had shown during the last four or five years, and especially Mr. Austen-Leigh and Colonel Truscott. In respect of one point Mr. Hart had stolen his thunder, as he had intended to suggest the engaging of a technical expert who would be able not only to work out facts and figures, but also to advise members, and to deal direct with the organiser of a union, and thus sometimes to avoid taking to 24, Holborn questions which could be settled on the spot.

Mr. W. J. Mizen.

Mr. Mizen (general jobbing) after a further expression of appreciation of Mr. Burt's services, referred to the high cost of printing, the introduction of substitutes for printing, and the competition of Continental printers. He thought that whilst much must be said for the time and work which their representatives had put in to arrive at the position that had now been reached, some better system of negotiation was required. Some of them had hoped that the Joint Industrial Council would be their League of Nations, but they had found that all the J.I.C. was able to do was to offer suggestions and recommendations. What they required was a tribunal or mediator agreeable to both sides, and whose decisions both sides would agree to abide by. The J.I.C., now an established part of the trade and a representative body, should be vested with power, with perhaps the addition of a referee to give a final vote.

The Root of the Matter.

After the chairman had spoken appreciatively of the various speeches delivered, Mr. Burt suggested that they should defer further discussion to next month's meeting. He said that the main thing they had heard that evening was not so much that 24, Holborn was at fault as that printers individually were at fault in failing to support their organisation—a sentiment which was received with general applause. He thanked all the speakers for their services, and extended an invitation to the next month's meeting.

Mr. Langley associated himself with Mr. Burt's expression of thanks, taking the opportunity to point out that it was at London's own request that the negotiations regarding London wages were carried on separately from those regarding the provinces.

The chairman then brought the meeting to an end, reiterating the invitation to resume the discussion next month.

The Vertical Miehle Explained.

Lecture at Liverpool.

With Mr. J. H. Manley (C. Tinling and Co.) in the chair, a large audience gathered last week at the School of Art, Liverpool, to hear a highly instructive and interesting lecture by Mr. W. A. Myles (secretary of the Miehle Printing Press and Manufacturing Co., Ltd.), on the American Co.'s Vertical Job Press, the new jobbing machine referred to at some length in our columns a little time ago.

In introducing the machine, Mr. Myles stated shortly the reasons that governed its design and the field it was intended that the Vertical Press should reach. The claims made for the press were also stated and the lecturer proceeded to explain the essential features of the press, illustrating his well-spoken and clear explanations by a series of lantern slides.

The very many advantages derived from the ingenious arrangement of the full crank driven and counterbalanced bed and cylinder reciprocating vertically in a two piece single joint framework resting on three points of support were carefully pointed out. The accessibility of the machine and its wonderful simplicity and convenience of handling were appreciated, and its perfect registering qualities were emphasised by a representative selection of samples of various work which included some admirable four-colour specimens; these samples created much interest. The very few adjustments required to change over from one job to another were naturally appreciated by the pressmen, and the ease with which the few adjustments could be made clearly showed how the distinctive characteristic of the machine, namely, its high productivity, was brought about.

That the explanations of the chief features of the Vertical Press had been very closely followed was evidenced by the pertinent questions dealt with by the lecturer and the discussion that ensued.

A vote of thanks having been passed to the chairman and the lecturer, as well as to Mr. Henry Dodd, the president of the Letterpress Machinemen's Guild to whose initiative and enthusiasm the lecture was chiefly due, a highly successful meeting was brought to a close.

ANOTHER successful staff gathering was held on Saturday of all those associated with the firm of Charles Birchall, Ltd., the proprietors and publishers of the Liverpool *Journal of Commerce*, advertising agents, general printers and bookbinders, etc. This year's gathering, like those of recent years, was held at the Britannia Rooms, Cunard Building, Liverpool. The attendance from every department was fully representative, and the "outposts"—the branch offices, London, Cardiff, Newcastle, Glasgow, and so on—had their stalwarts well in the front rank. Mr. Birchall was supported by Mrs. Birchall, J.P., and other members of the family, and Mrs. Birchall presented the prizes at the whist drive, which was part of the evening's entertainment.

LITHOTEX
"Step-and-Repeat" Developments.

Demonstration, and a Visitor from China.

Some important developments have taken place recently in connection with the Step-and-Repeat machine as used in the Lithotex process, and to explain these to interested visitors a demonstration was given last week by Messrs. Pictorial Machinery, Ltd., of 7, Farringdon-road, E.C.1.

To indicate briefly the direction of the new improvements, one may point first to the new Lithotex Electrical Time Clock device, a contrivance entirely obviating the counting of seconds by the operator and the use of the bulb and tube, the timing being done entirely by electrical control. The shutter opens and closes instantly, giving exact timed seconds which are repeated automatically. This cuts out all the question of variation of exposure and consequent variation of negative. Negatives can now be obtained absolutely the same throughout the whole area of the plate,

Mr. K. Begdon.

no matter what the size may be or how many exposures there may be. This has been one of the greatest requirements of the Step-and-Repeat machine, and this improvement has taken three years before a thoroughly tried-out satisfactory method could be obtained.

The instrument specially seen was the No. 2 instrument, being specially built for Australia, and this instrument has an extra large lens; the lens on the standard Step-and-Repeat machine is 6 in., but the lens of the No. 2 machine is 9½ in., it thus being possible to project larger images and to start from a larger unit negative, which means for half-tone screen images that quite large images can be obtained without any enlargement of the screen. For certain work such as magazine covers or for long labels, long cheque tints which have to be printed at one operation, or all things of large areas in the printing trade, the No. 2 machine will be found equally facile as the previous machine has been for smaller images.

The dials on the new instrument are very much larger, the lettering with the figures appearing in white on a black ground, and the handles being also much easier to manipulate. A very striking feature in the new improvement is the placing of the magnification controlling wheel in front of the instrument; hitherto it has been underneath the instrument in the middle. The operator can now sit more comfortably, and regulate the instrument at greater ease. The same remark applies to the squaring up of images. This can also be done by manipulation from the front of the instrument. A number of other improvements relating to the unit holder and system of focussing are noticeable, whilst an adjustable negative holder taking practically any size multi-negatives is a feature of the new instrument.

These points of improvement have, we think, placed the Step-and-Repeat machine very much further along the path to perfection, and those who have appreciated the instrument in the past will certainly welcome the new possibilities. Observers particularly admired the general skill by which the larger requirements had been catered for, and the instrument was, in the general opinion of the visitors, a very admirable piece of engineering work.

An Inquirer from China.

One of the most interested of the visitors, by the way, was Mr. K. Begdon (portrait herewith) who has come to this country on matters of printing trade interest as representative of Messrs. Arnhold Brothers & Co:, Ltd., the big import firm of Shanghai. Mr. Begdon not only inspected the new Step-and-Repeat machine, but has also visited Messrs. Sharp and Sons of Leeds, where the Lithotex and Printex processes are in use for the production of textile rollers. Messrs. Arnhold have, we understand, taken up the sole agency for Lithotex plant in China—that vast awakening country whose teeming millions, now rapidly adopting the English language and culture, are beginning to provide a market for printing supplies to which British manufacturers would do well to pay increasing attention.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines:—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous,

One Insertion 3/-
Three Insertions... ... ... 6/-
For every line exceeding three lines 1/.

Situations Wanted,

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions... ... ... 3/0
For every line exceeding three lines 6d.

Machinery for Sale.

BREHMER and other WIRE STITCHERS, various models, including 4's, 4A's and Double-headed; guaranteed.—Box 13995.

BREHMER BOOK SEWING MACHINE, for Letterpress work, distance between stitches, also length of stitches—adjustable according to size of Books; machine to take any size of Books up to 14-in. long and 9½-in. wide; machine for Power.—Box 13996.

DAWSON'S TWO FEEDER WHARFEDALE NEWS MACHINE, for sale, flyers with cutter, bed 65 in. by 49 in., ink slab 60 in.; also MENTGES NEWS FOLDER, No. 2 868, folds 4, 6, 8, 10 or 12 pages, with paster, trims top of page.—Caldicotts "News" Office, Gainsborough. 14032

DOUBLE-HEADED WIRE STAPLING MACHINE, for Wooden Boxes, from 2-in. to 12-in. in height; fitted with Two Heads; adjustable from 2½-in. up to 8½-in. apart; Adjustable Iron Table; for Power or Treadle; latest construction; absolutely new.—Box 13997.

NO. 4 BREHMER WIRE STITCHING MACHINE; Power only; will stitch ½-in.—Box 13998.

QUAD DEMY FURNIVAL DIRECT LITHO ROTARY, in thorough condition; for immediate disposal.—For particulars and appointment to view, apply Box 14031.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

SMYTH-HORNE No. 3 BOOK SEWER for sale; can be seen working any time.—Box 13994.

Machinery Wanted.

HAND-PRINTING PLATEN wanted (Second-hand), good condition, must be cheap.—E. Warren, 75, Trehurst-street, Clapton, E.5. 14030

Miscellaneous.

CARBON PAPERS!!! Box containing 100 sheets, foolscap size, Black or Purple; price 4s.; special quotations for dozen lots.—Apply, Box 14029.

LARGE STOCK Good Quality TYPEWRITER CARBONS, Foolscap and Quarto; low price to clear.—Box 14035.

Tenders.

METROPOLITAN BOROUGH OF GREENWICH.

TO PRINTERS.

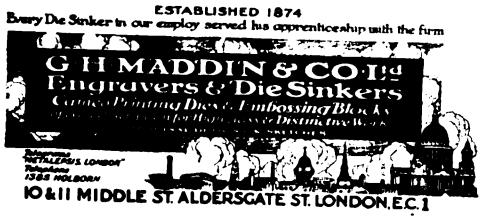
THE Council of the Metropolitan Borough of Greenwich is prepared to receive TENDERS FOR PRINTING for a period of three years from April 1st, 1923.

Printed forms of tender and conditions and schedules of requirements, with "Standard Prices," can be obtained and samples seen at the Town Hall, Greenwich-road, between the hours of 10 a.m. and 4 p.m. on week-days (Saturdays between 10 a.m. and 12 noon). A deposit of One Guinea will be required, which will be returned to the Depositor on his sending in a bona-fide tender.

The Contract will contain a clause providing for the adjustment of the contract price according to any variation in the cost of labour and/or material.

Tenders, on printed forms, sealed up, and endorsed on the envelope "Tender for Printing" must be sent to the Town Clerk, Town Hall, Greenwich, before 10 a.m. on Thursday 1st March, 1923. An undertaking to the effect that the person tendering will pay such rate of wages and observe such hours of labour as are considered just and fair in his various trades must be signed by each person tendering as part of his tender.

The Council does not bind itself to accept the lowest or any tender.



FREDERICK J. SIMPSON,
Town Clerk.
Town Hall, Greenwich, S.E.10.
January 18th, 1923. 14034

Patents, etc.

THE Proprietors of Letters Patents No. 26,514, 1911, relating to "IMPROVEMENTS IN THE PRODUCTION OF DESIGNS ON PAPER OR THE LIKE," No. 2,401, 1914, relating to "PROCESS OF PRODUCING COLOUR PRINTS," No. 1,144, 1914, relating to "IMPROVEMENTS IN PRINTING PROCESSES," and No. 103,120 relating to "METHOD AND APPARATUS FOR MANUFACTURING COLOUR PRINTS" desires to dispose of the Patents or to grant Licences to interested parties at reaosnable terms with a view to the adequate working of the Patents in Great Britain.

Inquiries to be addressed to the PATENTEE, AKTIEBOLAGET HASSETT, JARPEN, SWEDEN.

Lancashire and Yorkshire—Mr. W. C. FOSTER, 1, Duncan-street, Higher Broughton, Manchester.
Scandinavia and Finland—Mr. DAVID AAMO, 2, Hollænderdybet, Copenhagen, C.
France and Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, Brussels.
United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, JANUARY 25, 1923.

Printers and Postal Rates.

IT is satisfactory to learn the Postmaster-General has consented to receive, at 3 p.m. on Wednesday, January 31st, a deputation from the Joint Industrial Council of the Printing and Allied Trades of the United Kingdom, on the question of a further reduction in postal charges, particularly with regard to printed matter and post cards. Mr. A. E. Goodwin, joint secretary of the J.I.C., has been doing good work of late in getting publicity in the Press for the printers' views of the need for reduced postal rates. The deputation now arranged should do further good in focussing public attention upon the points in regard to which revised postal rates are required. It is understood that the deputation will press for a return to the pre-war rates for printed matter, by which two ounces could be sent for ½d. Now only one ounce can be sent for ½d. It is true that before the last Post Office Estimates were introduced, the rate was 1d. for only one ounce, but although printers are grateful for that reduction, that, unfortunately, does not affect the very large proportion of packages and catalogues weighing over one ounce. On some of the heavier packages the increase over pre-war rates is no less than 75 per cent. The deputation will also ask that the post card rate be reduced from 1d. to ½d. It is true that the last reduction from 1½d. to 1d. has been of great benefit to the picture post card trade, but the regulation as to the sending of five words of greeting for ½d. is so hedged round with conditions as to make it of little value. It seems clear that in these directions at any rate the Post Office could move with a good prospect of making little or no loss of revenue whilst certainly enhancing the utility of the postal services.

* * *

Printing Competition from Germany.

A CIRCULAR and folder have been received by buyers of printing throughout the country from one of the largest factories in Germany advertising best service in paper, print and postage at low cost. The claim is made that the factory has at present in press large contracts for school books, novels, catalogues, etc., for England, among other countries. We have known of novels and catalogues coming from Germany in abundance, but it is new and disturbing to hear of scholastic stationery coming over. It is pointed out in the circular that German paper is somewhat lower priced than English; but it is stressed more particularly that where our workman gets 92s. 6d., theirs, on the basis of Exchange ruling, get 12s. It is quite right for any German house to go out after business, but any English firm that is content to send orders abroad and see our own country with its present state of employment should sell its goods abroad.

* * *

Paper Imports Still Rising.

PAPER and cardboard imports into the United Kingdom last month reached 1,053,425 cwts., an amount which represents increases of 317,260 cwts. (43 per cent.) compared with December, 1921, and 378,522 cwt. (56 per cent.) over the corresponding month of 1920. The c.i.f. value of the month's imports stood at £1,114,335, an advance of £78,602 (7·5 per cent.) contrasted with December, 1921, and a decline of £575,780 (34 per cent.) compared with the same month of 1920. The quantity and value of the imports during last year and and the two previous years were as follows:—

	Cwts.	£
Jan.-Dec., 1922 ...	11,071,879 ...	12,374,275
" " 1921 ...	6,782,563 ...	11,601,455
" " 1920 ...	12,940,286 ...	30,243,744

Compared with the twelve months of 1921, last year's arrivals show a big increase of 4,289,316 cwts. (63·2 per cent.) in the quantity received, and in value an advance of £772,820 (6·6 per cent.). Against the twelve months of 1920, however, declines are recorded both in regard to quantity and value, viz., 1,868,407 cwts. (14·4 per cent.) and £17,869,469 (59 per cent.). The following figures mark the increases which took place during the past twelve months in the most important items included in the import list compared with the previous year: Printings, 3,832,358 cwts. (34·6 per cent.), an increase of 1,076,890 cwts.; strawboards, 2,966,880 cwts. (26·7 per cent.), 1,340,226 cwts.; packings and wrappings, 2,818,436 cwts. (25·4 per cent.), 1,285,572 cwts.; millboards, 879,182 cwts. (7·9 per cent.), 375,731 cwts.; and coated papers, 97,475 (·8 per cent.), 38,172 cwts. With regard to the countries sending printings to the British market during the twelve months' period, we find Newfoundland to be by far the largest supplier, her consignments (1,108,757 cwts.) indicating an increase of 363,037 cwts. compared with 1921. The next country on the list is Norway, with 649,291 cwts., an excess over the previous year's contribution of 76,530 cwts. Consignments from Sweden, although bulking largely, amount to 573,219 cwts. and show an increase of only 458 cwts. The position occupied by Canada is a much improved one, that Colony's supplies having risen from only 5,203 cwts. to 189,681 cwts. Germany and Belgium, however, have sent less of this class of paper, the former country's shipments having dropped from 97,273 cwts. to 93,761 cwts., and the latter's from 73,518 cwts. to 26,687 cwts. With regard to the imports of packings and wrappings during last year, the premier place is taken by Sweden with 1,058,478 cwts., an increase of 426,295 cwts. compared with the preceding twelve months. Norwegian supplies (641,514 cwts.) have been coming along freely, and show an advance of 379,785 cwts. compared with 1921. Packings and wrappings from Finland continue to show a consistent expansion (from 204,560 cwts. to 282,740 cwts.), while those from Germany (166,267 cwts. to 381,901 cwts.) and Canada (17,584 cwts. to 116,876 cwts.) indicate that a much bigger business has been transacted than in the previous year.

IT is better to err on the side of initiative than inactivity.

Personal.

THE PRINCE OF WALES will preside at the diamond jubilee dinner of the Newspaper Press Fund at the Hotel Victoria, Northumberland-avenue, W.C., the date of which has now been fixed for Thursday, May 10th.

SIR HERBERT E. MORGAN has accepted the chairmanship of an influential Appeal Committee which has been specially formed.

WHEN H.R.H. the Duke of York, at the Savoy Hotel on Thursday, presided over the festival dinner in aid of the funds of the Industrial Welfare Society, given by Colonel and Alderman Sir Charles Wakefield, those present included: Sir William A. Waterlow, Mr. R. A. Austen-Leigh and Mr. G. A. Isaacs.

SIR WILLIAM BERRY, speaking as the principal guest at a luncheon held under the auspices of the London Commercial Club, at which Mr. Alfred Edwards presided, said he thought we had in this country a newspaper Press which would stand comparison with any other Press of any country. The Americans were of the opinion that our papers were superior to theirs.

MEMBERS of the Thirty Club of London on Thursday entertained Mr. F. A. Wilson-Lawrenson, the American representative of the Associated Advertising Clubs of the World, at dinner at the Trocadero Restaurant, amongst those present being many representatives of the newspaper and printing trades, including Lieut.-Col. J. R. Truscott, Sir Ernest Benn, Mr. J. S. Elias, and Mr. Valentine Knapp.

MR. F. O. ROBERTS, M.P., has been made a life member of the Northampton Trades Council. He has seen it grow from an affiliated membership of 6,000 to 25,000.

WE extend hearty congratulations to Mr. F. W. Bridges, of the *Caxton Magazine*, on completing, on Wednesday last, fifty years' active association with trade journalism.

MR. WALTER JOHN WILDEN HART—who is a director of the firm of Coates Bros. and Co., Ltd., printing ink and varnish manufacturers—has been elected fourth Warden of the Worshipful Company of Felt Makers, of which the next Lord Mayor, Col. and Alderman Sir Louis Newton, is a member.

THERE was a gathering of all the staff of Messrs. Dee and Co, Ltd., on Friday evening to say good-bye to Mr. A. E. Rayment in the factory which he inaugurated and managed for so many years. On behalf of those present, Mr. G. S. Stockman, the managing director, presented Mr. Rayment with an illuminated testimonial. He referred to the recipient's service of over 36 years with the firm, a longer connection than that of any one else. There were additional gifts from other members of the staff.

MR. RAYMENT, with his elder son, has joined his brother's business as a wholesale manufacturing stationer, at 63, Stamford-street, S.E.1.

AT the first annual dinner of the *Daily Telegraph* editorial staff, held at the Hotel Victoria, Northumberland-avenue, on Saturday evening, Mr. James Macintyre, on his retirement after forty-two years' service, was the recipient of a gift offered to him as a tribute from his colleagues, the presentation being made by Mr. W. L. Courtney, LL.D.

MR. T. W. HANDFORD, upon the occasion of his having completed 40 years' service with the *Field* and the *Queen* newspapers, has been presented with a massive silver rose bowl (65oz. in weight) by the directors and staff.

MR. CHAS. W. DAVIDSON, the president, will preside at the annual winter dinner of the Stationers' Social Society, which will be held on Saturday, February 15th, in the Grand Hall of the Hotel Cecil, 6 for 6.30. As decided at the recent annual meeting, ladies are invited.

A Printer's Jubilee.

Mr. T. J. Mountain's 50th Anniversary.

To celebrate the 50th anniversary of Mr. T. J. Mountain's connection with the Westminster printing business of Wightman and Co., Ltd., a concert was held at the firm's Camberwell factory recreation hut on Saturday. An enjoyable programme was carried through under the guidance of Mr. C. G. Seiling.

During the course of the evening Mr. A. H. Bartlett, one of the directors, presented to Mr. T. J. Mountain a handsome cutlery cabinet subscribed to by the directors and employees.

Mr. Bartlett in the course of his remarks referred to the foundation of the business in Regency-street, Westminster, by Samuel Wightman. Mr. T. J. Mountain joined the firm in 1872 and on the death of his father, Mr. J. C. Mountain, in 1886, he assumed complete control. Since that time the business had steadily progressed. In 1898 it was turned into a limited liability company with Mr. T. J. Mountain as managing director, and in 1915 he was appointed chairman of the company. The studied thought of Mr. Mountain had evolved the profit-sharing scheme which was inaugurated in 1920. As a slight token of the honour and esteem which they all had for him, he made the presentation of the cutlery canteen so eagerly subscribed to by every member of the firm.

Mr. Mountain, in reply, said that he was reminded of the presentation of an illuminated address in 1891 to mark the occasion of the firm becoming a trade union house. There were few firms in which the spirit of regard between employer and employee had been so well maintained. He spoke of the early days when the wages bill on Saturday presented a difficulty, but he was very glad to say that no man had gone away empty-handed. Nowadays the firm was prosperous and had made a name in the trade which was very gratifying, a result brought about by the co-operation of all. He was glad to see Mr. Reason present. Mr. Reason had been in the employ of the firm for 70 years, in the days before he (Mr. Mountain) was born. He thanked the directors and employees for their generous kindness and their good wishes for the future.

Sir George Toulmin.

WE regret to record the death of Sir George Toulmin, which occurred at Preston on Sunday night. Born in 1857, Sir George Toulmin was managing director of the *Lancashire Daily Post*, the *Preston Guardian*, and the *Blackburn Times*. He was twice chairman of the Press Association—in 1909-1910, and in 1919-1920—and hon. treasurer of the Newspaper Society. Sir George Toulmin's services were frequently given for the benefit of the master printers' organisations which will miss the assistance rendered in many ways by this stalwart newspaper proprietor.

Mr. James Fletcher.

THE death occurred last week of Mr. James Fletcher, director, manager and secretary of Messrs. Fletcher and Speight, Ltd., printers, etc., of Fleet-street, Bury. Born 50 years ago, he was apprenticed with Messrs. Fletcher and Speight, in which his father was a partner, and in due course became a partner. He was a member of the Bury and District Master Printers' Association. Other business concerns with which he was connected were the Bury and Rochdale Billposting Companies, both of which limited companies he was a director.

PRINTERS' PENSION ELECTION.—Votes and recommendation are being solicited for the second application of Federick John Franklin, aged 64 years, compositor and reader, who was for 35 years with Messrs. Taylor and Francis; 5 years with Messrs. Eden Fisher and Co., Ltd.; *Lancet*; Messrs. Couchman; Messrs. Potter. Apprenticed to the late Dr. Francis and the Stationers' Company, and Freeman of the company and of the City of London.

Trade Union Matters.

LONDON BOOKBINDERS' STOPPAGE.—A wages dispute in the London bookbinding trade led on Monday to a strike of 200 workers, members of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers. According to a statement by a trade union official the trouble has arisen because the employers, belonging to the Bookbinding Section of the London Chamber of Commerce, refused to recognise an agreement in regard to the wages of the porters and warehousemen in their employ. So far as the bookbinders' union is concerned there is no dispute with the employers. Their members, refusing to do the work usually done by the porters and warehousemen, have ceased work in sympathy. Circulars are being sent by the union to all fathers of chapels whose members may be called on to handle goods from the firms concerned.

PAPER WORKERS' STRIKE.—This is the third week of the strike at the works of Messrs. Samuel Jones and Co., Ltd., of Bridewell-place, London, about 250 of whose workers are on strike in a dispute concerning the employment of non-union labour. The strikers, whose work relates to the making of gummed and coated papers, are members of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers.

FRAUD ON L.S.C.—At Bow-street Police Court on Thursday, Mr. Leycester gave a considered judgment in a case in which Isaac Harry Farley and William Henry Hannington were summoned for having, while employed as compositors at the Avenue Press Drury-lane, W.C., fraudulently misapplied moneys belonging to the London Society of Compositors, of which they were officials. The Magistrate said that he regarded Farley as being no better than a thief. He deserved to go to prison, but the peculiar Act of Parliament under which the proceedings were taken (the Trade Union Act, 1871) gave the Court no power to order imprisonment for this offence without the option of a fine. He ordered Farley to repay the amount he had collected, £112, in addition to a penalty of £20 and £1 costs, or go to prison for three months in the second division. Hannington knew that Farley was misapplying the Society's funds and he ought to have prevented it; but instead of doing so, he went so far as to make false entries to conceal Farley's deficiency. He (the magistrate) believed Hannington when he said that he did not have any of the money in question, and as he had lost his situation over this matter he would merely be bound over.

"ALLOWANCE FOR CALLS."—A difference of opinion on the "allowance for calls" clause in the National Wages Agreement has arisen in a Leeds office. Members of the Typographical Association were called in to work two hours before the usual time for starting, and in addition to the usual overtime charges, a claim for one hour's extra pay for "special call" was made on the basis of the clause in the agreement, which sanctions one hour's "special call" money unless the men are called "within two hours of the usual time of starting." The firm in question refused to pay the claim, and the point was referred to the Federation of Master Printers and to the Executive Council of the Typographical Association. The decision of the latter is that when men are called in exactly two hours before the usual starting time special call should be paid. The decision of the Federation has not yet been announced.

AT the annual meeting of the Leeds Branch of the National Union of Journalists, on Saturday evening, Mr. E. G. Aston was elected chairman in succession to Mr. J. W. Allen, with Mr. L. Milne secretary and Mr. J. V. Medley treasurer. During the evening Mr. A. Kenyon was presented with a handsome oak writing bureau as a mark of appreciation of his services as secretary and treasurer during the past eight years.

TRADE UNION MEMBERSHIP.—According to the statistics of trade unions for the years 1912 to 1921, issued by the Chief Registrar of Friendly Societies, most industrial groups showed decreases of trade union membership during the period, but the "papermaking and printing" group was one of the exceptions, membership being increased from 139,817 to 145,078.

DIVIDENDS AND REPORTS.

HUDSON AND KEARNS — Report for year ended June 30th, 1922, shows loss, after making provision for depreciation of plant and machinery, payment of salaries and all other working expenses, of £23,993. From this is deducted £2,514 brought forward and £1,700 transferred from reserve fund, making £19,777. To this has to be added interim dividends paid on December 31st, 1921, on the 8 per cent. cumulative first preference and 6 per cent. cumulative second preference shares, £3,823; and corporation profits tax and reserve for income tax, £2,355; bringing total debit balance carried forward to £25,955. Directors state that loss is entirely due to the Manchester business.

NEW COMPANIES.

LOCAL NEWSPAPERS, LTD.—Capital £3,000 in £1 shares; to take over the proprietary and other rights of Simson and Co., Ltd., of 2 and 4, Fore street, Hertford, in the *Hertfordshire Record*, and to carry on the business of newspaper proprietors, printers and publishers, advertising agents, etc. Private company. First directors: H. H. Houston and W. D. McConnell. Registered office: 2, Fore-street, Hertford.

METAL GRAVURE CO. (1923), LTD.—Capital £2,600 in 2,500 preference shares of £1 each and 2,000 ordinary shares of 1s. each; chemical engravers, etc. Private company. Subscribers: N. H. Wilkins and A. Rayner. First directors: N. H. Wilkins, A. Rayner and A. J H. Hughes.

THOMPSON BROS. (PRINTERS AND STATIONERS), LTD.—Capital £1,000 in £1 shares (500 7 per cent. cumulative participating preference); to acquire the business of printers and office equipment contractors, wholesale, manufacturing and retail stationers, toy and model makers, etc., carried on at 31, Staines-road, Hounslow, Middlesex, and elsewhere as "Thompson Bros." Private company. First directors: J. E. Thompson, W. A. Tarling and Mrs. Catherine Thompson. Registered office: 31, Staines-road, Hounslow.

W. H. RICKINSON AND SON, LTD.—Capital £5,000 in £1 shares; to adopt an agreement with W. H. Rickinson and W. H. Rickinson, junr., trading as "W. H. Rickinson and Son," and to carry on the business of newspaper proprietors and publishers, etc. Private company. Directors: W. H. Rickinson and W. H. Rickinson, junr. Registered office: 3 and 4, Great Winchester-street, E.C.

GEORGE RADFORD, THE ADVERTISING AGENCY OF LONDON, LTD.—Capital £6,000 in £1 shares (3,000 8 per cent. cumulative preference); advertising agents, publishers of newspapers, magazines, journals, books and other literature, etc. Private company. First directors: G. Radford, Miss Marion A. Radford, Miss Marjorie L. Radford and Miss Hester I. Radford. Registered office: 12, York-buildings, Adelphi, W.C.2.

CRAWFORD-ALLEN, CO., LTD.-Capital £100 in £1 shares; stationers, printers, lithographers, stereotypers, electrotypers, photographic printers, engravers, papermakers, paper bag and account book makers, boxmakers, cardboard manufacturers, etc. Private company. Subscribers: A. M. Allen (first director) and J. P. Lane. Registered office: 14, Paternoster-square, E.C.4.

NORTHAMPTON GLUE CO., LTD.—Capital £4,000, in £1 shares; objects as indicated by title. Private company. Subscribers: T. Collingridge and J. Pebody. Registered office: Mill lane, St. James End, Northampton.

WESTERN SALES PROMOTION AGENCY, LTD. Capital £3,000, in £1 shares; to acquire the business of an advertising contractor carried on by L. E. Palmer at 53, Queen's-road, Bristol, as the "Western Sales Promotion Agency." Private company. First directors: Major L. E. Palmer and Mrs. Lillian M. E. Palmer. Registered office: 53, Queen's-road, Bristol.

AUTOMATIC PUBLICITY (PRESTON), LTD.—Capital £750, in £1 shares; to acquire a license for making, using, exercising and vending in Preston a patent automatic advertising machine; to adopt an agreement with F. Beardsworth and to carry on the business of advertising and publicity contractors and agents, proprietors and renters of hoarding, electrical, illuminated or other advertising stations, printers, engravers, etc. Private company. Directors: F. Beardsworth and J. W. Burton. Registered office: 27, Nile-street, Preston.

SERVICE AND INDUSTRIES, LTD.—Capital £2,000, in £1 shares (1,000 10 per cent. cumulative preference); general dealers, manufacturers and importers of and dealers in foreign and colonial produce, printers, publishers, etc. Private company. Directors: Mrs. Norah W. H. Dally and H. C. Trench. Registered office: 287, Regent-street, W.1.

CHARLES SCRIBNER'S SONS.—Particulars filed on January 16th, at Somerset House, pursuant to Section 274 of the Companies (Consolidation) Act. Capital $2,000,000, in $1,000 shares; publishers, printers, etc. British address: 168, Regent-street, W., where C. Kingsley is authorised to accept service and process of notices on behalf of the company. Directors: C. Scribner, C. Scribner, Jun., E. T. S. Lord and M. E. Perkins, all of New Jersey, and A. H. Scribner, E. L. Burlingame, R. J. Safford and R. Bridges, all of New York.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

FLEETWAY PRESS, LTD.—Satisfaction to the extent of £2,500 on December 30th, 1922, of "B" debentures dated July 28th, 1920, securing £53,200.

CLOISTER PRESS, LTD. (Manchester).—Issue on January 8th, 1923, of £1,100 debentures, part of a series already registered.

LEIGHTON, SON AND HODGE, LTD. (bookbinders, etc., London).—Satisfaction in full on October 27th, 1920, of debentures dated June 5th, 1908, securing £1,000. (Notice filed January 15th, 1923.)

LABOUR PUBLISHING CO., LTD.—Issue on December 8th, 1922, of £150 debentures, part of a series already registered.

DISPATCH PRESS (CRICKLEWOOD), LTD. (printers, etc.).—First mortgage debenture to "Bearer," dated December 14th, 1922, to secure £60, charged on the company's undertaking and property, present and future, including uncalled capital.

V. K. ROTARY CO., LTD. (London).—Land Registry charge on "Woodstock," Baring-road, Lee, S.E.12, dated January 5th, 1923, to secure £1,000. Holders: F. W. Brazil, A. V. Knight and F. C. Tilleard, all of 2, Talbot-court, Gracechurch-street, E.C.

ANTHONY HOUGHTON (FINE ART CO.), LTD. (Reading).—Debenture dated December 18th, 1922, to secure £200, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: J. C. St. L. Stallwood, Reading.

WILLIAM SINCLAIR AND SON (STATIONERS), LTD.—Montgage dated December 2nd, 1921, to secure £365 7s. 11d., charged on 11, Pool-road, Otley. Holder: Otley and Wharfedale Permanent Investment and Benefit Building Society (registered January 9th, 1923, pursuant to Order of Court).

BANKRUPTCIES, etc.

Re WALTER ERNEST EYRE, law stationer, late of 24, Portugal-street, Lincoln's-inn, W.C.—The creditors under this failure met at the London Bankruptcy Court on January 20th, when the official receiver reported that the liabilities were estimated at £412 against book debts £3. The debtor had stated that when he left school in 1892 he was apprenticed to the firm of Walter Eyre and Gale, 14, New-square, Lincoln's-inn, in which business his father was a partner. On the death of the latter he (debtor) became a partner and remained in the firm until 1910; the partnership then expired and Mr. Gale took over the business and the debtor retained a branch which had been opened at 24, Portugal-street. He traded with a fair amount of success until 1914, but was always hampered by lack of capital. In 1915 he joined the army and his wife carried on the business until he was demobilised in July, 1919. Latterly the business had gone from bad to worse. The estate was left in the hands of the official receiver to be wound up in bankruptcy.

Mechanical Plate Casting Within the Reach of Every Newspaper!

SWISS MANUFACTURE GUARANTEED

SWISS MANUFACTURE GUARANTEED

"WINKLER"

Automatic Plate Casting Machine.

THIS Machine embodies a number of exclusive features and new principles which permit the production of perfectly true and solid newspaper stereo plates—

1, Without "tail,"
2, Without pumps,
3, Without trimming or hand finishing,
4, Without subsequent shaving,
5, Without any dummy castings.

In other words: after a short automatic operation, independent of the skill of the operator a perfectly finished Stereo Plate is produced, which is absolutely ready for the press and does not require any make-ready.

Only one operator necessary.
Produces three plates per minute.
Considerably less loss of metal.
Consumption of fuel 75 per cent. less.

BRITISH AGENTS:

Wharfedale Printing Machine PROSPECTS.

Makers Anticipate Better Trade.

Present indications point to an improvement in the Wharfedale printing machine trade during the coming year. Although a "boom" such as followed the war is not anticipated, the majority of the Otley employers display a spirit of confidence. They report that markets are becoming steadier, and inquiries for their goods are of a more promising kind than has been the case for many months. It is felt, however, that what is now wanted is a period of quietude to allow industry to settle down.

Some improvement in the printing engineering trade was experienced during the latter half of the year, and none of the workshops has been on short time during the last six months. The reductions in the cost of raw materials and in the wage bills have enabled manufacturers to cut their prices, and orders are increasing in consequence.

Interviewed by a Press representative, Mr. Herbert Payne, one of the heads of the associated firm of Messrs. Dawson, Payne and Elliott, Ltd., said the improvement has been steady and is still holding. It is not confined to any particular market, or any special brand of machine, but is sufficiently distributed to keep all the machinery at the three works employed. It is also rather strange that in view of the unsettled state of Ireland the demand from that country is better than for some time past.

Mr. Payne says he is optimistic about the future, and can see nothing to hinder a gradual improvement throughout the year. Perhaps the best indication of the improving condition of trade was in the class of inquiry they were now receiving. The re-organising of the resources of the associated firms, which followed the amalgamation two years ago, has been proceeding steadily throughout the year. All the castings are now made at the Atlas Works, where there is the greater convenience, and the foundry has undergone extension for that purpose. The Steel Croft Works in Gay-lane are being utilised for the production of "Cossar" flat-bed web machines; whilst guillotines, in which all three firms formerly specialised, are now manufactured exclusively at the Atlas Works.

Arrangements are now being made for the whole of the automatic turning machinery to be placed in one building, and this will be followed by other changes to facilitate production. During the past year a new "Summit" platen of a heavy type has been designed, built, aud is now on the market. Other new specialities include a high-class folding machine, and a number of machines have been equipped with the "Waite" automatic feeder.

DUTCH strawboards are being quoted £9 per ton, with £1 5s. extra for heavy weights, and twice pre-war scale for lining one side. Best quality wood pulp boards are offered at £20 per ton, second quality at £18 15s. per ton. Reed boards are listed at £6 15s. per ton, leather boards at £20, and grey boards at £17 per ton. Fibre boards are selling at £25 to £28 per ton, pure kraft at £28, M.G. sulphite at £29, and rope brown at £22.

"LITIDROS."—We have received from that well-known specialist in lithographic printing, Mr. Joseph Goodman (12, Crane-court, Fleet-street, E.C.), some particulars of "Litidros" the "anti-drying" and "perfect-damping" composition for which he is the the sole agent for the British Isles. "Litidros" is a liquid which is added to the water used in moistening lithographic stones and plates, its object being to maintain the required humidity on both stones and plates without using a large quantity of water. That object is obviously a most desirable one, and amongst the claims made for this preparation are that water consumption is reduced to a quarter; that perfectly uniform moistening of printing surface is effected under all conditions of room temperature; that paper does not expand from excessive moisture and overlapping of colours does not occur; that printing ink is less debased, does not clog on the rollers, and the resulting prints retain the natural freshness of colour of the inks—with the economy of materials and labour which the prevention of excessive moisture entails.

THE late Mr. Alfred Slee, of Radburn-road, Shipley, Yorks, a director of S. Milnes and Son, Ltd., paper and canvas merchants, left £7,472,

Lloyd's New Paper Mill.

Widest Machines in the United Kingdom.

Kent as a papermaking county is well maintaining its laurels. In the domain of news-print production developments are proceeding apace which will enormously increase output as time goes on.

Following the building of an additional mill at Gravesend by the Imperial Paper Mills, Ltd., and the starting up of the new works at Aylesford by Messrs. A. E. Reed and Co., Ltd., we have now to record the enterprise of Messrs. Edward Lloyd, Ltd., of Sittingbourne, who have commenced operations in connection with a new mill at Kemsley.

A Link with Sittingbourne Mills.

Discussing the new project, Mr. R. B. Miller, the manager of the Sittingbourne Paper Mills, said it might be described as a link between the mills at Sittingbourne and Ridham Dock. Linked up as the Sittingbourne Mills are with Ridham Dock by a railway, the Kemsley Mill will be as it were a strengthening of that steel line which means so much to the industrial prosperity of Sittingbourne and Milton.

Work is actively proceeding in regard to making the necessary excavations for drainage, water supply, an extension of wharfage accommodation at that part of the Swale, and for a new roadway leading on to the site of the contemplated mill; while, later on, the railway track from Ridham Dock to Kemsley is to be doubled.

A visit to the site revealed a few boundary and building line stakes, and where is now primeval grazing ground, in a year's time will be seen bricks, mortar, cement, and timbers shaping themselves into what is to be a modern paper mill. Approximately the site of the new mill is a square mile in extent. The men now at work at Kemsley are the pioneers of an army of mechanics and labourers, the operations being under the direction of Mr. A. A. Richards, the chief engineer, assisted by Mr. A. J. Evans.

First Unit—Two Machines.

It is intended at the outset to instal two machines and to make additions as circumstances demand. The site is an extensive one, and consequently there will be no limit to expansion.

The firm of Edward Lloyd, Ltd., with their usual enterprise will take the lead in installing the widest machines in the United Kingdom, which will give a finished width of 215 ins. and run at 800 ft. per minute.

A weekly output of 800 tons will be furnished by the two machines, which, combined with the quantity manufactured at Sittingbourne mills, will give a prodigious total production.

Tenders are now being considered for the boiler plant, prime movers, and for the papermaking machines.

Calendars, Etc.

MESSRS. W. J. LIGHT AND CO., LTD., of 36-38, Whitefriars-street, E.C.4, send us a hanging calendar with monthly tear-off pad, the distinguishing feature being a series of very effective half-tone illustrations of some of the stereotyping machinery for which this firm has a big reputation.

FROM the house of A. Chris. Fowler, of Moorfields and Shoreditch, comes a neat and ornamental hanging calendar with monthly tear-off pad and well-printed reproduction of a painting of the Quay Vert, Bruges, the printing showing a delicate water-colour effect which is very pleasing.

PROCESS POCKET BOOK.—We have received a copy of the Penrose Process Pocket Book and Diary for 1923. This neat booklet is compiled by Mr. William Gamble, F.R.P.S., and in addition to usual diary features contains useful tables, technical data, etc., of special utility to process workers.

MESSRS. FOSH AND CROSS, LTD., send us a neat offset-litho'd folder and other publicity matter in which are explained the facilities they can offer, as trade printers, for the execution of various classes of work, including photo-process, linotype, ruling, binding and bronzing.

Book Printing and Stationery

MANUFACTURING IN EDINBURGH.

The printing industry of Edinburgh, like most other industries throughout Britain, has passed through a period of depression during the past year, says a writer in the useful *Journal* of the Edinburgh and Leith Chambers of Commerce. Whilst signs of recovery in certain directions are perceptible at the moment, recent experience forbids too much optimism, and the attitude of employers may be described as one of chastened hope.

There are firms in Edinburgh capable of undertaking every branch of printing, but the mainstay is undoubtedly the printing of books. Other printing centres may comprise one or more book printing works, but Edinburgh is unique in regard to the number of book-printing establishments in the city, and there are firms which undertake the whole production of a book, from the manuscript to the bound and illustrated volume.

The natural corollary to a large book-printing industry was the growth of publishers' bookbinding. The bookbinding concerns in Edinburgh are as well equipped as any in the country, and are only comparable with the best establishments in London.

Lithographic work in Edinburgh is rightly famed for high quality, and certain firms produce the finest examples of the lithographic art, including such specialised and skilful work as the reproductions in colour of the famous paintings of the Old Masters.

The manufacture of stationery is second only to the book printing industry in regard to numbers of employed persons. A large export trade in stationery is done by Edinburgh firms, particularly to the British Dominions overseas and the Far Eastern countries of the Empire. A solution of political and economic problems in India and a recovery of demand in that vast market are earnestly looked for by manufacturing stationers in Edinburgh, who are in a position to expand their trade with that country immediately conditions are favourable.

Trading in Printing Type.

EXPORTS.—Printing type of British manufacture was exported overseas during last year to the extent of 172 tons (of the value of £58,849), as compared with 285 tons (£103,879) in the twelve months of 1921, and 292 tons (£89,345) in 1920.

IMPORTS.—The imports of printing type into this country during the tweve months of last year amounted to 39 tons (£14,516), as contrasted with 27 tons (£13,461) in the preceding year and 26 tons (£10,521) in 1920 (twelve months).

MR. T. V. OLSEN, of 10-12, Ludgate-hill, London, E.C.4, has been appointed sole agent for England and Wales for Aktiebolaget Axel Christiernsson, of Stockholm, owners of the Hylte Bruks Aktiebolaget, makers of M.G. sulphite and greaseproof papers, and the Munkedals Aktiebolaget, makers of bleached papers. Instead of sales being made through various channels, as hitherto, the above mills will in future have direct representation.

Stationers' Company's Costing and

ESTIMATING EXAMINATIONS.

The results of the costing and estimating examinations held at Stationers' Hall on December 18th, 1922, have now been issued by the examiners—Mr. W. Howard Hazell for costing and Mr. Harold Curwen for estimating. The results are as under:—

Costing Examination.—First Class: A. P. Pritchard (Costing Committe's first prize), G.A. Hughes (Costing Committee's second prize), W. G. Kemp, Miss M. Rigg, F. A. Rawlinson, J. M. Banham, W. A. Darby, W. D. Ross, Miss M. M. Packer, G. D. Dumbrill, C. Evans, R. J. Nearn, E. C. Featherstone, F. C. Lethbridge, Miss M. L. Newnham, H. A. Rose, J. W. Tilley, W. F. Morris, L. A. Barker, E. A. Flindall, J. D. Papworth, Miss I. E. Fewtrell, Miss G. V. Higgins, E. A. Griffiths, L. G. White, F. E. Godfrey. Second Class: W. R. J. Fitch, M. J. Walsh, W. G. Eldridge, S. J. Collins, Miss G. M. Parkin, D. T. Lett, H. W. Brookes, W. A. Embleton, F. W. Goldsmith, T. Lowe, S. W. P. Hyem, J. B. Affleck, F. J. Stowell, Miss N. Honeyball, W. T. Priddle, Miss M. A. Edwards.

Estimating Examination.—First Class: E. R. Stockley (obtained first prize), R. G. Allen and J. D. Dalgleish (tied for second prize), D. T. Williams, A. J. Pennell, H. P. Willings, H. Gray, F. Kendell. Second Class: F. Ratcliffe, H. E. Hodgson, D. T. Jones, E. S. Wilkins, A. Biffen, W. G. Firkin, W. D. Brown, P. McComish.

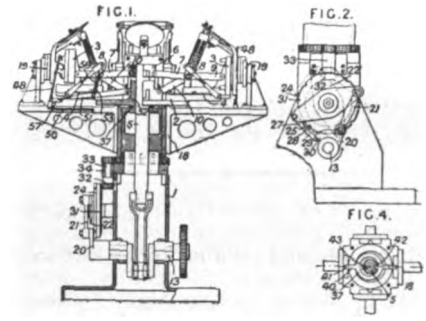
New Inventions

Finishing Stereotypes.



Messrs. Linotype and Machinery Ltd. and S. Newton have patented an invention in a stereotype finishing machine in which the edges of the plate are sprung inwards as the plate is lifted into the shaving arch, and then released, the springing-in of the plate is effected by upstanding edges on a pair of laterally movable runway bars, which are also movable vertically to lift the plate into the arch. As shown, the bars 7 of about the

length of the plate 6 have runway tracks 7ª and undercut upstanding edges 7ᵇ to engage and spring in the edges of the plate when the bars are moved towards each other. The bars 7 are fixed to arms 8 fast on rock shafts 9 carried by vertically slidable blocks 10, 11 and operated from a pair of similar grooved cams 37 through bowls 36, arms 35, 33, links 32, and arms 31. The blocks 10, 11 are raised and lowered to lift the plate 6 into and out of the arch 3, the block 11 being raised positively by an edge cam 17 acting through arms 19, 13 fast on a rock shaft 14, and a link 12, and depressed by a spring 16 acting upon an arm 15 on the rock shaft 14, and the block 10 being raised by an edge cam 30 acting through arms 27, 24 on a rock shaft 25, and a spring 20, and lowered by a spring 28 connected to an arm 26 on the shaft 25.

Multiple Printing Machines.

An invention by the Markem Machine Co. relates to printing machines comprising a plurality of type beds and platens arranged about a vertical centre, the platen supporting member being rotated intermittingly to bring the platens successively into operative relation with the type beds, which are reciprocated radially by means of a central plunger connected by toggle links to the type beds, and comprises a lock actuated by the movement of the plunger to hold the platen supporting member against rotation while the impressions are being made and improved means for actuating the platen supporting member. The type beds 3 are arranged radially about the central standard 1, and are reciprocated along the ways 4 of the head 2 by means of toggle links 7, 9, connected to a cap 6 on the vertically reciprocated plunger 5, the joints 8 of the toggles being connected by links 10 to the head 2. The member 18 supporting the platens 19 is locked during the intervals between its step by step rotation by an annular locking member 37, Fig. 4, surrounding the plunger 5 and having a projection 40 adapted to engage one of a series of internal notches 41 in the platen supporting member 18. Cam surfaces along the plunger 5 engage fingers 42, 43 on the inside of the annular locking member so that the latter is projected into locking position during the impression. The platen supporting member 18 is rotated intermittingly by a crank 20 on the shaft 13 which reciprocates the plunger 5, the crank being connected by a rod 21 to a pivoted plate 22 carrying a pawl 27 engaging a rotary notched disc 24 rigid with a bevel gear 31 meshing with a bevel pinion 32 on a shaft 33 geared to the member 18. Fig. 2 shows the position of the parts at the time a partial rotation of the platen supporting

member has just been completed. An extension 30 of the crank 20 thereupon engages the extremity 29 of the pawl 27 so as to disengage the pawl projection 28 from the notch 25 during the return swing of the pawl carrier 22 to the dotted line position. Each platen has pivoted work holding fingers 48, which are normally urged by springs 50 to engage the work and are withdrawn therefrom when the platen reaches the point where the finished work is removed. This withdrawal is effected by an arm 51 pivoted to the fixed head at 52 and resiliently connected by a rod 53 encircled by a coil spring 56 to the extended joint pin 8 of one of the type bed actuating toggles, so that the arm 51 swings in unison with the reciprocation of the plunger 5 and engages a projection 57 rigid with the fingers 48 of the platen in the work removing position, thereby withdrawing said fingers, as shown on the left hand side of Fig. 1.

Treating Paper and Board.

Application has been made for a British patent by Mr. J. Janser covering a means for treating paper or board. In the manufacture of a substitute for "press-spahn" which is water resisting and suitable for all purposes, finished paper or board is impregnated with a mixture of a wax soap such as potassium or sodium cerotate, with a binding medium such as glue or casein alkali and formaldehyde and a filling substance such as barium sulphate, calcium carbonate or precipitated aluminium hydroxide. Coloured fillings such as metallic compound of aniline colours may be used. After drying, the surface is rubbed down and smoothed by calendering, and the pores thus closed. To produce a good insulator, the material is soaked with linseed oil, train oil, paraffin or other oil or fat before smoothing. A harder product is obtained by uniting two or more layers of paper with iron resinate or other lac-like substance mixed with a little oil, and impregnating and finishing the product as above described.

Drawing Office Materials.

Fifth Annual Meeting of Manufacturers and Dealers.

Mr. W. Monkhouse presided last week at the fifth annual general meeting, which was held at 26-27, Farringdon-street, and was a successful function from every point of view. General regret was expressed at the absence of the vice-president (Mr. E. H. Hickman) and of Mr. L. G. Sloan, due to illness in each case.

Mr. A. W. Foster, the secretary, presented the fifth annual report, and Mr. H. T. Tallack the statement of accounts.

Helpful Conferences.

Moving the adoption of the report and accounts, the president referred to the holding of conferences in various parts of the country. He was sorry to say that those held in Manchester and London had not been the success they should like. If the members only realised the time that was devoted to their general interests by the individual members of the council, he thought they would see that it was to their common good, and the future success of their Association, that each individual should attend at least two conferences during the year. By doing this they would be kept in close touch with the inner working, and at the same time the council would no doubt benefit by the interchange of views, which would be helpful when engaged on their work. The conferences were originally called for this purpose. He was pleased to say, however, that in Scotland they continued to have successful conferences, and, when one bore in mind the strong feeling that existed on all sides (even in the early days of the Association), it spoke volumes for the conferences held there, as the atmosphere was now totally different. In fact he thought he was right in saying that all looked forward to these informal meetings.

As it is not possible for their Scottish members to attend the annual dinner and meeting in London, they decided to arrange a dinner to be held in Glasgow. This took place on March 29th last (37 being present), when it was voted by all to be a great success, and there was every reason to believe that it would now become an annual event.

They could not help but feel that, if so much had been achieved in Scotland, it would strengthen their Association considerably if they could get better results in the northern and southern conferences. For some reason the photo printers in these districts were the members who took little or no interest in these meetings. This might be due to two factors—the first being the serious depression in trade during the past twelve months; and the other that perhaps they did not think it necessery for small firms to be present. That to his (Mr. Monkhouse's) mind was an entirely wrong view to take, and he was sure, if they would realise that with no Association their difficulties would be very serious, they would see the necessity of giving up a little time to assist as far as possible in consolidating the work of their Association, and thereby protecting their own interests for the future.

Trade Outlook.

Reviewing the position of trade, the president observed that this had steadied somewhat and, so far as it was possible to see, they appeared to have actually turned the corner.

Although their Association had been in existence for a period of five years, he doubted whether any one of its members had felt the full benefit and help so much as during the past year. They could not possibly imagine with this experience before them any desire to go back to the old methods of trading by competition on price only. As an illustration of his point he could not do better than draw attention to the fact that, where prices had not been fixed, the competition was becoming so acute at times that some goods were actually sold at cost price. This their council were endeavouring to stop. At the same time the council would endeavour, wherever possible, to get the manufacturers to fix a minimum selling price.

If this happened where the Association had no control over prices, they had only got to ask themselves the question as to what would be the position to-day if they were to revert back to the methods in force before the formation of the Association.

They set out originally with the idea of raising the whole standard of their trade, and in doing so they desired any benefits that might accrue to be proportioned to the members and their employees. He thought he was right in saying that this had been faithfully carried out in the majority of cases. With no Association they would all have been compelled to considerably reduce their wages bill on the one hand, and to be content with little or no profit on the other hand. Whilst this, he hoped, had been an object lesson to all, he was confident in saying that the consumers have not in any way been forgotten. Before fixing any prices the council had at all times made a thorough investigation of the costs by collecting as much information as possible from the various manufacturers.

He had always endeavoured to make a strong point on behalf of his council, to the effect that it was their duty to see that the consumer derived full benefit from any fall that might take place on the market in raw material, in exactly the same way as when they were called upon to bear their full share of any rise in costs.

The National Situation.

After expressing gratification at the activities of the Photo Printers' Section, Mr. Monkhouse observed: Those who are looking after the country's interests have many grave and serious problems before them at the present time, and a great deal depends upon their success in handling these matters as to whether we can look forward to brighter conditions during the coming year. It seemed a deplorable thing that a country like ours should be saddled with such a heavy list of unemployment, due entirely to their having made special efforts to balance their budget, whereas other countries appear to have neglected this. In addition to this they have before them the serious question of Reparation, and also the delicate position in the East. We all earnestly hope that His Majesty's Ministers will do all in their power to steer a satisfactory course, and that success will reward their labours. (Applause.)

In conclusion, the President voiced his indebtedness to the trustees, the hon. treasurer, members of the council, the secretary and his staff, for the whole-hearted support he had received during 1922.

Mr. Oscar Winterbottom seconded the resolution, which was unanimously carried.

Messrs. J. H. Fulford, J. D. G. Hendry and A. P. Webster were re-elected to the Executive Council.

Election of President.

In the absence of Mr. Hickman, Mr. Hendry proposed the re-election of Mr. Monkhouse as president. He was glad to have that opportunity of testifying to the high appreciation and admiration which they in Scotland entertained for Mr. Monkhouse by reason of his many good qualities. Ever since Mr. Monkhouse had been elected their president at the inception of the Association five years ago, he had had a very hard task; but it was due to his wonderful tact, his integrity, his grasp of the subject in hand and to his many other attributes that the Association had been such a success. They in Scotland were gratified that Mr. Monkhouse had been persuaded to allow himself to be nominated once more for the presidency.

Mr. S. A. Harding, in seconding the resolution, quoted from a letter written by Mr. Hickman, a high tribute to the character and ability of Mr. Monkhouse, who, added Mr. Harding, set himself a high standard and lived up to it. The speaker urged the members of the Association to support the president and the council to the fullest extent possible.

The resolution was carried with acclamation.

Mr. Monkhouse was very cordially received upon rising to respond. With regard to his re election for the 5th year, he said his feeling even now was that he would like to see a new president installed, because he might bring new ideas into the Association and strengthen up any weak spots he may have overlooked. Mr. Monkhouse attributed the success of the Association to the fact that they were all working for the benefit of the Association as a whole. He went on to ask for the whole-hearted support of every individual member.

Election of Vice-President.

Mr. J. B. Halden moved the re-election of Mr. Hickman as vice-president. He remarked on the strong position held by the Association even after a period of exceptional trade depression.

Mr. J. B. Thorp, in seconding, added his tribute to the work of Mr. Hickman, whose election was carried with acclamation.

On the motion of Mr. A. P. Webster, seconded by Mr. A. J. Thornton, Mr. H. T. Tallack was re-elected hon. treasurer.

At the instance of Mr. S. A. Harding, seconded by Mr. Williamson, a very cordial vote of thanks was passed to the council for the work performed during the past year.

Mr. J. S. Walker, having acknowledged the resolution, went on to propose that a resolution of thanks be forwarded to Messrs. J. Halden and Co., Ltd., for the sacrifice they continued to make in allowing Mr. Monkhouse to devote so much of his time to the services of the Association.

Mr. Hendry seconded the resolution, which was carried unanimously.

Mr. W. V. Brown, on behalf of the directors of Messrs. Halden, said so long as the Association asked Mr. Monkhouse to undertake the office and so long as Mr. Monkhouse was willing to serve, so long would Messrs. J. Halden and Co., Ltd., be delighted to acquiesce in the arrangement.

Photo Printers' Section.

The annual general meeting of the Photo Printers' Section of the Association was then held, and Mr. H. C. Hanrott (chairman of the Section), in his report, mentioned that the Section had added during the past year 12 new members. He went on to refer to other activities of the Section, and on the motion of Mr. Entwistle, seconded by Mr. Thorp, a vote of thanks was accorded to Mr. Hanrott for his work in the chair.

Some Paper Figures.

The producing capacity of the paper and pulp mills in the United States is about eight million tons a year of all grades. There are about sixteen hundred paper machines, nine hundred of which are Fourdrinier machines and seven hundred cylinder machines. There are five hundred sulphite pulp digesters, three hundred sulphate and soda pulp digesters, and fifteen hundred pulp grinders. More than twelve thousand steam engines and electric motors are used in the paper and pulp mills and they generate over two million h.p.

There are consumed in the pulp mills of U.S.A. in a year one hundred million dollars' worth of pulp wood and the manufacturers of paper purchase close on to one hundred and fifty million dollars' worth of wood pulp.

The paper mills consume about one million tons of anthracite coal and nearly nine million tons of bituminous coal and three million barrels of fuel oil.

The paper mills deal annually with thirty million dollars' worth of rags, fifty million dollars' worth of paper stock, ten million dollars' worth of rope and jute stock and four million dollars' worth of straw. They also consume six million dollars worth of bleaching powder, more than six million dollars' worth of casein, five million dollars' worth of china clay and over five million dollars' worth of sulphur.

The number of men and women employed in the paper mills of the United States total about one hundred and fifty thousand; two million dollars is paid out in wages, fifty million dollars in rent and taxes, and more one-half a million dollars for raw material.

There are three hundred mills in the country each of which turns out more than one million dollars' worth of paper in a year.—*The Paper Mill.*

MESSRS. D. FREEDER AND CO., Crepe Paper Mills, Lea Bridge-road, Leyton, have just completed an extensive new building standing on three acres of land, and have installed a complete new and up-to-date plant, especially for the manufacture of their fancy papers. They are receiving many inquiries from various parts of the world for their manufactures, and with a new range of samples and their means of getting these distributed to various buyers they hope to establish practically a new industry in this country, since the fancy papers of this type were formerly imported. At the forthcoming British Industries Fair, Messrs. Freeder will show some very attractive advertisements on crepe paper which have been completed for some well known houses, and they are hoping for a great success with the range of goods which has taken them considerable time to get together.

LOOK ahead. For that purpose are your eyes in the front of your head.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

An American Printer Looks at Europe.

Mr. Edmund G. Gress tells of Visits to European Centres of Trade Interest, including London.

Mr. George Eaton Hart and others have recently paid very interesting visits to the United States, and have returned to tell us of things seen and friendships made amongst American printers. Such travellers' impressions of their visits have informative and suggestive value to printers on this side of the Atlantic, showing as they do the rather different lines of development taken by the industry under the different conditions of another country. Also of much interest are the impressions which overseas visitors form of the printing craft as they see it amongst ourselves, and the remarks which they make tend perhaps to open our eyes to some of the things which we fail to notice just because they are so near.

Amongst the latest representatives of the U.S. printing trade to visit Europe has been Mr. Edmund G. Gress, one of the joint editors of the *American Printer*, in which journal he tells, in chatty informal fashion, the story of his recent European tour, his narrative being enhanced by a number of snapshots taken *en route*.

Florence Book Fair.

The Book Fair at Florence appears to have been Mr. Gress's first European objective, and he found proof in Italy's fine exhibit there that "the country in which Jenson, Aldus and Ratdolt had printed such masterpieces more than four hundred years ago is doing something to regain the prestige of the old days." England, he noted, "had a small but good exhibit, including the work of some of her famous private presses." He has to confess that "America's exhibit was perhaps the smallest of any of the countries," but suggests as part explanation the late day at which many American houses were notified of the Fair.

The City of Aldus.

The next place of pilgrimage was Venice, the city in which Nicholas Jenson, Aldus Manutius and Erhard Ratdolt printed. He set out to locate the site of the printing office or house of Aldus Manutius. He was, however, unable exactly to identify Aldus's printing office, though locating the immediate vicinity, which proved to be much less inspiring and picturesque than one might have imagined from the elegance depicted in the well-known painting by Flameng, showing Aldus in his printery. At the Biblioteca Nazionale Marciana the visitor had the satisfaction of inspecting a rich collection of manuscripts and printed books, amongst which he noted a letter signed by Aldus Manutius, also a sheet written by Petrarch—whose caligraphy, strange to say, did not show the slope which is supposed to have given to Aldus the inspiration that led to the first italic type.

The Trajan Column.

Our American visitor, an enthusiast for beautiful type faces, naturally took the opportunity of visiting, while in Rome, the Trajan Column, the inscription at the base of which is regarded as the example *par excellence* of the Roman alphabet. Those 1800-years-old Roman capitals, which Mr. Gress calls the "daddy" of our present day Roman type faces, have provided inspiration for some of the most famous type designers, and it is rather unfortunate that the reverent visitor finds it difficult to examine the inscription, which is not only discoloured but is inaccessible.

Some French Treasures.

Mr. Gress met with better fortune in seeking out some of the unique craft treasures of France. In Paris he inspected with great interest the Imprimerie Nationale, and was happily able to have access to the cabinets containing the famous old type punches and matrices. He relates: "I fondled the centuries-old punches and matrices of Garamond, Didot and Grandjean. The characters were in many languages, including Egyptian hieroglyphics. I was surprised at the large size of some of the punches used for initial letters, which must have required the force of a sledge hammer to drive them into the copper bar. In the bindery section I was shown decorative tools of various designs that had been used for hundreds of years in decorating leather bindings."

Another visit in France was a pilgrimage made on U.S. Flag Day to St. Die, to see the "Baptismal Font of America"—the house in which more than four centuries ago was printed a book suggesting "America" as the name of the continent.

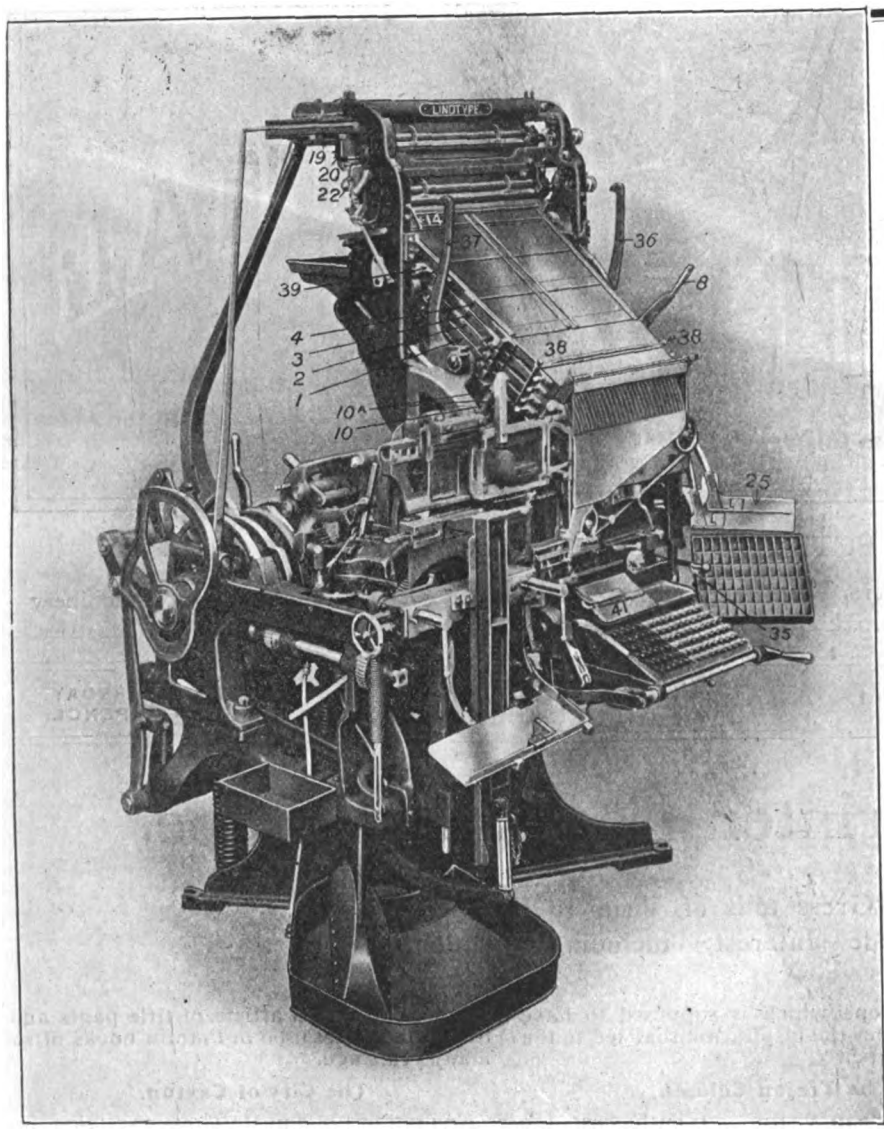
Plantin's Printing Office.

Call was made at Antwerp to inspect the Plantin museum, and though this was done because it was "the thing to do," the visitor, nevertheless, after seeing some of the priceless historical exhibits to be found there, was thankful he had not omitted the visit. It gave the American tourist a queer impression to find the centuries-old office clock still ticking away in the counting-room, and the account books in place on the desks. He marvelled at the extensive exhibit of original copper plates, some of them 300 years old, with proofs from the plates alongside. Copperplate presses were there also. There were original sketches and drawings by Reubens and other artists, of title pages and illustrated pages used in Plantin books of so many years ago.

The City of Caxton.

Coming to London Mr. Gress was taken in hand by our ubiquitous friend, Mr. Frank Colebrook, who was, no doubt, found to be an interesting cicerone. One of the first journeys made was to Highgate, where, says the visitor, "we started up a big hill and came to a stone enclosed in a railing. It was on this stone—according to a legend that I read as a boy in the school reader—that Dick Whittington sat more than 500 years ago when the bells of Bow Church in the distance seemed to tell him to turn back; that he would thrice be Lord Mayor of London. Mr. Colebrook offered to show me Dick Whittington's cat also, but I was satisfied with the stone."

Waterlow Park was inspected with much interest, the American afterwards writing: "I was shown a statue of Mr. Waterlow which was unveiled in 1900. I photographed it, as it seemed to me a printer who can afford to give a park is worthy of more than the usual attention."



Meetings with London Printers.

The visitor made interested and respectful inspection of some of the memorials of William Morris, whom American printers, like ourselves, regard as one of our greatest craftsmen. Living printers were also met, one of the first being Mr. Charles T. Jacobi, of whom Mr. Gress writes: "Because of his reputation as a printer and author I always thought of him as the DeVinne of England. It was more than interesting, then, to meet him. Here was a man who had supervised the printing of some of the Morris books before Morris had his own print shop. The Chiswick Press, in the operation of which Mr. Jacobi had been active for half a century, was also well known to me because of its connection with the restoration of the Caslon type face about seventy-five years ago. I found Mr. Jacobi active and interesting, and regretted that I had not arranged to spend more time with him."

Another London printer looked up was Mr. Emery Walker, whom the visitor found looking younger than expected, and with whom he had "a delightful conversation."

Mr. Gress called also at the Pelican Press and met Mr. Francis Meynell. He writes: "That Mr. Meynell is popular with American printers and designers is to be seen from his mentioning the visits last year to his printshop of Hal Marchbanks, Guido and Lawrence Rosa, George Illian, Frederic W. Goudy,

To MR. PARKIN S. BOOTH.

THE ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED.

LONDON OFFICE:
26, 27 & 28, KIMBERLEY HOUSE,
HOLBORN VIADUCT, E.C.1.
Telegrams: "ASMANIST," CENT. Telephone: CITY 6942/4 (2 lines).

LIVERPOOL OFFICE:
35, 36 & 37, EXCHANGE CHAMBERS,
2, BIXTETH STREET
Telegrams: "QUORUM." Telephone: 4330 CENTRAL (Private Branch Exchange)

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from .....192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.
All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—
Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.
" Debt " " " " 1/6 "
The Collection of an unlimited number of Accounts at the following rates of Commission:—
5% on amounts recovered up to - - £20 1% on amounts over - - - £100
2½% on amounts over £20 and up to - £100 5% on amounts recovered in Ireland, Scotland and the Channel Isles.
Special terms in respect to Foreign Debt collections and enquiries.
Representation at Meetings of Creditors free of charge.
Searches of the Registers (unlimited) free of charge.
Legal Advice by the Solicitors to the Office upon ordinary business matters free.

(Signed)..... *(Address)*.....
.....
Date.....192. *Business*.....

O. W. Jaquish, John Henry Nash, and others. Mr. Meynell is an enthusiast on good printing and thinks very well of what is being done in America."

Others whom the visitor met and briefly mentions included Mr. George W. Jones, Mr. R. B. Fishenden, Mr. Walter Bradley, of the Morland Press, Mr. Gerard T. Meynell, Mr. William Gamble. A visit of great interest was paid also to Mr. C. H. St. John Hornby, of "Ashedene" fame.

Other Historic Printeries.

Later, the visitor extended his pilgrimage into the provinces, and amongst the printeries visited was the Clarendon Press, where, he says, "I was shown the historic punches, matrices, and woodcut initials presented to the press in 1695 by Dr. Fell, of 'I do not like you' fame. I handled the ancient tools with reverence and pleasure. There were Roman, Greek and other alphabets. I was especially interested in the old metal flowers, those type ornaments that the seventeenth and eighteenth century printers used so well. I was told that an authority had compared some of these metal flowers with some in the Plantin Museum at Antwerp and had found them to be exactly the same design."

Realising the enthusiastic interest of overseas craftsmen in the work, tools and other memorials of the printer pioneers in our own land, and those in later years whose work has made history in the development of the art, we are reminded of the pride which the British printer has a right to take both in his honourable history and his skill as craftsman. Let it be the aim of present-day printers to do all they can to prevent debasement of our standards of excellence, and to produce printed work of which later generations will have cause to be proud!

Destruction of Paper by Ink.

From Professor W. Herzberg, the industrious Chief of the Paper Department of the Materials Testing Office at Berlin-Dahlem, we have received a reprint on the above subject, from the journal of that office. This communication is occasioned by observations made while rearranging the records in the year 1921.

It was noticed that samples of paper, which had been used in 1898 in an endeavour to find a suitable process for determining the degree of sizing, and on which had been made numerous ink lines of widths varying from 0.5 to to 2.5 mm. with document ink produced by one of the foremost German ink makers, had been corroded by the ink. These papers were made, some of rag, some of sulphite pulp and some of mixtures of these, and they were stored in the filing cabinets under normal conditions.

To get comparative figures showing the influence of the ink, these papers were tested for breaking strain at right angles to the ink lines. It was shown that the paper with 2 mm. wide lines was rather less than half as strong as the same paper without ink marks. The decrease in strength is augmented in a fairly regular degree by the increasing width of the ink line.

This question has engaged the attention of librarians and scientists ever since P. Ehrle, late Prefect of the Vatican Library, first brought the matter prominently before the notice of scientists and urged that remedial measures should be found.

About 20 years ago, Herr Schluttig, director of Leonhardi's ink works, made a research into the matter and came to the conclusion that it had been wrongly assumed that the sulphuric acid of the ink was to blame, and that the iron oxide salts were the true cause of the trouble.

The new observations at the Materials Testing Office show that even modern inks energetically attack paper. Professor Herzberg is not satisfied with Schluttig's conclusions, for it is well known that sulphuric acid also attacks the fibres, rendering them friable. He calls for a renewal of the study and he states that the Materials Testing Office intends to approach the ink makers for their co-operation in laying down a plan of research whose object shall be systematic examination of the influence of modern inks on paper. It is of great importance to determine whether all our documents are liable to such destruction or whether the above-mentioned discovery in the Testing Office is merely an isolated case, due perhaps to the composition of one batch of ink only. It is hoped that the production of a harmless ink may result.

Cardiff Printers' Trade Review.

Annual Meeting of Master Printers' Association.

The annual meeting of the Cardiff Master Printers' Association was held on Tuesday evening, January 23rd, at the Electric House Café, and was well attended.

Owing to the unavoidable absence of the president, Mr. E. W. Holder, and vice-president, Mr. W. R. Smith, who was out of town, the chair was taken by Mr. W. C. Short, and the president's report was read by Mr. I. M. Thomas.

A Time of Testing.

The president stated in his report that the year had been a very difficult one in many respects. The bad trade and the strike had upset the equanimity of the Association as a whole, whilst the difficulties of getting uniform action in various matters had complicated the work considerably — but when everything was considered, they had come out very satisfactorily as regards the strike, while the bad trade had taught them many lessons which he had no doubt would help them in the future, and should tend to make them combine more closely. It also taught them many lessons in the Trade Agreement, and showed them the many weaknesses of the system. This might lead them to a wider consideration of the matter, as it was certain that only joint action, and strict adherence to the spirit as well as to the letter of the agreement, would bring a solution of their difficulties, and make the trade what they wished it to be; therefore, he trusted that serious consideration would be given to the report to be brought forward by the committed appointed for that purpose. There was evidence that trade was improving throughout the country and it was up to them to take advantage of the improvement when it reached them, and to arrange that they might receive the fruits of their labour.

Co-operation with Labour.

Reviewing the meetings of the past year the president said the various duties outside his chairmanship had been carried out to the best of his ability. As vice-president of the Joint Industrial Council he had regularly attended its meetings, and although there had been many disappointments, he still believed that the future would clear away many of the difficulties. It was to be regretted that the Holiday Home had to be closed down, also that the Typographical Association had withdrawn its membership, but he believed that wiser counsels would prevail in the near future, and they would have the pleasure of the company of its representatives again.

The Alliance meetings had been very successful under the various presidents, and he had to congratulate Mr. Short on the very wise government of its meetings.

The Chamber of Trade.

One side of their work was taken but little notice of, he said, and that was their affiliation to the Cardiff Chamber of Trade. Many matters were considered which had a direct bearing on the printing trade, such as railway rates, postage and general transport facilities. The Chamber was always delighted to have opinions from, and to fight for any of its affiliated associations, and he would like to see a greater interest taken therein. Being a personal member, he knew its value, and he would like the members to know that steps were being taken to work with the Chamber of Commerce which had hitherto interested itself only in the docks businesses.

Before closing his report he expressed grateful thanks to Mr. F. Verner Nicholls, their secretary. In all cases of difficulty his kindly advice had been most helpful, and his intimate touch with all matters pertaining to the trade in the district had been of considerable value to the Association generally.

A vote of thanks to the retiring president, very feelingly moved by Mr. T. W. Tucker, who referred to the great interest taken and the amount of time devoted to the work by Mr. Holder, was very well received, as was also a vote of thanks to all officers and committees.

Mr. Short, as chairman of the executive committee, said that the committee had under consideration schemes which were likely to have a very far-reaching influence on the trade, and by which it was hoped that considerable economies might be effected. The report was as yet incomplete, but it was hoped that the proposals would be before the members for consideration at an early date.

Election of Officers.

The following officers were elected for the ensuing year:—President, Mr. F. Glossop; vice-president, Mr. A. E. Harrison; hon. treasurer, Mr. F. Glossop; and hon. secretary, Mr. F. Verner Nicholls.

The executive committee were re-elected *en bloc*.

Mr. F. Glossop and Mr. A. E. Harrison were appointed to represent Cardiff on the Alliance executive committee.

Chamber of Trade.—Mr. E. W. Holder nominated vice-president of the chamber, and Messrs. A. H. Carter and D. Caxton Davies as delegates.

J.I.C. Committee, to form the employers' panel.—Messrs. Holder (V. Pres.), Webber, Murrell, Glossop, Tucker, Short, Davies, Kirkby, Caxton Davies, Richards, Nelmes and Pickford were appointed.

Technical Instruction Committee.—Messrs. Webber, Short, Holder, Harrison, Glossop.

It was decided to hold the annual dinner within the next three weeks, and that ladies should be invited.

The delegates on the Chamber of Trade were instructed to press for co-operation of the Chamber with the local Chamber of Commerce.

It was resolved, after discussion, to recommend the Alliance to press the Federation for an agreed rate of wages to be paid to apprentices in the letterpress and litho departments, and that the scale of pay be as that recently suggested by the Federation Committee.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

GIBRALTAR.

A wholesale dealer in paper and stationery at Gibraltar wishes to be put in touch with United Kingdom manufacturers of all sorts of papers and stationery. (Reference D.O.T. 10209/E.D./M.C.).

SOUTH AFRICA.

A Cape Town firm of manufacturers' representatives are desirous of securing the representation of United Kingdom manufacturers of wrapping paper and paper for box-makers and confectioners. (Reference No. 71).

EGYPT.

The British Commercial Agent for Egypt has transmitted to the Department of Overseas Trade copies of documents issued by the Egyptian Ministry of the Interior in connection with various photographic materials required during 1923, for which tenders are invited to be presented by noon on March 15th. The goods required include paper, etc. (Reference D.O.T. 9726/F.E./G.C./2).

The Newfoundland Paper Scheme

On his return to Newfoundland, the Prime Minister (Sir Richard Squires) spoke with confidence of the projected development scheme in the Humber River area. In his opinion, he said, it was an epoch-making undertaking, and never before had a Newfoundland Prime Minister been able to secure so much financial assistance from the Imperial Treasury. The Humber development scheme was about twice the size of that now operating at Grand Falls, and the capacity of the new paper mill would be 400 tons per day of news-print.

This proposition only awaits the ratification of the Newfoundland Government, added Sir Richard, the Treasury sanction for the financial support of the United Kingdom having already been authorised.

THE Chancellor of the Exchequer, Mr. Stanley Baldwin, is to receive a deputation from the F.B.I. on Friday, February 9th, when the views of members on the subject of industrial taxation will be laid before him in connection with the forthcoming Budget. The representations will be based upon the considered opinion of industry throughout the country, as expressed at the special district meetings arranged by the Federation last autumn.

OFFSET PRINTING

AND

The Harris Automatic Offset Machine

OFFSET **printing** is no longer an undemonstrated theory. It is to-day a live industry that only came into the field of the Graphic Arts a few years ago, requiring nothing but machinery to make it a commercial proposition for the best quality of printing in one or more colours. It has had a phenomenal growth during the few years of its existence, and that it has impressed buyers of printed advertising with its extraordinary quality is proved by the growing demand for this class of work, and the reason of this great demand is because in offset printing the quality of the work equals the best that can be produced by any other process. Every day the demand for offset printing is increasing, both in commercial work and the highest class of colour work. A tremendous quantity of work is also done by offset which was previously printed on flat-bed and type presses. Offset Printing eliminates make-ready, does away with stereotyping, eliminates block making and ensures perfect quality of work from start to finish. The rotary principle of the offset process also introduces the element of speed, 5,000 impressions per hour being easily possible with the Harris Pile Feeder on a Harris Offset Machine.

The Harris Automatic Press Company to-day makes more offset presses than all the other manufacturers combined, and no type of standard printing or lithographic press in the world, except roll fed, equals the speed of the "Harris" equipped with the Harris Feeder, which is an integral part of the machine, and guaranteed with it. You get in the Harris Press every advantage that the word automatic means, and in addition, quality which develops sales, and large output, which develops profit. QUALITY WITH LARGE OUTPUT is the "Harris" combination of unbeatable advantages.

The Lanston Monotype Corporation, Ltd.,

PRINTERS' MACHINERY DEPARTMENT,

43 and 44, Fetter Lane, London, E.C.4.

USHER & CO.

USHER-WALKER, LTD.

Makers of the finest Printing Inks, Rollers and Roller Composition

FOR HOME AND EXPORT. Specially made to suit all climates and conditions.

¶ Our Rollers are used in producing the Leading Newspapers and Magazines, and have a longer effective life than any other.

¶ Our "*Vigeo*" Composition is absolutely infusible.

¶ Our Inks are the best value obtainable for Letter-press, Litho, Offset, Tin-Printing, Die-Stamping and every conceivable process.

Trade Notes.

THE week's partnerships dissolved include that between W. H. Barnett and J. C. Martin, printers and stationers, 35A, Millstone-lane, Leicester, under the style of the Barnett Printing Co.

APPRENTICES' WAGES.—The Apprenticeship Committee of the Federation of Master Printers met at 24, Holborn on Tuesday and considered the question of the wages payable to apprentices, and will make recommendations on the matter at the next council meeting. The question of girl apprentices was discussed and it was decided to obtain the views of the Alliances on this important subject.

POSTAL RATES.—The Postmaster-General consented to receive yesterday (Wednesday) afternoon a deputation from the Joint Industrial Council of the Printing and Allied Trades (which represents 5,000 employers and 250,000 workers). The object of the deputation was to press for reductions in postal rates on the larger packages sent at printed matter rates, post cards, and small parcels of printed matter sent at parcel rates, evidence being submitted regarding unemployment in the printing and allied trades, which can be be directly traced to high postal rates.

POSTAL REFORMS.—Abolition of the Corporation Profits tax, a further reduction in income-tax, and the restoration of the penny post for letters not exceeding an ounce, and of the halfpenny rate for post cards, are among recommendations made by the Birmingham Chamber of Commerce. The Chamber favours effective measures to end the practice, stated to have become fairly widespread, of sending large batches of circulars to the Continent to be posted back, thus avoiding British postal dues.

P.O. SURCHARGES.—In connection with the six months' returns which the Post Office has just made public showing that £88,000 has been collected in surcharges during that period, Mr. W. H. Burchell (Caxton Press, Ltd., Leather-lane, E.C.1), writes us suggesting that the same kind of carelessness which has produced this astounding result, gives reason for the assumption that a large sum has been lost to the public in *overstamping* letters. He adds that it was in view of the likelihood of this that he was led to bestow a great deal of time, trouble and expense on the production of the "At-a-Glance Postal Rate Chart" showing the new charges. He would be pleased to send one of these charts to any of our readers who may be interested.

CASSELL'S CHAIRMAN ENTERTAINED.—Sir William E. Berry presided at a luncheon given at the Savoy Hotel on Tuesday to Mr. Thomas Young on his appointment as chairman of Messrs. Cassell's. The gathering was thoroughly representative of those engaged in the publishing and advertising business, together with other friends principally engaged on the commercial side of newspapers and publications. Among the company were Lord Riddell, Sir James Carmichael, Sir F. Bowater, Mr. J. Gomer Berry, Sir Charles Starmer, and Mr. Wareham Smith.

P. M. AND O. A. DINNER.—The referendum to members has resulted in a decision to revive the annual dinner of the Printers' Managers and Overseers Association. The 1923 dinner will be held in the King's Hall, Holborn Restaurant, on Saturday, April 14th, tickets being priced at 10s. 6d. single, 19s. double.

A DISPUTE in the printing trade exists in Limerick owing to the refusal of the members of the Typographical Society to accept the wages cut. Newspapers and jobbing offices are affected, and the four local papers announce temporary suspension of publication.

BOOKBINDING LECTURE.—In continuation of the series of technical lectures arranged by the Stationers' Company and Printing Industry Technical Board, an address on bookbinding will be given by E. J. W. Zaehnsdorf, Esq. (Zaehnsdorf, Ltd.), at Stationers' Hall, Ludgate-hill, London, E.C.4, at 6.30 p.m., on Friday, February 9th, 1923. The chair is to be taken by Major R. Leighton (chairman, Bookbinding Section, London Chamber of Commerce). The address will be illustrated by practical demonstrations and an exhibition of bound books.

MR. JAMES BENNET PEACE, Fellow of Emmanuel College, Cambridge, and the University Printer, died suddenly at his residence, Woolaston-road, Cambridge, on Tuesday night.

MR. JAMES POULTER, who was for many years in the service of *The Times*, died on Wednesday of last week at Leytonstone. Mr. Poulter, who was 83, entered *The Times* office as a messenger at the age of 14 in 1853, and was afterwards apprenticed as a compositor. He ultimately became overseer of the day composing staff, and retired on a pension in January, 1905.

THE death occurred suddenly on Friday evening of Mr. Beatley Nichols, who was for a long period associated with the printing trade of Ipswich. Mr. Nichols, who was 85 years of age, had in 1867 taken the position of foreman at the *Ipswich Journal* office: this he held for nearly 25 years. He was a member of the Typographical Association, and evinced deep interest in all matters concerning the trade.

MR. SIDNEY S. PAWLING, of Earl's Court-road, S.W., head of the publishing firm of Heinemann and Co., left £16,836.

MR. HENRY LEONARD DICKIN, of Muswell Hill-road, N., journalist and critic, for some years a contributor to the musical columns of the *Morning Post*, *Globe*, *Sunday Times*, and *Daily Telegraph*, who died on November 27th last, left estate of the gross value of £969, with net personalty £844.

AN important agreement regarding dock dues and charges has been reached by the dock-owning railway companies and associations representing the trade of the country.

THE Companionship of the *Daily Herald* made their annual effort to assist the Caxton Convalescent Home, Limpsfield, at a specially arranged concert at the London and Brighton Hotel, Peckham, on Saturday last. The "plate" realised over forty guineas, and was substantially augmented by a novel basket-of-fruit "turn," arranged by Mr. A. Russell (of the *Daily Herald* staff), which produced ten guineas. The chairmen (Messrs. W. T. Whittington and C. Cartmall) are to be congratulated on their successful evening.

JOURNALISTS' SAINT.—Monday last was the day of St. Francis of Sales, who has just been designated by the Pope as Patron Saint of Christian Writers and Journalists. He was canonised by Alexander VII. on January 29th, 1665.

RECENT tenders asked for by the Stationery Office included the following quantities of paper: Hand-made or mould-made papers 13 tons, writings (air dried) 19 tons, loose-leaf ledger papers 4 tons, writings 2 tons, loan papers 12 tons, writings (ordinary) 104 tons, second papers 114 tons, bank papers 50 tons, writing papers 47 tons, writings (coloured) 2½ tons, blotting papers 28 tons, printing and lithographic papers 232 tons, imitation art papers 15 tons, second papers 55 tons, coloured printings 38 tons, copying papers 4 tons, brown papers 7 tons, brown papers (second) 83 tons, smallhands 2½ tons, buff papers 98 tons and manilla papers 51 tons.

LEICESTER Chamber of Commerce reports that the letterpress printing, binding and paper trades on the whole appear to be steady, but there is rather a lack of enquiries for future orders. The lithographic section is quiet, and a good deal more labour could be employed if the business could be obtained, but foreign competition is keenly felt. Paper box business has improved slightly since Christmas. Orders from hosiery manufacturers remain about the same, but an improvement in footwear requirements is anticipated during the next few weeks.

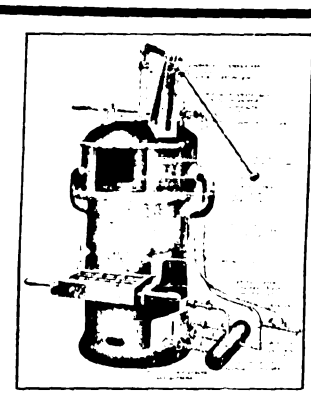
THE first number of a new weekly paper, *By-the-Way and Interviews*, has just been issued. Particulars of the promoting company appear on our commercial page.

A COPY has reached us of a special issue of the *Bulletin Officiel*, the organ of the French master printers' organisation, produced as a Christmas number. To printers on this side of the Channel—especially, of course, such as read French—this publication is of much interest. Reading matter includes some interesting extracts from old French treatises on printing dating back to the eighteenth century, these being followed by strongly contrasting up-to-date technical articles. There is an article on photo-lithography by Louis Tanchon, one on offset by M. Maillet, on gelatine printing ("Phototypie") by Leon Marotte, and an anonymous article on rotary photogravure. An admirable pictorial supplement shows how far advanced are French printers in the use of the numerous illustrative processes. Published at 7, Rue Suger, Paris, VIe, copies are obtainable at a price of 50 francs, post free.

THE recent attack upon Mr. Denis M'Grath manager of the *Cork Examiner* newspaper, who is making gradual recovery from his injuries, was followed on Wednesday night of last week by the destruction of the proprietor's residence. Armed men called at the home of Mr. George Crosbie, and set the building on fire. It burned fiercely for several hours, and was completely destroyed.

THE Attorney-General for Quebec has been notified from New York that a request will be made to the Canadian Government for the extradition of Mr. John H. Roberts, editor of *The Age*, a Montreal newspaper, who is now in prison for defaming members of the Quebec Legislature. It is understood that Mr. Roberts is charged with defrauding an American printing firm of twenty-five thousand dollars [about £5,500 at present rates.]

A DISASTER occurred on Wednesday of last week at the offices of the *Berliner Tageblatt*, when a new top storey collapsed and crashed through the building to the cellar, a number of persons being removed from the offices dead, and many other workers seriously injured. The editorial departments and machine rooms were totally destroyed.



Calendars, etc.

MESSRS. SMYTH-HORNE, LTD., have sent their British customers a wall calendar which comprises a tear-off monthly pad mounted on a large card which is of special interest by reason of its bearing no less than nineteen separate half-tone illustrations of the principal labour-saving machines which are the firm's specialities.

MESSRS. JARVIS AND FOSTER send us a hanging calendar, the monthly tear-off sheets of which provide a small blank space against each day's date to allow engagements to be noted.

MESSRS. G. AND G. PONTON, engravers, printers, etc., of Glasgow and Edinburgh, send a wall calendar in which the monthly tear-off pad hangs from a large card which bears a picture of the Market Place, Copenhagen, the reproduction being done by colour photogravure. The brilliance of effect speaks well both for the possibilities of this promising process and also for the capabilities of Messrs. Ponton's printery.

MESSRS. HILL, SIFFKEN AND CO., LTD., specialists in pictorial posters, are again sending out a useful desk blotter. Mounted on a stout board, it usefully gives the dates for the whole year down the sides of the pad, which is, moreover, securely bound at the corners.

INSTAL A MONOMETER

£2000 per annum saved in metal alone by using a MONOMETER FURNACE.

A large London Printers' have found by test that they get 48½ lbs. less dross per ton of metal melted with a Monometer Furnace.

They melt 8 tons per day, so a direct saving of over £5,000 is effected.

Just calculate how much you melt per day and see what you will save.

Bookbinding Trade Stoppage.

Trouble Reaches Serious Dimensions.

The stoppage in the London bookbinding trade shows, at the time of writing, no sign of approaching settlement.

The Employers' View.

The following statement was made before the week-end by Mr. Douglas Leighton, of Leighton, Son, and Hodge, Ltd. "A stoppage has occurred in the London bookbinding trade, and all the houses of any importance are involved. Between 4,000 and 5,000 hands are affected. The dispute is due to a demand by the National Union of Paper Workers that London master bookbinders shall apply to a certain few of their unskilled and semi-skilled workpeople an agreement as to wage reductions recently arrived at between their union and the London Master Printers' Association. All employees in the London bookbinding houses, skilled and unskilled alike, have, in fact, accepted a scale of wage reductions commencing in June last, when a national trade settlement was arranged. The London master bookbinders had no part in the more recent negotiations which affected London printers only. The position of the bookbinders was made perfectly clear to the union officials before these negotiations started. The demand is in effect for an increase in wages which the employers find it impossible to grant in the present condition of trade."

Trade Union Statements.

The National Union of Printing, Bookbinding, Machine Ruling and Paper Workers has made the following reply: "Mr. Leighton has been, and still is, a member of the London Master Printers' Association's Labour Committee, and as representing the master bookbinders he must have taken part in the deliberations on the agreement. Previous to the national agreement last June the whole of the London paper workers, employed by the master bookbinders, were paid under the master printers' agreement, and any questions that arose were settled with the master printers. The London Master Printers' Association knew that whatever agreement was arrived at nationally would not apply to the members of the Paper Workers' Union in London. The paper workers naturally did not expect that the national agreement would be put in operation by the master bookbinders, but it was, and that is the cause of the dispute."

The binders' section of the union is issuing a statement which reads, in part:—

"Following the resolutions passed on January 23rd, and confirmed by the mass meeting on the following evening, our members refused to touch any work handled by persons other than those who had usually handled the work for delivery, despatch or in the shop. The Bookbinding Section of the London Chamber of Commerce, at a conference on January 18th, recognised that if the warehousemen and porters went out many shops would have to close in a few days. Up to this time our branch was not in dispute with our employers; but because these shops had automatically to close, the employers decided to issue lock-out notices to all our members in the other shops where, up to then, there had been no trouble, thus making a trade dispute of the matter. We are bound to accept this challenge, as it aims at the right of our members to act up to the tenets of trade unionism, and we are determined to defend our trade union principles. With two exceptions, all letterpress and Bible shops are involved."

Samuel Jones & Co., Ltd.

No agreement has yet been reached between Messrs. Samuel Jones and Co., Ltd., and the union representatives regarding the matter in dispute, and the employees for the most part are still out on strike. The employers, however, are filling up all the positions in their works as fast as they can, and we understand they have found quite capable workpeople, so that they will have no difficulty in executing orders.

MESSRS. J. AND J. MAKIN, LTD., paper manufacturers, have joined the Federation of British Industries.

Printers and Phthisis.

Dr. E. Halford Ross writes to *The Times*: "During October and November, 1920, you published a series of letters from me on printers' phthisis. In these it was enunciated that silica-grit, when breathed, is the active factor in the causation of consumption; and it was maintained that the elimination of dust by constant cleanliness should encompass the prevention of the disease which . . . is most prevalent among printers.

"The letters gave rise to considerable controversy, and it is with great interest that I am now able to relate the result of a practical test. Phthisis had occurred in the printing department of the Bank of England, as in other printing works. Therefore, when the large new building in Old-street, E.C., was nearing completion, in the autumn of 1920, it was suggested by the head of the department that a vacuum-cleaning plant, with pipes carried to every floor, having a central exhaust engine with dust containers in the basement, might be a satisfactory means of keeping the new premises thoroughly clean. This was installed, and has been used continually and systematically over all floors, walls, cupboards, type-cases, etc., by a specially trained staff. Detailed medical notes and reports, from varying and independent sources, have been kept of all cases of illness, even of minor ailments; and in order to make the experiment free from error similar records were also kept at another new factory near London, which was engaged on similar work, but in which such cleaners had not been instituted.

"In neither works was there a picked population, but persons of all ages, including many new-comers, were employed. Two years' careful observations are therefore available. During the first year the new factory above referred to had five fresh cases, one of which has since proved fatal. It was then extra-cleaned; and during the second year there were none. But the Old-street premises of the Bank of England, in the heart of London, have remained free from new disease throughout the whole two years—a remarkable result in a large staff engaged in a most phthisical trade; and the average number of days lost per annum per person owing to ill-health (estimated by the method published by the Industrial Welfare Society in its *Journal* of December, 1921, as eight in factories generally) has fallen to between five and six days in these works.

"The conclusion is that phthisis may be prevented in certain printing shops if preventive measures are taken. If it can be prevented among printers, it can surely be reduced elsewhere. The constant, systematic elimination of dust should lead to the curtailment not only of consumption, but of many minor illnesses."

TUCK'S

£5,000 Post Card Competition.

Printers and stationers—particularly those having retail shops—will be interested to note that Messrs. Raphael Tuck and Sons, Ltd., have now fully launched their big publicity scheme for the post card prize competition. We understand January has beaten the record in the matter of post cards sent in by competitors. The competition is now being taken up largely by schools. Considerably more than a thousand headmasters and headmistresses throughout the country have applied for supplies of the competition announcement and rules for distribution among their pupils. The striking poster—"The Thunderstruck Postman"—is attracting attention on the hoardings, and by various means particulars of the competition are being broadcast to post card dealers and the general public. It now remains for the retailer to assist himself in the post card branch of his business, and to assist the movement for cheaper postage, by utilising the facilities which the firm is providing for getting his customers to enter for the competition, utilising the well-known "Tuck" picture post cards, of which so many excellent varieties are available.

"PAPER and Printings" cleared through the Constantinople Customs during the month of August amounted in value to £T156,102.

The Problem of Non-Register.

Importance of Grain in Paper.

Of all the bugbears of the colour printer, none is more formidable than that of non-register. It is easy—says a writer in the house magazine of Messrs. B. J. Ball, Ltd., of Australia—for the customer to curse the printer and the printer to call down anathemas on the head of the papermaker or the machinery manufacturer, or some other responsible person; but, as a matter of fact, while paper continues to be used as a medium of expressing art or nature in colours, just so long will non-register continue to be a problem the printer must face. The purpose of this article is not to suggest a method of overcoming the difficulties, but to explain some of the reasons which cause the trouble.

Printing paper consists of innumerable fibres, made from wood or rags or grass, which are carried along in a vast body of water and deposited on an endless travelling oscillating wire screen. The tendency of these fibres is to lie the long way of the travelling belt, with the consequence that the stretchability of the paper is greater in the other direction than that in which the fibres lie. Consequently any printer who does a lot of colour work should make a point of indenting any important quantities of paper, and should advise his supplier which way he wants his paper cut. In other words, if the paper is to be fed in the broad way, then the fibres should run in the direction of the short way of the sheet, so that the pull on the cylinder should be in the direction the fibres are running, instead of across them.

The simplest way to test an ordinary sheet of printing paper to ascertain the grain is to tear it in each direction. It will be observed that the tear is very irregular and resistant one way, whilst the other direction offers less resistance and tears fairly straight, the latter being "the way of the grain" or "direction of web."

But even though attention be given to this, the stretchability of paper cannot entirely be overcome, although it can be minimised. An expert attached to one of the great paper mills recently gave us the following remarks on the question:—

"Non-register trouble is due very largely to the fact that paper absorbs moisture from a humid atmosphere. Let us assume this paper was going through the mill during average atmospheric conditions, and, therefore, contained an average percentage of moisture. The paper would remain practically the same as long as it was kept in the cases, and continue so when taken out, if the atmosphere to which it was exposed was relatively the same as when the paper was made. If, on the other hand, it was drier the paper would shrink, and if damper expand. This action is not unusual, but comparatively infrequent, except during periods of radical changes in humidity, which, being beyond the control of papermaker and printer, cause considerable trouble, especially on register work.

"Only last week the writer visited a print shop and observed a sheet which stretched one-eighth inch in twenty minutes. It was a damp day, but when the sheet had been allowed to accommodate itself to the damp atmosphere and expand correspondingly, it printed in perfect register. The necessity at times for conditioning paper is obvious, and we doubt if you would care to take the position that the papermaker is responsible for the trouble caused by atmospheric conditions, unless he had supplied paper with the grain the short way when it had been ordered with the grain the long. For colour and other close-register work the grain should run the long way, as most of the fibres lie in this direction, and in expanding or contracting they change diameter rather than length."

MESSRS. E. A. BRISTOW AND CO., papermakers' agents, Temple Bar House, 23-28, Fleet-street, London, have been appointed sole agents in America for the well-known mill, Otto Gunther, Greiz, as well, of course, as representing them solely in this country. This mill has four machines, and makes a speciality of fancy covers, box papers and boards, red and black duplex for films, and black plate wrapping for the photographic trade. Other products are index boards, manillas and embossed wall papers in small trade rolls.

Lithographic Prices & Possibilities.

At a meeting of the members of the L.M.P.A. Trade Lithographers' Section, held at 24, Holborn, last week, Mr. Wiles, chairman of the Section, reviewed the present position of the trade and the great possibilities opening for it, especially in photo-lithography, and reported the issue of a new price list, with considerable reductions made by reason of the wages reduction.

Mr. Bates (Messrs. Johnson, Riddle and Co.) attended, and addressed the members, dealing with the practical and business side of this branch. He had hoped for a year of quietness and progress, but already they had to refuse a demand for increased wages from the two litho trade unions, in spite of the agreement which had been made, covering the year up to December 31st. He was glad to know that the reduction in prices had already been of service in helping trade and reducing unemployment.

Mr. Fishenden, M.Sc.Tech., then spoke, dealing with the technical side. He claimed that the immense advantages of rotary offset were only just coming into full appreciation. Letterpress printers recognised its advantages, especially when duplication was necessary, transferring costing less than stereos, whilst cheaper paper could be used. Telegraph forms, two-colour labels and similar work were now being so produced, and it was available for high-class work. He described the Manul process of reprinting type pages, showing a volume produced in this way at a very cheap rate. Auto-litho was referred to, and reproductions of chalk sketches and block work from pencil drawings were shown.

The speakers were thanked for their addresses, which were considered of practical value to the Section.

Lithographers' Auxiliary Concert.

A most successful and enjoyable bohemian concert was held on Monday at Anderton's Hotel, Fleet-street, under the ægis of the Lithographers' Auxiliary to the Printers' Pension Corporation. A departure was made by the executive in selecting Anderton's in place of the Cannon-street Hotel—a building which had been taken for so many years for these concerts—and the choice made met with the very warm approval of the large gathering of the supporters of the Auxiliary present. The event was "billed" as an executive night, and the chair was taken successively by Mr. E. A. Lowe, Mr. Fred Howe, Mr. Woodgate Stevens, and Mr. N. T. Hammond. Among others present were Mr. Sidney Cumbers, Mr. H. F. Parker and Mr. J. Mynott (hon. Auxiliary secretary). Mr. Joseph Mortimer sent a letter regretting his absence.

Mr. E. A. Lowe, during an interval in the concert programme, expressed the thanks of the executive to the various firms and gentlemen who had financially supported that evening's effort. Their Auxiliary was putting up two candidates for election this year, and he appealed earnestly for an even more extended support for what he thought was one of the finest benevolent institutions in existence. He thought there was room for propaganda on behalf of the aims and objects of the Printers' Pension Corporation.

Mr. Woodgate Stevens, who also spoke, referred to the fact that it was their first executive night. These pensions, after all, were for the rank and file in the trade, and he thought the people who most benefited by them should contribute their share towards their maintenance. The success that had attended the efforts of the members of the executive that night would indeed whet their appetites for further endeavour in the same direction.

Mr. Fred Howe and Mr. N. T. Hammond, the other chairmen, also briefly expressed their thanks to those who had contributed financially to the evening's plate.

The total collection amounted roughly to £80.

The musical programme was provided by the well-known concert party, the Astra Carltons, under the direction of Mr. Fredk. G. Turner, whose members comprised, in addition to the last-named gentleman, Miss Maude Smythe, Miss Phyllis Manser, Mr. Herbert Wild, Mr Tom Westmacott and Mr. Morey Wicks. Much appreciation was shown to each one of the artists, whose performances were rendered in first-rate style.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines :—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous,

One Insertion 3/-
Three Insertions... ... ... 6/-

For every line exceeding three lines 1/.

Situations Wanted,

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words) :—

One Insertion 1/6
Three Insertions... ... ... 3/0

For every line exceeding three lines **6d.**

Sales by Auctions, Tenders,

THURSDAY, FEBRUARY 1, 1923.

The Bookbinding Stoppage.

THE stoppage in the London bookbinding trade has already, as indicated in the report on another page, reached serious dimensions, and it threatens to spread still further within a few days' time. It is unfortunate that there should be apparent misunderstanding as to the scope of the London wage negotiations, and it is still more unfortunate that a disagreement of this kind should be allowed suddenly to arrest the working of an important section of the industry. What is essential now, for the good of all parties concerned, is that some means be found to arrange an immediate, if only temporary, resumption of work while the points at issue are thrashed out. We are gratified to hear that a meeting of the Joint Industrial Council has been called for to-morrow (Friday), and we trust that a way may be found to prevent the continuance or spread of this destructive and useless stoppage of work, a thing that injures all whilst giving no assurance of any good results which could not be better achieved by other means.

* * *

German Picture Post Cards.

THE need for more stringent application of merchandise marks regulations—a matter in regard to which the Federation of Master Printers is showing commendable pertinacity—was emphasised last week by Mr. Godfrey Cheesman, general secretary of the National Union of Manufacturers, who called attention to what he regards as another case of serious trade penetration from Germany. A circular just received from Berlin by an important London firm of printers and stationers offers picture picture post cards wholesale at "2s. 6d. per gross only"—a price with which, Mr. Cheesman observed, no British manufacturer could possibly compete. The samples enclosed in the circular are of the comic variety, that would appeal certainly to the masses, and there is nothing on them to indicate their German origin. On the contrary, they bear an imprint announcing that they are published in a well-known building in London. Mr. Cheesman remarked that there are still many thousands of patriotic people who would refrain from buying these post cards, and would not be influenced by their extraordinary cheapness if they knew of their origin, but as those people will have nothing whatever to guide them in the matter, they will consider that in buying them they are purchasing a British article, for the post cards are printed to deceive, and the subjects dealt with on the samples are purely British. All this, Mr. Cheesman contends, shows the absolute necessity of adopting immediately the findings of the committee set up with regard to the Merchandise Marks Act.

* * *

Employment.

ABSORPTION of unemployed workpeople is proceeding slowly, in the printing and allied industries as well as in other directions. The official report states that employment in the paper trade continues fair on the whole, and in some districts an improvement is reported. In the printing trade employment generally remains slack; with letterpress printers an improvement is reported at several provincial centres, but in London there is a slight decline in most branches except electrotypers, with whom employment is reported as very good. In the bookbinding trade employment continues bad, with much short time. The percentage of unemployment, according to the *Labour Gazette*, was higher in paper making and staining than in either manufactured stationery or printing, publishing and bookbinding. Out of an estimated number of 61,000 insured workpeople in paper-making and staining, 4,265 were unemployed at December 18th, the large majority (3,374) being males. The total figure represented a percentage of 7, a decrease of 0·2 compared with November 20th. Of 70,200 workpeople in the manufactured stationery trades, 4,033 were unemployed, the majority being females (2,432). The percentage of 5·7 was 0·2 lower than a month previous. With an estimated number of 213,150 insured workpeople in printing, publishing and bookbinding, 12,568 (of whom 9,431 were males) were unemployed. The total percentage, 5·9, also shows a reduction of 0·2.

* * *

Direct Dealing in Paper.

THE question of direct buying, or, rather, selling, is still to the fore, as indeed it must be until some agreement on principle is arrived at. As a matter of fundamental fact, there is really only one principle, and that is that there should be no selling direct to the private consumer. On the same ground, there should be no buying direct on the part of the printer. Unfortunately, practice differs from theory and will continue to do so until organisation is absolutely perfect and every person in trade is quite honest and loyal. That will be the millennium. Meantime, compromise is a necessity and something toward improvement in the relations between printers, wholesalers and papermakers. To give a lasting nature to any compromise it is necessary that each organisation should embody all or nearly all the houses or mills in each particular industry or trade. An immense benefit would be conferred on all concerned by a settled plan of papermaking and distributing; and this fact is recognised even by those who by circumstance are at present acting irregularly. The various associations representative of the interests concerned are stronger and better organised than they ever were, despite shakiness in one direction. They are certainly strong enough to co-operate and arrange a plan which would work out successfully. With whole hearted loyalty among members, they could create a machine which would make it difficult for the independent agency to keep outside their ranks in the future conduct of trade. This way lies the fuller development of the Allied Trades.

Personal.

MR. J. A. STEMBRIDGE, vice-president of the Leeds and District Master Printers' Association, has been elected a member of the Council of the Leeds Chamber of Commerce. Mr. Stembridge was chosen by the M.P.A. to represent the interests of the printing and stationery group of trades on the Council of the Leeds Chamber, a somewhat important body.

MEMBERS of the London Press Club held their third house dinner of the season on Saturday, when the guests of the evening were Mr. Justice Eve, Judge Parry, Mr. T. P. O'Connor, and Mr. John Crisp, hon. solicitor to the club. Mr. H. B. Lawford presided over a representative gathering.

MR. GEORGE DOUGLAS, late assistant secretary of the Amalgamated Society of Lithographic Printers (London Branch), is being honoured by a concert and testimonial at Anderton's Hotel, Fleet-street, on February 23rd.

MR. RICHARD HANCOCK, of Birmingham, will lecture on February 6th before the Printers' Managers and Overseers (Parent) Association on the London "Zoo," the lecture being illustrated with lantern slides.

MR. FRANK B. NOYES, president of the Associated Press of America, and his family have arrived in Delhi and are the guests of the Viceroy.

IT was unanimously decided at the last Executive Council meeting of the Papermakers' Association to tender a cordial invitation to Mr. C. R. Seddon, J.P., to allow himself to be nominated as President of the Papermakers' Association in succession to Mr. W. Leonard Tod, J.P., whose term of office expires this year.

MR. SEDDON has signified his willingness to accept nomination, which will no doubt meet with the unanimous approval of the whole of the industry.

MR. DEPUTY S. J. SANDLE has been appointed a representative trustee of the Crystal Palace for the Corpóration of London.

WE understand that Mr. Herbert W. Clarke, who has been connected with the firm for the past 43 years, and who from time to time has acted as alternate director, has been appointed a director of Edward Lloyd, Ltd., the proprietors of the Sittingbourne Paper Mills.

THE Papyrus Lodge (Mr. W. V. Marchant, W.M.) will hold a Ladies' Night on Friday, February 16th, at the Hotel Cecil, for which function a most attractive programme will be arranged. Mr. S. M. Lane is the hon. secretary.

MR. JAS. C. HEIGHWAY, managing director of Messrs. Edwards, Dunlop and Co. (London), Ltd., will shortly be on his way to Australia, having booked his passage by the "Orvieto" leaving London on February 3rd. He will spend some few months in Sydney and other parts of the Commonwealth, and would be pleased to hear from any of his friends in the trade to whom he could be of service during his stay "down under." As agents for Edwards, Dunlop and Co., Ltd., of Sydney, Melbourne and Brisbane, Mr. Heighway's firm have passed through very strenuous times during the last few years, and his health has suffered rather severely from the heavy strain. It is hoped that the rest and the sea air will work wonders, and that Mr. Heighway will return to London completely fit and well again.

MESSRS. BUTCHER, WETHERLY AND CO., LTD., paper agents and merchants, have taken premises at 83 and 85, Cowcross-street, London, E.C.1. Mr. C. A. Butcher was for 20 years with Messrs. Spicer Bros., Ltd., and both he and Mr. H. Wetherly are thoroughly experienced in the paper trade, while Mr. W. J. Skelton has been interested in the manufacture and sale of glue, gum, gelatine, etc. The new company is now in complete working order.

Printers at Leeds University.

A welcome privilege was granted on Saturday afternoon to a large body of Leeds printers, employers and employed, who, numbering in all about 400, paid a visit to the University of Leeds, and had an interesting inspection of the work of the various departments. Special exhibitions had been arranged, particularly in the Department of Colour Chemistry, and in the Library many books, including early printed volumes and works of fine artistic and historic character, were gathered on the tables for examination.

At the outset the party assembled in the Great Hall, where a formal welcome was offered them by the Pro-Chancellor (Mr. E. G. Arnold), and the Vice-Chancellor (Sir Michael Sadler).

The Pro-Chancellor (himself a master printer) welcomed the visitors, and said that they would find in the University evidence that the place was brimming with enthusiasm, humming with energy, and actuated by the highest ideals of public duty. He was pleased to announce that negotiations were almost complete through which attendance at the Leeds Printing School might become part of a University honours course for those young men who desired to qualify for posts of directive responsibility within the industry. Other printing schools existed, but this would be the first so united with a University honours course.

The Vice-Chancellor said the visit was doubly welcome, because the visitors came, not only as fellow citizens, concerned with the life of the University, but also because their craft was very near to University studies. Where would a University be without books and printing?

Mr. Harry Cooke, President of the Printers' Association, expressed the thanks of the gathering to the Pro-Chancellor and Sir Michael Sadler, and to Mr. Grist and Mr. W. S. Wildblood, who had made the arrangements for the gathering.

The party was then divided and made an inspection of the institution, each section listening to a lecture by Mr. C. B. Fawcett, head of the Department of Geography, upon "Some main facts in the Distribution of Man." Afterwards tea was taken in the refectory.

North London Master Printers.

The first meeting for 1923 of the North London Master Printers' Association was held on Monday of last week at the Finsbury Park Hall when there was a good attendance of members. Following the election of two firms to membership, there was a general discussion upon trade matters and a review of work undertaken by the Federation.

Mr. L. F. Hunt, who presided, gave a brief summary of the negotiations which had recently brought to a successful issue the reduction in wages, and recounted some of the difficulties London was faced with compared to those of the provinces. He explained that whilst the support given was far in excess of that previously obtained, yet the fact remained that it was on account of the indifference of master printers to this question that the reduction was not more.

Price cutting came under notice. With regard to the question passed on from 24, Holborn, as to the advisability of issuing a new price-list, the meeting was in no doubt, practically all being in favour.

Other matters under discussion were postal rates, prices of half-tone and other blocks. H.M. Stationery Office, the appointment of a trade expert in an advisory position at headquarters, and the forthcoming London congress of the Federation.

Mr. Whyte spoke enthusiastically upon the services and skill of Colonel Truscott in his fight for London printers during his term of chairmanship, and upon the suggestion of the chairman a hearty vote of thanks was accorded him.

Upon the proposition of Mr. Williams, seconded by Mr. Soule, it was decided to hold a social evening at the Library Hall on Wednesday, March 21st, under the direction of Mr. Frank J. Collins, of Finchley.

Messrs. Johnson and Hedger, organisers to the Association, both attended and gave an account of their calls in the district.

Copies of the new edition of rules were distributed during the evening.

Trade Union Matters.

LONDON LITHOGRAPHERS' WAGES. — Mr. Woodgate Stevens, London branch secretary of the Amalgamated Society of Lithographic Printers, in conversation with a representative of the *British and Colonial Printer and Stationer*, said that his members were feeling acutely the unfortunate position in which they found themselves on the wages question. They regarded their position as anomalous and an impossible one. However, they were still hopeful that their position would be recognised by the L.M.P.A., but unless something was done to place the lithographers of London on equal footing with the other branches of the trade their members would take matters into their own hands. The L.M.P.A. had turned them down, and the whole matter now rested with their members. A special meeting of the whole of the London Branch is being held early in Feburary to consider future action. They did not desire, said Mr. Stevens, that any rupture should take place, but things at the present moment were not very hopeful. They believed in honouring an agreement, but the agreement had been broken by the employers, and their members were determined that the position could not remain as it was.

LEEDS TYPOGRAPHICAL SOCIETY.—The following officials of the Leeds Typographical Society have been elected for the current year: President, Mr. F. Naylor (Beck and Prichbold); vice-president, Mr. A. Beckwith; treasurer, Mr. J. E. Nettleton; secretary, Mr. J. Musgrave; auditor, Mr. E. W. Cluderay. Mr. W. Bottomley will again represent the Branch on the Executive Council.

AT a meeting of the Executive Council of the Typographical Association the General President (Mr. J. D. French) reported upon attending a meeting of the Conciliation Committee of the Joint Industrial Council, called to consider the question of the stoppage of one day's holiday pay by the members of the Leeds Master Printers' Association because Typographical Association members had ceased work at the commencement of the recent wages dispute. Mr. French stated the case for the Association, and was supported by Mr. J. Musgrave, secretary of the Leeds Branch. Mr. Stembridge, vice-president of the Leeds Master Printers' Association, gave the case for the masters. The findings of the Conciliation Committee were as follows:—"This Conciliation Committee is of opinion that while the Leeds employers are strictly within their rights under the Hours and Holidays Agreement, the employers should recognise that in the peculiar circumstances of the case, the men should be paid for the day's holiday under review."

THE Printing and Kindred Trades Federation of the United Kingdom has just issued No. 1 of Vol. I. of the *Printing Federation Bulletin*. This latest addition to the periodical Press of the printing trade starts as a humble 4-page sheet, which is printed by the Watford Printers, Ltd., and published at the Federation's offices at 60, Doughty-street, W.C.1. "Our purpose," says the *Bulletin*, "is to create a closer understanding between the national and the local federations and provide more comprehensive knowledge of the many questions which affect the industry—not always from the national to affiliated unions and the local federations, but to an equal extent from the union and the local federations to the national body. Neither must we neglect items of interest as between union and union and between local federations. The activities of the Joint Industrial Councils with which our unions are connected will also be recorded in our columns. For the present, the *Bulletin* will be published as occasion demands—we shall feel our way towards regularly printed issues. It will depend to a great extent upon our reception by our public how soon this will be determined."

MR. ALBERT E. MALLANDAIN, of Park Royal Paper Mills, Park Royal, N.W.10, has acquired the business of the Forester Paper Co. (1917), Ltd. The latter company is being wound up voluntarily, all creditors to be paid in full. Mr. Mallandain will give personal supervision to the productions hitherto made by the Forester Co., and the improvements introduced will no doubt be appreciated by the firm's customers. Mr. Mallandain has a high reputation as a manufacturer of cloth-lined papers, boards, art and chromo papers, etc.

DIVIDENDS AND REPORTS.

"LIVERPOOL DAILY POST."—Directors announce final dividend of 7½ per cent. actual, making 10 per cent. for the year, together with bonus of 10 per cent., placing £50,000 to reserve and carrying forward £70,000.

LANSTON MONOTYPE.—The Lanston Monotype Corporation announces dividend of 4 per cent. actual, less tax, payable February 9th, making with interim of 2 per cent., 6 per cent. for year; same as year ago.

NEW COMPANIES.

CHARLES JAQUES AND SON, LTD.—Capital £5,000 in £1 shares (1,000 preference). To take over the business of printers and stationers carried on by R. A. Benny and A. W. Tooth at 73 and 75, Kenton-street, Brunswick-square, W.C. Private company. First directors: R. A. Benny and A. W. Tooth. Registered office: 73 and 75, Kenton-street, Brunswick-square, W.C.1.

WOOLRIDGE AND CO., LTD.—Capital £500 in £1 shares. To adopt an agreement with T. F. J. Woolridge and to carry on the business of commercial and general printers as formerly carried on by the said vendor as T. F. J. Woolridge at 39-41, High-street, Highgate, N. Private company. First directors: T. F. J. Woolridge and V. Woolridge. Registered office: 39-39a, High-street, Highgate, N.

MONARCH PUBLICATION AND PRINTING CO., LTD. (London.)—Capital £1,000 in £1 shares. Newspaper proprietors, general printers, publishers, agents and managers, advertising contractors, etc. Private company. Subscribers: C. W. Lane and W. P. Jacobs. F. W. Horner is governing director.

BY-THE-WAY AND INTERVIEWS, LTD.—Capital £500 in £1 shares. Newspaper proprietors and general publishers, printers, advertising agents, etc. Private company. First directors: Mrs. I. A. Westbrook, H. W. Westbrook, W. F. Arbuthnot and A. Francis. Registered office: 66, Fenchurch street, E.C.

DENISON PRESS, LTD.—Capital £200 in £1 shares. Proprietors and publishers of newspapers, journals, magazines, books and other literary works and undertakings, printers, stationers, etc. Private company. Directors: R. P. Boss and F. A. Rowe. Registered office: Denison House, 296, Vauxhall-bridge-road, S.W.1.

SHAFTESBURY PRESS, LTD.—Capital £500 in £1 shares (200 ordinary, 175 8 per cent. cumulative preference and 125 deferred). To acquire the business of publishers, booksellers and newspaper, periodical, magazine and general distributors and advertising agents carried on by J. C. McKew as "The Bliss Mail Order Co." at 143, Drakefell-road, Brockley, S.E., and by H. H. Ward as the "Shaftesbury Publishing Co.," at 47, Dean-street, Westminster. Private company. First directors: J. C. McKew, H. H. Ward, A. E. Norwood and M. C. Pittman. Registered office: 63, Dean-street, W.1.

METCALFE AND WYBROW, LTD. — Capital £500 in £1 shares. Printers, stationers, advertising contractors, publicity agents, artists and designers, etc. Private company. Directors: M. L. Metcalfe and S. W. Wybrow. Registered office: Abbey House, Victoria-street, Westminster, S.E.

JEFFREY AND CO., LTD.—Capital £25,000, in £1 shares (9,000 convertible ordinary and 16,000 ordinary); manufacturers of, and dealers in, plain, printed or embossed wall and other papers, wood pulp, wood wool, esparto and other grasses, jute, flax and other fibres, rags and all other materials from which paper can be manufactured, etc. Private company. Directors: Metford Warner, H. Warner and Marcus Warner. Registered office: 64, Essex-road, Islington, N.

ALFRED DAVIES, LTD.—Capital £20,000, in £1 shares (5,000 7 per cent. cumulative preference); to acquire the business of A. Davies, cardboard box manufacturers, now carried on at Welford-road, Leicester, and to carry on the business of cardboard and leather board manufacturers and dealers, vendors and publishers of show cards and post cards, manufacturers of, and dealers in, fancy goods, printers, stationers, etc. Private company. Subscribers: A. Davies, R. F. Goddard, Mrs. M. J. Davies, Miss A. Pratt and G. Howard. Registered office: Weymouth-street, Leicester.

O. REICH AND CO., LTD.—Capital £20,000 in £1 shares (10,000 10 per cent. cumulative preference); to acquire the business of agents for wood pulp manufacturers in Sweden, Norway and elsewhere, shippers, export and import merchants carried on as "O. Reich and Co.," at Stuart House, Tudor-street, E.C. Private company. First directors: Olaf Reich, Orla G. Bech and E. C. Lait. Registered office: 1, Tudor-street, E.C.4.

NORTH GOONBARROW CHINA CLAY CO., LTD. — Capital £10,000, in £1 shares; to acquire the business of the North Goonbarrow China Clay Co., and to search for, quarry, refine, prepare for market, and deal in china clay, china stone, ball clay, felspar, potters, papermakers and cotton spinners' materials and chemicals, etc. Private company. First directors: H. Nicholls, W. W. R. Nicholls, A. C. Best, W. T. Nicholls and A. Ede. Registered office: 3, Victoria-place, St. Austell.

REMINGTON KRAFT PAPER CO. — Capital £20,002 in £1 shares; paper manufacturers. Private company.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

LEIGH AND WILLIAMS, LTD. (printers, stationers, etc.).—Mortgage dated January 8th, 1923, to secure all moneys due or to become due from company to L.J.C. and Midland Bank, charged on 31, Sussex-street, Rhyl, Flint, together with machinery, fixtures, etc.

CAXTON PUBLISHING CO., LTD. (newspaper proprietors, London).—Satisfaction to the extent of £1,000 on January 8th, 1923, of debentures dated May 3rd, 1910, securing £40,000.

STRINGERTYPE MANUFACTURING CO., LTD. (London).—Issue on January 16th, 1923, of £900 debentures, part of a series already registered.

ETCHING AND PHOTOGRAVURE CO., LTD.—Charge on machinery and plant at the Works, Newcastle-place, Clerkenwell, E.C., dated January 17th, 1923, to secure £200. Holder: E. L. Marshall, 57A, Carter-lane, E.C.4.

MIDLAND UNITED NEWSPAPERS, LTD.—Particulars filed of £4,500 debentures authorised December 30th, 1922, charged on the company's undertaking and property, including uncalled capital, the whole amount being now issued.

SAMUEL STEPHEN, LTD. (newspaper proprietors, Upper Norwood).—Debenture dated January 16th, 1923, to secure all moneys due or to become due from the company to Lloyds Bank, charged on the company's undertaking and property, present and future, including uncalled capital.

SAMUEL STEPHEN, LTD. (newspaper proprietors, etc., Upper Norwood, S.E.).—Satisfaction in full on November 24th, 1922, of debenture dated December 12th, 1919, securing £3,000.

XPRES PRINTERS, LTD.—Mortgage dated January 9th, 1923, to secure all moneys due or to become due from the company to the London County Westminster and Parrs Bank, charged on 36, St. Mary's-street, Northampton.

LONDON CALEDONIAN PRESS, LTD.—Debenture dated January 15th, 1923, to secure not more than £13,000, charged on freehold and leasehold property, plant and machinery in or about 74, Swinton-street, W.C., and elsewhere, and the company's undertaking and property, present and future, including uncalled capital. Holder: Co-operative Wholesale Society, Ltd., 1, Balloon-street, Manchester.

EASTERN PRESS, LTD. (office, London).—Particulars filed of £4,000 debentures authorised January 5th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

NATIONAL CARDBOARD BOX MANUFACTURING CO., LTD. (London).—Second debenture dated January 16th, 1923, to secure £500, charged on the company's property, present and future, including uncalled capital. Holder: Tilley Rickman, 75, Canfield-gardens, Hampstead, N.W.

HORNER AND READ, LTD. (publishers, paper manufacturers, etc., London).—Particulars filed of £2,000 debentures authorised January 1st, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

A. H. STANLEY AND CO., LTD. (papermakers, printers, stationers, etc., London).—Particulars filed of £1,400 debentures authorised January 9th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

L. UPCOTT GILL AND SON, LTD.—Issue on January 1st, 1923, of £470 part of a series already registered.

CHADWICK AND SHAPCOTT, LTD. (brush and paper manufacturers and dealers, etc., London).—Issue on January 12th, 1923, of £1,500 debentures, part of a series already registered.

Mechanical Plate Casting Within the Reach of Every Newspaper!

SWISS MANUFACTURE GUARANTEED

SWISS MANUFACTURE GUARANTEED

"WINKLER"

Automatic Plate Casting Machine.

THIS Machine embodies a number of exclusive features and new principles which permit the production of perfectly true and solid newspaper stereo plates—

1, Without "tail,"
2, Without pumps,
3, Without trimming or hand finishing,
4, Without subsequent shaving,
5, Without any dummy castings.

In other words: after a short automatic operation, independent of the skill of the operator, a perfectly finished Stereo Plate is produced, which is absolutely ready for the press and does not require any make-ready.

Only one operator necessary.
Produces three plates per minute.
Considerably less loss of metal.
Consumption of fuel 75 per cent. less.

Swedish Paper Lock-Out.

A big crisis has broken in the paper industry of Sweden, and by this time all the mills are in all probability closed. A lock-out was to come into effect this week.

With regard to the effect on the market, this will be to harden prices, although it is thought there will be no further increase on the pulp side than has already taken place.

Mr. Erik Fernstrom, who has just paid a visit to Sweden, states that it is understood that the critical time in the paper industry of that country is due. The employers believe that there will be a stoppage. The dispute concerns a question of wages, the employers demanding a reduction, while the workpeople insist upon an increase. The impression on the other side is that the negotiators will not be able to settle the matter without a strike or lock-out, but it is fervently hoped, for the sake, not only of the employers, but also for the workpeople, that the strike will not be of long duration.

Discussing the outlook for the paper industry in Sweden, Mr. Fernstrom, in conversation with our representative said: The situation, so far as I understand it, is that the mills are full up with orders, and to my knowledge all paper machines which are in good order are running. Prices, however, are low, and the manufacturers complain that there is no profit at present; but the fact that there are quite sufficient orders to be booked indicates to me that sooner or later the matter of making the selling price meet the cost of production, and at the same time leave something over for profit, will soon be reached.

"More capable men than myself predict a good time during 1923, and providing nothing happens which cannot be foreseen, I do not see why that prophecy should not be fulfilled."

French Paperstock Co., Ltd.

The petition of Co-operative Vereeniging Stroocartonfabriek "De Toekomst" for a compulsory order to wind up the French Paperstock Co., Ltd., came before Mr. Justice Eve, in the Companies Winding-up Court, on Jan. 23rd.

Mr. Grant, K.C., who appeared with Mr. Lindon for the petitioners, said they were judgment creditors. The petition was before the court last week, when there was a question as to whether a resolution to wind up voluntarily was valid. Mr. Luxmoore, for the respondent company, then agreed that owing to a deficiency of one day the meeting had not been regularly convened, and therefore there was no resolution. There were debentures on foot which, if his learned friend was right, would swallow the whole of the assets. What had now happened was that Mr. Luxmoore and he had agreed that the petition should stand over for four weeks, and that Sir Wm. McLintock and an independent liquidator to be nominated by Mr. Luxmoore's clients should be appointed in a voluntary winding up.

His Lordship: Two liquidators? I am against that.

Mr. Grant: That can be done in a voluntary winding up.

His Lordship: It adds to the expense, and often works unsatisfactorily.

Mr. Grant said the creditors whom he represented desired to look into the matter to see if the affairs of the company had been regularly conducted; he did not say they had not.

His Lordship: Why not have a supervision order? Two liquidators, like two receivers or two partners, often work unsatisfactorily.

Mr. Grant said he was sure in this case they would work satisfactorily. Mr. Luxmoore's solicitors would undertake that the costs of his (Mr. Grant's) independent liquidator should be paid. He asked that the petition be allowed to stand over for four weeks, and if the arrangement was carried out, the petition would then be dismissed and the costs provided for as he had indicated.

Mr. Peel said he appeared for creditors for £10,721 and he opposed a compulsory order and agreed to the arrangement stated by Mr. Grant.

His Lordship: There are several creditors opposing.

Mr. Grant: Mr. Peel appears for them all.

His Lordship: The petition will stand over for four weeks, and then such order as may be advised; I do not bind the hands of the court in any way.

Printers' Battalion Memorial.

At the headquarters of the 6th City of London Rifles (the Printers' Battalion) in Farringdon-road, the battalion war memorial was dedicated on Sunday by the Chaplain of the Regiment (Rev. A. E. Wilkinson).

The memorial takes the form of a handsome oak screen, with 16 bronze panels bearing some 14 hundred names, including that of Earl Roberts, at one time honorary colonel of the battalion. A centre panel bears the names of men who fell in the South African War.

Colonel R. C. Boothby, the commanding officer, said over 9,000 men passed through the regiment in the late war, 50 per cent. being wounded, and 1,271 killed in action.

The memorial was unveiled by Brigadier-General W. F. Mildren, honorary colonel of the regiment.

Printing Crafts' Guild.

A very successful whist drive and dance was held in the College of Technology, Manchester, on Saturday evening last, when upwards of 250 members were present. The president, Mr. John Taylor, had the support of Mr. Charles W. Gamble, O.B.E., director of printing, Mr. W. M. Menzies being the M.C. There was a good programme of dances, and the musical items included a song by Miss Ada F. Lodge, cornet solos by Mr. L. Winstanley, and "Impressions" by Mr. W. W. Menzies.

WEE MAC.

A News-Print Transaction.

In the Kings Bench Division on Jan. 19, before Mr. Justice Roche, Messrs. Chas. Briscoe and Co., Ltd., Knight Rider-street, City, were plaintiffs in an action in which they claimed damages for breach of contract to supply a quantity of "news" paper, from Messrs. Victor Tandberg and Co., Drapers-Gardens, Throgmorton-avenue.

It appeared from the opening of Mr. Barrington Ward, K.C., for the plaintiffs, that under contract in February, 1922, the plaintiffs agreed to purchase from the defendant company ten tons of glazed "news" paper at £17 per ton and ten tons at £18 per ton. It was an express term of the agreement that the first ten tons should be delivered within a period of four to six weeks, or, alternatively, that the goods were to be delivered within a reasonable time. They said such reasonable time expired before the 16th May or June, 1922. They also said that the first 14 tons should have been delivered before that time and the residue before July 5th. They said that the defendants in breach of this agreement did not deliver any of the paper and in consequence they claimed the difference between the contract price and the price at which they had to purchase other paper in the open market, which amounted to about £105.

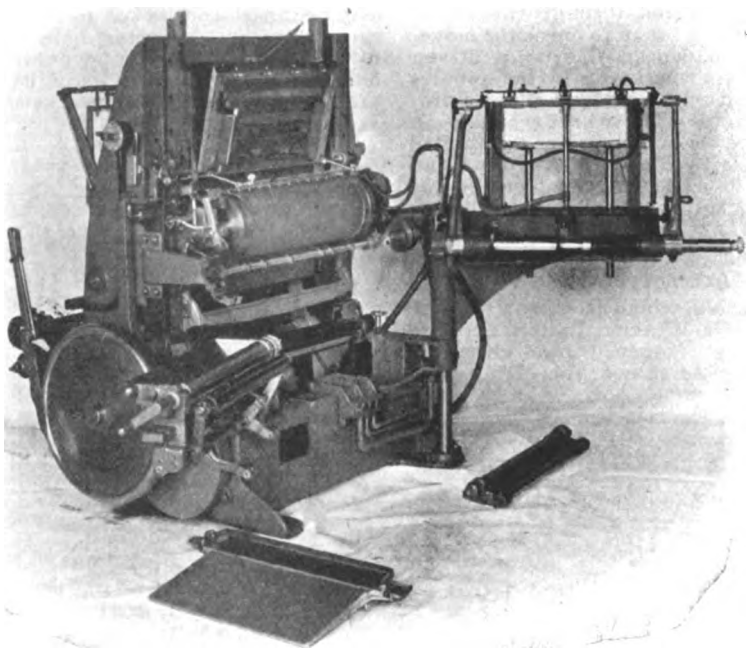
The case for the defendants, who were represented by Mr. Miller, K.C., was that there had never been an agreement to deliver in four to six weeks, and further that there had never been a confirmation of a sale under such conditions as was required in order to complete the contract. It was further pleaded that if there was any default in delivery it was from causes beyond the control of the defendants and that the mills were responsible for delay, for which they were not liable.

Mr. Barrington Ward said that with regard to the document of confirmation, if the letters between the parties showed the nature of the contract the actual confirming document between the parties—who understood the nature of the contract from the correspondence—was not necessary.

Mr. Miller denied that there was any agreement as to date of delivery and Mr. Tandberg, defendant's business manager, said when in February plaintiffs sent him the order he telephoned to the defendants and told them that they might be able to deliver ten tons. He then wrote to the mills in Norway and received a reply that they might be able to supply ten tons in April and would try to get other mills to find the remainder. When he had ascertained this fact, he telephoned to plaintiffs and informed them of the position and intimated that they could not guarantee when delivery could be made. His firm afterwards wrote and told plaintiffs they would not be responsible for any default on the part of the mills.

His Lordship was of opinion that the defendants were liable as to 15 tons, but not as to 5 tons, delivery of which was offered and refused.

The parties agreed the damages at £80, and judgment was entered for this amount with costs.



Paper and Box-Board Trade.

Since the last report of the *Anglo-Norwegian Trade Journal* regarding the paper and box-board trade, business has fallen away to a very large extent and orders are not coming in as they did a couple of months ago. Happily for the Norwegian paper mills, they are fairly full up with orders for several months, as the substantial orders recently received from America have not yet been executed. Prices remain fairly stationary and mills are quoting for good unglazed "news" in substance 50 gr., £15 5s. per ton, net, f.o.b. M.G. pure sulphite in substance double crown, 16 lbs., 480 on reels, is bought at £23 10s. to £23 15s. per ton, and for substance double crown 7 lbs. 480, the price is £31 10s. per ton. These prices are c.i.f. United Kingdom, net. With reference to friction glazed leather boards, there is practically no demand and the price has been stationary during the last few months at £14 per ton less 2 per cent. f.o.b. Scandinavian ports.

The . . .

American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme; showing also pile-table and fountain swung back and forme roller unit and transfer table removed from Press.

SPECIFICATION.

Inside Chase Measurement, 13¾ in. × 19¾ in.
Type matter locked in chase, 12½ in. × 19 in.
Largest sheet which can be delivered, 12½ in. × 19 in.
Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.
Over-all measurements:
Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
Net weight, with motor, approximately 2,600 lbs.
Speed Range 2,000 to 3,600.

✖ ✖

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its chargeable time by reason of the enormous reduction in the time required to change from one job to another.

All interested are cordially invited to see the American Miehle Company's Vertical Job Press now being exhibited at our Showroom address, No. 2, Salisbury Court, Fleet St., E.C.4

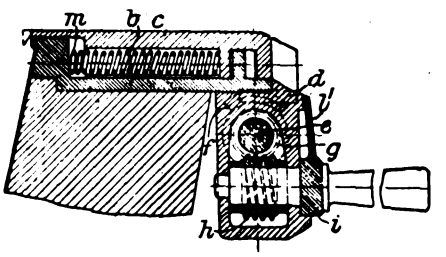
New Inventions

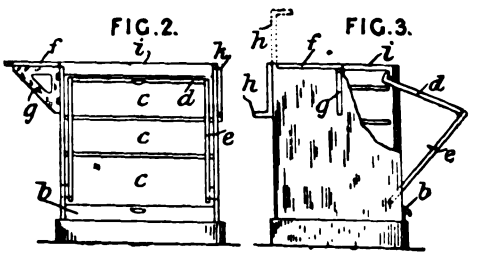
Worm Gearing on Rotaries.



Mr. A. Terrey has patented an invention in rotary machines in which worm gearing is employed for driving the impression, plate, or inking cylinders, or other parts, the driving worms are constructed of such an

angle and pitch to permit of their being rotated by the worm wheels or spiral toothed or helical wheels with which they engage. On arresting the movement of the driving element, the driven part is not suddenly arrested by the worm but stops gradually, a resistance being offered through the worm, which thus acts as a brake to check the movement. As shown, worms *f*. *g* on a driven shaft *e* drive worm wheels f^1, g^1 on the spindles of an impression cylinder *a*, and plate cylinder *b* respectively. The wheel g^1 engages a worm *i* on a shaft *h*, which drives the shaft of an inking roll *c* by means of a worm *j* and worm wheel *k*. The shaft *h* may be the driven shaft. A suitable angle for the threads of the gearing is 31 degs.

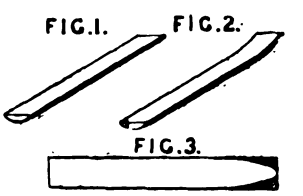
Stereotyping.



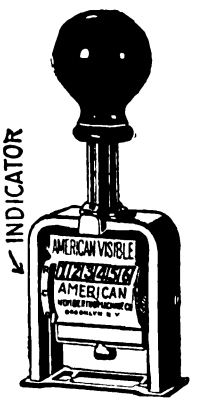
In this invention, which is patented in this country by Messrs. Winkler, Fallert and Co., a matrix clamp is opened and closed by worm gearing. As shown, the clamp com-

prises a fixed bar *b* and a slidable bar *c* provided with racks *d* engaging toothed segments *f* on a shaft *e* provided with a worm-wheel *g* engaged by a worm *h* operated by a hand lever *i*. A spring arm i^1 on the hand lever *i* snapping into a notch indicates to the operator when the clamp is closed. One or more springs *m* take up slack in the worm gear and ensure closing of the clamp.

Printers' Work Frames.



A work-frame for printers, as patented by Messrs. A. Hoffmann and Kommandit-Ges. Hoffmann and Co., comprises a working table *i* arranged above drawers *c* and provided with three hinged walls *f*, *h*, *k*, which may be raised and locked in a vertical position by means of spring bolts, or may be lowered into an horizontal position so as to enlarge the working surface of the table, and are then supported by brackets *g*. When



the walls are raised, the table and drawers can be covered by means of a roller-top *b*, which is drawn up and locked to the wall *h*. A plate *d* is adapted to be pulled out and secured in inclined position by a support *e*.

Ruling Pens.

Blades for ruling and like pens, as patented by Mr. K. Akashi, are formed from a metal strip having a section similar to that shown in Fig. 1, by bending one end in dies, as

shown in Fig. 2, and removing the metal projecting above the plane of the flat side to form a pointed blade, as shown in Fig. 3. The contour of the blade may be varied by changing the section of the strip or by varying the curvature shown in Fig. 2.

THE NATIONAL
Association of Wholesale Stationers
AND
PAPER MERCHANTS.

The thirty fifth meeting of the National Council took place at the Council Chamber of the Association on Thursday, January 11th, Mr. F. M. Carson, the president, being in the chair.

With reference to the case submitted by this Association for the re-introduction of the inland sample postage rate, which would place the British manufacturer and merchant at least on an equal footing with the foreigner, an unsatisfactory reply has been received from the Postmaster-General on the matter. The Association, however, is determined to continue its efforts in this direction until the anomaly at present existing in this direction is rectified.

It is hoped that a strong committee will be set up at an early date to deal with the conditions of sale of the Scandinavian Convention, which have been fully discussed at recent meetings of the Association.

With regard to the invitation already extended to the Master Printers to meet this Association in conference to discuss matters of mutual interest, it is hoped that the meeting of the joint committee will be held in the near future, and it is understood that the Master Printers will at a very early date be in a position to make the necessary arrangements for such conference.

A discussion took place with regard to joint action of common interest which had been taken by this Association in conjunction with one of the kindred associations.

The question of the interpretation of the Paper Trade Customs on certain points of difference which had arisen was fully discussed, the opinion of the Council being obtained thereon.

It is understood that the Postmaster-General is now viewing in a more favourable light the case which has been put forward from time to time by this Association in conjunction with the allied associations with reference to the regulations prevailing as regards the printed paper rates.

Government Contracts.

Paper Box Trades.

In the December issue of the *Labour Gazette* the paper box making trade was included in the list of industries in which agreements exist between employers and workpeople providing for the payment of wages during recognised holidays. Since the publication of that article the Department has been notified that the agreement, dated March 17th, 1920, in which provision to this effect was contained, is no longer operative, a new agreement having been signed on March 23rd, 1922, by the British Paper Box Manufacturers' Federation and the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, in which the clauses of the previous agreement relating to payment for holidays were cancelled.

There is no reason why you should not have your share of the highest class of letterpress printing—when you have a Miehle two-revolution press.

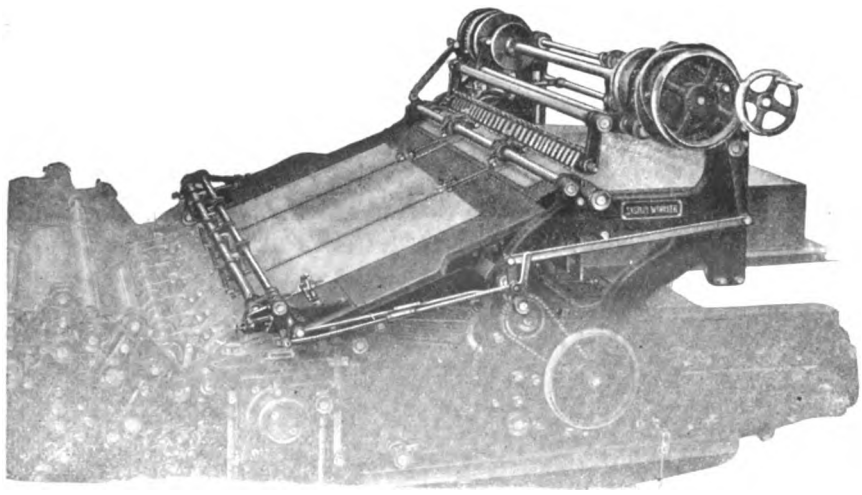
The press that "advertises itself" also advertises its user by raising the standard of his single and three- and four-colour work.

The Miehle *is manufactured by Linotype and Machinery Limited at their Works in Altrincham, Cheshire.*

It is built in six sizes, from double demy to ex. eight crown.
For full particulars write to the Head Office of the Company.

LINOTYPE & MACHINERY LIMITED, 9 Kingsway, London, W.C.2

Members of the Association of British Manufacturers of Machinery for the Printing and Allied Trades



The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letterpress or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.

Keeps up with the speed of the fastest running machine.

Feeds all kinds of paper from thinnest tissue to cardboard.

Register is assured even at maximum speed.

The only Feeder adaptable for very short runs.

Quick changing from small to large sizes and *vice versa*.

Changing to hand feed in a few minutes.

Purely mechanical Automatic Throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.

The Winkler Feeder is also built with a Stacking Arrangement.

COME AND SEE IT RUNNING IN LONDON.

The Rise, Progress & Future Possibilities of the Offset Process

By JOSEPH GOODMAN, F.R.P.S.

City Guilds of London, Honours, Silver and Bronze Medallist, Author of "Practical Modern Metalithography," "Practical Machine Minding," "Colour and Colour Mixing," etc.

When we reflect that lithography as an art-craft is only a century and a quarter old (1798), and that to its epoch-making inception we owe the present-day fine art colour printing, we can but marvel at the all-pervading influence of this versatile graphic industry upon printerdom and the commercial life of the whole civilised world.

Through lithography the "world and his wife" learn to appreciate art and graphic colour illustration as applied to every walk of life.

Prior to this discovery industries moved but slowly, merchandise possessed no coloured illustration to enhance its attractiveness or to establish trade-marks of merit. Art masterpieces had to be portrayed to the multitude by the slow and cumbrous methods of hand engraving. Famous works of art were locked up in art galleries or the mansions of the wealthy. Ecclesiastic missals with their beautiful hand-coloured illustrations were virtually chained in the churches and abbeys.

Then lithography appeared and changed all this. Its marvellous capacity for expressing every phase of artistic feeling attracted eminent artists of all races.

Hosts of legends that threw a halo of immortality around the life of the great Napoleon were created by lithography. Sydney Cooper's famous animal studies were drawn by him upon grained lithographic stone. Sam Prout's beautiful architectural plates were produced in like manner, as were also Bonnington's celebrated "Picturesque Europe," Lane's faithful "Portraits," and so on through Ackermann, Hullmandel, Thackeray, William Strang, and Whistler. Abroad, Piloty, Strixner, Delacroix, and many others, embraced lithography, leaving to posterity their immortal work. The litho stone yielded up triumph after triumph. Prince Louis of Bavaria, when visiting Senefelder's workroom, wrote upon litho transfer paper this historic sentence:—"Lithography is the most important discovery of the 18th century."

All this, however, was direct lithography with wooden machinery; the "offset" iron-age development of it had not even been foreseen.

In this old direct lithography the printed impressions were made direct from the planographic printing surface to the sheet of paper without any intermediate process of conveyance whatever, and the necessary pressure upon the stone or metal surface conveyed the inked image to the paper. The harder and rougher the paper, the more difficult it was to get a sharp, solid and clear impression. Excess of ink or pressure did not improve the result.

Now in the "offset" method, or process of *rubber transfer printing*, the ink impression is first made upon a specially prepared three-ply rubber blanket, which accepts the ink from the image upon the primary printing surface, and then by virtue of the accommodating resiliency which rubber affords a perfect impression is made upon the paper; no matter the grade, quality or finish—whether plain or coated, indented imitation crocodile, or of linen faced texture—solidity and sharpness are obtained combined with a delicacy and softness unattainable by any other method of printing.

In reaching this perfection of printing, infinitely less pressure is employed than in the older method, enabling a higher speed to be obtained with less consumption of power, and considerably less ink than with the direct method of lithography.

Another great advantage of the offset process is the facility it offers to the employment of photo-processes, both for ruled-screen grain images as well as "screenless" work. Pure high light images and designs are best printed by this method, rendering the "light" and "shade" and intermediate "tonal values," from deepest shadow to evanescent atmosphere, in their truest and most realistic states. The great economy of time which this primal aid of the camera affords both quickens and cheapens production, besides reproducing a given subject with greater accuracy.

The manner of the invention of offset lithography is both romantic and simple. When Columbus declared that the shape of the earth was round like an egg and revolved upon an inclined axis, sceptics cynically remarked "Fancy an egg standing upon its end"; to which the old philosopher replied "Look, and I will show you." Taking an egg and lightly indenting one end by a gentle tap, he set it upon this depressed end. "There you are, friends!" he exclaimed. "Oh, we could have done that," replied the critics in chorus. "Yes," he retorted, "but you didn't." This has its parallel in offset lithography. Countless thousands of lithographers all over the world had made "offsets" and "set offs," intentionally and otherwise; but none before Rubel in 1905 had mechanically applied the principle to offset printing upon paper in a practical commercial manner.

In that year Ira W. Rubel was engaged minding a flat-bed direct litho machine in a small plant in New Jersey, U.S.A., when the feeder boy missed putting a sheet into the grippers for one of the impressions. The cylinder being clothed with a rubber blanket took up the ink impression which in due course it transferred to the back of the next sheet fed into the machine.

Mr. Rubel accidentally saw this sheet printed upon both sides and was struck with the fact that the superfluous impression upon the back was printed far more solid, clear and soft, and far more pleasing and beautiful, than the legitimate impression upon the front side of the sheet, although this was made direct from the printing image.

He stopped the machine and pondered over this phenomenon; finally deciding to wash the rubber blanket, restart the machine, and repeat this "offsetting." To his great delight he found the offset impression perfect each time. He thereupon resolved to manufacture a special lithographic machine which should print by transferring the ink impression upon the rubber blanket to the sheet of paper instead of direct from image to paper as heretofore.

This was the birth of the original offset machine, the first successful press of the kind ever made, and from which the Harris Offset machine was directly evolved and brought to perfection. The "Harris" possesses an automatic feeding appliance which is an integral part of the machine, and is the only lithographic offset machine of the day that is so equipped.

Technically, rubber offset printing had been used for iron and tinned plate decoration work by lithographers for over a quarter of a century before Rubel applied it to paper. Lithographers also used a rubber sheet on their pantograph machine for enlarging and reducing designs. It was largely due to this that Mr. Rubel failed to obtain patent rights for his epoch-making machine, and although he secured imperishable fame with the process, he did not derive that pecuniary benefit to which such a remarkable "child of his brain" entitled him.

In the early days of the offset method there were many who disparaged it, despite the proofs of its value. One said: "The press is a failure for colour work." Another said: "Type printed from offset will ruin the eyesight." Others averred: "It is fit only for long runs of common commercial work"; and "It is ridiculous to say it can ever print half-tone."

To-day every variety and style of printed matter can be done by offset lithography; whatever can be drawn by men or produced by the primal aid of the camera in photography, or engraved by any means, intaglio or relief, can be utilised for printing in this process. Not only to the realms of art does it cater; industries and manufactures of every description benefit by its aid.

The offset process enables the chromo-lithographer to produce a velvet-like depth of rich

Bumsted Paper Bag Making Machines

The only square-bottomed Bag Making Machine that makes better bags than can be produced by hand

Read this testimonial:—

15, GLODWICK ROAD,
OLDHAM.
October 5th, 1922.

Messrs. BUMSTED & CHANDLER,
Hednesford.

DEAR SIRS,

We shall further consider the question of new bag machines when general conditions improve, but you can be assured we shall not fail to consult you, as the machines you have supplied us with in the past have given us every satisfaction.

We remain,
Yours faithfully,
(Signed) J. & J. WILD.

colouring in every class of colour work, whether it be a showcard, a coloured label, a chromo wrapper, or a poster. In fine art plate work the offset printer is enabled to produce the most pearly flesh tints in figure subjects, and the most delicate and natural sky colourings and cloudings. There is no colour process extant that can give the same powerful, economical and pleasing effects as this modern offset process. Its advantages and facilities are so manifold and accommodating that it almost baffles the human mind to conceive the limits of its capacity for service.

In the near future, and with the aid of photography, we shall see colour illustrated newspapers and periodicals printed from the reel in natural colours by this offset process; and, maybe, harnessed to rotary photogravure, the intaglio and planographic processes will work in tandem to produce a wealth of pictorial production that may have great influence on the culture and aesthetic tastes of the whole human race. In textile fabric decoration of every description and in the wide field of mural decorations the offset process has as yet but touched the fringe of its possibilities.

We must not forget that offset lithography is still virtually in its childhood stage, and it is safe to predict many important developments in the near future. In forming this opinion we are supported by the success of recent inventions, and the extended intrusion of the offset process into the domain of the letterpress printer.

Fortified with such triumphs of mechanical precision as the Harris Rotary Offset machine, and the specialised training of lithographical craftsmen, we can face the immediate and distant future of the craft assured of the material realisation of "floreat offset lithography."—*Monotype Recorder.*

Patent Office Printing.

In the course of a lecture which Mr. W Temple Franks, C.B., Comptroller-General of Patents, Designs, and Trade Marks, recently gave to the staff of the Board of Trade upon the work of his Department, he gave the following account of the Department's printing and publishing activities.

The Patent Office, he said, includes a printing and publication branch, which produces an immense amount of work at the present time. They publish an illustrated official journal of patents, and a trade mark journal every week, the one containing abridgments of all patents applied for as well as a name and subject matter index, and the other illustrations of trade marks applied for and other important matters. They have besides 40 volumes of reports of patent, designs, and trade mark cases which have been issued by the Printing and Publications Branch, and 146 volumes of illustrated abridgments of specifications which are issued in yearly volumes. There is also a 50 years' subject index, which is of the greatest importance; it is an index under scientific classification, containing references to the whole of the patents for the last 50 years. All these publications require most careful work on the part of the staff in the editing, proof-reading, indexing, and in their compilation. Here, familiarity with technical matters is necessary, as well as a practical knowledge of law and patent practice.

A Sales Branch, including a warehouse, is also attached to the Office. The warehouse contains over 3,000,000 publications. The sales receipts amounted to over £20,000 last year. There are 503 deposit accounts, and the sales branch makes a very large distribution of Patent Office publications. Complete sets of publications, in addition to the *Patents Journal* and the *Trade Marks Journal*, are distributed to libraries and societies in all parts of the world, and in 1922, 1,661,444 publications and documents were distributed at home and abroad.

Fire at Valleyfield Paper Mills.—On Wednesday, Jan. 24th, an outbreak of fire was discovered at the electric light station of Valleyfield Paper Mills at Penicuik. This department was the only part of the works with machinery in motion, work being suspended in other departments owing to the dispute with the workers. A number of tradesmen were at hand, and these were assisted by the office staff, and the fire was soon got under. The damage done is not of a serious nature.

Lord Northcliffe's Millions.

Legacies to Colleagues and Employees.

Many of Lord Northcliffe's colleagues in his journalistic and allied enterprises benefit very considerably under the provisions of his lordship's will, now made public, whilst generous recognition is made also of the many employees of the various concerns, not omitting the printing workers. The estate will probably amount to £5,000,000. Nearly £2,000,000 will be payable as death duties which have to be paid before the legacies can be distributed.

Directors of every company of which Lord Northcliffe was a director at the time of his death are to receive a legacy of £1,000, Sir George Sutton, Mr. Thomas Marlowe and Sir Andrew Caird being singled out for special benefits.

Each of the Fathers of the Chapels at each of the printing establishments or other departments of the various offices printing any of the newspapers or other publications of which Lord Northcliffe was principal proprietor receives £50. Also employees of all grades (exclusive of directors and managing directors) of *The Times* Publishing Co., Ltd., Associated Newspapers, Ltd., the Amalgamated Press, Ltd., the Angto-Newfoundland Development Co., Ltd., the Imperial Paper Mills, Ltd., and the Empire Printing Ink Co., Ltd., are to receive the equivalent of three months' salary, wages or commission.

Subject to the specified claims on the income of the residuary trust fund, the fund and its income are to be devoted ultimately, on terms specified in the will, to charitable purposes. One-half of the residue of the fund, and the income from it, is to be devoted to all or one or more (according to the conditions specified) of the three following charities, viz.: The Newspaper Press Fund, the Newsvendors' Provident Institution, and the Printers' Almshouses and Orphan Asylum Corporation. A charity is to be founded to provide pensions for aged or infirm or incapacitated employees of his companies.

Printers' Pension Corporation.

Camden Town Auxiliary.

The monthly concert of the Camden Town Printers' Philanthropic Society (auxiliary of the Printers' Pension Corporation) was held at the Royal Arms, Gaisford-street, on Saturday, when the chairmen were Messrs. T. C. Bolton (president) and W. A. Perkins (past president). The latter occupied the chair during the first part of the evening, and the former during the second part. A capital programme had been provided, with Mr. E. O. Callcott as musical director, and Mr. T. C. Hooker as pianist.

At the close, the hon. secretary (Mr. S. Pearce) announced a "record plate" for the Camden Town Auxilrary (namely, about £80), and proposed a vote of thanks to the two chairmen for their efforts.

Mr. Frost seconded the motion, which was heartily approved.

Mr. Perkins, in reply, said that by far the greater portion of the collection was due to the efforts of his colleague in the chair, and he flattered himself that if he had done nothing else for the Camden Town Auxiliary he deserved their gratitude for having found them so excellent a successor in the post of president as Mr. Bolton had proved himself to be.

Mr. H. C. Bolton expressed the pleasure it gave him to help so good a cause, and gratified the members by promising to continue in the position of president.

Foreign Customs Arrangements.

The *Gazzetta Ufficiale* (Rome) for January 10th contains a Decree, dated December 28th, which increases the statistical tax on goods imported into Italy from 20 to 25 centesimi per unit.

The Board of Trade have received translation of the Latvian Export Tariff at present in force. The duties are in general the same as those payable under the previous tariff. Books and other printed matter are, however, exempt from duty.

British Industries Fair.

Big Rush of Overseas Buyers Expected.

With reports current on all sides of improving trade conditions, the greatest interest is being taken in the forthcoming British Industries Fair, the ninth of an unbroken series, to be held from February 19th to March 2nd.

As usual, the Fair will consist of two sections, running concurrently, in London and Birmingham. The former, which is organised by the Department of Overseas Trade, is confined mainly to light goods, such as chemicals, fancy goods, paper, printing and stationery, etc., while the Birmingham Section, organised by a joint committee of the municipality and the Chamber of Commerce, will display heavier commodities, such as engineering stock.

A quarter of a million invitations to trade buyers in the United Kingdom are being issued by the Department of Overseas Trade, and another 50,000 have already been sent to buyers overseas. The Fair has also received considerable publicity overseas, and a highly satisfactory number of buyers have written to the Department expressing their interest and intimating their intention to attend. In many of these replies overseas buyers have raised questions of interest to themselves and British manufacturers, and as a result orders for British firms have already been secured.

A point of special interest to the public is that the British Industries Fair is entirely self-supporting, all costs of construction, maintenance publicity being borne by the exhibiting firms. The vast scope of the Fair is illustrated by the fact that every British industry except textiles will be represented, along with products from Canada and India. The fact that all exhibitors are the actual manufacturers of the goods shown is of the utmost value to the buyer, especially from overseas, since it eliminates the confusion and waste of time arising from the display of the same goods at different places and varying prices in the same fair—a condition of things not uncommon at Continental fairs.

The necessary structural preparations at the White City and Castle Bromwich, Birmingham, are well advanced, and exhibits are beginning to arrive. Some idea of the size of the Fair and the labour involved in its preparation may be gained from the fact that at the White City alone there will be some four miles of stand frontages, while the electrical fittings employed in lighting this city of wholesale shops call for the use of no less than a dozen miles of ordinary cable, a dozen miles of flexible cable, over a hundred fuse boards, and six miles of straining wire to support the cable. By these means the 8,000 lamps on exhibitors' stands are supplied with current.

In a few days representatives of the exhibitors will be busy putting the finishing touches to their displays in preparation for the rush of buyers which will begin on February 19th

Printing Trades Health Survey.

A nation-wide health survey of the printing trades, representing both employers and employees in the U.S.A., has been authorised by the International Joint Conference Council, with special emphasis to be placed on methods of ventilation, air pollution, lighting, eye-strain, posture and physique. The investigations, which will cover a period of two years, will be carried on in co-operation with governmental, scientific and corporate organisations, including the United States Bureau of Labour Statistics. The latter will have charge of a large portion of the social and economic inquiries. The insurance companies of the country are expected to play an important role in the investigation, which will be under the immediate direction of Frederick L. Hoffman, consulting statistician, Prudential Insurance Co.

The Joint Industrial Council of the Paper-making Industry had last week under consideration the dispute at the Valleyfield Paper Mills. A deputation was appointed to visit the mill and interview the parties. Strong hopes are entertained that a settlement will be reached.

Trade Notes.

AMONGST the week's partnerships dissolved is that between G. T. Northover and R. D. Cooper, printers and manufacturing stationers, 11, 12 and 13, Lizard-street, St. Luke's, London, under the style of G. T. Northover and Son.

IN the Manchester County Court on Thursday, David Lynch, Manchester, was allowed £50 damages from Messrs. Thomas Griffiths and Co., printers, of Gaythorne, Manchester, in respect of injuries sustained by him whilst on their premises in pursuance of his daily calling, such injuries being, it was claimed, the result of the unsatisfactory state of a staircase down which he fell.

THE "POSTER BALLOT."—At Bow-street Police-court on Monday was continued the hearing of the case in which Joseph Weiner and Arthur Elliott, of the firm of Weiner and Co., lithographic printers, Long-acre, W.C., were summoned for publishing a scheme for the sale of tickets in an alleged lottery, called "The Great Poster Ballot." Many people prominent in the advertising world, including Mr. John Hassell, the artist, and Mr. Charles Frederick T. Walker, editor of the *Advertisers' Weekly*, gave evidence in support of the contention of the defence that an element of skill entered into the competition. The case against Mr. Elliott was withdrawn.

COMPANY LAW AND PRACTICE.—An interesting evening is arranged for the next meeting of the London Central Districts M.P.A. (at Stationers' Hall, on Monday next at 6 for 6.30). Mr. Herbert W. Jordan (managing director of Messrs. Jordan and Sons, Ltd., printers and company registration agents), will give a paper on the subject of formation, amalgamation and reconstruction of printing and other companies.

WEST AND NORTH-WEST L.M.P.A.—The very interesting discussion inaugurated at the January meeting of this Association (reported in our issue of January 25th) will be continued on Tuesday, February 13th, at Westbourne Park Institute, Porchester-road, Bayswater, W., at 7 p.m. Mr. A. Bonner, for the periodical houses, will open at about 7.30, and Mr. S. Goss, of Baines and Scarsbrook, Ltd., and Mr. W. Skelton, of Hammersmith, will follow with addresses on trade organisation. The president of the Federation, Mr. R. A. Austen-Leigh, has promised to be present and join in the discussion.

LADY AS AUXILIARY CHAIRMAN.—Mrs. Violet Kerton has consented to take the chair at the concert of the South London Auxiliary on Saturday next at "The Horns" Assembly Rooms, Kennington. An excellent programme has been arranged and a large gathering is expected. We believe this is the first occasion at which a lady has consented to occupy the chair at an Auxiliary concert.

AT the annual meeting at Stockton on Saturday night of the North Yorkshire and South Durham district of the Newspaper Press Fund, the hon. secretary (Mr. W. Newton) reported a membership of 26, the same as the previous year, and that during the year £154 had been paid in grants to the dependents of deceased members who had belonged to the district. Mr. W. Robertson was re-elected president, and Mr. W. Newton hon. secretary.

THE death has occurred of Mr. Arthur E. Murray, for a number of years editor of the *Financial Times*. Mr. Murray was a native of Aberdeen, and commenced as a sub-editor on what was then the *Aberdeen Free Press*. Later he was engaged as a descriptive reporter on the *Evening News*, and afterwards became assistant editor of the *Echo*.

THE death took place recently, at his residence, 7, Lorne-street, Chester, of Mr. Arthur Edward Ward, head of the well-known firm of bookbinders of Chester. He was aged about 58, and succeeded his late father in the bookbinding business, which was one of the oldest in the ancient city.

MR. A. E. SOMERS MARSHALL, a Brighton journalist, died in a nursing home at Hove on Sunday.

THE death is announced in his 76th year of Mr. William Dawe, who was for many years a member of the composing staff of the *Western Daily Press* (Bristol) and allied papers, and was held in high esteem by his colleagues.

THERE was a large attendance of mourners at the funeral last week of Mr. James Bennet Peace, Fellow of Emmanuel College, Cambridge, and the University Printer, whose sudden death was announced in our last issue. Those present included Mr. R. A. Austen-Leigh (president of the Federation of Master Printers), Mr. W. T. F. Jarrold and Mr. G. H. Yelf (of Norwich), and Mr. Piggott (of Cambridge), whilst the Cambridge University Press was fully represented, the male employees marching to the church in a body. The Fellows of Emmanuel College followed the procession and the lesson was read by the Master of Emmanuel.

A WRIT for alleged libel has been served on the *Morning Post* newspaper on behalf of Sir Basil Clarke, of the Ministry of Health, in connection with references published in that journal to his recent services as Director of Public Information in Ireland.

OVER 200 members of the staffs of the *Manchester Guardian* and *Evening News* and their friends met at a social evening in the Houldsworth Hall on Saturday. A lively dance programme was carried out in the body of the hall, while a whist drive was held in the galleries.

THE *Gravesend and Dartford Reporter* (published at Gravesend) has placed an order for a Model 6 display Linotype—as described and illustrated in our issue of September 7th—and the newspaper invites its readers to view this interesting machine in operation.

SOME of the mysteries of printing and binding were explained to two parties of students from the County School for Girls, Ramsgate, on Thursday evening, when they were shown over the printing works of the *Kent Argus*.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

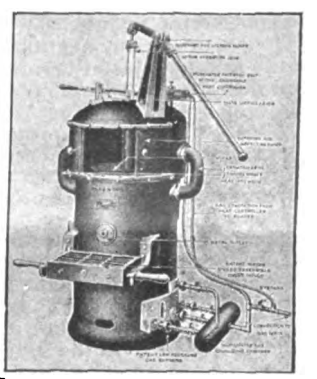
Annual Bohemian Concert Revived.

Next to the annual dinner, the annual bohemian concert was at one time considered by the members as the most important event in the Association's year. The war, responsible as it was for the curtailment of many of the activities carried on by the Association, also brought about a stoppage of this very popular social event. On Saturday, however, the function was revived and was accompanied with very much of its old-time enthusiasm. The concert was held at the Talbot Restaurant, London-wall, E.C.2, and there was a large attendance of members and friends. The gathering was presided over by the president, Mr. A. W. Hunt, who was ably supported by the vice-president, Mr. H. G. Milton. Among those present were Messrs. A. G. Aves, A. Cox (secretary), J. Dixon, G. A. Eden (technical adviser), W. T. Lingham, A. W. Sundilands, and J. Lee.

The stewards, Messrs. A. J. Jones and A. C. Ware, carried out their duties in a praiseworthy manner and were largely responsible for the success that attended the evening's proceedings.

The concert artists gave complete satisfaction, all being possessed of particular ability in their respective spheres of entertainment. They were Miss Dolly Glover, Miss Gladys Fox, Mr. A. J. Jones (baritone), Mr. J. Alexander Esler (magical entertainer), Mr. James O'Brien, Mr. Lloyd Saxton (tenors), Mr. Wilson Martell, Mr. George Wilson, Mr. Walter Todd (humorists), and Mr. F. H. Holland (accompanist) Much appreciation was shown by the company to the talent displayed by the various artists, and encores were numerous.

Wonder Gum for Bookbinders.



Binders, who are constantly meeting with the difficulty of obtaining a gum that will not require cooking in its preparation, leaves no sediment and above all is 'odourless,' will do well to consult Messrs. The Hall Trading Co., of 181, Queen Victoria-street, London, E.C.4, for any information relating to glues and gums used in their factories. It is part of their work to assist the bookbinder, and he in turn is asked to communicate any difficulty he may have met in obtaining glues that will not turn the colour of the cloth or leather used.

Trade Union Matters.

"NATSOPA" members have received a shock by the resignation of Mr. Alfred Bispham from the post of assistant general secretary of the National Society of Operative Printers and Assistants. Mr. Bispham was appointed to that post in July, 1918. Prior to his election as a full-time officer and since, he has frequently carried on the work of the general secretary in that official's absence from England on society work and during one or two periods of indisposition, with entire satisfaction to all concerned. His labour on behalf of the Natsopa Memorial Home has also been of the greatest usefulness. He is to retain his trusteeship of the Home. The "Natsopa" *Journal* records the announcement of his retirement from the assistant secretaryship as being "unquestionably the most disturbing news" that it has ever published. In a letter to the membership Mr. Bispham gives as his reasons for resignation: "You are entitled to know why I have taken this step. The reasons are twofold. First, I have felt for the last year that the feeling around the E.C. board and at our membership meetings has not been so happy as previously; there has been an atmosphere of suspicion and mistrust, not openly—I wish it had been—one is always able to discuss openly any matter that arises, but a stab in the dark is difficult to bring home to anyone. Then, again, the troubles of the law courts for breach of rule, ridiculous in themselves, but magnified in a court of law. I am not ashamed of any single instance, believing it was done in the best interests. I cannot work happily under such conditions, and so I slip off the side for some other to carry on." The appointing of a successor to Mr. Bispham will engage the attention of the February meeting of the "Natsopa" executive.

CONSTITUTION OF THE T.A.—Mr. William Bottomley, the Leeds representative on the executive council of the Typographical Association, makes some important proposals in the official circular for the reconstitution of the executive council of the Association. The enlargement of the council to 22 members was made a year ago. Mr. Bottomley doubts if any improvement in management has evolved from the enlargement. One serious difficulty in the present method of administration is the lack of facilities for attendance of members at council meetings, many big firms being averse from conceding time off for this purpose. Mr. Bottomley suggests in place of the present executive of 22 members meeting every two months, with a working committee meeting fortnightly, a permanent executive of eight members, including the president and secretary, for the daily transaction of pressing Association business. He also urges the resuscitation of the old representative council, numbering about fifty, who would form the supreme authority of the T.A.

Bookbinding Trade Stoppage.

All London Binderies Close.

The position in regard to the dispute in the London bookbinding trade has assumed more serious proportions. The week-end brought further stoppages of bookbinding establishments, and, following the failure of the Conciliation Committee to effect a settlement, the secretaries of the three London branches of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers on Tuesday addressed a communication to the fathers and clerks of chapels, and shop secretaries in the warehouse, folding and binding departments of several London establishments stating that it had been agreed that the members should hand in their notices in the printing houses not previously affected. The union representatives were instructed to hand in notices yesterday (Wednesday) morning that, unless an agreed settlement were arrived at, they and their members would cease work in one week's time from giving notice.

The London Master Printers' Association on Tuesday circularised its members to the effect that if notices were tendered by any members of the Paper Workers Union employed, such notices were to be accepted, and members of other unions in their employment should then be warned that in the event of a stoppage the firm might not be able to retain their services.

The Conciliation Committee of the J.I.C. met on Monday, and representatives of the N.U.P.B.M.R. and P.W. attended. After consideration of the matter for several hours, it was decided to adjourn until Tuesday, when representatives of the Master Bookbinders' Section of the Chamber of Commerce were to be asked to attend.

The Master Bookbinders' Section of the London Chamber of Commerce is affiliated to the Federation of Master Printers and to the London Master Printers' Association. The meetings, however, are not held at 24, Holborn, and the Section's representatives have negotiated with the N.U.P.B.M.R. and P.W. on several matters. They have associated themselves with the Federation of Master Printers in wages negotiations, and so long as these were conducted on a national basis they have always carried out the settlements reached. When the reduction of 12s. 6d. was put forward by the employers' federation and recommended by the national executive of the N.U.P.B.M.R. and P.W., the employers were informed that the London Central Branch would ballot on the proposals separately. The result was that the binding workers in London and in the provinces independently accepted the 12s. 6d. reduction, but the London paper workers' section of the union did not, and they subsequently negotiated with the London Master Printers' Association, a reduction of 6s. being eventually agreed upon, subject to certain adjustments of the minimum rates. The Master Bookbinders' Section of the Chamber of Commerce notified the Paperworkers' Section in July last that they would not be parties to any negotiations conducted by the London Master Printers' Association and they proceeded to make the same wage reductions from the paper workers as from the binders. The union protested, but the men remained at work, accepting the lower wages under protest. When the settlement was reached between the union and the London Master Printers' Association the paper workers' section of the union asked that the rates of wages agreed should be applied to their members engaged in the offices of the Master Bookbinders. On the employers declining to do this, the labour was withdrawn and consequently in the shops affected the members of the binding section of the union who were not willing to carry out the duties of the paper workers' section, also ceased work. Members of the Master Bookbinders' Section who were not employing paper workers then decided to give notice to their binding employees also. Thus practically the whole of the letterpress binding trade in London has come to a standstill. About 5,000 binders are involved, according to our information, and about 180 members of the paper workers' section of the union.

THE late Mr. Harold Gaskell Syers, Bowdon, Chester, a director of the Berthwich and Knutsford Billposting Co., Ltd., left £29,746.

Printers and Postal Rates.

Deputation to the Postmaster-General.

A deputation from the Joint Industrial Council of the Printing and Allied Trades was received by the Postmaster-General at the G.P.O. on Wednesday of last week.

The deputation consisted of General W. Wright Bemrose, Mr. R. A. Austen-Leigh, Lieut.-Colonel H. Rivers Fletcher, Mr. James MacLehose, Mr. E. H. Dennis, Mr. H. Skinner (chairman of the Joint Industrial Council), Mr. C. W. Bowerman, M.P., Mr. T. E. Naylor (Printing and Kindred Trades Federation), and Mr. A. E. Goodwin (joint secretary, Joint Industrial Council).

The deputation was introduced by the Right Hon. C. W. Bowerman, M.P., who asked for a reduction in printed paper rates to the pre-war level, or, alternatively, for the restoration of the former minimum rate of 2 oz. per ½d. A return to the ½d. post card was also requested, or, alternatively, that any message which might be written upon post cards to admit them to the privilege of the printed post card rate, should not be confined to "five words of conventional greetings." Finally, a reduction was pressed for in the parcels rate on small parcels of printed matter.

During the discussion Mr. Goodwin pointed out that post card rates had been increased in a much heavier proportion than those of letters. Originally a halfpenny, they were increased to 1½d., which almost killed the picture post card industry. With the reduction to a penny the trade was only gradually recovering.

Mr. Neville Chamberlain, in his reply, said that he realised the bearing which the questions raised by the deputation had upon the wider question of trade and employment, and whilst he would not be in a position to make a statement about particular rates until he had fully considered the whole range of the postal charges for the next financial year, he would bear carefully in mind the views which had been put before him, and would give them full weight in coming to a decision.

The Charity Sports Dinner.

The annual dinner of the committee of the Printing and Allied Trades Charity Sports Association was held at the Manchester Hotel last Saturday. In the unavoidable absence of the president, Mr. W. R. Masters, the chair was taken by Mr. Chas. H. Roud.

Mr. Roud proposed the success of the Printing and Allied Trades Charity Sports Association, and in the course of his remarks said that he was much impressed by the way in which the committee carried on their work, and was pleased to identify himself with such a fine body of voluntary workers. Although the last year had not been so successful as had been anticipated, there was a good deal to be thankful for, especially as the meeting at Stamford Bridge was one of the largest held during the year. The sports gathering was also a record, whilst the other sections of the Association had met with their usual success. He felt that the term Charity Sports Association was now somewhat out of date, and thought that a better title would be the Printing and Allied Trades Sports Benevolent Association, its work being more benevolent than charitable. The printers' institutions (and there were none finer in any other trade) had contributory schemes attached to them by which all could receive benefits if they were direct subscribers to the fund to which they gave their support. He coupled with the toast the name of Mr. H. F. Parker, the general hon. secretary of the Association and secretary of the Lloyd Home, who was so widely known and so deservedly popular throughout the printing trades.

The toast was received with musical honours.

The general hon. secretary thanked the chairman and other patrons for their kindness in being present, remarking that it helped the committee to struggle on whilst the trades were emerging from the throes of the greatest depression ever experienced in the history of the craft. When one heard of the great success attending the efforts of the welfare departments of our large offices, it was well to remember that such methods had been the guiding spirit of this Association for the past 25 years. After stressing the value of social efforts, he said the great good that had been accomplished in the past must go on to larger efforts. It must be done by younger men prepared to profit by the experience of the old captains. They had splendid men coming to their rescue. In athletics they had the very embodiment of that section in their friend Mr. W. Jewell. In boxing they could say the same of Mr. Charles Anderson. Mr. Anderson was hoping to start a boxing club connected with the trade, a project which would be heartily endorsed by those interested in this form of sport. In Mr. George Marks they had the soul of football. Their good sportsman, Alf Wills, had done great work in the past, and they hoped he would have a more helpful committee next year and so gain the help his service merited. They could not but admire their friend Mr. Pescud, whose extraordinary efforts last year created a record in Miniature Rifle Clubs. To make a profit of £40 at a Bisley was surely something to be astonished at. He deserved and obtained the heartiest congratulations of the committee. Their treasurer, Mr. Oddy, had been severely handicapped owing to pressure of business and must be relieved of some of the work if they were to retain his valuable services. In like manner relief must be given to three of their hardest-worked officials, namely the genial hon. assistant secretary, Mr. C. Pushee, and his co-worker Mr. Gray, and to their good friend Mr. W. Allen.

Mr. G. W. Knight proposed the health of the visitors, coupling with it the names of Mr. Munday and Miss Weller. This was received with great acclamation.

Mr. Munday, on behalf of the gentlemen, thanked the company in a very humorous speech, whilst Miss Weller made a neat response on behalf of the lady visitors.

Mr. A. Oddy, the treasurer of the Association, very happily proposed the health of the chairman, Mr. Chas. H. Roud.

Mr. Roud, in replying to the toast, thanked the stewards on behalf of the others present for their efforts, and added that the whole proceedings had passed off so satisfactorily as to make the evening most enjoyable.

Responses were made by the stewards, and the function terminated at a late hour, everybody feeling that it had been a most pleasant evening.

The stewards were Messrs. W. J. Allen, W. H. Marshall, G. W. Knight and F. C. Peacock, and Mr. Tommy White was musical director.

OFFSET PROGRESS.—A special "offset number" of the *Monotype Recorder* has reached us which is worth the notice of all interested in this important branch of modern printing. Faultless letterpress is accompanied by excellent illustration work, together forming a demonstration which speaks volumes both for the process employed and for the executants who produced this issue. The entire magazine (with the exception of two initials) is stated to have been composed on the monotype, the whole being produced by the offset process, and printed on the Harris press at a speed of 3,800 impressions per hour by Messrs. Blades, East and Blades, Ltd., The issue has also much interesting reading matter including several very informative articles on offset printing.

London Bookbinders Idle.

IT is a thing much to be regretted on the part of the whole industry that the Conciliation Committee has not yet been able to find a way out of the *impasse* that has developed in the London bookbinding trade. The dispute is, as we go to press, being extended to printing departments, and so takes on a still more sombre aspect. Every extension of a dispute means not only more loss to the industry, but also more likelihood of ill-feeling, and more difficulty in reaching a settlement. If a fight it is to be, everything should certainly be done by those responsible to limit the extent of the trouble. A strike or a lock-out, however, is a deplorable thing for all concerned, and every effort must be made, through the Conciliation Committee or other means, to bring about r a easonable settlement.

The Printer and His Paper.

THE problems of paper distribution are engaging the minds of many in the trade; the anomalies that abound in every direction are coming to be observed and the real need for their elimination appreciated. Take the case of a mill which sets out on a definite policy of selling direct to the consumer, *i.e.* say, the printer. Of course, there are many mills that do this, but sometimes they set up a wholesale organisation of their own, as in the case of houses like Wiggins, Teape, Dickinsons and Spicers; in other cases they accept only makings or large stock orders from the big consumers and do the great bulk of their business through their agents with the wholesale houses. But take the mill which seeks to work out its own salvation by selling direct from the mill to the printer. On the face of it, the proposition appears to be one in keeping with the times, bearing in mind recent developments of policy in other directions. Apparently direct selling will yield better profit, secure more orders and ultimately guarantee success and profits. Whether it quite works out this way in practice is another matter. The first thing that happens under existing conditions is that the wholesale houses mark down the mill. That leaves the mill to face a problem of tonnage and sales organisation. The execution and delivery of small orders turns out to be an expensive business, requiring staff work and routine, which adds to the cost of the paper. Selling paper to the consumer turns out to be a highly specialised trade of its own and is very different from making paper for distribution.

Competition in Paper.

IT is interesting to observe the strenuous competition which at present exists in the tub-sized writing paper field. A reduction of price in one quarter is rapidly succeeded by a corresponding reduction and further concession in another quarter. A standard paper is set up as the prototype or target from which other makers take their pattern and at which they direct their aim. A fresh paper with all the essentials and a brand new dandy comes along and settles itself in the market at a lower level than the others. Then we come to discount and settlement concessions on other grades and find by calculation that after all there is perhaps a steady level all round. Representatives come forth with strict instructions to push this or that line for all they are worth, to dwell upon its advantages against the prototype, and, above all, to get the line in with an opening order. The unbiassed paper user takes a calm survey, inspects the various productions, and if he has any paper judgment arrives at the conclusion that in England the manufacture of a downright good paper is not the monopoly of any one mill. The critic who questions the ability of our mills to match a sample would receive an object lesson in their sample-matching ability by studying and comparing a dozen or two of the lines which we have in mind. Right behind all this chaff there is a sincere appreciation of the return to wholesome, healthy competition which characterises these efforts to develop trade.

Export Advances.

DURING the past year great strides were made in the export of British news-print. High-water-mark was attained in December, when the quantity sent overseas reached the figure of 4,511 tons. Of this total, 2,500 tons went to Australia and 1,000 tons to New Zealand. The preference given to British "news," which came into operation in 1921, is, therefore, responsible for the steady increase in British paper export which has been the feature of last year's trading. How this has grown is seen from the figures, for in April last the amount of news-print dispatched overseas was only 875 tons. Since that date there has been a gradual increase in shipments. In May the figure was 1,480, but by June it had gone to 2,070. October saw the first 3,000 odd tons, but December capped the record with 4,511 tons. The new outlet which Australasia affords for British news-print is a great boon, and the custom which has been thus introduced will, it is hoped, be long retained.

More Government Printing?

On a site covering between one and two acres of land, there is in course of erection at Cricklewood, states the Federation of Master Printers, a large factory which, it is understood, is to be used for the production of Admiralty maps and charts. It is evident, adds the Federation, that an expenditure of many thousands of pounds is being incurred. In the past a Government factory at Southampton, it is stated, has printed all the official ordnance maps. Hitherto the whole of the Admiralty maps have been made by contract.

Personal.

THE Prince of Wales, who will preside at the sixtieth anniversary dinner of the Newspaper Press Fund, at the Hotel Victoria, Northumberland avenue, on Thursday, May 10th, has sent a message to the appeal committee of which Sir Herbert Morgan is chairman. He states: "I am confident that in this Diamond Jubilee year we shall be able to further the splendid work which has been carried on for 60 years, and enable the Fund, of which his Majesty the King is Patron, to widen its sphere of usefulness."

AMONG those who, up to the present, have accepted invitations to attend the annual dinner of the Papermakers' Association on March 23rd are Lord Riddell, Sir James Owen (President of the Newspaper Society), Mr. R. A. Austen-Leigh (President of the Federation of Master Printers), Mr. W. Monkhouse (President of the Drawing Office Materials Manufacturers and Dealers' Association), Col. E. F. Lawson, D.S.O., and Mr. L. P. Andrews and Mr. S. Nicol (British Wood Pulp Association).

MR. W. HOWARD HAZELL (president of the London Master Printers' Association) contributed to Saturday's *Times* (Commercial Supplement) the first of what promises to be a further interesting series of articles on the general subject of costing. The article was entitled "Incorrect Costing: Some Errors and Fallacies."

MR. A. E. GOODWIN has been appointed to represent the Federation of Master Printers on the Traders' Co-ordination Committee, a body created to watch traders' interests in respect of railway rates.

AMONGST those attending the first musical reception (at the Mansion House on Tuesday) of the Lady Mayoress, Mrs. E. C. Moore, were Sir John and Lady Baddeley, and Sir William and Lady Waterlow.

MR. J. R. RIDDELL, principal of the London School of Printing, gave a much-appreciated address on Monday to the members of the Bartholomew Club on "Craft Training and Education." He made a strong appeal for a closer connection between the technical schools and the City Guilds, particularly those bearing the names of our national crafts having a world-wide reputation for good honest workmanship.

MR. RICHARD HANCOCK, F.A.I., lectured before the Printers' Managers and Overseers (Parent) Association on Tuesday evening on "The London Zoo," the lecture being illustrated by an admirable series of lantern slides.

MR. H. G. MILTON was elected president and Mr. J. Fleming, vice-president at the annual general meeting of the Printing, Bookbinding and Kindred Trades' Overseers Association on Tuesday. Mr. Arthur Cox continues as general secretary.

THE vicar of St. Bride's Church, Fleet-street, the Rev. Arthur Taylor, has been elected chairman of the St. Bride Foundation Governing Body.

MR. H. A. GWYNNE, editor of the *Morning Post*, was entertained at luncheon on Tuesday at the Café Royal by the members of the Foreign Press Association.

MR. J. M. WADSWORTH, assistant editor of the *Yorkshire Evening Post*, who is leaving Leeds to take up the position of London editor of the paper, was last week made the recipient of farewell gifts from his old colleagues in all departments. Mr. Wadsworth has been associated with the *Evening Post* for nearly 20 years.

MR. J. E. THORNTGN, who recently retired from the commercial managership of the *Yorkshire Post*, has been elected a life member of the Yorkshire Newspaper Society.

MR. W. E. DUCK, the new president of Bath Trades Council, is a member of the Typographical Association.

Stationers' Mutual Benefit Society.

Mr. T. J. Hunt Honoured at Committee Dinner.

The committee of the Stationers' Mutual Benefit Society met on Saturday evening for a jolly little "Committee Dinner," which was much enjoyed by those participating, a surprise event of the evening being a presentation to their popular chairman, Mr. T. J. Hunt.

The toast of the "S.M.B.S." was entrusted to Mr. C. W. Atkins, who recalled some of the outstanding names and events in the history of the Society since its inception in 1845. He gave due credit to the Society's founders, and traced the gradual extension of the beneficent work carried out, which took the form of financial assistance to fellow-members in difficulties, and the providing of pensions

Mr. T. J. Hunt.

and other benefits in time of need. He stressed the point that although 25 per cent. of the members had been called to the colours in the war, the Society distinguished itself by paying them sickness and death benefits on the same terms as members at home.

Mr. C. D. Wadley, the secretary, sketched the history of the Society during the last twelve months, the term of his secretaryship. His report showed increased usefulness of the Society, one item being the payment of over £1,265 in sick benefit during the year.

A Presentation.

The toast of "The Chairman," which was received with enthusiasm and given musical honours, was, in the absence through illness of Mr. Thos. Hunt, proposed by Mr. J. J. Harwood, one of the oldest members of the Society, who joined in 1876. In a happily-phrased speech he thanked Mr. T. J. Hunt not only for the hospitality provided that evening but for all the hard work he had done on behalf of the Society. He emphasised Mr. Hunt's geneality and his unobtrusive generosity, which had endeared him to them all. He then presented to Mr. Hunt on behalf of the committee an illuminated address —testifying to the valuable services he had rendered and the great benefits he had bestowed upon the Society by his efforts on its behalf. A case of pipes accompanied the testimonial.

Mr. Hunt suitably expressed his thanks for the appreciation shown, and for the kindly way in which the presentation—which took him by surprise—had been made. He went on to recall, with many a touch of humour, the early days of his association with the Society, concluding by urging all present to do their utmost to extend the Society's usefulness.

The toast of "The Visitors" was proposed by the chairman, and cordial replies were made by Mr. H. F. Parker (Charity Sports Association and Lloyd Memorial Home), Mr. F. C. Peacock (Vellum Binders and Machine Rulers' Pension Society). and Mr. S. J. White (Caxton Convalescent Home).

The evening was enlivened by a number of musical selections, which included tenor songs by Mr. W. H. Freeman (a veteran member of the Society) and his son, Mr. H. C. Freeman, both of whom were enthusiastically received, also songs by Mr. Harry Fellows and Mr. Bert Beale (humorist), Mr. Reginald Saunders being at the piano.

A cordial vote of thanks was, on the motion of the chairman, accorded to the stewards, Messrs. H. A. Sceats and E. A. Wadley, whose services greatly contributed to the success of the evening.

An attractive souvenir menu and programme of the occasion was produced by Messrs. T. J. Hunt, Ltd.

Stereotypers' Auxiliary Concert.

This enterprising Auxiliary held another successful bohemian concert on Monday at Anderton's Hotel, Fleet-street, E.C.4., Mr. A. E. Wood (Messrs. Odhams), who is a prominent member of the Electrotypers and Stereotypers Managers and Overseers' Association, occupying the chair. The gathering was a very large one, and among those present were Messrs. A. Chadwell, W. Bullett, W. J. Light (Wm. J. Light and Co., Ltd.), H. Williams (H. Williams and Co.), A. F. Bell (Fry's Metal Foundry), G. W. Sharvell, senr.; T. Middleton and W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers).

During the interval in the concert programme Mr. Warren, proposing a vote of thanks to Mr. Wood, expressed his appreciation of the hard work put in by their chairman in raising money for the Stereotypers' Auxiliary. Previous to that evening they required a sum of £155 to complete their sixth pension, and the excellent plate secured by Mr. Wood that evening—£170—would not only enable them to do that, but would give them a substantial sum in hand wherewith to start a seventh. Mr. Warren appealed for the full support of the votes of the trade in order to secure the success of their four candidates at the Pensions' Election this year. He concluded by again congratulating Mr. Wood on his magnificent effort, and drew attention to the special services rendered by Mr. George J. Harrison, the musical director, in presenting such a splendid concert.

The vote of thanks was accorded musical honours.

The Chairman, in reply, thanked the many friends in the trade who had assisted him, and made appreciative reference to the help he had received from the fathers of the chapels in the various foundries. Mr. A. Chadwell had also given him very valuable assistance.

The programme included many clever artists, chief among whom were Miss Sybil Arundale, the popular actress, Miss Gladys Harris (Dame Clara Butt's Cornish contralto, who received a big ovation). Miss Pauline Crothers, the Cornish violinist, Mr. Leon Harvey, Mr. Hal Parr and Mr. Will Jennings, Mr. Dudley Milton, the popular character actor, and Mr. Middleton Woods, of the Follies, Miss Lillian Hurry, Miss Jessie Wood, Mr. Will E. Sparkes (humorist), Miss Edna Brett.

Mr. Albert Bennett Honoured.

Owing to prolonged indisposition Mr. Bennett, who had been for over 25 years general manager of Messrs. Jas. Truscott and Son, Ltd., retired from that position on Wednesday of last week, but is still retaining his seat on the board of the company.

On his retirement he was the recipient of many tokens of affection, amongst them being an inscribed silver salver presented to him by Mr. W. S. Tredgold on behalf of the office staff at Suffolk-lane; a silver cigarette box presented by Mr. W. H. Pennell on behalf of Messrs. Truscott's Dowgate Works staff, and an illuminated address and walking stick presented by the overseers of the London factory. In addition to these presentations a farewell luncheon was given to Mr. Bennett by the directors who handed to him a substantial cheque in recognition of his long and valuable services to the company.

SECTIONS devoted to paper goods, photography, art, to printing and bookbinding, and to chemicals will be included in the Third Riga International Fair from July 22nd to August 5th.

The Bookbinder

Mr. Cockerell on Bookbinding Design.

Instructive Comments on Italian Bindings.

At the University of London College, Gower-street, on Wednesday of last week, there took place a public lecture on "Italian Bookbinding," together with an interesting display of lantern slides in colour illustrating typical Italian bindings.

Major C. Davenport, who had been announced as the lecturer, was prevented by illness from being present, but Mr. Arundell Esdaile ably filled the gap by reading, with some comments of his own, the comprehensive lecture on "Italian Bookbinding" which Major Davenport published some years ago. The interest of the occasion was greatly enhanced by the numerous coloured slides which Major Davenport had made. The slides were very well done, although those familiar with the extant examples of the classes of bindings shown realised that the vividly coloured representations on the screen conveyed what the bindings probably looked like in their pristine condition fresh from the binder's hands, rather than what they look like now, after centuries of ageing. The colours, however, served well to bring home to the audience the salient features of the designs.

In the showing of these slides the audience was fortunate in the fact that Mr. Douglas Cockerell came at short notice to take Major Davenport's place in describing and commenting on the bindings shown. Mr. Cockerell's remarks not only served to drive home the established historical facts detailed in the lecture—the strong influence of the East on Italian design and so on—but served also to impress upon students of bookbinding some of the golden rules of "rightness" in the use of ornament.

Effective Gold Tooling.

Most of the bindings shown being tooled in gold, Mr. Cockerell remarked upon the ease with which simple gold tooling could be used so as to make a binding beautiful. He said caustically that it was extraordinarily difficult to make a really ugly gold tooled binding. Nevertheless that difficulty had been overcome by some designers, and there were many modern bindings whose creators had succeeded in achieving consummate hideousness. But that result meant that someone had taken enormous pains. If the craftsman worked in any reasonable way, adopting some sort of simple orderliness in his work, gold tooling on leather could hardly fail to be charming.

The naïve charm of the simple designs seen in the early Italian work was pointed out, and Mr. Cockerell emphasised the fact that it should not be imagined that it is not possible to produce to day equally charming designs. Any craftsman, he said, should be able to achieve the like—provided he be not too much educated. Young boys in technical schools are to-day designing book covers that have the same charming naïvety of the early Italian examples.

The Natural Style *v.* the Scholarly.

Mr. Cockerell drew a strong distinction between what may be called the natural style of design, embo lying forms which indicate the obvious and natural use of tools, as against the comparatively elaborate, though sometimes pleasing, style of the more scholarly, or sophisticated designs, showing the hand of someone trained in design and lacking the naïvety of the other style.

Discussing the more elaborate bindings, Mr. Cockerell expressed the opinion that whilst a design elaborately planned out on paper might be satisfactory, it was essential that the craftsman should have a certain amount of freedom in his work, and some of the pleasure of creative craftsmanship. The slavish copying of designs tended to eliminate their charm. This value of pleasurable craftsmanship was put with homely force in respect of one example, when Mr. Cockerell remarked "The chap who did that had a lark, and the echo of his fun has come down to us to-day."

Sumptuous Bindings.

In respect of the use of jewels in bindings—found in Italian work as elsewhere—Mr. Cockerell suggested that if jewels were to be employed, it was practically essential that they should be used only on a metal base. He did not think jewels were pleasing on leather: they looked insecure, and seemed generally out of place.

The gesso work of many early Italian bindings was favourably regarded. Mr. Cockerell expressed admiration of the effect sometimes achieved by the use of these bright spots of colour, giving a jewel-like result without the incongruous effect of jewels. The use of gesso, he thought, might well be revived.

In regard to covers gold tooled all over, Mr. Cockerell suggested that there was no objection to this style, provided a certain regularity were appreciable, so as to give a sense of restfulness. Irregular elaboration tended to convey an impression of restlessness.

The Craze for Novelty.

"Those old fellows didn't try to invent something new every day," said Mr. Cockerell of the early Italian binders. They went on for years and years working upon the same basic system, just adopting slight modifications as they passed from book to book. So much was this the case that one can now identify almost any binding of the period, say where it was made and almost give it a date. That, he said, is the way style is built up. At the present day there is too great a tendency for the binder, after starting on a line of his own, to start next day in a different direction, instead of progressing along that line by way of small improvements. As a result he gets nowhere.

When the slides came to an end and the lights went up, Mr. Cockerell apologised for the lack of "information"—names, dates, etc.—in his remarks, explaining that he had merely been enjoying aloud the slides prepared by Major Davenport. Doubtless, however, his student hearers must have carried away something of real informative value from the chatty technical explanations and suggestions made, and they probably gained also what is quite as important as information—the inspiration that comes from contact with the mind of an artist-craftsman.

Lecture by Mr. E. J. W. Zaehnsdorf.

Much interest should attend the fifth of the series of craft lectures arranged under the auspices of the Worshipful Company of Stationers at Stationers' Hall, which is to be given by Mr. E. J. W. Zaehnsdorf tomorrow (Friday), on the subject of "Bookbinding," an art with which the house of Zaehnsdorf has been prominently identified since 1836, when the firm was founded by the late Joseph Zaehnsdorf. The address is expected to occupy the space of about one hour, and the various phases of bookbinding as carried out by a miscellaneous bookbinder will be described and also illustrated by specimens and models, showing the development of the craft from ancient times.

Some Notable Exhibits.

Amongst the exhibits will be, we understand, a richly-tooled, inlaid and jewelled binding, forming a worthy covering for a modern manuscript on vellum of four poems by John Keats. The design is composed of a border of semi-geometric interlaced work, set with rubies and amethysts, with a background of solid matt gold. Contrasting with the border is a free growth of inlaid roses and leaves surrounding a shield filled with Florentine leaves, in the centre of which is a massed cluster of diamonds and a ruby. The whole gives a rich, well-balanced effect and will doubtless claim much attention.

Another very notable exhibit will be the smallest volume ever bound by the house of Zaehnsdorf. It is a miniature copy of the letters of Galileo (printed in Italy), weighing only 27 grains and measuring $\frac{15}{64}$ in. by $\frac{25}{64}$ in. Though so tiny, this pygmy volume is excellently bound in morocco, gold-tooled, and with edges gilt in the solid.

Also belonging to the category of miniatures is a Bradshaw's Railway Guide specially printed to one-twelfth scale, *i.e.*, $1\frac{7}{16}$ in. by $1\frac{3}{16}$ in. and bound for the Queen's doll's house. It is intended to show also the miniature laying press and plough used in the forwarding of this book.

Admiration should be evoked also by a large-volume Dante, the binding of which provides a fine specimen of inlaying and tooling as executed personally by the late Joseph Zaehnsdorf (1816–1886). The design consists of geometrical strap-work interwoven with an acanthus leaf design in various colours.

Novel Decorative Work.

A further interesting exhibit is a copy of "The Art of Bookbinding," by Joseph William Zaehnsdorf. The centre plaque of this book is a replica of Mr. Zaehnsdorf's bookplate which depicts the interior of a workshop of the sixteenth century and shows two craftsmen at work. The treatment of this book is somewhat unique in character, the relief being obtained by carving away the ground work and inlaying over the carved surface. The surrounding borders are composed of intricate work produced by a single stop, interwoven with emblematic tools of the bookbinders' craft.

As a specimen of skilful gouged work and pointilé background tooled on royal blue levant morocco, the binding of a blank visitors' book is an exceptional piece of work, producing a superb richness of effect rarely seen, and illustrating the highest technical skill of the finisher.

Digitized by Google

A copy of Michael Field's "Julia Domna," printed on vellum, is treated in an entirely different fashion. The binding is of undyed levant morocco blind tooled in an Italian style. Only those who have attempted this particular form of decoration fully realise the difficulty of maintaining a uniform colour in such blind tooling, which is very apt in execution to turn black in parts unless the temperature of the tool is constant throughout the work.

The firm's versatility is shown in two admirable exhibits of "picture" work. A binding for the poems of Thomas Hardy includes a portrait of the poet after Nicholson, which is a most effective reproduction in leather of the artist's drawing. In the other instance the Mad Hatter, after Tenniel, reproduced on a copy of "Alice in Wonderland," is a very clever piece of picture work in contrasting style.

To revert to the classical form of decoration, a copy of "Songs before Sunrise" tooled in the style of Roger Payne, and also a copy of "The Ode on the Nativity" in the Grolieresque style afford other illustrations of skilful technical work.

Amongst the most interesting of the exhibits is a book "Loyal Rulers and Leaders of the East," recently published by the firm of Zaehnsdorf, Ltd., and printed by Unwin Bros., which illustrates in addition what can be done by combining high technical ideals with commercial requirements. This book is extravagantly rich in its decorative effect, suited to the subject matter of the book, and as a specimen of modern blocked work stands unique and is of high interest to the bookbinder craftsman. Included in the exhibition, which is regrettably a small one, are to be bindings in mottled calf, and half bindings in morocco. An opportunity is afforded of comparing the progress of bookbinding by the inclusion of a bound volume of the "Finisher's Friendly Circular" of 1845. The binding of this relic was considered the high-water mark of finishing in its day, and clearly illustrates the advance made in balance of design and treatment.

An Enemy Microscoped.

A novel exhibit has to do with one of the enemies of books, viz., a grub belonging to the genus commonly known as bookworms. Not only will there be shown books as damaged by this troublesome insect, but there will be provided also a microscope through which those interested may examine a specimen of the grub itself. The microscope to be used is, we believe, an instrument which belonged to the celebrated scientist, Michael Faraday, who commenced his career as a bookbinder's apprentice.

Bindery Supplies Wanted.

A firm in Basle is desirous of obtaining the Swiss representation of British manufacturers of leather for the bookbinding and fancy leather goods industries, also for the upholstery and saddlery trades.

An Auckland firm of agents wish to obtain the representation of British manufacturers of printers' and bookbinders' requisites, on a commission basis.

Inquiries in respect of either of these openings should be made to the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, quoting Reference No. 147 in the case of the Basle inquiry and Reference No. 121 in the case of the other.

Distinguished Woman Bookbinder.

Edith Diehl, one of the pioneer women bookbinders of America (says the New York *Publishers' Weekly*), who has since studied and worked in England, France and Belgium, is showing an unusually beautiful collection of hand bound books at the Art Centre (New York). These range in size from a large old Bible, plainly bound in oak boards, to a small 16-mo. edition of Victor Hugo, elaborately gold tooled in a seventeenth century design. A notable book is a volume of Van Eyck, bound in brown seal, blind-tooled, in a design of the period, and with metal clasps and bosses. Another book of note is a small volume of Michael Angelo's sonnets bound in cream seal and elaborately inlaid with a combination of russet, blue and green, suggesting the soft Italian colouring.

Notes and News.

Unprofitable Work.

Conditions in the bookbinding industry have not altered materially since the year began. The state of employment remains about the same, and there is still a deal too much idle time and unemployed machinery to make the condition uncomfortable. Very few large orders are moving, and competition for what business there is is as keen as ever it was. In other words, there is a large amount of unprofitable work being undertaken.

The Materials Market.

The market for materials is practically unaltered. Leathers are firm and stable but there are a few remarkably cheap lots of skins on offer. For instance, skivers at 4½ per square foot, black glazed basils at 26s. 6d. per dozen, roller basils at 24s. 6d. per dozen, These are unusually low figures for clearances. Generally the market is hardening, if anything.

Substitutes for Gold.

Book-edge locks and fittings have been reduced in price during the last week or two, goldleaf is unaltered as also are fabrics, paste, glue and gold. Goldleaf substitutes are in use on an extended scale and are preferred by many binders even for high-class work on account of their easy treatment and good effect. It must be observed that they are liable to tarnish with time and this is the main consideration to be taken into account when deciding upon their use as a substitute.

Doubtful Position of Boards.

Strawboards have declined slightly in price since our last notes on the subject appeared. Quotations as low as £9 5s. and £9 10s. per ton for lightweight boards are to be met with. The usual extras are charged for heavy weights, linings, etc. There has also been a concession in wood pulp boards, which are now listed at £17 10s. per ton for second grade and £19 per ton for firsts. How long wood pulp and leatherboard prices will hold good depends to a large extent upon the lock-out in the Swedish pulp industry. Naturally the cessation of production in Sweden will affect prices all round if there is a possibility of prolonged industrial strife. Already pulp prices are stiffening, and there is a certain amount of anxiety among users to make sure of their stocks. We understand that board stocks in Scandinavia are on the low side, and they are certainly not over weighted in this country. The events of the next few days will perhaps reveal the strength of the labour movement over in Sweden, and enable home consumers to gauge the future trend more accurately.

Marble Papers.

Marble papers still remain in the high price region, and the foreign producer is the loser. English bookbinders and pattern card makers are more concerned in producing their own patterns with monogram device or, on the other hand, in using the lower priced substitutes for marble papers which are obtainable from a number of home sources. Personally, we are inclined to regard the ordinary foreign marble papers as an obsolete reminder of pre-war custom. Book end papers and manufactured stationery products can be made to look either far more business-like or, on the other hand, far more effective by the use of modern lining and what are commonly termed fancy papers.

Fancy Papers.

We note that Keller-Dorian (G. Baker and Co.), Ltd., of 158, Bishopsgate, E.C.2, have appointed Mr. S. W. McLeod, of 19A, Granby-row, as their Manchester agent for bookcloths and fancy papers. The Keller-Dorian range of speciality papers for bookbinders and boxmakers is well known and appreciated in the trade. Of French manufacture (the mills are at Lyons) it must be conceded that the beauty of some of the more extravagant productions excels anything that we have seen either from Germany or America. In the ordinary commercial field of embossed linings, leather papers and imitation bookcloths the English manufacturer can easly hold his own. But it must be recognised that the most luxuriant and extravagant coverings come in from France, Japan and America. Japanese leather papers, for instance, reach a standard of excellence which carves out a special little field of its own. But after all the bookbinder who makes commercial stuff can find all he wants for his linings and coverings from our own manufacturers. There still remains a wide field of use for the imported specialities.

Duxeen.

Duxeen, the leather and bookcloth substitute so extensively advertised, is finding an ever-increasing use in bookbinding, box-making and pattern cardmaking. The new coverette series, which gives heavier substance and greater strength, brings the product into use in new directions in the manufacturing stationery industry. Scholastic binders are using this material in bulk for covering exercise books, memo, pads and notebooks.

Flint Covers.

A new line in stiff embossed flint covers for scholastic stationery and the smaller and cheaper range of stationers' books has been produced and issued to the market by the largest mill in Scotland. We have seen an advance sample book and price list and can safely recommend users to investigate the possibilities of the product. Produced in 17 ins. by 27 ins. 480 sheets at 41s. 3d per ream, the range comprises what may be termed the bread-and-cheese standards in pattern and colour. New designs and colours are already in preparation, and will shortly be issued to the trade.

A Reinforcing Material.

A Lancashire manufacturing stationer advises the introduction of a new material for reinforcing the edges and corners of account books, under the trade name of "Ferrofab." Brass fittings are a familiar feature of bound ledgers and cash books produced to resist wear and tear. Mostly, account books wear out on the foot aud fore-edge by careless handling and throwing into safes or shelves. Brass has the disadvantage of weight, cost and tendency to scratch or disfigure desks. Vellum fittings are also costly and susceptible to injury. It is claimed for Ferrofab that it is cheaper and more durable than other types of reinforcement. Some idea of the cost is provided in the offer to supply split boards with Ferrofab feet and bottom corners at the rate of 6s. per pair for up to demy folio and 7s. per pair for medium and Royal folio.

Cheap Bookcloth Trouble.

A recent experience with cheap bookcloth may help others to avoid similar inconvenience. The cloth in question was used in place of the usual standard quality in a large batch of small books and owing to urgency the job was rushed through, packed up and sent home. After lying in customers' stock some weeks mildew or mould developed which at first was set down to the possibility of damp storage. As the room proved to be quite warm and dry other reasons were looked for. The strawboard and glue were all right. Finally it was found that the cloth had the faculty of keeping the dampness of manufacture held in the cases and reacting ultimately to form mould. The cases were scrapped and standard bookcloth specified to remove any further possibility of trouble.

Rotting of Binders' Leathers.

At a meeting of the Dyers' and Colourists' London Section, held in the Dyers' Hall, Dowgate-street, E.C., on January 26th, a paper was read by Mr. T. E. Bradbury on "The Application of Colour to Leather."

At the opening of his paper, Mr. Bradbury referred to the increasing use of dyed leathers which he attributed largely to the great advances which had been made in dyeing during the past ten years, and to the instruction given at both the Leathersellers College and Leeds University. The public demand for fancy leather goods was increasing, but he viewed with some anxiety the tendency to the use of dope finishes, which, to some extent, destroyed the characteristics of real leather. In some cases there had also been a deterioration in leather dressing, and he referred to the rotting of bookbindings caused by the use of sulphuric acid. He advised the use of formic acid in its place, as its price now made it commercially possible, and it had no bad effect on the skin fibre.

NEW COMPANIES.

ATLAS PRESS, LTD.—Capital £3,000 in £1 shares. Advertising agents, stationers, printers, lithographers, photographers, etc. Private company. First directors: C. Watson and J. Johnston. Registered office: 12, Whitehall-crescent, Dundee.

GLOBE ADVERTISING CO., LTD. — Capital £3,000 in £1 shares. Advertising agents, stationers, printers, lithographers, engravers, etc. Private company. First directors: C. Watson and J. Johnston. Registered office: 170, Hope-street, Glasgow.

E. S. CATON, LTD.—Capital £500 in £1 shares. Proprietors and publishers of newspapers, journals, magazines and books, printers, stationers, etc. Private company. Subscribers: E. S. Caton and Mrs. E. M. Caton. Registered office: Monument Station Buildings, E.C.3.

CRAIG KELLY, LTD.—Capital £200 in £1 shares. Commercial, legal and manufacturing stationers, typists, printers, lithographers, etc. Private company. Directors: F. L. Craig-Kelly and M. L. Kelly. Registered office: 17, Brazennose-street, Manchester.

LAW PUBLISHING CO., LTD—Capital £100 in £1 shares. To acquire from Henry Allen Ashton the sole copyright and goodwill together with the original typescript of "One Thousand Questions and Answers on Company Law and Practice. Private company. Subscribers: Henry Allen Ashton and Reginald Ashton. First directors: Henry A. Ashton and Reginald Ashton. Registered office: 143-4, Fleet-street, E.C.

"BUFF BOOK, LTD."—Capital £100,000 in 80,000 ordinary shares of £1 each and 400,000 deferred shares of 1s. each. To acquire from the Business Telephone Directories, Ltd., the publication known as "The Buff Book," containing a classified trade list of commercial and professional telephone subscribers within the London Telephone Exchange Area or Areas; and to carry on the business of publishers, and printers, etc. First directors: H. P. Walters, Mrs. N. Ritchie, J. J. Bisgood and A. W. Thorpe. Registered office: 25, Lawrence-lane, Cheapside, E.C.

LIBERTY PRESS, LTD.—Capital £1,000, in £1 shares; printers, stationers, publishers, etc. Private company. First directors: P. Flanagan and Miss M. Boyle. Registered office: 15, Fleet-street, Dublin.

SOUTHERN POST, LTD.—Capital £7,000, in £1 shares; to adopt an agreement with H. Knight, and to carry on the business of newspaper proprietors and publishers at present carried on by the said H. Knight and to print and publish the newspaper known as the *Bognor Post*. Private company. First directors: H. Mayo, W. Palmer, W. Tate and H. Knight. Registered office: 27, London-road, Bognor, Sussex.

HOUGH AND SHORT, LTD.—Capital £3,000, in £1 shares; manufacturers of boxes for drapers, milliners, confectioners or others; printers, paper bag makers and dealers, lithographers, photographic printers and engravers, etc. Private company. First directors: T. E. Short and Mrs. M. J. Short. Registered office: 44, West street, Gateshead.

PAPER BOXES, LTD.—Capital £2,000, in £1 shares; to acquire the business of a manufacturer of cardboard boxes of all kinds, novelty show-card maker, and lithographic and letterpress printer, with all British patented rights, etc., in connection therewith, of W. P. Stubbs, of Globe Works, Salisbury street, Leek, Staffs. Private company. First directors: W. P. Stubbs and G. E. Oustom. Registered office: Globe Works, Salisbury-street, Leek, Staffs.

ST. LUKE'S (SOUTHPORT) PROPERTIES, LTD. —Capital £2,000, in £1 shares; to acquire and deal in freehold, leasehold or other properties. Power is taken to act as billposters, booksellers, paper and string dealers, paper bag manufacturers, etc. Private company. Directors: D. S. Brereton, Eva G. Brereton, W. Morris and J. N. Morris. Registered office: 3, Hart-street-bridge, Southport.

ARROW TRADING CO., LTD.—Capital £500 in £1 shares. Import, export and general merchants, to carry on direct and agency business in relation to all kinds of artistic and fancy goods, stationery and printing, etc. Private company. First directors: E. M. Moghilevkine, A.R.S.M., and A. Trenine. Registered office: 6-7, Coleman-street, E.C.2.

COMING FASHIONS, LTD.—Capital £1,000, in £1 shares; newspaper, magazine and other periodical proprietors, art journalists, literary and advertising agents, etc. Private company. Subscribers: G. A. Lewis and J. Hutchinson. Subscribers appoint directors. Registered office: Took's-court, Cursitor-street, E.C.4.

NICHOLSON AND TUCKER, LTD. — Capital £2,000, in £1 shares; manufacturers' agents, importers and exporters of, and wholesale and retail dealers in fancy goods, stationery, etc. Private company. Subscribers: S. Nicholson and S. P. Tucker. First directors: S. Nicholson, S. P. Tucker and H. T. T. Bennett. Registered office: 70-71, Gamage-buildings, Holborn, E.C.1.

JOHN R. SCHOLES AND CO., LTD.—Capital £5,000, in £1 shares; to take over the business of a merchant and shipper carried on by J. W. R. Scholes as "John R. Scholes and Co.," at 14 and 15, Argyll-chambers, 67, Hanging Ditch, Manchester, and to carry on the same and the business of importers, exporters of, and wholesale and retail dealers in, chemicals, colours, paper and other goods, machinery, etc. Private company. Subscribers: J. W. R. Scholes and T. H. Mottershead. First directors by subscribers. Registered office: 14, Argyll-chambers, 67, Hanging Ditch, Manchester.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

EASTERN PRESS, LTD.—Satisfaction to the extent of £800 on January 5th, 1923, of debentures dated December 8th, 1903, March 17th, 1908, and January 8th, 1918, securing £1,200.

VITTY AND SEABORNE, LTD. (engravers, etc.). —Issue on January 15th, 1923, of £350 debentures part of a series already registered.

LAW AGENCY, LTD.—Satisfaction to the extent of £100 on November 22nd of debentures dated August 10th, 1922, securing £300.

JAMES WRIGLEY AND SON, LTD. (papermakers, etc., Bury).—Debenture dated January 23rd, 1923, to secure £150,000, charged on the company's undertaking and property, present and future, including uncalled and unpaid capital. Holders: London County, Westminster and Parr's Bank.

PARR'S (STATIONERS), LTD.—Mortgage dated January 26th, 1923, to secure all moneys due or to become due from company to L.C.W. and Parrs Bank (stamped to cover £2,750), charged on certain freehold and leasehold shops and warehouses in High street, Knaresborough, Yorks.

WILLMOTT AND SONS, LTD. (machine rulers and printers, etc., London).—Satisfaction in full on January 10th, 1923, of debentures dated November 28th, 1912, securing £3,000.

NEW FYLDE DISTRICT AND BLACKPOOL BILLPOSTING CO., LTD.—Satisfaction in full on November 30th, 1922, of debentures dated December 3rd, 1917, securing £800.

BURY PAPER MAKING CO., LTD.—Satisfaction in full on December 1st, 1922, of trust deed dated December 1st and debentures authorised December 11th, 1902, and having the benefit of the said deed, securing £35,000.

BANKRUPTCIES, etc.

Re CECIL EDGAR DOUBLEDAY, printer and stationer, residing at Bingham, and trading at 46, Bridlesmith-gate, and lately at 6A, Lower Parliament-street, Nottingham.—At the first meeting of creditors, held on the 26th ult., bad trade and heavy drawings from his business were the causes of failure alleged. There were no assets, the deficiency amounting to £2,098 4s 7d. The official receiver said the debter, aged 50, stated that he was formerly employed in a stationer's business at 6A, Lower Parliament-street, and that in January, 1903, on the death of his employer he took over the business at valuation, paying £200, which he then borrowed, and which was still owing. Subsequently he purchased a printing machine, and for a number of years past had carried on business as a printer and stationer. Throughout he had traded under the style of "W. B. Draper and Co.," and the business was said to have been successful up till about three years ago, but to have since yielded only very small profits. Notwithstanding the decline in the profits, however, the debtor appeared to have continued to draw heavily from the business for his own expenses, necessitating his borrowing money from numerous sources. In June last he sold the business as it stood for £250, using the proceeds to pay out the executions and distress. Since disposing of the business he had canvassed for orders for printing, and for that purpose stated that he took a furnished office in October at 46, Bridlesmith-gate, but in December, owing to the rent not having been paid, the landlord entered into possession of the premises. There being no quorum of creditors present, the matter was left in the hands of the official receiver, debtor being instructed to furnish a cash account between specific dates covering a period of six months.

Re W. E. D. KELSEY, late of 58, Warwick-street, W.—The creditors under this failure met last week at the London Bankruptcy Court, when accounts were submitted showing liabilities £613, and a deficiency of £562. The official receiver reported that the debtor had stated that in December, 1921, he and his brother purchased a monthly publication entitled the *London Amusement Guide*, at the price of £330. They paid £195 on account and continued the issue until March last, when, in consequence of inability to continue the payments, the vendors obtained an injunction against further publication and the business came to an end. To that fact the debtor attributed his failure. The case was left with the official receiver to be wound up in bankruptcy.

THE Guard Bridge Paper Co. announces interim dividend of 5 per cent. per annum, less tax, on ordinary shares, payable February 1st.

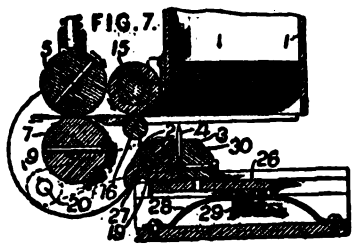
New Inventions

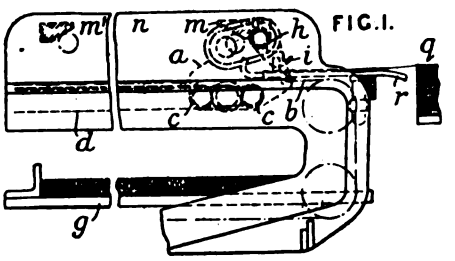


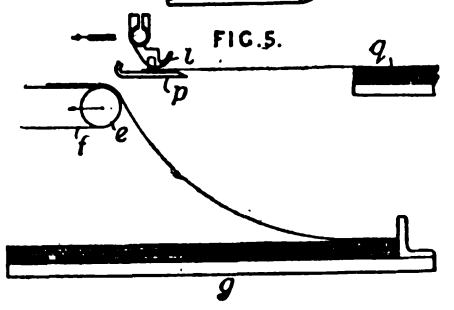
Bookbinders' Foils.

The Diamond Decorative Leaf Co. have produced a foil material in which paper or the like treated with an alkaline metal silicate such as water glass is used as a backing for beaten metal foils, as a backing on which bronzing and colour films are produced by spraying or the like, or as a substitute for gold-beaters' skin in beating metal leaf. For the latter purpose, to increase the pliability of the leaf, the silicate may be mixed with glycerine or castor oil. Foil or leaf carried by the treated paper will, upon heating under pressure of a die, become detached from the backing and, together with a film of silicate, become attached to the material it is desired to stamp.

Card Feeding Appliance.

In an invention by the Comas Cigarette Machine Co. cards or coupons are fed from the bottom of a magazine 1 by means of a reciprocating rocking-head formed of two parts 2, 3 connected together by screws and fitted with a series of needles 4 which engage

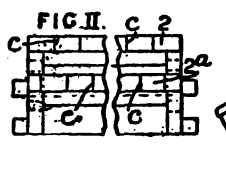


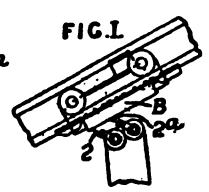


the bottom card of the pile and feed it into positively driven rollers 5, 7. The rocking-head is reciprocated by a crank disc 9 on the shaft of roller 7, and the connecting rod 22 is connected eccentrically to the shaft 19 which connects the rocking-head to a slide 26 which moves in guides in the frame of the machine. A spring 28 with a rubber block 29 engages the slide 26 and restrains it from movement while the rocking-head is moving about its pivot. The needles 4 are moved to sheet engaging position as the crank pin 20 moves from the position shown in Fig. 7 to that shown in Fig. 6. The rotary movement of the rocking-head is limited by the engagement of a projection 27 with the slide 26, and this prevents the needles from penetrating too far into the bottom card. The slide 26 carries the bottom sheet into the bite of the rollers 5, 7, and the rocking-head is then moved to the position shown in Fig. 7 to free the card from the pins 4. The rollers 5, 7 are of equal size and are geared together by pinions having teeth differing in number by one or two so that the peripheral speeds of the rollers are not exactly the same, and the resulting slipping movement keeps the rollers free from dirt. Should the needles 4 fail to feed a sheet, a shoulder 30 is adapted to engage the rear end of the bottom card and push it forward. Should two sheets be fed, the top sheet is returned by a positively driven roller 15 coacting with an idler roller 16, the roller 15 being set so as normally to have no action on a single sheet passing between the rollers 15, 16. The roller 15 is geared to and rotates reversely to roller 5.

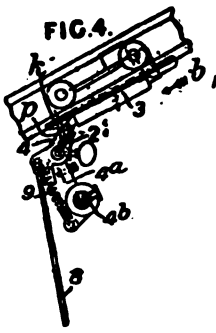
Interleaving Sheets.

A device for interleaving sheets printed in a cylinder machine has grippers on the tape drop delivery device, said grippers seizing a set-off sheet from a pile at the end of the machine when the delivery device reaches the limit of its outward travel and pulling it over the printed sheet whilst the latter is being dropped on the delivery board during the return of the delivery device. The delivery carriage *a* is pulled backwards and forwards by the chain *b* and is guided by rollers *c* running on rails *d*. Endless tapes *f* passing over a spindle *e* on the carriage drop the printed

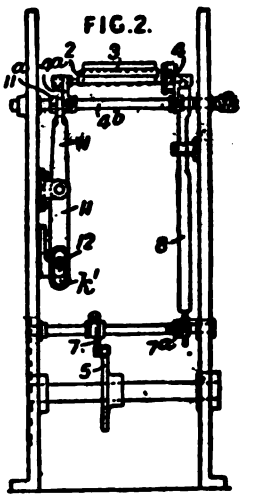




sheet on to the delivery board *g* whilst the carriage moves inwards. Simultaneously, a set-off sheet fed from a pile *q* to grippers *i* is pulled forward over the printed sheet, the grippers being actuated to release the sheet when the carriage reaches the limit of its inward travel and allow it to fall on the printed sheet. The grippers *i*, carried by a shaft *h*, are normally closed on a transverse bar *p* by a spring and are opened at the end positions of the carriage by tappets *m*, *m*¹ on the frame *n*. A bridge piece *r* is provided between the pile *q* and gripper bar *p* to support the set-off sheets as they are pushed forward by hand. The invention is patented by Mr. C. Winkler.



Wiping Engraved Plates.



Messrs. Waite and Saville have patented an invention by which in printing from engraved plates or dies such as B the superfluous ink is removed by one or more scraping blades 2, 2ª divided by means of slits or slots *c* into sections adapted to yield independently and so follow irregularities in the printing surface. Two blades are preferably used the

slits in each alternating with those of the other as shown in Fig. II, so that a continuous edge is presented to the die. Messrs. Waite and Saville have also patented a method whereby in printing from an engraved plate or die, the printing surface of which is flat or parallel to the straight path in which it is operated, the superfluous ink is removed by means of a flexible scraping blade arranged so that its edge is opposed to the direction of motion of the plate. Mechanism is also described for reciprocating the blade across the die. As shown, an inked plate 3, while moving in the direction *b*, Fig. 4, is acted on by a flexible scraper 2 opposing its motion. Oscillating arms 4 carrying the scraper are acted on by springs 9 to press it against the plate and by a cam 5, Fig. 2, through the intermediary of levers 7, 7a, 8 to withdraw it. The arms 4 are supported in brackets 4ª mounted on a shaft 4ᵇ which is reciprocated by means of a pivoted lever 11, Fig. 2, engaging between one of the brackets 4a and a collar 11a on the shaft and oscillated by a crank pin 12 engaging a slot *k*¹ therein. A narrow uninked portion is left at the lower end of the plate 3 and the scraper 2 is lowered on to that portion by the cam 5. Additional means for regulating the lowering of the scraper com-

prises a fixed cam *k* and a roller arm *p* attached to the arm 4. The leading edge of the plate 3 may be bevelled so as to dispense with the cam *k*.

PAPER and printing imports into New Zealand during the first nine months of 1922 were of the value of £555,771, as against £1,106,002 in the corresponding period of the previous year. Half of the paper is printings, the Dominion being extensively supplied with newspapers.

Paper Trade Statistics.

Overseas Countries' Imports and Exports of Paper.

The quarterly return dealing with the figures up to December 15th, 1922, issued by the Board of Trade, gives the following interesting statistics relating to the imports and exports of paper of certain foreign countries and British Possessions:—

FINLAND.—In the ten months ended October news-print was exported to the extent of 108,170 tonnes (of the value of 398,191,000 marks), as against 71,973 tonnes (338,369,000 marks) in the corresponding period of the previous year, and 76,695 tonnes (278,286,000 marks) in January to October, 1920. Packing paper exports during the three respective periods were 25,329 tonnes (106,509,000 marks), 12,000 tonnes (59,819,000 marks), 24,755 tonnes (90,210,000 marks). Pasteboard figures were as follows: 18,898 tonnes (54,566,000 marks), 7,379 tonnes (24,536,000 marks), 37,528 tonnes (09,217,000 marks).

NORWAY.—Printing paper exports were: 104,700 tonnes for the nine months ended September, as compared with 42,554 tonnes in the previous year (January to September) and 96,453 tonnes in the corresponding nine months of 1920. Packing paper exported in the same period last year reached 49,164 tonnes, as contrasted with 8,224 tonnes in the nine months of 1921 and 31,569 tonnes during January-September of the preceding year.

SWEDEN.—Swedish paper "of all kinds" was exported during the ten months ended October to the extent of 204,283 tonnes, as against 132,609 tonnes in 1921 and 228,198 tonnes in 1920 (ten months).

DENMARK.—The value of the imports of paper and paper manufactures during the ten months ended October last was 21,297,000 kr., in the previous year 20,957,000 kr. and in the corresponding ten months of 1920 38,692,000 kr.

GERMANY. — Given in 100 kilos., fancy, coloured, varnished, etc., paper was exported from Germany during the nine months ended September last year to the extent of 121,909 (of the value of 1,132,687,000 paper marks), comparing with 183,610 (14,256,000 gold marks) in January to September, 1913. Photographic paper was exported to the extent of 10,047 (281,800,000 paper marks) during January to September last year, as against 11,409 (4,107,000 gold marks) in the nine months of 1913.

NETHERLANDS.—Printing and writing paper (including news-print) imported in the ten months ended October last stood at 29,535 tonnes (of the value of 7,001,000 guldens), compared with 18,275 (7,616,000 guldens) in the previous year and 27,697 (18,585,000 guldens) during January to October, 1920. Exports from the Netherlands of the same class of merchandise for the same three periods were: 29,339 tonnes (7,842,000 guldens), 1922; 24,999 (9,493,000 guldens), 1921; 13,884 (9,769,000 guldens), 1920. Exports of strawboards reached 138,294 tonnes (12,085,000 guldens) during the ten months ended October last, as against 72,518 (8,958,000 guldens) in the preceding year, and 168,094 (32,363,000 guldens) in the corresponding period of 1920. [Gulden = 1s. 8d.].

BELGIUM.—The imports of paper and cardboard (including Luxembourg) for the five months ended September, 1922, amounted to 13,042 tonnes (of the value of 23,143,000 francs). Exports of the same class of goods through the Belgo-Luxembourg Economic Union reached 16,408 tonnes (29,959,000 francs) during the five months ended September, last year.

FRANCE.—Paper and manufactures (including books) imported into France in the ten months ended October, in 100 kilos., reached 1,151,130 (of the value of 184,129,000 francs), against 648,983 (195,755,000 francs) in January to October, 1921, and 1,224,093 (457,762,000 francs) in the corresponding ten months of 1920. Exports under the heading of paper (also in 100 kilos.) were 273,586 last year (January to October), 262,084 in the corresponding period of 1921, and 318,040 in the ten months of 1920.

ITALY.—Paper (white or dyed in the pulp) exported (in 100 kilos.) during the three months ended March last year amounted to 7,717, against 10,587 in the corresponding period of 1921 and 10,944 in 1920 (three months).

CZECHO-SLOVAKIA. — Exports of packing paper (given in 100 kilos.) despatched from Czecho-Slovakia during the eight months ended August, 1922, amounted to 141,356, against 125,477 in the corresponding period of 1921. The following were the other classes of paper and paper manufactures leaving that country during January-August, 1922, the figures in parenthesis being those for the corresponding period of the previous year: Printing paper, 72,416 (72,710); writing paper, 19,861 (33,754); cardboard, 19,274 (33,790); cigarette paper, 5,852 (14,693).

GREECE. — Printing paper imported amounted to 2,311 tonnes (of the value of 5,597,000 drachmas) during the first five months of 1922, as contrasted with 1,665 tonnes (3,561,000 drachmas) in the corresponding period of 1921, and 2,117 tonnes (2,170,000 drachmas) in 1920. Writings imported reached 209 tonnes in January to May last year, 586 tonnes, in the corresponding period of the previous year and 736 tonnes in the five months of 1920. [Drachma = 9 6d., or 25 to £1].

EGYPT.—Imports of paper and of the various classes of paper goods (in kilos) for the nine months ended September, 1922, were as follows, the figures in parenthesis representing the amounts for the corresponding period of the preceding year: Wrappings, 8,218,887 (6,052,157); cardboard, 4,636,929 (2,596,058); printings, 4,529,465 (1,931,109); cigarette paper, 362,103 (308,447). Cigarette paper exported during the nine months of last year stood at 33 tonnes, against 73 in 1921 and 203 in the nine months of 1920.

BRAZIL —Paper and paper manufactures imported in the three months ended March, 1922, amounted to 5,472 tonnes (of the value of 6,728,000 milreis), as contrasted with 13,178 tonnes (29,461,000 milreis) in the preceding year, and 7,846 tonnes (7,631,000 milres) in January to March, 1920. [Milreis = 7½d. to 1s. 5d.]

JAPAN.—Given in piculs, the imports of printing paper into Japan during the eight months ended August last amounted to 312,618 (of the value of 5,969,000 yen), as against 65,470 (2,232,000 yen) for the 1921 period, and 111,536 (3,782,000 yen) in January-August, 1920. Packing paper imports for the three eight-monthly periods were: 1922, 181,426 (3,014,000 yen); 1921, 53,861 (1,846,000 yen); 1920, 125,426 (3,879,000 yen). The quantity of the exports of paper and paper manufactures are not shown in the statistics, but the value of these was 14,102,000 yen for the eight months ended August last, as compared with 16,565,000 yen in the corresponding period of the preceding year and 23,597,000 yen during January-August, 1920. [Picul = 133⅓ lbs. avoir.]

SIAM.—Unprinted paper entering Siam in the nine months ended September last reached 1,680 tonnes (of the value of 699,000 ticals), comparing with 1,546 tonnes (1,158,000 ticals) in the previous year, and 1,145 tonnes (1,100,000 ticals) in the nine months of 1920. [Tical = 2s. 1½d. in 1922.]

BRITISH INDIA.—The imports of paper into British India for the six months ended September last were of the value of 1,22,20,000 rupees, as against 1,04,33,000 rupees in 1921 (six months) and 2,88,17,000 rupees in the corresponding period of 1920.

CEYLON.—Paper imports for the eight months ended August last were: Printings, 11,888 cwts.; writings, 4,860 cwts. The values of the paper imports for the eight months ended August last and the two previous years were as follows: Printings, 3,57,000 rupees, 1922; 3,68,000 rupees, 1921; 5,86,000 rupees, 1920; writings, 3,04,000 rupees, 1922; 3,13,000 rupees, 1921; 2,80,000 rupees, 1920; other paper, 8,51,000 rupees, 1922; 2,86,000 rupees, 1921; 1,54,000 rupees, 1920.

NEW ZEALAND.—Paper imports for eight months ended August last were of the value of £450,000, as against £1,109,000 in the corresponding period of the preceding year.

BRITISH SOUTH AFRICA.—Printing paper imported in the eight months ended August last reached 173,626 cwts (£251,000), against 194,754 cwts. (£597,000) in the previous year and 140,826 cwts. (£371,000) in the eight months of 1920. Imports of wrappings for the three periods were: 1922, 65,861 cwts. (£108,000); 1921, 52,185 cwts. (£183,000); 1920, 39,924 cwts. (£150,000). The values of the imports of "other paper" during the same periods were: £90,000 (1922), £99,000 (1921), £198,000 (1920). Printed books were valued at £214,000 during the eight months ended August last, £241,000 in 1921 and £269,000 during January-August, 1920.

THE steady improvement in the United States paper markets is attributed largely to better fundamental conditions throughout the country.

Revised Tariff Valuations in India.

The Governor-General of India in Council has fixed Revised Schedules of Tariff Valuations for the purpose of levying Customs duties in British India, with effect from January 1st, 1923.

Free admission is allowed for pulp of wood, rags and other papermaking materials; trade catalogues and advertising circulars imported by packet, book or parcel post; and books, printed, including covers for printed books, maps, charts and plans, proofs, music and manuscripts.

The following items (No. 123) bear an *ad valorem* duty of 2½ per cent: Printing and Lithographic Material, namely, presses, type, ink, aluminium lithographic plates, brass rules, composing sticks, chases, imposing tables, and lithographic stones, stereo blocks, wood blocks, half tone blocks, electrotype blocks, roller moulds, roller frames and stocks, roller composition, standing screw and hot presses, perforating machines, gold-blocking presses, galley presses, proof presses, arming presses, copper plate printing presses, rolling presses, ruling machines, ruling pen-making machines, lead and rule cutters, type casting machines, type-setting and casting machines, rule bending machines, rule mitreing machines, bronzing machines, leads, wooden and metal quoins, shooting sticks and galleys, stereotyping apparatus, metal furniture, paper folding machines, and paging machines, but excluding paper.

Prints, engravings and pictures, including photographs and picture post cards carry an *ad valorem* duty of 30 per cent.

The following articles under the heading of paper, pasteboard and stationery (No. 94) are dutiable at 15 per cent. *ad val.*:—Paper and articles made of paper and papier mache, pasteboard, millboard and cardboard, all sorts, and stationery, including ruled or printed forms and account and manuscript books, drawing and copy books, labels, advertising circulars, sheet or card almanacs and calendars, Christmas, Easter and other cards, including cards in booklet form; including also wastepaper and old newspapers for packing except old newspapers in bales and bags; but excluding trade catalogues and advertising circulars imported by packet, book or parcel post, and also excluding the descriptions given below.

Other articles in the Tariff (No. 94) bear a uniform duty of 15 per cent., but the tariff valuation varies as under:—

	Per	Tariff Valuation Rs. A. P.
Old newspapers in bales and bags	cwt.	8 8 0
News printing paper	lb.	0 3 3
Printing paper—		
Flints	lb.	0 14 0
Real art	lb.	0 9 0
Imitation art, machine finish, super calendered, ivory finish, account book (printing), antique, stereo, litho, poster, cartridge, cover paper and machine glazed pressings	lb.	0 6 0
Other sorts, including coated papers	—	ad val.
Packing and wrapping paper—		
Nature brown, Manilla machine-glazed and unglazed, sulphite envelope, kraft and imitation kraft	lb.	0 4 0
Tissues, white and coloured	lb.	0 9 0
Writing paper—		
Bond, bank, loan, cream laid and wove: and also white and coloured, glazed and unglazed	lb.	0 9 0
Other sorts, including hand-made	—	ad val.
Strawboard	cwt.	14 8 0

Accurately Matching Colours.

The Holophane Daylight Unit.

In printers' work it is extremely desirable that there be means by which an exact shade of colour may be matched, and one readily comprehends the importance and practicability of the application of artificial light that successfully approaches the light of day.

Following considerable scientific research the Holophane Daylight Unit has been placed on the market, and has met with a high degree of success in many industries where artificial daylight is imperative to maintain delicate shades in the course of manufacturing operations.

We illustrate the Holophane Daylight Unit, which is so adapted as to give, at a small cost, a colour composition equivalent to daylight.

Almost all forms of artificial light are very yellow and colour sensations are thereby rendered less sensitive, thus making it difficult to see anything in its true colour value. This yellowness is only properly appreciated by direct comparison of artificial light with the pure whiteness of daylight, and is due to the lower temperature of the sources of artificial light as compared with the higher temperature of the source of daylight—the sun.

In order to correct the light thus given from an artificial source to the equivalent of daylight, it is necessary either to add the proper amount of violet and blue, etc., or to take away the proper amount of red and yellow light, etc. As the former method cannot be carried out satistactorily, the latter course must therefore be adopted and light must be sacrificed to obtain the necessary correction.

To make this correction 60 per cent. of the light which reaches the daylight screen is absorbed, therefore as much as possible of the total light from the lamp should be transmitted through the screen to give adequate results for the energy expended.

The light rays from an electric lamp are emitted in all directions around the lamp, and just as much of the light is given in the upward direction as in the downward direction. Fully 75 per cent. of the total light from the bare lamp is given out in the zone from 60 degs. from the vertical to 180 degs. (Zenith). To utilise the maximum amount of the upward and downward light it is necessary to collect it by means of an efficient reflector and redirect it through the daylight screen.

With the installation of the Holophane Daylight Unit, supplied by Holophane, Ltd., 27, Elverton-street, Vincent-square, London, S.W., means are provided to secure an exact shade of colour, thus overcoming the difficulties previously experienced both in the laboratory and mill.

MESSRS. HOLM AND CO., LTD, ship and mill owners, of Victoria Embankment, London, have purchased the aerodrome at Kingsnorth, Kent. Rumours have been current that the building of a large paper mill or chemical works was contemplated, but in denying the report Mr. Holm states that the owners prefer, at the present juncture, not to discuss or disclose their future plans, as local conditions may not, after further investigations, favour the erection of the plant which was proposed. A thorough investigation of the site is being made, and upon the result of the investigation will depend the purpose for which the site will be used. There is a large quantity of machinery and various buildings on the site, which comprises freehold land of about 557 acres. Exceptional rail and transport facilities are provided. A private railway track runs from Sharnal-street station to the aerodrome—or Royal Naval Air Station as it formerly was—and thence to the jetty, which is about 235 yards in length. There is a waterside frontage of over a mile.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

Make a Good Impression!

An unrivalled experience and technical knowledge enable Lorilleux & Bolton, Ltd., to produce Printing Inks of the first quality for the latest processes and with the greatest range of tints, colours, consistencies and drying properties.

Lorilleux & Bolton, Ltd., have an intimate knowledge of the requirements of printers, and make a feature of producing inks for special purposes, and they will be pleased to answer any enquiries and give expert advice if desired.

Australian Paper Market.

Factors of Interest to British Exporters.

The report on the economic and financial situation of Australia, which Mr. S. W. B. McGregor (H.M. Senior Trade Commissioner in the Commonwealth) has revised to October, 1922, contains some information which deserves the attention of British exporters.

It is pointed out that the fact, which was published last year, that Australia had become the United Kingdom's second best customer came as a surprise to many, due probably to the smoothness and absence of difficulty with which the bulk trade with Australia is carried on.

The Advantages.

Australia offers many advantages to the British trader—a generous British Preferential Tariff, a strong sentiment in favour of British goods and trading methods, a strong progressive banking system, freedom from anxiety as regards credits, no exchange problems such as exist in India and certain foreign countries, and, not least, a market which must expand with a greater or less degree of rapidity depending on the success of the immigration schemes in operation or to be introduced. The question of United Kingdom Tariff Reciprocity for Australian produce such as meats, dried fruits, etc., is in many men's minds to-day, and may have some bearing on immigration and land settlement.

The United Kingdom's present share in a valuable market like the Australian will not be retained without severe competition from the United States and possibly other countries. The Queensland Loans recently raised in New York and standing at a considerable premium to-day, together with the known offers of United States financiers of loans to the other States, are an indication of what may be expected apart from competition in prices of goods and sales organisation.

The best goods, the best sales methods, the best type of visiting representative are not too good for the existing valuable Australian market with its vast future possibilities.

The Tariff Board.

British papermakers will be specially concerned with the operations of the Tariff Board appointed by the Commonwealth Government, and consisting of a representative of the Customs Department and two business men representing respectively importers' and Australian manufacturers' interests. The functions of the Board are to watch the operations of the tariff, to inquire into all requests for new duties, or for the increase or the reduction of existing duties, to investigate any complaints in which it is alleged that manufacturers are taking undue advantage of the protection afforded by the tariff, and to inquire into questions involving the application of the dumping duties of the Industries Preservation Act.

In addition, the investigation of various other matters comes within the scope of the Board's functions, as, for example, the granting or withdrawal of bounties, the examination of proposals for reciprocal tariff agreements with British Dominions or foreign countries, the consideration of disputes arising out of the interpretation of the tariff. The Board makes its reports to the Minister for Trade and Customs, who may, if he thinks fit, take any action according to law in respect of any of the matters dealt with in the Board's report.

Paper and Stationery Imports.

Under the heading of paper and stationery the statement is made that the granting of £3 per ton preference to British-made news-print has resulted in large orders being diverted to the United Kingdom from Canada and Sweden. The full effect of this preference has not yet been felt. There is no manufacture of printing or writing paper in Australia.

Total imports of paper were valued at £7,081,612 in 1920–21 and £3,387,576 in 1921–22. Total imports of stationery were valued at £1,897,285 in 190–21 and £1,433,487 in 1921–22.

The report proceeds to give some "items of interest" from the figures of 1920–21, but it should be understood that the position has since been altered, at all events, as regards news print, by the operation of the preference mentioned.

News-Print and Printing Paper.

The tonnage and value of imports of news-print in rolls were as follows during 1920–21:

	Tons.	£
United Kingdom ...	4,825	276,954
Canada	29,409	938,236
Norway	11,204	378,243
Sweden	20,877	773,838
United States ...	559	27,851
All countries ...	70,454	2,543,060

Printing paper, other than news print:

	Tons.	£
United Kingdom ...	5,668	557,490
Norway	2,075	126,606
United States ...	2,962	267,314
All countries ...	11,748	1,036,728

Only values are given of writing and typewriting paper, sources of supply being: United Kingdom, £678,024; Canada, £88,384; Norway, £65,002; Sweden, £41,669; United States, £110,407; all countries, £1,001,376.

Books, music, periodicals and newspapers were received as follows: United Kingdom, £859,391; United States, £150,934; all countries, £1,032,935.

In an appendix is given a list of the principal industries in 1920–21, "according to value of output. The class comprising books, paper, printing, etc., represents £16,437,140.

French Companies.

Under the style "Manufacture de Papiers" a company has been formed in Strasburg, with a capital of 1,200,000 francs, to carry on the business of Messrs. Windel and Simon, specialists in manufacture of paper bags and boxes and in general all kinds of fancy packing papers.

The profits of *Etablissements Moullot Fils aîné*, Marseilles, for the year ending June 30th represent 837,708 francs.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

Paper Sizes for Printers.

Important Investigation into Printing Papers Carried out by U.S. Bureau of Standards.

Considerable attention is being given in papermaking and paper-using circles of America to a report issued through the Bureau of Standards, Department of Commerce, Washington, on the subject of the simplification of paper sizes. A committee representing national organisations of buyers and users of printing and paper was appointed by the Department, through the director of the Bureau of Standards (Mr. S. W. Stratton), "to investigate the size and grade situations in the manufacture and use of printing papers." The first task of the committee was to recommend a minimum set of standard sizes of book papers, bond and writing papers that would meet every practical demand in printing and publishing.

Suggestive Page Sizes.

After nearly five months' work of gathering data, there was compiled, published and distributed a booklet—"Suggestive Page Sizes." This booklet contained tabulations of page sizes that could be cut without waste from three sizes of book paper, with illustrations showing present conditions in respect of sizes of trade papers, magazines, directories, books, house organs, catalogues and general printed literature.

In addition, the booklet included information as to the office and factory forms and letter books that would cut without waste from the three flat or bond paper sizes of 17 × 22 in., 17 × 28 in., 19×24 in., and their doubles.

The three sizes of book paper chosen upon which to base their data as to sizes were 25×38 in., 30½×41 in., 32×44 in., and their doubles, and the purpose of issuing the booklet was to show the great variety of sizes possible to be produced from a minimum number of sizes of book papers.

The editions of the booklet, of 15,000 each, were printed for distribution through the members of the committee.

The reason for the wide distribution of "Suggestive Page Sizes" was not only that the possibilities of a minimum number of sizes of book papers and bond papers could be appreciated, but also that the paper size simplification programme should be thoroughly understood and enable the recipients readily to make criticisms and offer suggestions.

Surveys of Printed Literature.

In addition to the preparation and distribution of 21,000 booklets and more than 15,000 questionnaires, 14 different surveys were made of current printed literature, in respect of size and fold, representing over 25,000 individual printing jobs. These analyses are exclusive of the surveys made of magazines, trade papers, books, directories, etc. Detailed figures itemising 9 of the surveys were printed in the booklet.

The purpose of those and fold surveys was to enable the committee to ascertain just what changes in present practice would be necessary in the covering of general printing needs to conform with a simplification programme. Incidentally, these surveys served as a check-up on the answers to the questionnaires. The following approximate group page sizes were used as a basis in analysing these more than 25,000 individual jobs of printing. Any piece of literature under 9½ / 12½ in. that varies ⅛ in. to ⅜ in. in either dimension was included in its nearest group size.

The following were the size classifications:

Unstitched Forms.		Stitched Forms.	
Page.	Sheet.	Page.	Sheet.
9¼ x 12½	25 x 38	9¼ x 12⅛	25 x 38
8¾ x 11⅜	35 x 45½	8⅛ x 11	35 x 45½
8 x 11	32 x 44	8 x 11⅛	33 x 46
6½ x 9½	25 x 38	7¾ x 10⅛	32 x 44
5 1/16 x 8¾	35 x 45½	6¾ x 10⅛	28 x 42
5½ x 8	32 x 44	6 x 9⅛	25 x 38
4¾ x 6¼	25 x 38	5½ x 8⅜	35 x 45½
4⅛ x 9½	25 x 38	4¼ x 7⅝	32 x 44
3⅝ x 6½	26 x 29	4½ x 6	25 x 38
3⅛ x 6¼	25 x 38	4 x 9⅛	25 x 38
		3½ x 6¼	26 x 29

These figures reveal the fact that if advertisers, publishers, printers and lithographers co-operate in changing a portion of their present literature specifications only ⅛ in. to ⅜ in., 87½ per cent. of the unstitched circulars, 79 per cent. of the booklets, and 86 per cent. of the cloth-bound and loose-leaf catalogues could be cut without waste from the following four standard sheet sizes of paper, viz., 26 × 29 in., 25 × 38 in., 32 × 44 in., and 35 × 45½ in. and their double sizes. (The small percentage of literature that fell into the 28 × 42 and 33 × 46 sheet size groups is not included in the above percentages.) If the changes were ¼ to ½ inch, practically all the literature would come within the above four standard sheet sizes.

In other words, an average of the four classes of literature—unstitched, wire-stitched, cloth-bound and loose-leaf catalogues—showed that only 16 per cent. of the total would require special sizes of paper.

NOTE.—It is probable that a good deal of the literature varying ⅛ to ⅜ of an inch, included in the group page size classifications, was printed on sizes of paper made specially to order, or else cut to waste in the binding. It would seem to be obvious that, with the co-operation of the printer and buyer of printing, the possibility of fitting practically 100 per cent. of the requirements to a minimum number of standard sizes could be accomplished without any serious inconvenience.

The following figures show the percentage of literature that fell into each approximate group size. The unstitched circulars were kept separate from the stitched and bound work, because being untrimmed their page size was a little larger, and also to emphasise the fact that unstitched circular specifications are slightly different from stitched literature:

STITCHED BOOKLETS AND CATALOGUES.

Page.	Sheet.	Percentage.
9¼ x 12⅛ ...	25 x 38 ...	3½
8⅛ x 11 ...	35 x 45½ ...	14½

necessary and advisable to consider the fold phase. The following percentages show how the literature in the surveys was folded: 95 7/10 per cent. of the unstitched literature conformed to the following regular folds or signatures: 4 pages, 6 pages, 8 pages, 12 pages (letter fold), 16 pages, 24 pages and 32 page folds.

The unstitched circular fold analysis of 9,536 individual printing jobs (available for inspection), collected from January to September, 1922, follows:

	Percentage
4 page 1 fold	54
6 page 2 parallel	19
8 page 2 parallel	7
8 page 2 right angle	7
12 page letter fold	6
16 page 2 right angle 1 parallel ...	1
16 page 3 right angle	3/4
24 page 3 right angle 1 parallel (double letter)	1/2
32 page 3 right angle 1 parallel ...	1/10
32 page 4 right angle	1/10
8 10-12-14-16 page 3 parellel ...	2 3/10
Hand and freak folds	2

Note.—The above percentages do not include the folds used for the covers for booklets, nor the folds in multigraphed and form letters, received for survey purposes. If these had been included, the percentages of the one and two fold work would have been higher and those of the three or more fold work would have been less.

The unstitched literature above analysed was 39 per cent. of the total against 61 per cent. of stitched forms or vehicles as follows: 46 per cent. of the wire-stitched forms were bound in covers, 54 per cent. being self-cover booklets.

Combining and averaging the folds used in stiched literature with the folds used in unstitched literature, the percentage of special folds is reduced to less than one per cent.

STITCHED BOOKLETS AND CATALOGUES (14,958) ANALYSED ACCORDING TO NUMBER OF PAGES.

Number of Pages.	Percentage.	Number of Pages.	Percentage.
8 pages	16 1/2	28 pages	1
8 pages with cover	4 1/4	28 pages with cover	1 3/4
12 pages	12	36 pages	1/2
12 pages with cover	4 3/4	36 pages with cover	2
16 pages ...	13 1/4	40 pages	1/2
16 pages with cover	9	40 pages with cover	1 3/4
24 pages	3 1/2	44 pages	1/4
24 pages with cover	6	44 pages with cover	1
32 pages	2	56 pages	1/10
32 pages with cover	6 1/2	56 pages with cover	3/4
48 pages	1	60 pages	1/10
48 pages with cover	2	60 pages with cover	1/10
64 pages	1/10	52 pages	1/10
64 pages with cover	1	52 pages with cover	1/2
20 pages	2 1/2	Over 64 pages ...	1/10
20 pages with cover	3 3/4	Over 64 pages with cover	1

These percentages of folds and number of pages or signatures, separated into unstitched and stitched work, are included in this report to show, in addition, to what extent the standard sheet sizes are used for each kind of fold. No answers to the questionnaires contained a criticism of the folds or page combinations included in the booklet, "Suggestive Page Sizes," and there was no request for special folds or page combinations.

[The recommendations which were submitted as a result of the investigations will appear in a subsequent issue.]

LIFE'S strongest motive is the ideal. The unseen rules the world.

Printers' Managers and Overseers

PARENT ASSOCIATION.

Lecture on "The London Zoo."

The chief feature of the February meeting of the Printers' Managers and Overseers (Parent) Association—held at the Old Bell, Holborn, on Tuesday of last week—was a lantern lecture on "The London Zoo," by Mr. Richard Hancock, F.A.I. Mr. S. M. Bateman presided over a fair attendance of members.

The Annual Dinner.

Arising out of the minutes of the January meeting, the subject of the Association's annual dinner was brought forward by the general secretary, who drew attention to the fact that, acting upon the resolution passed at the January general meeting, the Council had circularised the membership, and as the result of a very satisfactory response had arranged for the dinner to be held on Saturday, April 14th next, in the King's Hall, Holborn Restaurant. Mr. Whittle added that the Council, after many inquiries, had felt quite justified in deciding upon the Holborn Restaurant, as the management had offered the King's Hall (which would accommodate 400 persons comfortably) on a guaranteed attendance of 250. In regard to ladies being invited, he intimated that a satisfactory representation seemed assured, as something like 100 members had already promised to bring ladies. (Applause.)

Mr. Bateman remarked that he thought the Holborn management had met them fairly, and he read the letter which the Association had received confirming the engaging of the King's Hall. He added that it would be the first time in the Association's history that ladies and gentlemen would sit down together at their annual dinner.

There were again several candidates for admission into the Association, and the following were elected in due form: Mr. E. H. Jacobs (R. S. Murray and Co., Ltd., 57, Clerkenwell-road, E.C.1.), overseer, letterpress machine room; Mr. E. E. Martin (Wm. Brendon and Son, Ltd., Pier-street, West Hoe, Plymouth), overseer, letterpress machine room; Mr. A. S. Smith (the Amalgamated Press, Ltd., Gravesend, Kent), works manager; and Mr. F. Wheeler (Wilkes and Co., 41-47, Friar-street, Southwark, S.E.1.), overseer, letterpress machine room.

All these, with the exception of the provincial candidate, were present, and received a personal welcome from the chair.

Admirable Lantern Slides.

Mr. Hancock was now called upon for his lecture, which be delivered by way of a running commentary upon a very comprehensive series of lantern slides. The slides. many of them from especially happy photographs—mostly of Mr. Hancock's own taking—showed the zoo-dwellers to advantage. A very wide field was covered. Something was said first of the London Zoological Garden's themselves and the way they compare—disadvantageously in some respects—with other well-known zoo's. Then, commencing with the king of beasts, the lecturer passed from lions, to tigers and other members of the cat family, on to wolves and their relatives; the many kinds of deer and antelope, the gazelle and goat family, camels and dromedaries, elephants, rhinoceri and hippopotami, the giraffe and zebra families, the bison, the walrus and seal tribe, the various species of bears, and so to the monkey genus—with its many points of resemblance to man. Then followed a rapid review of the numerous race of birds as exemplified at the Zoo, ranging from the immense South American condor down to tiny inhabitants of the small bird house. Animals and birds shown on the screen included many which have been in the Gardens only on single or rare occasions, some of which have been the only examples exhibited in Europe.

The president, in commending the lecture, had to confess—as doubtless must many other Londoners—that he had visited the Zoo only once.

A similar confession came from Mr. R. H. Berry, who moved a cordial vote of thanks to the lecturer. He emphasised the large amount of time and study which must have been required before a lecture of this character could be delivered, without a single note.

Mr. E. H. Berryman heartily seconded the motion, making humorous allusion to his disappointment as a boy when he found at the Zoo that the live lions were so much smaller than Landseer's bronze lions in Trafalgar-square.

A remark of Mr. Berryman's suggesting a humane objection to the caging of animals drew from Mr. Bateman the comment: "Personally I like to see them in cages—rather than meet them outside." (Laughter.)

The vote of thanks being carried with acclamation, the lecturer briefly replied. On the subject of the caging of animals, he pointed out that animals in captivity live much longer than they do in a state of nature; he thought, too, that in the London Zoo they were well treated. He remarked that he had taken over 2,000 photographs in the London Zoo, and his whole collection of negatives of natural history subjects numbered something like 20,000.

Paper and Box Board.

During January this year the paper and box board market has weakened to a certain extent, although prices remain fairly stationary, says the official organ of the Norwegian Chamber of Commerce, London. The demand is not so brisk as could be wished, and has certainly fallen very much below what was anticipated some two or three months ago. Of course, January is never a very busy month, so there is hope that during this month (February) the conditions may improve.

The prices for M.G. and unglazed kraft of best Norwegian and Swedish make varies from £24 to £25 per ton of 2,240 lbs. net f.o.b. Scandinavian ports.

M.G. pure sulphite in substance d.c. 7 lbs., 480 is quoted at £31 10s. per ton, and substance d.c. 16 lbs., 480 at £24 per ton. These prices are net c.i.f. United Kingdom.

Prices for friction glazed brown leather boards as well as white wood pulp boards remain at from £14 to £14 10s. per ton, subject to 1¼ per cent. discount net f.o.b. Scandinavian ports, but there has been very little demand for these kinds of boards for some considerable time.

Zinc and Copper Process Plates

Used by all the Leading Newspaper and Process Houses in the British Empire. Supplied in all Gauges and Sizes. Also High Grade Zinc and Copper Plates for Etching, Engraving, Mezzotint, Aquatint, and Artists' Requirements.

Mr. E. J. W. Zaehnsdorf on "Bookbinding."

The Binder's Art Explained and Demonstrated at Stationers' Hall.

A large audience enjoyed Mr. E. J. W. Zaehnsdorf's lecture on Friday evening, under the auspices of the Stationers' Company and Printing Industry, when he contrived to deal in entertaining as well as instructive fashion with the well-worn subject of "Bookbinding," eliciting a notable ovation from his hearers. Added interest was given to the occasion by the exhibits of bindings and other articles of interest (to which extended reference was made in last week's issue), whilst Mr. Zaehnsdorf introduced something of an innovation—and a very welcome one—by installing in the Hall itself several of his firm's bookbinding craftspeople with apparatus for making practical demonstration of the processes employed in forwarding and finishing.

The chair was taken by Major Robert Leighton, and on the platform were also Messrs. Edward Unwin, R. A. Austen-Leigh, A. E. Goodwin, J. R. Riddell and others.

Major Leighton, in introducing the speaker, referred to the comprehensive character of the term "bookbinding," and remarked that to Mr. Zaehnsdorf bookbinding was as much an art as a craft. His name was quite enough guarantee that they would hear not only about bookbinding but also about the binding art.

Ancient but Unremunerative Craft.

Calling attention to the antiquity of the binder's craft, Mr. Zaehnsdorf went back to what, though not bookbinding proper, showed the nascent art of the preservation of records. He exhibited a plaster model to illustrate how in ancient Abyssinia and Babylonia tablets were inserted for protection in an enclosing case of clay. As evidence that there is "nothing new under the sun" the speaker showed a model of two Roman tablets (for writing with a stylus upon wax) the pair being hinged together by means of a couple of rings. He pointed out the similarity of principle employed in this ancient "book" and employed to-day in Walker's Loose-leaf System—an example of which was also shown.

The next point made was that although bookbinding existed long before printing, there had been, even since so far back as the eighth century, practically no progress at all from a strictly bookbinding point of view. To illustrate this, a book of the year 1300 was shown, and the sewing compared with that of a recent Zaehnsdorf volume, remark being made that apart from the fact that the old book had double bands and the modern a single band, the methods of binding were identical.

The speaker characterised the bookbinding trade as the Cinderella of the printing and allied trades—though not the younger sister. Bookbinding had never been very remunerative, he said, and he had never known a wealthy bookbinder.

Importance of Paper.

Proceeding to outline the processes employed in the course of binding a book, Mr. Zaehnsdorf referred first to the paper on which the book was printed. He strongly appealed to the printers present to see that they gave the binder paper which it was possible to bind. He thought few general readers, when they found that a book was unsatisfactory in the way it opened, would think of blaming anyone but the bookbinder, though really, in allocating the blame, it might be necessary to look further back. He showed an example of a book his firm had bound which did not open nicely (because of the heavy paper used), and said he defied anyone to bind that book properly, unless by cutting and guarding the leaves. He told also of a recent case where the printer had chosen his paper thinking only of the effect of his colour work in printing the book, with the result that when the binder folded the sheets the paper cracked right through.

He did not propose, he said, to go into the question of folding, but he touched in passing on the subject of signatures, indicating their importance to the bookbinder in the work of collating. Comparing the pagination of more modern times with the use of catchwords in incunabula, he remarked that he did not know who introduced the system of signatures, though the innovation was generally attributed to Caxton. Signatures had, however, been used in the days of manuscripts.

The Art of Cleaning.

The speaker passed next to the art of cleaning book pages. This, he said, was a very important part of the binder's work. Every book offered an individual problem. In approaching the work of cleaning, two methods were available, the dry method and the wet. In dry cleaning use was sometimes made of indiarubber, bread crumbs or even the drastic remedy of very fine glass paper. In using the wet or chemical method of cleaning, the binder had to be a bit of a chemist, inasmuch as he must understand the reasons for what he was doing. The book was first taken apart leaf by leaf, section by section, and then dry cleaned and the pages washed. He issued a very emphatic warning against the use of strong chemicals in the cleaning process, stressing the danger of injury to the fibres of the paper, which, once damaged, could never be restored. It was surprising, he said, how much could be done just with hot water, or soap and water, in removing dirt from books. Sometimes, however, the binder had to go beyond that, and he had in mind a dozen different chemical formulæ for taking stains out of book pages. The most common stains were "fox marks," understood to be due to colloids of iron in the paper, coming possibly from the papermaking machinery. These turned rusty and gave the brown stain. The chemicals used for removing these were directed against rust, but care must be taken in utilising the properties of oxygen and chlorine. He had known books to be cleaned with chloride of lime, which left traces of free chlorine in the pages, spoiling the ink and also setting up disintegration. Despite the warnings given, however, he maintained that in the hands of the skilled worker there was no harm whatever in using chemical cleaning agents. It was necessary only to know what one was doing, and not to run undue risks.

Methods of Sewing.

Approaching the question of sewing, the speaker dealt first with the flattening of the printed page, which had, he said to be rolled or pressed. He drew attention to an exhibit of a 7 lb. hammer, a tool always used in the old days for flattening pages, the margins being carefully hammered out so as to stretch them to correspond with the stretching of the middle of the page when printed damp He remarked, in passing, that the invention of rolling to take the place of hammering had led to a strike of the workpeople. He thought that if, at the present day, he asked his workers to go back to the arm-breaking job of using the 7 lb. hammer there would be another strike. (Laughter.)

Upon the subject of sewing he did not propose to be dogmatic. In choosing a method it was necessary to know the object and use for which the book to be bound was intended. It was of no use, for instance, for the public library binder to put a binding that would stand for 400 years upon a volume the paper of which would not stand more than 40 issues from the library. The methods of sewing would also vary according to whether price was an important consideration or whether the binder was given carte blanche to produce the most flexible binding he could. In ordinary commercial binding, he said, of which most of the books exhibited that evening were examples, what was known as "sawn-in" sewing was adopted. He explained and illustrated this familiar method, then contrasted it with the method of flexible sewing by the use of bands or cords. The latter method he strongly recommended for hard wear. Picking up a book flexibly bound by his firm some 40 years or so ago, he ruthlessly doubled its covers back and then rapped the volume sharply on the table, showing it uninjured after the process. He remarked: "This is a book bound by a bookbinder for a bookbinder's use." (Laughter.) After touching briefly also on French sewing and machine sewing, he described "overcasted" sewing, explaining that this was sometimes the only practicable method, as when a book consisted of single leaves He told how when this method had been carefully carried out by his own workers, an amateur bookbinder customer, who had at first been horrified at the suggestion, had expressed himself entirely satisfied with the result.

End Papers.

Passing on to the subject of end papers, he urged that these should be chosen so as to be in keeping with the book. It was horrible to see the anachronism of some modern-looking end paper on a beautiful book of, say, the late 18th century. He was himself fond of plain end papers, but good specimens of marbled and other papers were often excellent. The French had some beautiful end papers, but English made papers were also good, and one or two London firms were to-day turning out an excellent product. He explained briefly the methods of attaching end papers, remarking that he did not object to "tipping," if it was properly done. Attachment by mounting on linen or paper was also explained.

The process of rounding the back was next instructively dealt with, the use of flat backs being discountenanced for general use. The attachment of covers by the lacing-in method and the split board method (which latter was recommended for ordinary commercial use) was clearly explained.

Edge Gilding.

In regard to the gilding of the edges of books, the lecturer remarked that the work was usually sent out to specialists, there being only two miscellaneous binders in London doing their own edge-gilding to-day. The time-honoured use of the binder's plough for smoothing the edges preparatory to gilding was commended as giving generally a smoother finish than the guillotine.

After headbanding had been explained, also lining up—both directly on the back and by the hollow back method—the speaker proceeded to deal with the covering. Whilst, of course, commending leather as the principal material for this purpose, he gave due notice to cloth, now so widely used, and mentioned the fact that to the chairman's great grandfather (Mr. Archibald Leighton) is due the credit for the introduction of book cloth. Calf was criticised in respect of durability, and a warning was given as to the danger of mineral acid in moroccos.

The "Finishing" Process.

Passing on to the process of finishing, the speaker stressed the need for legibility of lettering. The art of the finisher, he said, was closely allied to that of the artist. On the practical side, the most severe test of the skill of a finisher was to make a series of, say, eight parallel lines not more than $\frac{1}{8}$ in. apart. The man who could run such a series in gold was a finisher indeed. The nearest description he could suggest of the qualifications necessary to make a good finisher was "innate appreciation of conditions." The state of the leather and the heat of the tool—these two factors were intimately associated, and what the relation ought to be the craftsman himself could not say. That was where the art of the finisher lay. It was found that, on the same bench and under the same conditions, one worker was able to get his gold a little brighter than another.

The lecturer closed by touching on the subject of the design of book covers. In referring to notable innovators in book-cover design, he mentioned Roger Payne, Charles Lewis, William Morris, Cobden-Sanderson and F. Sangorski. Bookbinders, he said, were in danger of getting into a rut in respect of design. Special reference was made to inlaid work, of which some admirable Zaehnsdorf examples were available for inspection.

The Discussion.

The meeting being thrown open for questions or discussion, Mr. J. R. Riddell took the opportunity of publicly congratulating Mr. Zaehnsdorf on his lecture—a first appearance on the lecture platform. He prophesied further demands for Mr. Zaehnsdorf's services as lecturer. In regard to the accusation made against printers in the matter of paper, Mr. Riddell passed the blame on to the publishers—a suggestion which was evidently welcome to many printers present. He also taxed the binder with the crime of cutting off the printers' finely-designed margins.

In reply to a query as to the comparative merits of British and American bindings, Mr. Zaehnsdorf told of some fine work done in the

Digitized by Google

States, but maintained that this country leads the way in the best class of bookbinding.

A querist who said he was a publisher's representative took up the matter of paper, inquiring what kind of paper the lecturer wished the publisher to use.

In the course of his reply Mr. Zaehnsdorf indicated that he liked to have a paper not unduly translucent, of a substance consistent with the size of the book, a flexible paper, and if possible one that would last. He recalled, however, an American visitor's comment in regard to lasting properties: "In the States we don't let 'em last—what are we going to do in ten years' time!!!"

A vote of thanks to the lecturer was ably proposed by Mr. S. Hodgson, and Mr. C. W. Atkins seconded, approving especially the lecturer's reference to bookbinding as the Cinderella of the allied trades. He added that in producing a book under contract the binder had often to make up for time lost by the printer, and after the printer had gone through a lot of money on his part of the job the binder had to cut his part down to make it fit into the price. (Laughter and applause.)

The vote being carried with acclamation, the lecturer briefly replied, expressing his appreciation of the fact that Major Leighton, despite onerous duties as chairman of the Bookbinding Section of the London Chamber of Commerce, had found time to attend.

The Making of Process Blocks.

Lecture by Mr. W. E. Barnard.

Some fine specimens of colour work were passed round at the meeting of the Publicity Club of London, held at the Hotel Cecil on Monday, when Mr. William E. Barnard, of the Grout Engraving Co., Ltd., gave an address on "Blockmaking."

Mr. Barnard explained that his remarks would be confined entirely to process blockmaking. He had been associated with the work for nearly 23 years, and still found that it needed close study. He wanted to indicate to the members of the Club some of the ways in which they themselves could help to obtain the best results and incidentally be of great service to the blockmakers who were keen on producing the best results possible. Illustration at the present day was an absolute necessity. Whatever kind of printed matter was put before the public they looked for pictures in connection with it. He put in a special plea for co-operation between all concerned in the handling of blocks, and pointed out how difficult it was for blockmakers to produce the best work when they were asked to fulfil rush orders.

Mr. Barnard had many interesting things to say in passing regarding the suitability of certain blocks for reproduction, and he urged the necessity for taking into consideration the type of publication for which an illustration was required so that entire satisfaction could be relied upon. He agreed, of course, that the question of price was very important, but it seemed to him that no price was too much to pay, when the object in view was the creation of a good advertisement. He advocated the greatest care in the selection of originals, and suggested that by co-operating with the blockmaker buyers would have the greatest chances of successful results.

One of the reasons for dissatisfaction with blocks was in many cases faulty printing, and great care was necessary when colour work was being done. Here again co-operation between the printer and the blockmaker would eliminate many difficulties. There was only one quality worthy of use for advertising, and that was the best.

An interesting discussion followed, among those taking part being Mr. Carl Hentschel, who recalled that he had created records for the rapid making of blocks. Process work had not made as much advance as might have taken place but for the war, but now more headway was being made. He emphasised the importance of newspapers having the best stereotyping plant if they were to obtain the best results. Confirming Mr. Barnard's remarks regarding requests for rush work, he mentioned one instance where he had been asked to make a block while the boy waited for it. (Laughter.)

ALL Canadian news-print mills made much better showings the latter part of last year than was the case a year before.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Business for Sale.

OLD-ESTABLISHED LETTERPRESS and LITHOGRAPHIC PRINTING BUSINESS in North of England. Well-equipped Modern Plant, including Monotypes, Stereo Foundry, Two-revolution Machines, Envelope-making Machines, Carton Creasing and Cutting Machines, and complete Machine Ruling and Binding Departments. Good supplies of the latest type faces by reputed founders. Own stone-built freehold premises (specially built on island site) on one floor with galleries and land for extension. Factory is situated amid exceptionally healthy environment. Staff of steady, experienced workpeople with homes near works. Ample facilities for training own labour. The whole presents a unique opportunity to a large printing house seeking auxiliary works in the country where costs of production are materially lower than in the great towns. Excellent goodwill with very valuable connections in certain trades. Capacity for £30,000 turnover. Itemised inventory and valuation by Evans; present value (plant only) £17,000; £5,000 would secure control.—Principals only should address, in first instance, J. F. B., c/o Messrs. E. Flux Leadbitter and Neighbour, solicitors, 88, Gracechurch-street, London, E.C.3. 14041

Miscellaneous.

RECIPROCATING RIDER ROLLERS give perfect distribution at one-third the cost of other systems; One Thousand Sets running; also makers of the perfect Jogger-up.—F. Bedfield, Stauley-place, Burnley. 14044

WANTED, THREE or FOUR-COLOUR BLOCKS, Odd or Series, suitable for Wall Calendars, size about 6 by 8 cm.—Price and colour proof to L. F. De Vos and Co., 37, Canal de l'Amidon, Antwerp. 14050

Tenders.

METROPOLITAN BOROUGH OF ST. MARYLEBONE.

Printing, Account Books, Stationery, etc.

THE Council of the Metropolitan Borough of St. Marylebone invite TENDERS for PRINTING, ACCOUNT BOOKS, STATIONERY and OFFICE SUNDRIES for One Year, or for such other period as may be decided.

Contractors shall pay such rates of wages and observe such conditions as have been agreed to between Associations of employers and employees.

Further particulars and forms of tender may be obtained on application to the undersigned, and samples may be inspected at the Town Hall, Marylebone-road, N.W., on and after Monday, the 12th February.

Tenders must be delivered to the undersigned, in a sealed envelope, endorsed "Tender for ———," not later than 12 o'clock (noon) on Friday, the 23rd day of February, 1923.

The Council will not be bound to accept the lowest or any tender.

By Order,
JAMES WILSON,
Town Clerk.

Town Hall,
Marylebone Road, N.W.1.
January, 1923. 14047

Books as Dance Favours.

The printing and allied trades can, of course, fully approve of a suggestion made last week in the *Star*, where it is remarked that as so much money is spent on cotillion favours, it seems a pity that the gifts are not of a more enduring quality.

"Where did this come from?" asked a book lover recently, picking up a little volume of verse bound in soft green leather.

"That was one of my favours at last night's dance," his daughter answered.

"Now, that is worth keeping," her father exclaimed. "What a pity you cannot always bring home something as attractive and sensible."

Dainty volumes are certainly one of the most charming of favours, and if tied with broad ribbon they look quite as effective as fragile confections of tissue paper and artificial flowers. They will probably not cost any more, and the hostess will have the satisfaction of knowing that the souvenirs of her dance will be cherished.

THERE has just appeared the first issue of the *Guardian*, a well produced Christian weekly journal, published in Calcutta. The journal is represented in London at 15, Devonshire-street, E.C.2.

France and Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, B russels.
United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, FEBRUARY 15, 1923.

The Bookbinding Dispute Ends.

THE welcome news that the stoppage in the London bookbinding trade is at an end, the matter in dispute being referred to arbitration, draws attention once more to the practical usefulness of the Joint Industrial Council of the Printing and Allied Trades. It was unfortunate that neither party to the dispute reported the matter to the Joint Industrial Council before a stoppage was actually in being, for this, of course, made it unnecessarily difficult for the J.I.C. to take action. At the full meeting of the J.I.C. on February 2nd the discussion served to make plain the question which was in dispute, and the matter was then referred to a special Conciliation Committee. Although this committee failed to find terms of settlement, and the Ministry of Labour intervened, the decision to refer the dispute to arbitration was certainly the outcome of the efforts of the Conciliation Committee. The Joint Industrial Council of the Printing and Allied Trades is peculiarly constituted. Whilst the Council has no authority to intervene in wages disputes, it has successfully exerted its influence over and over again in the interests of peace in the industry, and this week has brought yet another such welcome achievement.

* * *

Printers' Interests in Parliament.

THE forthcoming session of Parliament will bring to the front many matters of importance to printers. The Federation of Master Printers is alive to the opportunities which question time affords, and there is an active group of M.P.'s who are ever ready to assist the industry. In particular, Sir G. Rowland Blades and Sir Arthur Holbrook have already proved their willingness to promote every movement for the benefit of the printing trade. Amongst matters due to be dealt with, the question of the extension of State printing is not likely to be overlooked, as the three years' experiment at Harrow comes to an end in June. The starting of a new Government factory at Cricklewood to produce maps and charts also appears to be a strange development at a time when economy is being preached on every hand. The trade looks also for improved legislation in respect of the Merchandise Marks Act, the rating of machinery, and further reductions in postal rates—all matters in which printers are much concerned.

* * *

Printing in Germany.

CIRCULARS printed in Germany continue to arrive in this country. The Free Church Touring Guild has had printed and posted in that country cards relating to their tours abroad. That an organisation with its headquarters at the Memorial Hall, Farringdon-street, should be able to go to Germany and obtain its printing and postage for delivery in this country is a disturbing circumstance for British producers of paper and print used in this class of propaganda. It is a little ironical still that the tear-off card to be sent to the secretary of the Guild must have an English stamp affixed to it, whereas the original card carries German stamps. No doubt the temptation to have the printing and posting done abroad is due to a saving in cost; but that a religious organisation should deliberately economise at the expense of British industry and British workpeople seems to be a subject for protest.

* * *

The State of Trade.

PAPER merchants report improved business as regards the numerical value of orders, but complain of the lack of bulk. It is no secret that there are but few bulky orders about, and of what few there are a certain proportion finds its way direct to the mill. The state of the printing trade clearly reflects the lack of bulk business, for there are very few printers working full time with their full equipment. We hear it said on good authority that there are large machines all over the country that have scarcely turned a wheel for months. It is also well known that advertisers are working strictly to the "ca' canny" principle in their publicity schemes. In this connection the postal rates are directly responsible for retarding business development. The extra cost of postage over old rates is quite enough to entirely condemn or ruthlessly limit certain types of advertisement, and the printer and papermaker lose the business.

* * *

Vellum and Parchment.

AMONG papermakers' specimens recently received are two folios, each worthy of mention, and both dealing with newly-introduced bonds and parchment papers. Incidentally one hears less rarely of the vellum term in modern papermaking. Perhaps this is because it is now being discovered that vellum is a binding material, while parchment is the true writing surface of the legal scribe. Either way we have the historical allusion to old monastic prototypes of paper. In the light of recent Luxor revelations, there should be an unearthing of some new form of reference papyrus as an even earlier prototype in paper development. Tutankhamen papyrus, for instance, or pergamyn Tutankhamen.

* * *

Paper Specimens.

REVERTING to the folios mentioned, which are respectively the products of Messrs. Chas. Morgan and Co. and Busbridges, there is evidence of advancement in papermakers' methods of publicity. Morgan's folio comprises a series of sheets of Kent Vale parchment in various substances, demonstrating the uses to which the paper can suitably be put. If the typographic and other treatment conveys excellent suggestion to the printer or consumer, the descriptive matter accompanying is couched in selling phraseology which reflects credit on the compiler. Busbridge's apply a different but equally strong selling method by enclosing within a tasteful folder a series of plain quarto sheets conveying nothing but the specification in small lettering.

Settlement of the Bookbinding DISPUTE.

Parties Agree to Arbitration.

On Tuesday last, on the eve of an extension of the bookbinding wage dispute to the printing side of the trade, the welcome news was learned that a meeting between the Conciliation Committee of the Joint Industrial Council and the joint committee of the union had resulted in agreement on the part of the union to submit the dispute to arbitration, a course previously agreed to by the Master Bookbinders' Association. The stoppage was therefore at an end, notices being withdrawn and arrangements made for the immediate resumption of work.

At the end of last week the position was very grave. A mass meeting of the union was held on Thursday, and passed a resolution endorsing the action of the joint committee which decided that a week's notice should be tendered, from Wednesday of last week, to those employers who had members of the union in their employ, including those engaged on general printing work. Thus the prospect of further extension of the dispute looked very threatening.

Failure to reach a settlement having been reported to the Ministry of Labour, all the parties concerned were invited by Sir David Shackleton to meet him on Monday afternoon. The conference was held accordingly, and representatives of the Master Binders' Association, the Federation of Master Printers, and the London Master Printers' Association, on the one hand, and of the National Union of Printing, Binding, and Paper Workers on the other, met Sir David Shackleton on Monday at the Ministry of Labour. After a long sitting the following statement was officially made on Monday evening by the joint secretaries of the Joint Industrial Council for the Printing and Allied Trades:—

"The conference called to-day at the request of Sir David Shackleton for the purpose of considering the dispute in the bookbinding trades as affecting warehousemen and assistants has had a serious task to perform. After a long discussion we were able to induce both sides to submit to their respective organisations that the question as to whether the Master Bookbinders' Association, which is affiliated to the London Master Printers' Association and the Federation of Master Printers of the United Kingdom, were parties to the agreement which was arrived at in December last between the London Master Printers' Association and the central branch of the Printing and Paper Workers' Union, should be referred to some form of arbitration.

"Representatives of the Conciliation Committee of the Joint Industrial Council are meeting the joint committee of the union to-morrow (Tuesday) for the purpose of explaining the resolution arrived at and urging acceptance of the same. The continuance of the dispute will be determined by the decision arrived at by the bodies to whom this resolution has been referred. The Master Bookbinders' Association have been able to undertake that the proposal to refer the question to arbitration would be accepted by their organisation."

Tuesday's meeting under the auspices of the J.I.C. was duly held, with the welcome result of agreement to arbitrate, as indicated above.

Arising out of the bookbinders' dispute, summonses were granted at Kingston last Thursday against 108 men employed by Messrs. J. Burn and Co., Esher, who, it was alleged, left work without notice.

The companionship of the *Star* held their annual concert, under the auspices of the Caxton Musical Society, at the London and Brighton Hotel, Peckham, on Saturday last, when the chair was occupied by Mr. Harry Murch, supported by Messrs. G. H. Howard and G. C. Josland (father and clerk). An excellent programme of music and song was carried through to the delight of a crowded audience. It was announced that the "plate" had reached over £40, and hearty thanks was accorded to the chairmen for their efforts to bring about a satisfactory result. The Society is presenting a new gateway and a pair of entrance gates to the Caxton Home, Limpsfield, during the summer at a cost of £109.

Personal.

Alderman Sir G. Rowland Blades, Bart., M.P., has been elected to represent the Corporation of London on the Board of Governors of Livery Companies for the Advancement of Technical Education.

The Right Hon. C. A. McCurdy, K.C., M.P., and the Right Hon. F. G. Kellaway, have been appointed directors of the Edinburgh *Evening News*, Ltd.

Many happy returns to Sir Robert Baird, K.B.E., the well known Belfast printer and newspaper proprietor, who in 1910–11 was president of the Master Printers' Federation, and has also been president of the Irish Newspaper Society, and twice president of the Ulster District of the Institute of Journalists.

Sir Robert, who entered upon his 69th year on Friday, still gives evidence of the abounding energy, enterprise and ability which have made his career so useful and successful.

Mr. David Motherwell, director and secretary of Messrs. David Allen and Sons, Ltd., has been elected to the office of president of the Belfast Printing Trades Employers' Association.

Mr. Motherwell, who is very popular in Belfast printing trade circles, has for the long stretch of 34 years been actively identified with the extensive printing section of the business of Messrs. David Allen and Sons, Ltd., whose works are in Belfast, London and Liverpool, with numerous branches. Thirty of those years he spent in the capacity of manager, and during the past four years he has been secretary, holding a directorial position.

Illness of Mr. Reginald J. Lake, for many years director of the Federation of Master Printers, is causing grave anxiety to his family and friends. Numerous expressions of sympathy are being received from his many well-wishers in the trade.

Mr. James MacLehose, M.A., LL.D., and Mrs. and Miss MacLehose were among those attending the dinner of the Dickens Fellowship at the Connaught Rooms on Wednesday of last week, the day being the anniversary of the birth, one hundred and eleven years ago, of the great novelist.

Mr. Geo. Eaton Hart, of the St. Clements Press, is anxious to meet his old apprentices. He asks, therefore, that all his old apprentices, in any department, employed at Wilson and Whitworth, Romford; the Lombard Press (E.S. Book); the Express Works at Kingston-on-Thames; Clements House; or the St. Clements Press, will write expressing their willingness to accept an invitation to an "Old Boys" meeting and dinner. In any circumstance, Mr. Hart will be glad to hear from them.

Mr. Herbert W. Jordan (managing director of Messrs. Jordan and Sons, Ltd., printers and company registration agents), aroused much interest at Tuesday's meeting of the Central London Master Printers' Association, with his paper on the subject of formation, amalgamation and reconstruction of printing and other companies, a report of which is unavoidably held over to next week's issue.

The colleagues on the *Daily News* of Mr. Ernest Munton, Parliamentary sub-editor, last week presented him with an oak hanging clock with Westminster chimes, on his leaving to become chief sub-editor of the *Daily Graphic*.

Mr. J. C. Woodsford, formerly sub-editor of the *Dorest Daily Press*, has been appointed assistant editor of the Jersey *Morning News*.

Captain T. A. Newton, who was formerly engaged in the paper trade in London, has now settled in Launceston, Tasmania. In addition to representing the British Union of Manufacturers, he has taken up the paper business again.

Lithographic Printing.

(From a Correspondent.)

It is much to be regretted that the lithographic trade does not take the fullest advantage of the valuable training facilities provided at the London School of Printing in Stamford-street. The department is complete in every respect with a modern assortment of presses—flat bed, direct rotary with automatic feeder and offset printing machines. In addition there is a fine plant for dealing with photo-lithography in its various phases and worked on the lines adopted in an up-to-date office.

As a member of the Governing Body of the School I can vouch for the good work which is being done, and there is still plenty of room for additional students in this department. The Principal informs me that lithographers have taken less advantage of the facilities provided at the School than those engaged in any other section of the industry.

It is now the practice for employers to send their apprentices for four hours a week during working hours, paying wages and fees whilst in attendance. In case there may be any misunderstanding as to what this means, I can assure employers that the strictest discipline is maintained and that students are kept continuously at work, which is done on lines suitable to the needs of a workshop. There are no "high falutin'" schemes at work in this School. Everything is of a highly practical character.

In the evenings there are plenty of opportunities for senior apprentices and journeymen if they would only avail themselves of the facilities which this excellent School provides.

Experience proves that most of the "failures" of to-day are found amongst those who have not had a thorough grounding in the fundamental principles of their craft. Therefore it is essential that all students prove their efficiency as lithographic printers before entering the advanced classes.

Penrose Process Workers' Handbook Compiled by William Gamble; F.R.P.S., F.O.S. London: Percy Lund, Humphries and Co., Ltd. Price 2s. 6d. net.

In this neatly-produced little book of something over a hundred pages, 6 in. by 3 in., in cloth-backed boards, will be found a very wide variety of most valuable reference matter in regard to all branches of photo-mechanical practice. Notes, formulæ and tables for process workers—which war-time conditions made it necessary to remove from the Penrose Pocket Book and Diary—are here found revised and with many additions, and will well repay perusal and reference use by both students and advanced workers in the process field.

The Paper Mills Directory of England, Scotland and Ireland for 1923. London: Simpkin, Marshall, Hamilton, Kent and Co., Ltd. Pp. 210. 2s. net.—This buff coloured octavo directory with the present issue reaches its 63rd annual edition. It forms a useful and handy desk companion for all who have occasion to refer to British papers or to those who make or handle them. The directory of paper mills is very complete, the countries being numerically, geographically, and alphabetically arranged. There is a list of the millboard and pressing board makers in England and Wales, together with the wholesale stationers of London, the papermakers' agents in London, and the paper stainers of Great Britain. Useful sections of the volume are devoted to a classified list of papers and to watermarks and trade names, a valuable aid in deciding the origin of a particular paper. The inclusion of the paper trade customs and of the various organisations associated with the paper industry complete the essential information which renders this directory so welcome. In spite of its age, it continues to keep abreast of the times, and is in every way a reliable and speedy guide.

To know the purpose of your work adds force to your efforts.

DIVIDENDS AND REPORTS.

HUGH STEVENSON AND SONS, LTD.—The report for the year ended September 30th shows a profit of £2,016, which the directors consider satisfactory, taking into account the abnormally depressed state of the home and export trade. A debit balance of £97,891 was brought forward. Deducting the profit, there remains a debit of £95,875 to be carried forward.

NEW COMPANIES.

CENTROPRESS, LTD.—Capital £1,000 in 5s. shares; printers, lithographers, stationers, newspaper and periodical proprietors, publishers, paper and cardboard manufacturers, etc. Private company. First directors: G. L. Deacon and T. Irving. Registered office: 168, Camberwell-road, S.E.

LAREINE AND CO., LTD. (London).—Capital £100 in £1 shares; music dealers, publishers, printers, engravers, stationers, etc. Private company. First directors: Miss L. Lareine and M. Elwin.

LAZENBY, LTD.—Capital £1,000 in £1 shares; advertising agents, publishers, printers, photographers, billposters, etc. Private company. First directors: F. Bowman and H. W. Lazenby. Registered office: 57 and 59, Victoria-street, S.W.

SOPER AND WHEELER, LTD.—Capital £3,500 in £1 shares (500 ordinary and 3,000 6 per cent. cumulative preference; to take over the business of a stationer, printer, bookbinder and paper bag manufacturer carried on by A. H. Douglas, at 2, North-road, Brighton. Private company. First directors: H. B. C. Baldwin, A. H. Douglas, C. Smith and T. D. Sykes. Registered office: 47, Old Steyne, Brighton.

GRIFFITHS AND WELLER, LTD. — Capital £1,000 in £1 shares; to adopt an agreement with O. T. Griffiths and E. E. B. Weller trading as Griffiths and Weller at 5, Bloomsbury-square, W.C., and to carry on the business of general advertising agents and publishers, etc. Private company. First directors: O. T. Griffiths and E. E. B. Weller. Registered office: 5, Bloomsbury-square, W.C.

BESTONE, LTD.—Capital £1,000 in £1 shares; manufacturers, exporters, importers, agents for and dealers in musical intruments, music printers and publishers, etc. Private company. Subscribers: D. V. Cuddeford and A. J. Hardy. First directors: D. V. Cuddeford and Mrs. I. Wanklin. Registered office: 66, High-street, Marylebone, W.9.

HEAD WEIR PAPER MILLS, LTD.—Capital £20,000 in £10 shares (1,000 ordinary and 1,000 preference); manufacturers of and dealers in paper of all kinds, and articles made from paper or pulp, etc. Private company. Directors: A. N. Pitts, G. E. Pitts, and W. D. Hibberd. Registered office: Head Weir Mills, Bonhay-road, Exeter.

CASSIO PHOTOGRAPHIC PAPER CO., LTD.—Capital £20,000 in £1 shares; to adopt an agreement, in the form of a tender, dated December 13th, 1922, relating to the acquisition of the photographic paper coating works of Cassio, Ltd., at Croxley Green, near Watford, and to carry on the business of manufacturers of and dealers in photographic paper, plates, films, apparatus, accessories and materials of all kinds, etc. Private company. First directors: D. P. Geddes and E. Smith. Registered office: Cassio Works, Cassio Bridge, Watford, Herts.

SOMIC, LTD.—Capital £10,000 in £1 shares; to acquire patents (1) No. 8,967 of 1914 for improvements in machines for the manufacture of paper twine and (2) No. 8,968 of 1914 for improvements in paper twine, and in a method of and means for the manufacture thereof, together with the patent rights for France, Belgium and Canada; to adopt an agreement with A. Dymock, and to carry on the business of manufacturers of and dealers in paper yarn, paper and other twines of all kinds, ropes, sash lines, box cords, bunting, banners and flags, paper, and articles made from paper or pulp, dealers in esparto and other grasses, cotton, wool, jute and rags and other products, etc. Private company. Subscribers: A. J. Clarkson and C. Yates. Subscribers appoint directors. Registered office: Trinity Works, Market-street, Preston.

SAXTON AND CO., LTD. (IPSWICH).—Capital £3,000 in £1 shares; dealers in iron and other metals, rags, paper and skins, etc. Subscribers: A. H. Saxton, G. L. Saxton and A. H. Saxton (governing director).

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

VICTORIA PRESS MANUFACTURING CO., LTD. (London).—Satisfaction in full by an agreement dated December 15th, 1922, of debentures dated January 27th, 1920, securing £3,000.

MID-CUMBERLAND AND NORTH WESTMORLAND HERALD NEWSPAPER AND PRINTING CO., LTD.—Satisfaction in full on January 20th, 1923, of mortgage dated October 15th, 1906, securing £600.

EDWARDS AND SONS (OF REGENT-STREET), LTD. (stationers, printers, jewellers, dealers in fancy goods, etc.).—Mortgage and Land Registry Charge on 157, 159 and 161, Regent-street, W., both dated January 19th, 1923, to secure £75,000. Holders: Prudential Assurance Co., Ltd.

PIRIE, WYATT AND CO., LTD. (paper manufacturers, etc., Wells, Somerset).—Satisfaction in full on February 1st, 1923, of charge dated July 1st, 1896, securing £15,000.

PIRIE, WYATT AND CO., LTD. (paper manufacturers, etc., Wells, Somerset).—Particulars filed of £50,000 debentures authorised February 1st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

WOOLRIDGE AND CO., LTD. (printers, London).—Particulars filed of £450 debentures authorised January 25th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

FARRINGDON PRESS, LTD. (London).—Particulars filed of £5,000 debentures authorised October 3rd, 1922, charged on the company's property, present and future, including uncalled capital, subject to £500 first debentures and mortgage for £3,000, the amount of the present issue being £500.

CLOISTER PRESS, LTD. (printers, stationers, etc., Heaton Mersey, near Manchester).—Particulars filed of £11,700 debentures authorised December 28th, 1922, constituting a specific charge on the land, buildings, fixed plant, machinery and fittings (subject to a mortgage for £12,000 and to £10,000 mortgage debentures) and a first floating charge on the company's other assets; the amount of the present issue being £7,000.

BRITISH CREPE PAPER MANUFACTURERS LTD. (London).—Debenture dated January 26th, 1923, to secure all moneys due or to become due from company to Lloyds Bank, not exceeding £1,500, charged on the company's undertaking and property, present and future, including uncalled capital.

Lanston Monotype Corporation.

Dividend Maintained at 6 per cent.

The annual general meeting of the Lanston Monotype Corporation, Ltd., was held on Thursday at Cannon-street Hotel, E.C.

Lord Askwith, K.C.B., K.C. (vice-chairman), who presided in the absence of the Earl of Dunraven, said that the past year had been one of the worst years—perhaps the worst—known in the printing industry—an industry with whose success and prosperity this corporation was intimately bound up. They had, however, been able to obtain some net profit, and to declare the same dividend as last year—namely, 6 per cent. Although the volume of trade had been smaller than in the previous year, they had done a great deal of technical work in order to improve the manufacture of the machine. Further, they had succeeded in reducing expenses; at the same time they had sacrificed nothing in efficiency. They had taken up some new patents and had secured the prolongation of others, while a few patents which had lapsed had been replaced by patents which sufficiently protected the inventions of the corporation. Many of the improvements which had been made in the machine were due to the work of their own technical staff, and they had been successful in maintaining the position of the machine as the most notable, perhaps, in the printing industry. With regard to the foreign field, the managing director, Mr. Duncan, along with the company's patent adviser, had been to Germany, Austria, France and Italy. He had consolidated the company's agencies, and looked into the conditions of the patents. New patents had to be taken out in these different countries. The repair shop at Berlin had to be taken over. Investigation had to be made of possible infringements which had taken place during the war, and the business was put upon a basis for future working. Under the present conditions of exchange, sales of machines abroad had necessarily been restricted. The price could not be paid in the depreciated exchange, but there had been business in repairing and in the supply of parts for the machines which were in these countries. The repair shop in Germany had been re-established and was now working well, and they had taken in hand the establishment of a repair shop in France. France, Belgium and Italy had taken some machines, but the rate of exchange made it very difficult to sell many in those countries. After dealing with the various items appearing in the accounts, his lordship referred to the heavy taxation which was imposed upon this and other companies, and remarked that it was one of the greatest detriments to industrial progress that could be conceived.

The report and accounts were unanimously adopted.

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

The Annual General Meeting.

There was a large gathering at the annual general meeting of the Association on Tuesday of last week, at St. Bride Institute, Bride-lane, E.C.4, when Mr. A. W. Hunt occupied the chair. The annual report and balance sheet—in the hands of the members—reviewed the activities of the Association during the past year. It states that when considering the affairs of the Association it is desirable to remember the suggestion made at the last annual meeting that the year under consideration might prove a trying one for all sections of the community; and especially so, so far as it affected the printing, bookbinding and allied trades. The probability that during the year, owing to trade depression, there would be a considerable amount of unemployment was emphasised, and the need to conserve the funds of the Association was a subject strong in many members' minds. Bearing the foregoing statements in mind members can look back with a feeling of relief, and know that their funds have not been depleted. To those members who have suffered unemployment the executive have extended all consideration possible, continues the report. The statement of accounts shows that the unemployment disbursements during 1922 were heavier than ever before in the annals of the Association; however, it has proved fortunate that the benefit fund has not been depleted to any great extent. With regard to this fund a slightly smaller balance is carried to the 1923 account than was brought forward at the beginning of the year 1922. This is the only fund that shows a smaller balance, all the other funds being slightly increased. The balance sheet shows only the small margin of 11s. 1d. It is pointed out by the executive that in face of this small profit on the year's working it is advisable to watch any fresh commitments that may be suggested from time to time. Sixteen new members were enrolled during the year. Expenditure incurred during last year for the various funds of the Association is given as follows: General, £74 18s. 11d.; benevolent, £40 11s. 3d.; benefit, £72; funeral, £10; entertainment, £15 3s. 1d.

Adoption of the Report and Balance-Sheet.

The minutes of the last annual general meeting having been read and confirmed the annual report and balance-sheet was considered. In drawing attention to it the president observed that the year just closed had been a trying one. However, up to now they had weathered the storm. So far as the financial side of their activities was concerned, he thought their position was encouraging. The balance-sheet was on the right side, a fact which gave every sign of the solidarity of the Association's funds.

Mr. G. A. Eden, late general secretary, considered both sides of the report and balance-sheet to be excellent. The results of the year's programme showed they were exceedingly wise in selecting Mr. Cox last year as their general secretary. He wished, however, to give a warning to the new executive. They had been a little lavish in their expenditure last year in respect of the benevolent fund, and he thought they would do well to watch very closely the disbursements of their funds in this connection.

The president invited further discussion or criticism of the annual report and balance-sheet, and, none being forthcoming, it was carried *nem con.*

The correspondence submitted included a letter from Mr. J. R. Riddell inviting the members to the lecture given by Mr. E. J. W. Zaehnsdorf at Stationers' Hall on Friday last. A letter was also read concerning the candidature of Miss Emma Way and H. T. Sims for pensions in connection with the Vellum Binders and Machine Rulers' Pension Society.

Election of President and Vice-President.

Mr. A. W. Hunt, in vacating the chair, said he was now going to stand aside and have a rest. He would not lose any interest in the Association because of his retirement from the presidency. During his term of office he had made many friends, and one of the best stimulants he experienced was when he came among the members on meeting nights. He thanked all the members for the kindliness shown towards him, and hoped they would continue to give to his successor the same consideration. He had much pleasure in proposing Mr. H. G. Milton as president.

Tributes to the work done by Mr. Hunt during the past two years as president were paid by Mr. J. Fleming and Mr. F. C. Peacock.

Mr. Milton was unanimously elected president, and in briefly returning thanks, said he would always do his utmost to further the best interests of the Association and its members.

On the proposition of Mr. J. Dixon, seconded by Mr, A. W. Hunt, Mr. J. Fleming was unanimously elected vice-president.

Other Offices Filled.

Messrs. Arthur Cox (general secretary), A. G. Aves (financial secretary), A. W. Sandilands (treasurer), S. J. Wills and J. Lee (trustees), were each re-elected to their former posts; Messrs. W. F. Cribb, G. J. Hellery and A. J. Jones were appointed members of the Council to fill the vacancies caused by the retirement according to rule of three other members.

After statements had been made by Messrs. Esler, Jones and Ware, stewards for the annual dinner (which event is to be held at the Connaught Rooms on April 21st), a vote of thanks was heartily accorded to the chairman, and the meeting was then brought to a close.

Lord Northcliffe's Will.

Printing Trade Charities' Benefits.

The secretaries of the Newspaper Press Fund, Newsvendors' Benevolent and Provident Institution, and the Printers' Pension, Almshouse, and Orphan Asylum Corporation write jointly to the Press as follows:—

"The Newspaper Press Fund, the Newsvendors' Benevolent and Provident Institution, and the Printers' Pension, Almsheuse, and Orphan Asylum Corporation, in all of which the late Lord Northcliffe took a personal interest, are deeply grateful for the generous disposition which he has made on their behalf in his will. But they desire to point out that the will provides for the distribution of the residuary trust after the expiration of many lives, and that none of the three societies can expect to benefit by a single penny for at least half-a century.

"The necessity for continued support of our work, and especially for our annual appeals, is constantly increasing."

This statement of facts, it is announced, has been approved by all concerned.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

ITALY.

An agent at Turin desires to secure the representation for the whole of Italy, on a commission basis, of British manufacturers of fine writing paper, illustrated post cards, chromo-lithographic and three colour prints, fine stationery. Reference No. 91.)

SWITZERLAND.

A Swiss agent resident in Zurich is desirous of securing the representation of a British firm of paper and cardboard makers who wish to obtain business connections with printing works, lithographic works, account books and ledger manufacturers, cardboard box makers, etc. (Reference No. 145.)

DOMINICAN REPUBLIC.

A commission agent in Santo Domingo, understood to be of good standing, wishes to represent British firms manufacturing stationery and office sundries, including account books, cheap school exercise books, commercial writing paper, writing pads, boxed notepaper and envelopes, carbon paper, inks and general office sundries. (Reference No. 153).

NETHERLANDS.

A British firm in Amsterdam, with head offices in Australia, are desirous of being placed in touch with British firms manufacturing blotting paper with a view to the exporting of same to Australia. (Reference No. 98.)

Towards Better Printing.

Newcastle J.I.C. Lectures.

A start has been made this month with a series of lectures at Newcastle-on-Tyne under the auspices of the Joint Industrial Council of the Printing and Allied Trades. The first lecture was delivered by Professor R. G. Hatton, principal of the Department of Fine Art at Armstrong College, Newcastle, who spoke on "The Artistic Value of the Printed Book." The start was a most encouraging one, there being a crowded attendance, composed of employers and employees in the trade.

Mr. J. B. Leslie Smith, chairman of the District Committee of the Council, presided and briefly indicated the nature of the addresses to be given.

Professor Hatton first congratulated the council upon the movement for the improvement of the artistic quality in printing and in the allied crafts, which the series of lectures inaugurated. The influence of printing upon civilisation, he said, must always be great. Few crafts, while serving a useful purpose could do so much for the spiritual side of man's nature, or have done so much Fortunately for us the value of artistic quality in printing had not now to be proved, thanks to William Morris and his successors.

Newcastle should remember Joseph Crawhall, whose experiments had and still have a wide influence. One point must be emphasised, let them not mistake the costly for the good, but let them not forget that they must expect to pay for what was good.

The lecture was accompanied by some excellent lantern illustrations.

The Process Engravers' Club.

The second meeting of this club was held at Ye Olde London Restaurant on the 6th inst., and proved a most enjoyable and interesting time. There were 36 members present, and the president, Mr. A. Dargavel, occupied the chair, being supported by the vice-president and council.

Mr. R. A. Austen-Leigh, the president of the Federation of Master Printers, paid the club a visit, and gave an address relating mainly to the proposed collective exhibit for the trade at the forthcoming Empire Exhibition in 1924. Those present were much interested in the matter, and most probably more will be heard of it in the near future.

The president gave an address pointing out the great value of co-operation between employers in order that each might be of benefit to the other, so that by discussing matters affecting the industry, such as production, apprentices, economical prices, working conditions, etc., they might be enabled to carry on the industry for the benefit of themselves whilst at the same time keeping before them the view-point of the customer.

Mr. Huggins gave an interesting account of his visit to the proprietors of an alleged new illustration process that is to "revolutionise" process work, though it seemed apparent he did not consider that the time had yet come when engravers should be called upon to weep at the graveside of the process engraving industry.

Mr. Vincent also gave an address full of encouragement, and asked all to co-operate in order to make the meetings not only successful so far as numbers are concerned, but eminently usetul. It was not a question, he said, of how fluent a speaker may be, but of what information he had to impart—that was the secret of success.

Mr. Coombe entertained the meeting with a song that was so much appreciated that he was called upon for an encore.

Other musical items by gentlemen introduced by Mr. Carl Hentschel helped to make up a very interesting and enjoyable evening.

The next meeting will be held on Tuesday, March 6th, and will be addressed by Mr. W. Gamble, F.R.P.S, upon a matter of importance to all process engravers.

UNEMPLOYMENT FIGURES.—The Ministry of Labour states that the number of persons on January 29th registered as wholly unemployed was 1,409,900. This was 28,941 less than in the preceding week. The number working short time and drawing benefit for intervals of unemployment was 54,700 on January 29th, compared with 54,004 on January 22nd.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

A pronounced success was the annual dinner held at the Mitre Hotel, Cathedral Gates, on Saturday last, when eighty-two members and ladies were present. Mr. F. E. Robinson (president) had the support of Mrs. Robinson, Mr. Frank Scouler (vice-president) and Mrs. Scouler, Mr. S. M. Bateman (president, London Centre), and Mrs. Bateman, Mr. E. W. Whittle (general secretary) and Mrs. Whittle, Mr. J. C. Pugh (London), Messrs. Chas. Mackie and Jas. N. Poole (president and secretary, Liverpool Centre), Messrs. H. Temple and J. Thackrah (president and trustee, Yorkshire Centre), Messrs. C. H. Prestidge and W. E. Martin (treasurer and secretary, Birmingham Centre), Mr. John Taylor (president, The Printing Crafts Guild), Messrs. Thos. L. Whitehead, Richard Bates, Fred. Burnett, Edward McVay, J. H. Nuttall and Thos. Rignall (all past presidents of the Manchester Centre), Mr. Jas. E. Mayo (treasurer), Mr. F. J. Hughes (secretary) and Messrs. E. C. Balls and A. Hellewell (stewards).

After the dinner, the president issued a few cheery words of welcome, and then immediately followed with the toast of "The King" which was received with musical honours.

The president in proposing the toast of the evening, "The P. M. and O. A," said that those persons who were eligible for membership and still held aloof were missing something of advantage to them. The main object of the Association was educational, and recently Mr. Ernest Garrett had read a very instructive paper on "The Training of the Apprentice," and it had caused the Manchester members to think deeply. The educational authorities appeared to have failed in their efforts and the technical authorities seemed rather slow in getting successful day classes in Manchester on a sound basis. He suggested that the Masters' Association and the P. M. and O. A. should hold a conference and discuss the feasibility of apprentices attending day classes for something like two half-days per week, as the employers would benefit in the long run. He was sorry to admit that the present-day rank and file of printerdom were very poor craftsmen, and every person who had the craft at heart should endeavour to raise the standard of efficiency.

Mr. S. M. Bateman humorously remarked that he had answered the bugle call for the twenty-ninth year, and during that period he had spent three-fourths of his time as an office-bearer. He had always endeavoured to do what he could to advance the interests of the Association. As President Robinson had touched upon the question of apprenticeship, he might say that before St. Bride's, London, was opened, he had delivered lectures to craftsmen, written articles to the trade press, and suggested day classes for students, but he was met with the rebuff that France had tried it and failed. His retort was that if France had failed, that was no argument that Britain would fail. After a lapse of ten years they in London had decided to resuscitate their annual dinner, and had seriously discussed whether they should, or should not, open the doors to the ladies. During the past few years the ladies had claimed equal rights, and so it was decided to admit them, the promises to date being over one hundred. On behalf of London he thanked Manchester for the opportunity of being present to extend the goodwill of the Association.

Mr. Chas. Mackie said that to become a member of the Association a man had to have a certain amount of dignity, and when once inside he should always endeavour to maintain that standard. In Liverpool, the educational people had given them a rebuff, but they were not going to stop at that as the young craftsmen should be guided on proper lines, and there were no other persons more capable of doing it than the members of the P. M. and O. A. He wished Manchester success on its efforts to do all possible for the young craftsman.

Mr. H. Temple spoke on the motto of the Association, "Audi alterem partem," and remarked that although they were members of the buffer state, yet they were always willing to hear the other fellow—the other side—so as to give a fair and honourable decision on a subject that came within their province. They were always out for enlightenment, and he illustrated his view with a farming story. Such social events as the one in which they were participating helped to brighten their lives and remove the worries of business.

Mr. W. E. Martin, speaking on technical education, said they were well served in Birmingham and had a representative on the education committee. The principal of the University was very considerate and did all possible to help the young people. He hoped the other Centre would soon be as well favoured.

Mr. Ernest Garrett gave "The Visitors, the Ladies, and the Artistes" in an appreciative little speech.

Mr. E. W. Whittle replying, naturally picked out the ladies for special mention, and afterwards humorously replied on their behalf. As a visitor he also touched on the technical side, and said London was well ahead in the matter of day classes, the employers paying the fees and sending the apprentices to the technical day schools.

There were calls for Mr. Pugh, the Association's statistical commentator, and the chairman gracefully deviated from the printed programme to ask that gentleman to respond.

Mr. Pugh spoke upon the questions set for students at examinations, and remarked that to answer many of them was impossible for the student, and would even tax members of the craft who were many years older. He desired that the Association should work out a practical curriculum so that the student would not become disheartened and give up when half of his term had been put in. It was noticeable that after the Christmas vacation there was a great falling off in the attendances, and there should be some means of inducing the lads to carry on with a hope of success.

The artistes were Messrs. George Handby (humorous), Chas. G. Maynard (baritone), F. T. Ward (character sketch) and Miss Mollie Lewis (contralto). The accompanist was Mr. Frank Tighe.

Ancoats Hospital.

Through the instrumentality of Mr. Edward McVay the members had pledged themselves to raise forty pounds in aid of this most deserving institution, and it was the president's pleasure to announce that the sum of fifty-two pounds had been received to date. This was greeted with cheers, and then Mr. McVay expounded some of the work done by Ancoats Hospital which was in close proximity to many of the printing houses in the city.

WEE MAC.

The Irish Printing Trade.

Serious Wage Trouble Continues.

The printing trade stoppage in Limerick previously reported, appears to be continuing and Limerick master printers state that the men have struck against a reduction of 5s. a week, agreed to by their own executive. This cut, it is pointed out, was made in some other Irish centres more than a month ago, but was deferred by Limerick employers as a concession. The operatives have described the dispute as a lock-out, and refer to the reduction as one of 12s. 6d. In reply, the masters say that the question of the further 7s. 6d. is to be considered by a joint conference. It is also stated that the action of the Limerick operatives is not approved by the executive of their own union. The men refused to set up a statement of the employers' case for publication in the last issue of the local papers before the strike.

Masters' Defence Fund.

At the annual meeting last week, in Dublin, the Irish Master Printers' Association, representative of the four Irish provinces, it was decided to inaugurate forthwith a defence fund to indemnify master printers and newspaper proprietors in Kilkenny and Limerick for the losses they have sustained by reason of the closing of their offices by members of the Typographical Association, who, it was affirmed, ceased work in defiance of the directions of their own executive committee rather than accept the reduction in wages recommended by their executive, following a decision reached at a meeting of the Joint Labour Council of the industry. The resolution was unanimously subscribed to by the 25 delegates from the provinces who were present at the meeting.

The Paper Trade Golfing Society

Lord Riddell's Cup.

The third round of the competition for the cup presented by Lord Riddell has now been completed, with the result that the following have passed into the fourth round, which must be played off by February 28th: Mr. F. A. Skerratt, Mr. R. D. Oldham, Mr. F. C. Harding, Mr. S. G. Saunders, Mr. S. A. Harding, Capt. C. R. Mullings, Major A. J. Evans, and Mr. T. A. Colclough Leete.

Match v. Aero Golfing Society.

A match by singles and foursomes took place at Coombe Hill Golf Club, when the Paper Trade Golfing Society were successful by 7 matches to 4 on the day's play, winning the singles by 4 matches to 3 with one match halved, and the foursomes by 3 matches to 1.

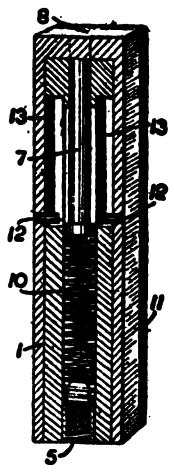
New Inventions

Intaglio Printing.

In this invention the free end of a flexible intaglio printing plate, after the plate is tightly wrapped round the printing cylinder, is secured by being clamped between a distance piece and a capping piece which are fixed in a longitudinal slot in the cylinder. As shown, the slot 2 in the cylinder is provided with a steel jaw 3 carrying pegs 4, over



which perforations in one end of the plate 5 are passed. A distance piece 6 is then placed in the slot 2 to retain the plate upon the pegs and is itself secured by latches 7 on the ends of the cylinder engaging lugs 8 on the piece 6. After the plate 5 is wrapped round the cylinder by the apparatus described in Specification 188,148, the plate is forced into the slot by means of a dove-tailed capping piece 9, presser block 10, are long bolts 11. The presser block 10, which is in several sections, is then removed one section at a time, the bolts 11 being replaced by screws 12 having countersunk heads flush with the surface of the capping piece 9. The plate is then severed along the edge of the capping piece 9, and the latter is covered by an undercut piece 13 which is substantially flush with the surface of the cylinder. To facilitate the passage of the scraper, the slot 2 may be slightly inclined to the axis of the cylinder. The end of the plate 5 engaging the pegs 4 may be bent round a reinforcing rod 14, and the other end of the plate may be similarly formed to engage the tensioning bar of the straining apparatus described in the Specification referred to above. The invention is patented by Messrs. Penrose and Co, Ltd., and A. W. Gamble and M. Owen.

A Composing Appliance.

A device for holding set up type in a galley or tray, as patented by Mr. P. Yates, comprises an extensible rod or bar formed of two members 1, 8, connected in slidable relation, so as always to present a continuous surface to the type, and extended by means of a spring 10 to engage frictionally the opposite sides of the galley or tray. The main member 1 is a rectangular block grooved on opposite faces to receive side pieces 11 of the member 8, and bored axially to contain the spring 10 and to guide a plunger 7 attached to the member 8, the outer end of the bore being closed by a screw plug 5. The relative movement of the members is limited by stops, for example pins 12 on the member 8 and slots 13 in the member 1.

Producing Colour Prints.

An interesting method of colour photography has been patented by Mr. E. A. Zage, whose invention relates to a process for producing colour prints on paper or the like, in which three colour-value negatives are successively copied on a single base which is re-sensitised for each successive image, the yellow partial image is produced as a chrome yellow image, the blue partial image is produced as an iron blue image, and the red partial image is produced by a chromate process, the yellow image being maintained invisible until the blue and red partial images have been printed. A bichromate bath which is used to produce the yellow image is also utilised to sensitise the paper for printing the red image. An ordinary black gaslight or similar print is produced from the yellow negative, well rinsed, and bleached in a bath containing lead nitrate, potassium ferricyanide, and nitric acid. The print is washed, dried, and moistened with a solution containing ferric ammonium citrate and potassium ferricyanide. It is then printed fully under the blue negative, washed, dried quickly, and coated with a 3 per cent. solution of potassium bichromate, which is allowed to dry. This develops the yellow partial image, but, owing to the yellow colour of the bichromate, maintains this image invisible, and also sensitises the surface for printing from the red partial negative. The printing from this negative is continued until the image is just visible in the high lights; the print is then washed and dried and the red image is produced thereon by treatment with red pigment. The print is finally fixed in sodium hyposulphite, washed, and dried.

THE Print Society (Woodgreen Common, Breamore, Hampshire), is publishing this month the second and expanded edition of "On Making and Collecting Etchings," which has been out of print over two years. In April will appear "66 Etchings," a book sumptuously illustrated with reproductions of examples of most of the graphic processes.

The Use of Too Small Type.

Printers and Publishers Warned.

A warning that the extensive use of printing type of smaller dimensions than 10-point is becoming a serious factor among the contributory causes of eye fatigue and impairment of vision is contained in a communication from the National Committee for the Prevention of Blindness, 130, E. Twenty-second-street, New York City, to the various associations of book and periodical publishers, advertisers, printers, school boards, libraries and other large users or producers of printed matter.

The statement calls attention to the fact that "the use of type smaller than 10-point, not only has a harmful effect on the eyesight of the reader, but often defeats its own purpose by repelling the potential reader who realises that the reading of such type hurts or tires his eyes." The amount of money lost by advertisers and publishers through the waste circulation that results from the use of type faces difficult to read because of smallness or design, says the Committee, is probably greater than the cost of the extra space and paper stock necessary if larger type is used.

Particularly in the case of school books and publications read by children is the use of small type harmful, the committee says. Reading matter intended for children of any age should never be printed in type smaller than 10 point. The type sizes recommended for children by the National Committee for the Prevention of Blindness are: For children 12 years of age, 10-point; children between 9 and 12 years, 12-point; children between 8 and 9 years, 14-point; children between 7 and 8 years, 18-point; children under 7 years, 24 to 30-point.

The publishers of geography and history maps are among the most flagrant offenders in this respect, the Committee reports. A special effort to induce publishers of school maps to use larger type will be made.

A research recently conducted by the Department of Education of the State of Ohio showed that certain styles of 24-point type were more easily read by young children than other styles of 36-point type. The ultimate abolition of the use of all 6-point and smaller types of any styles is urged by the Committee. Publishers, printers, and advertisers who have on hand large stocks of such small types are urged to use them only when their use is unavoidable, and to scrap such type at the earliest opportunity.

As an indication of the growing appreciation of the effect of type sizes on eyesight, the Committee reports that at least two public libraries at St. Louis, Mo., and Springfield, Mass., have set aside departments of "Books for Tired Eyes" in which are included only books of 14 and 18-point type. These books are proving exceedingly popular with older people. Plans are also under way among Bible societies to publish the book of Psalms in larger type for older readers and similar steps are being considered by the publishers of fraternal organisation journals read largely by older persons.

Canada and Australian Preference.

Mr. J. A. Robb on His Mission.

Mr. J. A. Robb, the Canadian Minister of Trade and Commerce, who has been on a mission to Australia, is now nearing home, having returned by Europe. It was understood to be his object to seek a preference for Canadian pulp and paper, and a report was current recently that he had succeeded in this task.

According, however, to an interview which Mr. Robb granted in Paris to a correspondent of *The Times*, no definite decision appears to have been reached.

While Mr. Robb was not free to talk of the terms of the "proposed treaty," he discussed its origin and aims.

Speaking of Canada's preference to the Mother Country (now 33⅓ per cent.) Mr. Robb mentioned that for twenty-five years the British preference has been open to Australia. For one reason or another, however, Australia has refrained from taking advantage of this preferential tariff in the Canadian market. When the Canadian Government, of which Mr. Robb is a member, assumed office in December last, they received representations from the Australian Government which indicated that they would like to enter into negotiations with a view to obtaining the advantages of Canadian-British preference; and on the invitation of Mr. Hughes, the Prime Minister of Australia, Mr. Robb was appointed by the Canadian Government to take to Australia an offer of the widest measure of British preference.

The policy of Canada, as far as is consistent with her own requirements of taxation, Mr. Robb continued, is all in favour of trade within the Empire. The treaty which is now being negotiated between the Governments of Canada and Australia is an important link in the chain. He sat for a month with the Tariff Board of Australia and discussed with them every detail of the project. The powers of the Board are, however, only advisory, and it is now for them to advise the Government of Australia on the results of the pourparlers.

MUSIC TYPEWRITER.—At the Hyde Park Hotel recently, in the presence of a few invited guests, Mr. L. Fortoni, the leader of the orchestra at Prince's, Piccadilly, demonstrated the use of a music typewriter of his own invention. The machine is stated to be but little larger than an ordinary typewriter, and to make possible a neat and direct copy of any description of musical composition—piano score, vocal score, orchestral score, band parts, etc., ready also for any duplicating process whereby thousands of copies of a new work can be produced in a few hours by printing directly upon transfer paper, and at a great saving of money.

Amalgamation and Reconstruction of Printing Companies.

By HERBERT W. JORDAN

(Managing Director of Jordan and Sons, Limited).

As a preliminary to the subject of reconstructions and amalgamations it may be well to speak on the manner in which companies are formed. As is generally known, there are two categories of companies recognised by the Companies Acts, namely, public and private companies. The vast majority of companies are "limited by shares," but a few are "limited by guarantee" or "unlimited," either with or without share capital. These latter classes may be ignored for our purpose, seeing that amalgamations and reconstructions of such companies are almost unknown. In passing, however, I may remark that the liability of the members of a company limited by shares is restricted to any amount that may be unpaid on the shares they hold; the members of a company limited by guarantee are liable to the extent of the amount of the guarantee fixed by the memorandum of association (but only in the event of the company going into liquidation), and also as shareholders if the company is registered with a share capital; and the members of an unlimited company are liable *pro rata* to the full extent of the company's indebtedness. The bulk of the companies limited by shares are private companies.

Formation of Private Companies.

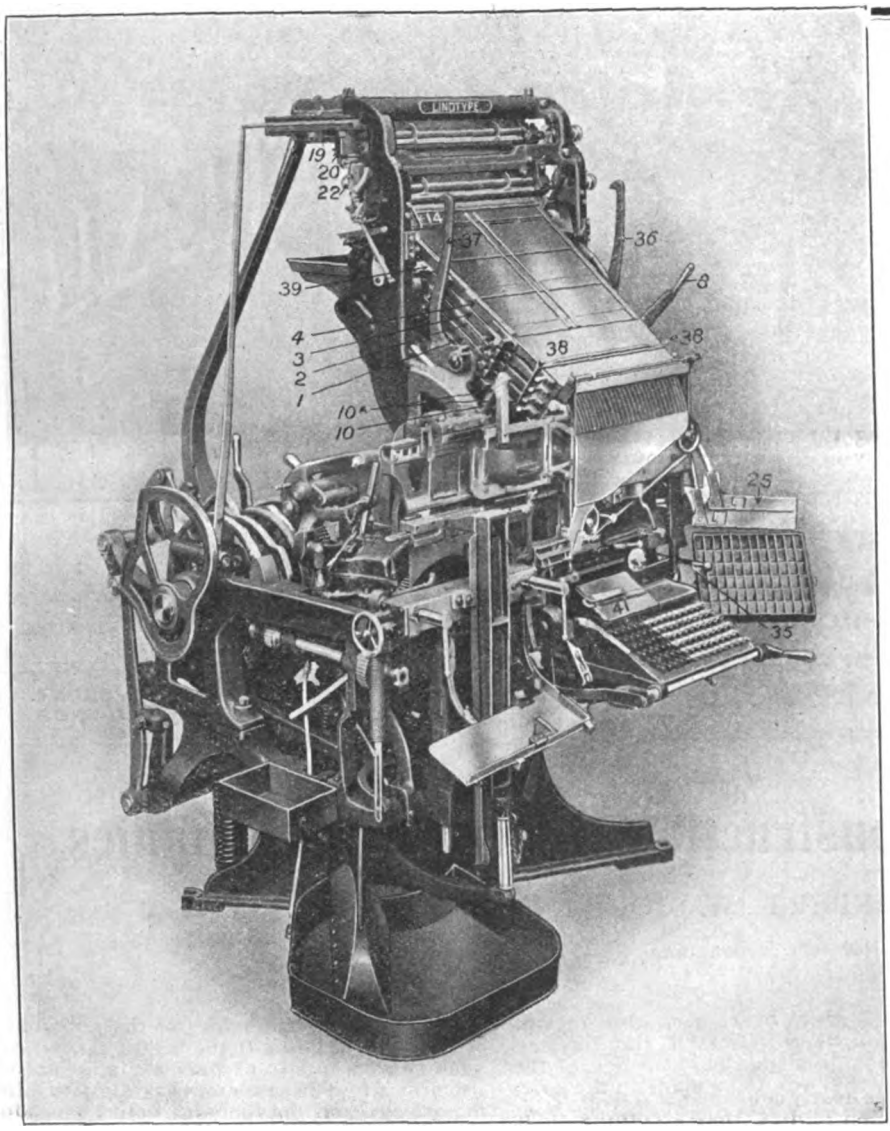
In order to constitute a company a private one the right to transfer shares must be restricted, the membership limited to 50 (excluding employees and ex-employees) and any invitation to the public to subscribe for shares or debentures prohibited. Unless all these conditions are complied with, the company will be outside the statutory definition and consequently come within the category of a public company.

Private companies are frequently formed for the purpose of starting new enterprises. In such cases a few individuals (or it may be only one) form a company instead of a partnership, each person contributing capital to an agreed extent by acquiring the requisite number of shares and paying for them to the full extent of their nominal value, or paying a certain sum per share and leaving the balance to be paid as and when required. The conduct of the business will be entrusted to the directors (who, as a rule, will be the individuals forming the company or one or more of their number) and they will receive from the company "remuneration" for their services instead of "drawings" which they would take as partners had a firm been established. The directors (and any other shareholders) will, of course, also receive dividends on their shares if the business prospers, such dividends being in lieu of the distribution that would be made to the partners had a firm been established. If the sum originally invested in the company should prove insufficient, owing it may be to anticipations of prosperity not being realised quickly enough, or conceivably to an unexpectedly rapid expansion of the business rendering a larger amount of working capital necessary, one of two courses must be taken: the additional funds must be provided by one or more of the shareholders or be obtained from some other source, or the company must be wound up and the business disposed of by the liquidator. If no one can be found who is prepared to take up further shares unless they carry attractive rights to dividend, it may be deemed advisable to create a new class of shares to be called preference or deferred shares, conferring on the holders thereof either the right to dividends at a fixed rate in priority to the other shareholders (whose shares would be known as ordinary) or to a large proportion of the profits after the payment of a dividend at a specified rate on the existing shares. Another method would be to create a series of debentures and find persons who will take them up, or to lodge the instruments with the company's bankers as security for an overdraft. The holders of the debentures would be secured by a floating charge on the stock-in-trade, book debts and other assets, and, in the event of the company owning any unencumbered freehold property or other assets of a permanent character, a fixed charge would probably also be conferred on them.

"Conversion" into Company.

Where a business already exists and a company is formed to take it over, the business or firm is popularly spoken of as being "converted into a company"; but, of course, the business is not affected and remains as hitherto, although the proprietorship is transferred from the firm (or individual) to the new company. The owners (or owner) usually transfer the business to the company when formed in consideration of the allotment to them or their nominees of a number of fully paid shares of the company, the nominal value of which should represent approximately the value of the business as a going concern. "Conversions" of the kind are effected for various reasons, the principal being: (a) The desire of the proprietors (or proprietor) to give others an interest in the business (in the shape of shares of the company), and in many cases a measure of control over the affairs by offering them directorships of the new company, without going to the length of inviting such persons to join as partners in the existing firm; (b) The desire of the proprietors to make provision for their respective families during their lifetimes by making a present to certain relatives of a substantial proportion of the shares to which they are entitled in consideration of the transfer of their business to the company; (c) To obtain additional capital by getting friends, customers, or other persons, to take up shares or debentures; and (d) The limitation of the liability of the partners, in view of the risk of failure attending the carrying on of business of every description.

The conversion of a business into a company is effected in a simple manner and the procedure follows a somewhat regular course. A company is formed to take over the business, which is transferred to it by the proprietors at a specified price, the sum being satisfied as a rule by the issue to the vendors, or their nominees, of fully-paid shares. The vendors thus exchange their status of partners in the firm for that of members of a company. Usually some of the shares to which the vendors are entitled are, by their direction, allotted to members of their families or to senior employees, some of the relations and occasionally responsible members of the staff being appointed directors.



More rarely, a business is transferred to a company for shares and debentures or even debentures alone. The vendors in such cases become (as debenture holders) creditors, and have the benefit of a floating charge on the assets they transfer to the company and any assets the company may acquire subsequently. If the company's operations should result in failure, the claims of the debenture holders will rank before those of the ordinary creditors, who generally get nothing; the debenture holders thus may be able to obtain possession of all the assets, and immediately form a new company to acquire them, issuing debentures to the individuals as in the case of the original company. This procedure can be repeated again and again; one individual in fact has carried it through successfully as many as thirteen times, but his little game ended with his fourteenth company! But the difficulties usually prove too serious for the "game to be worth the candle." Companies formed for the purposes mentioned are almost invariably registered as private companies.

Amount of Capital.

As with firms, the capital invested in private companies varies greatly in amount. Many

private companies have a paid up capital of well over £1,000,000, but in most cases the figure is under £5,000. In a few instances the capital has been no more than £1 divided into shares of 1s. or even ¼d. each.

It must not, however, be assumed that the amount of the share capital of a company reflects the value of its undertaking. A well-known large printing company, for instance, has a nominal and paid-up share capital of only £5,000, which obviously represents but a small fraction of the capital invested in the business. A few years ago a newspaper company was registered with a share capital of £100, but it issued debentures to the extent of £100,000.

If an offer to the public of shares or debentures is contemplated with the object of obtaining additional capital or of enabling the owners of the business to be paid partly in cash, the company must be registered as a public one and a prospectus or statement in lieu of prospectus filed. Before commencing business the company would have to obtain a trading certificate from the Registrar of Companies, which would be issued on a declaration being filed that shares to the amount of the minimum subscription had been allotted payable in cash and that certain other statutory requirements had been complied with.

The principal documents required on the registration of a company, whether public or private, are the memorandum and articles and (where a business is taken over) a contract of sale.

(To be Continued.)

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

BRITISH INDIA.

An Englishman residing in India, having had 20 years' experience of the Indian market, is prepared to undertake the representation of a limited number of lines (including paper and stationery) on a basis of representation for one year on probation, for a fee of £100 for a share of travelling expenses, plus commission. He proposes to make a first tour of the country early in March. (Reference No. 158.)

SOUTH AFRICA.

His Majesty's Senior Trade Commissioner in South Africa (Mr. W. G. Wickham) reports that a local firm desires to secure the agency of a United Kingdom firm manufacturing writing pads, boxed stationery and envelopes. United Kingdom firms interested in obtaining the name and address of the firm in question should apply to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1.

British Paper Trade.

Improvement Maintained.

In the papermaking industry the situation has not altered very markedly in the last month or so, but there is cause for satisfaction that the improvement which set in towards the end of last year has been well maintained. The news-print mills are booked well ahead, and their prices are almost on a par with Scandinavian quotations. They have a good home demand, and also a very fair sale abroad, especially in Australia, which strongly favours British paper. In printing and writing papers the mills are also well placed.

Prices are somewhat difficult, and apparently esparto paper is at present more profitable than paper made from pulp, the first costs of material being more favourable, while the process of manufacture is more economical. Scotch esparto mills are working at almost maximum production. Fine paper mills are not so well situated, and orders not plentiful, while competition is very keen.

The home demand is slight, owing to the inactivity in commerce, which means a small consumption of stationery. Wrapping and coarse paper mills are also in rather a bad way, as foreign paper is coming forward in large quantities.—*Bulletin, F.B.I.*

Central London Master Printers.

Mr. Jordan on Company Law and Practice.

There was a larger attendance than usual and much interest was displayed at the meeting of the Association of Master Printers of the London Central Districts on Monday of last week, when Mr. Herbert W. Jordan (managing director of Messrs. Jordan and Sons, Ltd., printers and company registration agents of Chancery-lane), lectured on "Amalgamations and Reconstructions of Printing and Other Companies."

The chair was taken by the Association's able president, Mr. J. D. McAra, F.C.I.S., who, in opening the proceedings, referred to the complexity of the ramifications of the Companies Acts, and introduced the speaker as being as well known amongst printers as amongst experts in company law and practice.

Mr. Jordan then delivered his lecture, which though of considerable length, was closely followed throughout, and gave rise to a good deal of discussion. The first section of the lecture appears on another page of this issue, the rest to follow as space permits.

At the conclusion of Mr. Jordan's remarks, the chairman threw the meeting open for questions and discussion.

Mr. F. Colebrook asked for some indication of the lecturer's experience as to whether amalgamations appeared to him in general to have served the purpose for which they were entered upon.

The lecturer replied that as a general rule this had decidedly been the case, though there were exceptions.

Valuation and Income Tax.

Mr. Colebrook asked further what the attitude of the income tax surveyors had been in the case of amalgamations with concerns whose plant values had been taken at nominal rather than at actual figures, the new conditions necessitating a statement of values more nearly corresponding with reality.

Mr. Jordan replied that according to his experience there was no difficulty in this direction. Increased value was treated as capital appreciation—not profit chargeable with income tax—on the same principle that no allowance could be claimed for decreased value.

Mr. Crowther, who mentioned his having had to do with company law for a long period of time, said he was surprised that more in the trade had not attached the word limited to the names of their firms. The Companies Acts had been exceedingly beneficial to commercial men. He strongly advised any who might be contemplating turning their businesses into limited companies to secure the services of a solicitor specialising in company law. It also greatly facilitated matters to employ a firm of chartered accountants thoroughly familiar with company work. He drew attention also to the unfairness of the Corporation Tax.

Mr. Jordan entirely agreed as to the need of employing a solicitor familiar with company law. He added that the same applied to counsel, should their services be necessary, and chartered accountants. Many serious mistakes had been made in dealing with such matters. The Corporation Tax, he regarded as iniquitous; it was justified at its introduction by the fact that companies did not pay super-tax, but that justification was now removed. He remarked that the Corporation Tax could be avoided by registering as an unlimited company with a share capital.

Mr. Colebrook asked whether firms amalgamating should in general keep their capital as low as possible, with a view to a less sum being necessary for the paying of a respectable divided.

The lecturer answered in the affirmative. As a rule he thought capital was made rather too high.

A querist referred to companies with shares not fully paid up, and asked whether the directors would be justified in cancelling such shares.

Mr. Jordan replied that the shares could not be cancelled, as that would be reduction of capital requiring an Order of the Court, which probably would not be granted.

The Creditor's Position.

Mr. W. H. Burchell deplored the fact that there seemed no one at Somerset House or at the Board of Trade who watched over the creditor's interests. A company could go into debt up to five minutes of the time at which a resolution was passed to go into liquidation and wind up the company's affairs. Another point he raised was that a master printer seeking to discover the position of a public company by searching the files at Somerset House might find that no balance-sheet for the previous year had been filed. He understood that a heavy penalty was imposed for this omission, but was informed that the penalty was never inflicted. It was time, he suggested, that we had some legislation framed in the interest of creditors to remedy these evasions.

The lecturer, in reply, advised traders before giving credit to a doubtful company to find out whether debentures had been issued, or to inquire of a trade protection association. It was true there were provisions in the Companies Acts which enabled tricks to be played, but on the whole the Acts were very good, and official committees of inquiry had reported that amendment would be likely to be more troublesome than beneficial. He did not understand why a balance-sheet, or a statement in the form of a balance-sheet was not available in the case referred to.

Names on Business Stationery.

In reply to a further query Mr. Jordan stated that in the case of both private and public companies registered since November 22nd, 1916, it was necessary for the names of directors to appear on business stationery.

In response to another speaker, Mr. Jordan quoted the wording of the Act in regard to directors names, these being required on trade catalogues, trade circulars, show cards, and business letters.

Some discussion having arisen as to the powers and rights of directors after the appointment of a receiver, Mr. C. A. Bates pointed out that although it might be impossible to depose a director, yet after a receiver was appointed a director had practically no power and all orders had to be sanctioned by the receiver.

A question having been raised as to the best method to be adopted—in the case of the conversion of a business into a company—in order to put the vendor in as strong a position as possible, there being objection to his taking debentures, Mr. Jordan said that the vendor should take notes instead of shares, as he would in that case be a creditor and thus rank before the shareholders in the event of a winding up. Notes are, it was explained, in effect debentures not containing any charge.

Asked as to the procedure and expense in turning a small printing business into a company with a capital of about £1,000, Mr. Jordan went into some detail as to the steps that might be taken, and roughly estimated the total cost of the various items to be about £50.

The Chairman's expression of thanks to Mr. Jordan at the close was supported with very hearty applause.

British Empire Exhibition.

Organising United Kingdom Exhibits.

It is the intention of the British Empire Exhibition authorities that the United Kingdom exhibits section, of which Sir Lawrence Weaver is director, shall be fully representative of every branch of industry in the Kingdom. No fewer than 54 technical committees have been set up, and every firm in every trade is being invited by the particular trade committee either to take space of its own in the exhibition or to join in any collective exhibit that may be organised by its own trade association.

Among the latest industries to be circularised in this way are the following: Printing, 1,214 firms; stationery, 1,105 firms; wall-paper, 87 firms.

Any firm or association of traders failing to receive a notice or invitation should communicate at once with the Director, United Kingdom Exhibits Section, British Empire Exhibition, 16, Grosvenor-gardens, S.W.1.

Papermaking.

At a recent meeting of the Council of the Papermakers' Association, a resolution was passed unanimously in favour of the Association co-operating with the Paper Trade Committee of the exhibition in order to secure a comprehensive exhibit of the industry.

It is interesting to note, as an indication of the extent of the exhibition, that the Wembley grounds will cover over 200 acres, whereas the entire space occupied by the 1851 exhibition in Hyde Park was but 26 acres.

Trade Notes.

BOOKBINDING DISPUTE ARBITRATION.—We understand that it is not yet settled what will be the personnel of the arbitration court which is to meet as soon as can be arranged to decide the points at issue in the wage dispute affecting the London bookbinding trade.

THE Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, reports a request for catalogues of educational books from Brazil. Reference 7470/F.L./M.F. should be quoted in correspondence.

NEWSPAPER POSTAGE.—A deputation introduced by Lord Riddell, which included representatives of the Newspaper Proprietors' Association, the Newspaper Society, the Weekly Newspaper and Periodical Proprietors' Association, and the British Association of Trade and Technical Journals, waited upon the Postmaster-General last week to ask for a reduction in newspaper postage rates. Mr. Neville Chamberlain, in reply, stated that the newspaper post already involved the Post Office in a heavy loss annually, and he felt unable to hold out any hope of cheaper newspaper postage at present.

L.M.P.A. DINNER.—It is understood that at the annual dinner of the London Master Printers' Association, at the Connaught Rooms on March 6th, the London local associations are arranging for separate tables for their members. Master printers who have not yet applied for tickets are requested to do so at once so as to facilitate the arrangements.

THE Yorkshire Conservative Newspaper Company, proprietors of the *Yorkshire Post* have acquired from Lord Rothermere the shares of Baines and Co., Ltd., Leeds, owning the *Leeds Mercury*. The latter journal will continue to be published as a picture paper.

WITH reference to the recent fire at the mill of Messrs. Pembertons (Gateshead) Ltd., the firm are again in a position to accept orders. The mill will be running within the next two weeks, so delivery can be made in about one month.

AN appeal against the dispersal of the Gardner Collection of Old London Prints is made by Mr. John Lane, the publisher, who, as early as 1910, emphasised the desirability of securing them for the City.

SAYING that he would put his judgment into writing, the Bow-street magistrate, on Monday, adjourned *sine die* the summons against Mr. Weiner (principal of the firm of J. Weiner and Co, Ltd., printers and lithographers, Long-acre), alleging that he "published a proposal or scheme for the sale of tickets in a certain lottery called the Great Poster Competition."

MUSIC LIBEL CASE.—In the Lord Chief Justice's Court in the King's Bench Division, London, last week, a settlement was announced of the music libel case, in which the plaintiffs, the Performing Right Society, Ltd., sued the British Music Union, Ltd., Mr. William Cartwright Newsam, its chairman, and Messrs. Lowe and Brydone, printers, of Willesden, in reference to certain statements made in a preface to a catalogue of music issued by the Music Union. Defendants apologised for the statements made and gave an undertaking that there would not be republished anything as affecting the plaintiffs in the action. It was accordingly agreed that there should be judgment for the plaintiffs for an indemnity for costs only.

AN £8,000 ADVERTISEMENT. — Messrs. Houston's Advertising Agency consented in the High Court last week to judgment against them for £8,038 16s., for advertising on the back of the amendment slips sent out with the census papers in 1921. The Attorney-General said that the contract was for payment at the rate of £1,000 per million forms, less 10 per cent. commission, and that the charge made was for actual circulation, a certificate showing that 10,032,002 were circulated. For the defence, it was said that Mr. Houston was merely an agent. His principal was Horatio Bottomley, against whom he had obtained an "entirely unfruitful judgment."

AN appeal is to be made against the death sentence passed on George Vincent Buckeridge, bookbinder, for the murder of his wife and her foster mother at Pembridge, near Hereford.

BRITISH COLOUR PRINTING CO., LTD.—Mr. John F. Roberts informs us that he has disposed of his interest in the British Colour Printing Co., Ltd., of 56, Ludgate-hill, E.C., and has resigned the position of managing director which he has held since the inception of the company 30 years ago—during which period he is glad to say the company has been uniformly prosperous, and has paid substantial dividends to its shareholders. His resignation as managing director takes effect as from March 31st next, after which date (though he has consented to remain an ordinary director for one year only) he will have no personal control or responsibility in the conduct of the business.

PRESS FUND MATINEE.—Arrangements have been made for a matinee in the Glasgow Alhambra Theatre on Tuesday, March 20th, in aid of the Newspaper Press Fund, and to mark the diamond jubilee of this well-known benevolent organisation for journalists. The Glasgow and West of Scotland branch is the largest centre outside of London, and since it was established about 30 years ago a total of £7,281 has been disbursed in grants.

INSURANCE BY NEWSPAPERS.—In the House of Commons, on Monday, the Chancellor of the Exchequer (Mr. Baldwin), in reply to Mr. T. Griffiths, who drew attention to statements which he alleged had been made by Judges in the Courts that the insurance business now being run by certain newspapers was fraudulent in that the purchasers of such newspapers were denied the benefits promised, said that he was not aware that such statements had been made by Judges in the Courts. He did not think it would be practicable to bring insurance by newspapers within the definition of industrial assurance with a view to dealing with the matter in the Bill foreshadowed in the King's Speech.

MR. THOMAS HERBERT LIGHT, editor of the *Bootle Times*, died on Saturday, aged 45.

THE death has occurred in an Aberdeen nursing home, after an operation, of Mr. Archibald Taylor, printer and proprietor of the *Kincardineshire Observer*.

THE death is announced from Brighton, at the age of 87, of Mr. William James Towner, proprietor of a Brighton paper, with which he had been associated for 72 years.

THE death has taken place at Rhyl, of Mr. W. C. Radnor, a local journalist, who for many years was attached to the *Denbighshire Free Press* with his uncle, Mr. Cotton.

THE late Mr. Walter Samuel Cowell, Ipswich, stationer, who died December 18th last, left estate of the gross value of £36,134, with net personalty £31,778.

MR. HERBERT EDWARD JEWELL, of Ilford, Essex, well-known sporting journalist, left £1,225.

EDINBURGH WELFARE SCHEME.—A new and interesting Edinburgh welfare scheme was inaugurated on Saturday evening for the employees of Mr. William Thyne, Lochend Printing and Wholesale Stationery Works, Abbey-hill, Edinburgh, a firm with a history in the Edinburgh paper trade dating back to 1870. A recreation hall with accommodation for 250, which has been erected on a site adjoining the works, was formerly handed over to a committee of management, representing the firm and the employees, and it will be utilised as the headquarters of the workers' club. Among those present at the ceremony, which was largely attended by the employees, were Mr. and Mrs. William Thyne, Baillie Crichton, Mr. William Thyne, jun., Mr. Cleveland Ellis, Mr. W. B. Robertson, S.S.C., Mr. Ian C. Menzies, W.S., and Mr. George Rae.

"DAILY NEWS" COMPOSING STAFF.—Members of the *Daily News* composing companionship and their wives and friends spent a most enjoyable evening at the London Tavern, Fenchurch-street, on Saturday, on the occasion of their annual dinner. Mr. F. J. Baker, Imperial Father, presided, and the principal guest was Mr. Wilson Pope, representing the firm. Mr. Toms proposed the toast of "The Firm," and Mr. Pope happily replied. Mr. Murch toasted the companionship, and the Imperial Father, responding, mentioned that the companionship's six oldest members had over 240 years' service to their credit. The veteran had been with the firm 46 years.

"DAILY HERALD'S" FUTURE.—A meeting of the General Council of the Trades Union Congress and the Executive Committee of the Labour Party held at the House of Commons last week to consider the plans for the future of the *Daily Herald* authorised the Joint Committee on the *Daily Herald* to complete its plans for the paper's development, in the expectation that, at a further meeting to be held in about a week's time, a definite decision to put these plans into execution will then be possible. Amongst trade unions which have agreed to proposals involving financial aid to the *Daily Herald* are: the Typographical Association; Correctors of the Press; National Society of Electrotypers and Stereotypers; National Society of Operative Printers and Assistants; Amalgamated Society of Lithographic Printers; and the Amalgamated Society of Lithographic Artists, Designers, Engravers and Process Workers.

THE annual meeting of the North-Eastern District Council of the National Federation of Newsagents, Booksellers and Stationers was held at Darlington on Wednesday of last week. Mr. H. Lynas (Sunderland), the retiring president, referred with satisfaction to the fact that they had an improved organisation. In fact, the Federation throughout the country was better organised than ever before.

UNEMPLOYMENT RETURNS.—Figures issued show that unemployed on the live registers of the exchanges on February 5th numbered 1,386,300. This was 23,690 less than the preceding week, and 473,433 less than the figure recorded at the beginning of January, 1922. Since the new year, when the total number was 1,485,800, there has been a decrease of 99,500.

NEWSPAPER COLOUR PRINTING.—The Powers Engraving Co., New York, has, according to the *Fourth Estate*, built a factory for producing panchromatic plates that will for the first time enable the direct taking of photographs in colour. Mr. Frank P. Powers, representing this company, claims that the plates will enable newspapers to print colour photographs within an hour. "It will revolutionise the reproduction in newspapers of stirring news events," says Mr. Powers, "for no more time will be necessary than is now used in the ordinary half-tone. The colours used will be yellow, red, blue and black."

DUBLIN OUTRAGE.—On Saturday afternoon the extensive printing works of Mr. P. Mahon, Yarnhall-street, Dublin, were almost completely destroyed by mine explosion carried out by armed men. Mr. Mahon's was one of best-equipped printing establishments in Dublin.

AN unsuccessful attempt was made to destroy the Government stationery office at 41 and 42, Fleet-street, Dublin, by a land mine last Friday.

FRENCH PRINTERS AND THE RUHR.—The Committee of the Fédération du Livre de France recently passed a resolution expressing grave concern as to the possible consequences of the Ruhr occupation, and stating that the only certain ontcome of this "grave and dangerous military operation" is the arousing in Germany of chauvinism and the spirit of revenge. The Fédération is in favour of the intervention of the League of Nations.

The British Industries Fair.

"Shop Window of Britain" Unveiled. Exhibits of Interest to Printers.

Opened at the White City on Monday, the British Industries Fair is again an impressive demonstration of the ability of British manufacturers to meet the requirements of overseas buyers in a myriad different lines of trade. The visitor cannot escape being impressed with the immense and attractive display of British goods set forth for inspection upon some eight hundred stands, which if set end to end would cover about four miles.

The opening day of the Fair was marked by a visit from the King and Queen, and an inaugural luncheon was held at which the President of the Board of Trade, Sir Philip Lloyd-Greame, presided, the guests including many people prominent in Governmental and trade circles.

The Paper, Printing, Stationery and Office Appliance Sections of the Fair form one of the largest groups exhibiting, and various trades connected with these important industries are well represented. These sections are again situated at the Wood-lane end of the Fair buildings, being housed in Hall "J," close to the Wood-lane entrance. The Metropolitan Railway Co. have opened the Wood-lane station during the period of the Fair, and all trains will make a stop there. Services from the City and the West End run every few minutes.

Exhibits of Machinery.

One of the first inquiries the printer is likely to make at the Fair is for exhibits of machinery and apparatus intended for the printing trade. Of this he will find but little. The only power-driven machinery we noticed was at the Stand of the Canadian-American Machinery Co., Ltd., who are showing a good selection of their folding and other machinery, fitted with electric motor drive. A new type of machine shown, which is of rather special interest, is their Demy and Double Demy Folder. Amongst the folds demonstrated on these machines are: One fold (4 pp.), two right-angle folds (8 pp.), three right-angle folds (16 pp.), two parallel folds (8 pp.), two parallel folds (accordeon) (6 pp.), one right-angle fold followed by two parallel folds at right angles to the first (16 pp.), three folds, letter. By the addition to the Demy Model Machine of a patented attachment, single, or or more sheets, up to half the size of the enclosing sheet may be insetted in the first fold and the subsequent folds carried out. The feed of the inset sheet is automatically synchronised by the feed of the enclosing sheet.

Messrs. Hampson, Bettridge and Co., Ltd., have also an interesting machinery exhibit. They are showing several of their well known models—loose-leaf punching and creasing machines, paging machines, numbering, bevelling and bending machines, etc.—also a new model of special interest in respect of the growing use (in typewriter duplicating work) of sheets stuck together along one edge and perforated for separation after typing. The new combined gumming and perforating machine is shown carrying out the operations of gumming and fine perforating at a single operation.

The stand of the Monometer Manufacturing Co. (1918), Ltd., provides another exhibit of importance to the printer. Monometer furnaces are made for a number of purposes, but are best known to the printing trade in the form of Monometer pressure casting furnaces for casting all sizes of news, stereo, half-plates, etc., and Monometer ladling furnaces for job stereotyping, news, and all stereo work where hand ladling is preferred. The inquirer is shown many attractive features of these furnaces. In the casting furnace the casting device is mounted on trunnions to enable the outlet nozzle to be brought down on the top of the casting box when casting, and the apparatus is complete with the Monometer low-pressure gas burners, heat controller, and non-oxidation system and all other Monometer improvements. An interesting additional exhibit is, we understand, to be shown at this stand, namely, apparatus for heating typesetting machines by electricity, with the aid of electric temperature control.

Worthy the attention of producers of Christmas cards and other artistic printing is the neat and convincing exhibit of Messrs. Minton and Casey, who have brought together some admirable examples of embossing and similar work done by their customers. The firm does not undertake printing or embossing, but supplies the metal dies, blocks for book covers, cutters, etc., requisite for this work, these supplies being shown alongside the finished work. The exhibit includes most useful tools for enabling embossing and cutting out to be done at one operation.

Printers' Work.

The Stationery and Printing Section contains important showings of paper and stationery (with which we shall deal next week), but it is perhaps chiefly interesting for its examples of the work of British printers, and in this respect it is certainly a very impressive demonstration. There is a fine variety of printing to be seen, books, commercial work, posters, and colour printing of every description. The Fair lends force to the claim that the art of colour printing in the United Kingdom has of late years made so much progress that we may be said to be in advance of the whole world. In particular we are specially predominant in the three and four colour processes, and there are at the Fair many firms with hundreds of pretty subjects in various sizes suitable for use as fancy box-tops, calendar tops, advertising showcard tops, as well as for framing or decorative purposes. It is pointed out that United Kingdom firms are still publishing, and, bearing in mind the greater interest to the Empire of British scenes and subjects as against German designs, which usually show foreign figures and landscapes, many enquiries for these lines are anticipated.

Magnificent colour printing is, of course, to be found at the stall of Messrs. Raphael Tuck and Sons, Ltd., whose greeting cards, picture post cards, calendars, picture books, pictures and similar lines make up a delightful exhibit. This was one of the stands in the Stationery Section at which the King and Queen halted in their visit of inspection. Their Majesties showed much interest in the "Tuck" Post Card Competition which is now being widely taken up, and they examined the competition cabinet as supplied to retail stationers, admiring also the big poster of the "Thunderstruck Postman," which occupies a prominent place in the stand. By means of an ingenious mechanism the postman is in this case made to move his eyes and mouth in a very amusing manner.

Messrs. C. W. Faulkner and Co., Ltd., are also prominent with greeting cards, calendars, and colour printing of all kinds, whilst the large company of other exhibitors includes such firms as G. Delgado, Ltd., E. T. W. Dennis and Sons, Ltd., Sir Joseph Causton and Sons, Ltd., Geo. H. Harrison and Son, The Graphic Arts Press, Langley and Sons, Ltd., A. Vivian Mansell and Co., J. Salmon, and the Walsall Lithographic Co.

Messrs. Langley and Sons are to the fore in posters, a line for which the firm is famous. Some admirable Langley posters are to be seen in various parts of the Fair, and the firm has also an interesting stand at which to concentrate the attention of inquirers.

Books and Bindings.

Of books and bookbindings there is an excellent display. The Oxford and Cambridge University Presses both have magnificent exhibits, and the other exhibitors include Blackie and Son, Ltd., Chas. Knight and Co., Ltd., Ward, Lock and Co., Ltd., and many more. Charles Letts and Co. distinguish themselves in diary work.

Supplementary to the book exhibits is the interesting Stand of the Dux Chemical Solutions Co., Ltd., the makers of "Duxeen." The firm has demonstrations of the kind shown at previous exhibitions to prove the insect-resisting and waterproof qualities of this popular material for bookbinding and box-covering. The catalogue of the Fair (bound in "Duxeen") is shown with other "Duxeen"-covered books immersed in water to prove that the colours do not run even under this drastic treatment. The insect-resisting character of "Duxeen" is also illustrated, an interesting exhibit being a book-cover recently sent from Bombay, where for two months it was exposed to the ravages of white ants. Whilst the "Duxeen" covering has been only slightly touched, the strawboard of the cover has been almost completely eaten away.

Business at the Fair opened quietly, as was to be expected, but even on the first day overseas buyers were arriving and exhibitors seemed optimistic as to the probable success of their efforts. An increasing influx of visitors is promised, and it is to be hoped that expectations will be fully realised and general benefit result to the trade of this country.

A Mammoth Book Factory.

A new American printing factory of a colossal character has just been completed at the out-of-the-way town of Kingsport, Tennessee, a town which is situated in the heart of a mountainous wilderness. The works have been arranged for book production in quantities, and Ford methods of efficiency have been applied in such a way that books can be supplied at prices within the reach of the poorest. The enterprise is a remarkable example of business energy as applied to printing, and the plant that has been installed is capable of an output of 100,000 finished volumes per day. Everything has been planned on a gigantic scale, the company owning the Kingsport Press having secured forests close by which will supply paper pulp for the next 90 years. They also own large coalfields, paper and pulp mills, glue and ink factories, a cloth-finishing plant and a process engraving workshop, and control the local railway that runs through the district. In fact, everything necessary for the making and transport of books is in the hands of the proprietors.

Already a start has been made by the production of an edition of the New Testament, and "Treasure Island" will be the first of a series of 20 classics in a size suited for the pocket. They will be printed on good paper, bound in cloth, red and gold, and the price to the public will be only 10 cents. Of course, such a low price is possible only by printing in millions, and a great part of this output will be put into circulation by the thousand Woolworth Stores throughout the United States. The usual "run" of books will be 500,000, and since orders for such quantities can be obtained only for dictionaries, primers, text books and certain classics, the scope will be restricted to work of that character.

The size of the buildings may be gauged from the fact that the concrete foundations are a mile and a-half round, and the factory is so large that no photograph to convey an adequate notion of its size has yet been taken. This immense printing factory is owned by J. J. Little and Co., Inc., of which Mr. L. M. Adams is president, and that gentleman is credited with having been the directing intelligence of the whole scheme, which is the realisation of a dream he has cherished for a long time, of producing Bibles, text books, and good sound reading matter at prices so low that everyone may become their possessors. The cost of the buildings and equipment was over $3,000,000.

Trade in Printing Type.

Exports.—British printing type exported during last month reached 29 tons (of the value of £7,683), as compared with 18 tons (£5,887) in the same month last year, and 34 tons (£11,539) in the corresponding month of the preceding year.

Imports.—Printing type imports into this country stood at 3 tons (£1,049) last month, 7 tons (£1,348) in January, 1922, and 1 ton (£357) in the corresponding month of the previous year.

The Finnish Consul-General in London (Mr. L. Norrgren) has a supply of exhibitors' application forms for the Finnish Fair to be held at Helsingfors July 1st to 6th, and he will be pleased to send a copy to anyone interested. On the back of the form are printed the conditions for exhibitors.

Trade Union Matters.

L.S.C. ANNUAL REPORT. — The seventy-fifth annual report of the L.S.C. in reviewing the position of unemployment amongst its members during last year, states that in the first week of 1922 the number of unemployed was 1,407, which fell to 1,299 in the last week of January. With occasional fluctuations the number dropped continuously until the week ending April 8th, when the lowest figure of 965 was reached. During April, May, June and July the average was a few over 1,000. In the next two months the number signing weekly was greater by nearly 200. November showed an improvement, and on the 25th of that month the total fell to 1,087. There was no great change until the last week of the year, December 30th, when the number on benefit went up to 1,362. During the year the following payments were made: Unemployment allowance (3,074 recipients), including special provident and supplementary benefit, £87,881 17s. 5d.; State Unemployment Insurance and Dependants' Allowances, £38,845 15s. 7d.; Superannuation allowances (820 recipients), £31,399 8s. The income of the Society last year was £202,260, compared with £181,958 13s. 2d. in the previous year; expenditure, £181,954 in 1922 against £203,924 0s. 3d. in 1921; the total funds last year represented £119,421, as compared with £94,308 11s. 11d. in 1921. The Report gives the membership of the Society as 14,800 last year, and 15,120 in the preceding year. The Superannuation Fund shows a balance of £3,147, and increases the total to the credit of this Fund to £15,553.

T.A. AND L.S.C. AMALGAMATION PROPOSALS. —The Executive Council of the Typographical Association, following a request from the London Society of Compositors to submit proposals for amalgamation, have forwarded the following seven clauses to be taken as a basis for consideration: — (1) That there should be one organisation comprehending the areas of the L.S.C. and T.A. (2) The organisation to bear a name to be agreed upon, and to be under the control of an Executive Council. (3) That should it be decided that the Executive Council be elected from the whole area, adequate representation be given to the various interests. (4) That a uniform subscription be paid by each member to a central fund. (5) That from the central fund uniform benefits be paid. (6) That there be one branch in each town, and that each branch have control of its own local funds and the administration of its own local affairs. (7) That representation at delegate meetings, etc., be in proportion to numerical strength, with a maximum to be agreed upon later.

THE financial report of the Leeds branch of the Typographical Association for the year 1922 shows that expenditure on Association benefits has been exceptionally large, amounting to £8,417, against £5,629 in 1921. The increase was caused wholly by the heavy payments of strike pay during the dispute of July and August, the amount thus disbursed being £3,541.

THE Bradford branch of the Typographical Association have reported to the executive council that the members consider the penalties imposed on certain members who remained at work during the dispute of last year against the orders of the Association are inadequate. The secretary of the branch says that it is felt that the members who acted loyally to the Association suffered a greater financial loss than the disloyal members even if the latter paid the fines imposed upon them.

THE falling away in the value of waste paper since the war is revealed by figures printed by the Public Health Department of the Guildhall. Whereas in the year ending March, 1919, the sum of £9,393 was received for waste paper, in 1920 only £20 was realised. With the slight revival which has since ensued, it is expected that for the year ending March next receipts will reach £68.

WE are informed that the well-known manufacturers of stereotyping and printing machinery, Messrs. Winkler, Fallert and Co., S.A., Berne, will be demonstrating all their machines in operation at the next Swiss Industries' Fair which will be held from April 14th to the 24th next. We understand that special travelling facilities are offered to those who purpose attending the exhibition.

EVERY mile you drift, means another mile to row back.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines:—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,

Business for Sale.

OLD-ESTABLISHED LETTERPRESS and LITHOGRAPHIC PRINTING BUSINESS in North of England. Well-equipped Modern Plant, including Monotypes, Stereo Foundry, Two-revolution Machines, Envelope-making Machines, Carton Creasing and Cutting Machines, and complete Machine Ruling and Binding Departments. Good supplies of the latest type faces by reputed founders. Own stone-built freehold premises (specially built on island site) on one floor with galleries and land for extension. Factory is situated amid exceptionally healthy environment. Staff of steady, experienced workpeople with homes near works. Ample facilities for training own labour. The whole presents a unique opportunity to a large printing house seeking auxiliary works in the country where costs of production are materially lower than in the great towns. Excellent goodwill with very valuable connections in certain trades. Capacity for £30,000 turnover. Itemised inventory and valuation by Evans; present value (plant only) £17,000; £5,000 would secure control.—Principals only should address, in first instance, J. F. B., c/o Messrs. E. Flux Leadbitter and Neighbour, solicitors, 88, Gracechurch-street, London, E.C.3. 14041

Miscellaneous.

NUMBERING MACHINES, 7 movements, 6 wheels, listed £6 15s.; brand new; nine only left, our price to clear, 55s.; money returned if not satisfied.—Kidd's Business Service, Ltd., 59, Albert-road, Middlesbrough. 14052

RECIPROCATING RIDER ROLLERS give perfect distribution at one-third the cost of other systems; One Thousand Sets running; also makers of the perfect Jogger-up.—F. Bedfield, Stanley-place, Burnley. 14044

WANTED. THREE or FOUR-COLOUR BLOCKS, Odd or Series, suitable for Wall Calendars, size about 6 by 8 cm.—Price and colour proof to L. F. De Vos and Co., 37, Canal de l'Amidon, Antwerp. 14050

Tenders.

WANDSWORTH BOROUGH COUNCIL.
TO PRINTERS.

THE Wandsworth Borough Council is prepared to receive TENDERS for (a) GENERAL PRINTING and (b) PRINTING AGENDA PAPERS and MINUTES from the 31st March, 1923. Tenders for the latter will only be received from persons carrying on business in the Borough.

Specification and printed forms of tender and contract may be obtained on application to the undersigned, and no tender will be entertained unless it is made upon one of such printed forms and delivered at the Council House, East Hill, Wandsworth, S.W., properly endorsed not later than Ten o'clock in the forenoon of Friday the 2nd March, 1923.

The Council does not bind itself to accept he lowest or any tender.

D. A. NICHOLL,
Town Clerk.

Council House, Wandsworth,
S.W.18., 12th February, 1923. 14054

COUNTY BOROUGH OF WIGAN.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, FEBRUARY 22, 1923.

The British Industries Fair.

ALTHOUGH a war-time product, the British Industries Fair continues to maintain and even improve upon the position it has assumed in relation to the trade of the country. It plays a very important part in promoting British commerce and our manufacturers do well to give it their support. It is not always possible to observe direct benefit from exhibiting at the Fair, although orders in considerable volume are actually placed. More permanent connections are made and the advertisement continues working in the intervals between one Fair and another. Sir Philip Lloyd-Greame, the President of the Board of Trade, emphasised the aim of the Fair at the opening luncheon, which is to promote trade, internal and external. According to the same authority a far larger number of buyers and visitors were coming to the White City than attended last year. In addition, of course, there is the Birmingham Fair. So that as a magnet acting upon home and foreign buyers the exhibition is increasing in power.

* * *

The Stationery Section.

MR. PERCY BARRINGER, who is so potent a force in the stationery trade, found opportunity at the luncheon for a useful little piece of propaganda on behalf of reduced postal rates. Responding to the toast of "The British Industries Fair," he referred to "the poverty and the deserving qualities" of the Stationery Section, on which Mr. Kellaway, when Postmaster General, endeavoured to mitigate the tax imposed through the postal charges. The speaker went on to express the hope that the present Postmaster-General (Mr. Neville Chamberlain) might be induced to wander round the Stationery Section and see what a deserving industry it was. Mr. Barringer also asked that attention should be given to a certain Government department which was embarking upon almost every phase of trade. Thus, apart from the direct business purpose of the Fair, it serves as a means of feeling the pulse of trade and by bringing people together should afford opportunities of suggesting other ways and means of assisting industry as a whole.

* * *

Precept and Practice.

VERY illuminating are the speeches made by the chairmen at the annual meetings of the shareholders of the big banks, and helpful to manufacturers and traders as showing the trend of commercial affairs. At the meeting of Barclay's Bank, recently, the chairman observed "America will no longer accept our manufactures on reasonable terms owing to the operation of the Fordney Act . . . in this way we shall reap the fruit of the policy of Empire development." Those among the shareholders interested in the British paper industry, on receipt of the pamphlet containing a report of the proceedings of the meeting of Barclay's Bank, and customers also, will notice with surprise and chagrin that the wide range of high class British products is passed over for a paper bearing a watermark showing manufacture in U.S.A.

* * *

Features of January's Paper and Cardboard Imports.

IMPORTS of paper and cardboard during the first month of the year—amounting to 981,529 cwts.—show increases of 292,841 cwts., or 42·5 per cent., compared wrth January, 1922, and of 579,256 cwts., or 143·9 per cent., contrasted with the corresponding month of 1921. Arrivals last month, however, were considerably under those of any previous month since June last year. Of the various classes of imports, strawboards (306,943 cwts.) represent 31·2 per cent. of the total, and reveal increases of 93,018 cwts. over January last year and of 177,826 compared with the same month of 1921. Packings and wrappings were also received in larger proportions than in January of the two previous years. For instance, last month's arrivals, 300,754 cwts., or 30·6 per cent. of the total, were 107,082 cwts. more than in January last year, and 200,100 cwts. greater than in the 1921 period. Printings and writings (227,185 cwts., 23·1 per cent. of the total) represent increases respectively of 57,524 cwts. and 134,692 cwts., while the consignments of millboards (90,966 cwts., or 9·2 per cent.) register advances of 29,714 cwts. and 37,210 cwts. With regard to the countries supplying packings and wrappings to the British market during last month, Sweden's contribution not only indicates a greater volume of trading, but represents the large proportion of 41·7 per cent. of the total quantity of this class of manufacture received into the United Kingdom. The next country on the list is Norway, with 59,243 cwts. (19·6 per cent.), whose shipments were also on a larger scale than in January of the two previous years. The third position is occupied by Germany (48,339 cwts.), 16 per cent. of the total, the consignments from that country being not only heavier than in January of 1922 and 1921, but represent the highest figure reached for several months. Finnish arrivals stood at 33,622 cwts. (11·1 per cent. of the total), a considerable advance on the quantities received in January of the two preceding years. As to the source of printings and writings received in the British market, it will be noticed that the big figure of 106,523 cwts. is credited to "other countries," while of the countries enumerated Norway's shipments (56,150 cwts.) were larger to the extent of 34,885 cwts. than in January, 1922, and eclipsed those of the corresponding month of 1921 by more than 34,000 cwts. Larger consignments were also forthcoming from Sweden (51,854 cwts.) during last month, there being registered increases of 29,321 cwts. against January last year, and 34,915 cwts. contrasted with the corresponding month of 1921. The c.i.f. value of the imports last month amounted to £981,529, an increase of £208,113, or 25·2 per cent., over January last year, and a slight advance of £24,585, or 2·4 per cent., compared with the corresponding month two years ago.

Personal.

MR. GEORGE HARVEY, the American Ambassador, will be the principal guest at the London Press Club's American Night house dinner on Saturday.

LORD RIDDELL, speaking as the guest of honour at the Forum Club, on Monday evening, when the journalist section entertained a number of leading journalists and writers, said that in no profession had women made greater progress during the past 20 years than in that of journalism.

SIR ADOLPH TUCK, Mr. Percy Barringer, Mr. R. A. Austen-Leigh (president of the Federation of Master Printers) and Mr. W. R. Codling (Controller of H.M. Stationery Office) attended the opening luncheon at the British Industries Fair on Monday.

AT the annual dinner of the London Master Printers' Association, which will be held at the Connaught Rooms on Tuesday, March 6th, Lord Askwith, who will be accompanied by Lady Askwith, is to reply to the toast of "The Visitors," which will be proposed by Sir Cecil Harrison.

MR. W. R. M. PRINGLE, M.P., and Mr. W. R. Codling (Controller of the Stationery Office), are among the further acceptances for the annual dinner of the Papermakers' Association on March 23rd.

ALDERMAN SIR VANSITTART BOWATER has been appointed Governor of the Irish Society of the Corporation of London for the ensuing year.

THE position of chairman and managing director of the well-known North of England firm of R. Robinson and Co., Ltd., wholesale and manufacturing stationers and printers, of Newcastle-on-Tyne, rendered vacant by the recent death of Mr. A. C. Wilkie, has been filled by the appointment of Mr. G. Harold McLean, younger son of the late Mr. George White McLean, who for many years was head of the firm.

MR. EDWARD H. COYSH was at the same time appointed warehouse manager. Mr. Coysh has served the firm for 45 years, 42 of them as representative and the last three as buyer for the wrapping paper section of the firm.

AT the L.C.C. Camberwell School of Arts and Crafts, on Wednesday, February 28th, Mr. Chas. T. Jacobi, formerly managing partner of the Chiswick Press, will deliver a lecture, illustrated wtth lantern slides, entitled "Some Account of the Plantin Museum at Antwerp."

THE chair is to be taken at 7.30 by Mr. O. V. Viney, of Messrs. Hazell, Watson and Viney.

MR. W. R. CUMMINS, the hon. treasurer of the North London Master Printers' Association, is making an effort to raise in the next few days £176 for the Salvation Army Self Denial Fund. Mr. Cummins is the Army's champion honorary collector, and printer friends could help him maintain this position by sending a donation for the cause to him at Muswell Hill, N.

THE National Society of Electrotypers and Stereotypers have dedicated No. 1 Pension the "Alfred Chadwell Pension," in recognition of Mr. Chadwell's twenty years' work on behalf of charities connected with the Society.

AT the annual dinner of the Publicity Club of London on Monday, Mr. Robert Thornberry, of Newspaper House, presented the club's trophy—which he described as the "Nobel" prize of publicity—to Mr. Walter Russell, who since 1910 has been president of the Incorported Society of Advertisement Consultants.

MR. GEORGE E. BEER has retired from the news editorship of *The Times* to take an important post in a commercial concern.

MR. WILLIAM CAIRD, a former member of the *Aberdeen Journal* staff, has been appointed editor of the *Daily Mail* Atlantic edition, which is now being printed and published on the great Cunard liners sailing between England and America.

MR. J. R. CLEGG, of the literary staff of the *Manchester Evening News*, has been elected president of the Manchester Press Club, in succession to Mr. James Haslam.

MR. H. B. ELLISTON, a well-known Portsmouth journalist, has been appointed to the staff of the *New York Herald* as leader writer.

MR. H. D. MINSHALL, who has been with Messrs. James Spicer and Sons for 31 years, has recently resigned from Messrs. Spicer's, Ltd., and taken up a position with Butt Bros. and Cooke, Ltd., Manchester.

Mr. Lansbury as Newspaper Man.

"How to Edit a Daily Paper" was the engaging title of an article by Mr. George Lansbury in Saturday's *Daily Herald*. He had some useful information and advice to give—especially to those numerous readers who demand each that his own individual taste in the selection of news and other features shall be catered for, at the expense of the requirements of other people.

With regard to his own entry into the newspaper field he tells how, after nearly 30 years' social and political agitation, he became interested in trying to establish local papers and to discuss the possibility of a daily paper devoted to Labour and Socialism. "Then," he writes, "came the *Daily Herald*: in an evil moment, so far as my peace of mind is concerned, but in a moment of great felicity if my real joy in life be regarded. I joined at the bidding of Ben Tillett in the effort to establish a Labour daily, and at once was plunged into the task of almost single-handedly—at least for a time—managing a business of which I had not the slightest experience or knowledge, and after a relatively short period was forced, by circumstances over which I had no control, to take on an even heavier task, of which I also had no experience—the editorship of a daily newspaper. My first discovery was that Pressmen, like the clergy, are of the same flesh and blood as ourselves, of like passions, virtues, and vices as the rest of mankind; but I found a 'camaraderie' amongst my comrades on the paper that has sweetened many a bitter trial and helped me over many a Slough of Despond."

Metallurgy for Printers.

Fry's Metal Foundry are continuing to do valuable work in educating the trades which they serve on technical problems connected with printing metals and white anti-friction metals. During 1922 Mr. A. H. Mundey, their London manager, as well as other members of the staff, gave more than 20 lectures on metals in various parts of the United Kingdom.

During the next few days the following lectures will be given by Mr. Mundey, and all printers and engineers are invited to be present: February 23rd—Lecture at 7.45 p.m. "Printing Metals," at the Technical College, Dundee, under the auspices of Messrs. D. C. Thomson and Co., Ltd., Dundee. February 24th—Lecture at 7 p.m., at the Technical College, Dundee, to the Dundee Institute of Engineers, on the subject of "Metallurgical Problems in Engineering Practice." March 1st—Lecture at 7 p.m., on "White Metals," to the Belfast Association of Engineers.

PAPER BOX-MAKERS' COSTING.—The British Paper Box Manufacturers' Federation have issued, at the price of 5s., a neat pamphlet entitled "A Costing System for Paper Box Manufacturers," which appears to us to be a valuable outline of its subject. Particulars are given of two schemes, more or less distinct, No. 1 being prepared for a small business, therefore simplified as far as practicable, and No. 2 being a more detailed exposition of a scheme covering the expenses and plant of a business with a larger turnover.

The Robert Hilton Appeal.

SIR,—Kindly allow me the favour of your columns to express my thanks to all who helped to relieve Mr. and Mrs. Hilton's immediate needs.

As the outcome of my appeal which appeared in the Trade Press (and the circular which some friends of Mr. Hilton reprinted and distributed) the sum of £82 9s. 7d. was obtained, which has for the time being relieved Mr. Hilton's anxiety, but if his future needs are to be met, a larger sum will be required to ensure that his few remaining days may be free from care.

If there are any who have not yet assisted Mr. Hilton and who wish to do so, I shall be glad if they will communicate direct with him at 241, Glyn-road, Clapton-park, N.E.

I am now closing the list for which I accepted responsibility, and in doing so heartily thank all contributors who so readily and handsomely rallied round this old and valued servant of the printing craft.

Mr. and Mrs. Hilton desire me to extend their heart-felt thanks to all who came to their aid in their day of adversity.

The list of subscribers can be seen on application at the London School of Printing.

Yours, etc.,
J. R. RIDDELL,
Principal.

London School of Printing and Kindred Trades, 61, Stamford-street, S.E.1.

—o—

G.P.O. Activity.

SIR,—Our monthly stock and price list, which survived the perils of 1921 and 1922, has just come under the microscopic eye of the G.P.O. authorities, who, with remarkable forensic skill, now claim that this list is a "sample," and as such must be charged at the full rate of postage. The objection taken, we understand, is that sales result by the printed footnote which we have all along used calling attention to the fact that the list is printed on one of our papers. Does it not appear that the trade exists for the Post Office, and not the Post Office for the trade?

For the time being we have adopted some other means for the distribution of our lists, and, in case of any consequential delay, ask the indulgence of our friends.

Yours, etc.,
MARTIN AND CLARKE.

The Paper House, Joiners' Hall-buildings, Upper Thames-street, E.C.4.

Printers' International Congress.

Arrangements are now well on the way towards completion in respect of the Jubilee Exhibition to be held at Gothenburg, Sweden, this summer—to commemorate the 300th anniversary of the foundation of the city. It will be remembered that this Exhibition is to be the occasion for an "International Master Printers' Congress" on June 4th, 5th and 6th. Amongst visitors from this country to the Congress will be Mr. R. A. Austen-Leigh (president of the Federation of Master Printers) who will speak on the subject of the international organisation of master printers, and Mr. A. E. Goodwin (secretary of the Federation), who has been asked to deal with apprenticeship and also to take part in the discussion on costing systems.

It is now announced that special steamer services will be available for the benefit of visitors. It is the intention of the Swedish Lloyd Steamship Co. to run an additional steamer each week between Tilbury and Gothenburg during the run of the Exhibition, which lasts from May 8th to September 30th. The steamer will leave each Tuesday and Friday, returning on Wednesday and Saturday. Passengers will be conveyed by special boat trains from St. Pancras. The first-class return fare is £16.

THE principal Canadian imports into Australia are "Ford" cars and paper.

DIVIDENDS AND REPORTS.

W. AND A. K. JOHNSTON.—Report of this Edinburgh company of geographers and engravers shows that after charging directors' and auditor's fees for 1921, depreciation, and all outgoings, there is profit on year's trading of £3,118. Balance at debit of profit and loss account at December, 1921, having been wiped out in adjustment of capital, balance of £3,118 stands at credit of profit and loss account at December, 1922, and directors recommend payment of dividend on preference shares for year 1921 at rate of 5 per cent. at £2,395, carrying forward £723. Previous year only preference dividend was paid.

EAST LANCASHIRE PAPER MILL CO., LTD.—Net profit £17,735; final dividends of 12s. 6d. and 2s. 6d. per share on the ordinary and bonus shares respectively, making 10 per cent. for the year; £18,223 forward.

NORTH OF IRELAND PAPER MILLS CO., LTD.—Accounts of North of Ireland Paper Mills show loss on year's working, after allowing for depreciation, of £5,641. Stocks have been written down to present market value, and having regard to conditions prevailing, directors consider year's working satisfactory.

NEW COMPANIES.

WALTHAMSTOW PRESS, LTD. — Capital £8,000, in £1 shares (4,000 6½ per cent. cumulative preference and 4,000 ordinary); to take over the business of a general printer formerly carried on by the late W. H. Everett at 183, High-street, Walthamstow, and certain of the assets in connection therewith, and to adopt an agreement with A. Eade on behalf of A. Suckling. Private company. First directors: P. W. Raffan, F. H. Harkness, J. C. Durant and A. M. Mathews. Registered office: 183, High-street, Walthamstow, E.17.

J. H. BUTCHER AND CO., LTD. — Capital £10,000, in £1 shares; to acquire as from July 31st, 1922, the business of transfer and transparency manufacturers carried on at Solito Works, 498-506, Moseley-road, Birmingham, as J. G. Outram and Co., Ltd.

At the annual meeting of the shareholders of Messrs. George Outram and Co., Ltd., Glasgow, Mr. J. Gourlay, chairman of the company, said it seemed to be the general view of the public that costs had come down to pre-war figures, and they received from time to time suggestions that prices might be reduced The principal item in the production of a newspaper was paper, and the cost of paper, taken for the whole of last year, was 122 per cent. more than in 1913. Ink cost 153 per cent. more, wages well over 100 per cent. on the average, and railway charges 75 to 100 per cent.

Conditions were still far from stable. Only last week paper went up in price to an extent that would cost the company something like £13,000 a year more The increase was a mere fraction of a penny, a very little advance in paper making all the difference in the world.

The report recommending the payment of a dividend for the year of 15 per cent. was adopted unanimously.

Hugh Stevenson and Sons, Ltd.

Depression in Cardboard Box-making.

The adjourned annual general meeting of Hugh Stevenson and Sons, Ltd., was held on Feb. 9th at Winchester House, London.

Mr. W. Gardner Sinclair presided and said that the unprecedented depreciation in trade and industry generally had affected the cardboard box-making industry very severely and unfortunately there had not been sufficient business to go round. Consequently the various factories had been on short time throughout the whole of the year. Competition had been exceptionally keen and some manufacturers had been willing to take almost any price to enable them to reduce their stocks. The directors were considering the manufacturing of other products which it was hoped would give employment to part of the plant at present unproductive. There were indications of an improvement in some trades, and he hoped that improvement would become general and lasting. Their industry, unfortunately, was one of the first to suffer from any depression and one of the last to recover. Given normal trade, however, there was no reason whatever for despondency.

In the course of the discussion several shareholders described the information given in the balance sheet as very meagre. Mr. Brown said that, sanguine as the chairman might be with regard to the future, it was quite time shareholders seriously considered the position. From the balance-sheet it would seem that nearly the whole of their assets were covered by their liability to the bank, their liability to creditors and the accumulated dividends on the preference shares. It appeared that unless the company made a profit of £60,000 for the coming year they would be unable to meet their liabilities.

Mr. Rowe wanted to know why the company should be liable for excess profits duty when they had never made any profits.

The chairman, in reply, said that the liability for excess profits duty was one of the liabilities taken over from the old company. With regard to the position of the company, although he was sanguine as to the future, it was obvious that there would have to be some sort of reconstruction later on.

The report and accounts were adopted.

Waste Paper Recovery.

English Negotiations Over a Patent.

In the King's Bench Division last week the case of Sinclair *v.* The General Waste Paper Recovery Co. and Another was down for hearing before Mr. Justice Bailhache.

Mr. Pritt, for plaintiff, asked that the case should stand out as there was a chance of the parties coming to terms.

In reply to his lordship, counsel stated that two American gentlemen came over to this country and said they had a valuable patent for the recovery of fibre from waste paper. Plaintiff took from one of the gentlemen, named Wishart, an assignment for an agreement which he had with the defendant company dealing with the rights. It was an agreement which involved that some machinery should be brought over to this country to operate to show that it could operate and as soon as it did operate Wishart, now substituted by Mr. Sinclair, was to form a company to take it over, and if he did not form a company all the rights were to lapse. The machinery was brought over and set going, but dispute arose between plaintiff and defendants as to whether it was or was not operating properly and as to whose fault it was. Plaintiff said the machinery did not operate properly, and the time had not come for him to form a company and he brought proceedings for a declaration that the agreement was still in force and he was still entitled to the patents. After considerable difficulty the parties, thinking it better that the patent should be exploited, got into touch with another gentleman to sell the patent, and an arrangement was entered into for that purpose. If that fell through, the action was to be restored, but he (counsel) thought there was hope for settlement.

Mr. Van Breda, for the defendants, consenting, his lordship allowed the case to stand out, generally granting liberty to either side to restore if necessary.

Paper Contract Dispute.

Judgment in a London Case.

In the King's Bench Division, before Mr. Justice Acton, on Thursday, Feb. 8th, Henry Featherstone and William Harold Walbrook sued William Penman and Son, of 14, Upper Thames-street, London, for damages for breach of an agreement dated February 24th, 1913, and for an account of what was due from defendants to plaintiffs.

The plaintiffs, in their claim, said that defendants were paper agents and merchants and by letters of February, 1913, it was agreed with defendants that in consideration of plaintiffs assisting defendants to obtain an order for the supplying of paper to the *London Mail*, defendants would pay to the plaintiffs half of the profits (less £10 a month for working expenses) derived from all orders given by the *London Mail*. The agreement was to continue for the period of time during which defendants supplied the paper and plaintiff Walbrook printed the same. Defendants obtained the order and supplied paper to the *London Mail* during 1913 to 1920 inclusive, and during all that time plaintiff Walbrook printed the periodical. From time to time defendants paid certain sums on account of plaintiffs' share of profits, but had failed to render any account; £3,059 had been paid and plaintiffs alleged that a further considerable sum was due to them, and that defendants had wrongfully repudiated liability.

In their defence, defendants pleaded that it was an express term of the agreement that it should be limited only to the duration of a contract between a company known as *London Mail*, Ltd., and plaintiffs for the printing of the paper and that contract came to an end in December, 1917. Defendants contended that as from that date the agreement between themselves and the plaintiffs was terminated and that defendants were no longer bound to pay plaintiffs any share of profits on the paper supplied for the printing of the periodical. They admitted that they supplied paper and that Walbrook printed the periodical up to May, 1920, but they said the contract under which the share of profits was payable came to an end because in August, 1917, the *London Mail*, Ltd., had a receiver appointed for the debentureholders and in January, 1918, sold the periodical to a new company called *London Mail* (1918), Ltd. They also counterclaimed for the return of money from plaintiffs, alleging that plaintiffs were liable under the agreement to share losses up to the end of 1917 and that there had been losses before that date which plaintiffs were bound to share.

After hearing the evidence and arguments of counsel, his Lordship gave judgment. He said since 1917 defendants had gone on supplying paper for the *London Mail* in exactly the same way as they had done from 1913. Walbrook had also gone on printing the periodical in the same manner. In his opinion the agreement in question applied and operated as much since 1917 as it had operated before then. Therefore he thought the plaintiffs ought to have an account up to the date they asked for, May, 1920, and gave judgment for the plaintiffs accordingly, all questions of costs reserved.

It was agreed that Sir E. Pollock, the official referee, should take the account.

Swedish Pulp Lock-Out.

Paper Mill Hopes.

With regard to the paper mills in Sweden, the Swedish Consulate has had a telegram from the Papermakers' Association at Stockholm stating that it was hoped to settle the dispute next week.

While this is encouraging news, the effect of the lock-out in the pulp mills, if continued long enough, must be ultimately to cause an automatic closing of the paper plants.

A GERMAN correspondent writing to the *Financial News* classes the printing industry amongst those most hardly hit by the disappearing purchasing power of Germany's population—a disaster greatly augmented by the French invasion. In the paper industry, he says, prospects are brighter, as paper cannot be dispensed with, whatever the price.

Government Contracts.

Contracts were placed with the following firms during January :—

Stationery Office.

CLOTH, TRACING.—B. J. Hall and Co., Ltd., Manchester.

GELATINE.—Vincent Brookes, Day and Co., Ltd., London, W.C.

ETCHING MACHINE.—A. W. Penrose and Co., Ltd, London, E.C.

PRINTING, RULING, BINDING, ETC.

Group 39 (1923).—Metereological Magazine; 7,500 Pads, Form P. 119.—Metcalfe and Cooper, Ltd., London, E.C.

Group 221 (1923).—Foreign Office Passports. —Thos. de la Rue and Co., Ltd., London, E.C.

1,500 cps. "Naval Court-Martial Proceedings.—Dow and Lester, London, E.C.

12,500 Bks. "Mines and Quarries, Form 42"; 600 General Ledgers, T.P. 1,085; 102,000 Registry Jackets; 500 "Postman's Attendance Bks., P. 1008"; 1,000 Cash Books, "L.P.S. 1072"; 900 Cash Books, "P. 1014"; 4,500 Cash Books, "P. 1015."—Waterlow and Sons, Ltd., London, E.C.

12,500 Bks., "Mines and Quarries, Form 42." —Drake, Driver and Leaver, Ltd., London, E.C.

54,500 "Ships Rotation Books"; 13,694 Pads, Receivable Order Cheques.—Barclay and Fry, Ltd., London, S.E.

15,000 Bks., P. 1022.—J. Corah and Son, Loughborough.

130,000 Forms 51 B, Forms A/cs. 455.—J. Robertson and Co., Ltd., St. Anne's-on-Sea.

500 C.I.D. Diaries No. 24; 14,500 Books, "Ships Rotation C. 234."—J. Dickinson and Co., Ltd., Hemel Hempstead.

STENCILS.—Ellams Duplicator Co., Ltd., Bushey; P. and J. Arnold, London, N.

The Argus & "Financial News"

ATHLETIC & SOCIAL CLUB.

This club gave a very successful carnival dance on Tuesday, February 13th, at the Finsbury Town Hall, Rosebery-avenue, over three hundred persons taking part. Frank Sweet's Belgravia Orchestra provided an excellent programme of dance music which was thoroughly enjoyed by all present. The costumes worn by the dancers were very attractive, many original designs being in evidence. In the parade which took place during the evening a charming effect of colour and variety was presented. The characters portrayed by the prize-winners represented "Carnival," "Jumperitis," "Casement Window," "The Argus" (showing the headlines of every paper and periodical produced by the firm including a head-dress of peacock's feathers illustrative of the being of one hundred eyes according to the well-known tradition) and "The Observer" (Ladies)— "Darts," "A Dual Cricketer and Footballer," "Punch" and "Sandwich Man" (Gentlemen).

The committee are to be congratulated on the perfect arrangements made by them for the comfort and enjoyment of the company, and it is to be hoped that in the future many similar functions will be fixed up, such certainly being conducive to good fellowship and *esprit de corps* between the "heads" and the rank and file in the sometime drab days of the worker's life.

MESSRS. SPALDING AND HODGE have taken a high standard with their house organ, which has just made its first appearance. "Spalding's Quarterly, a magazine devoted to paper and print," is a really good specimen of this type of publication, both from the point of view of style and matter. The paper employed is Spalding's antique de luxe, with deckle edge. A beautifully reproduced portrait of Thomas Spalding, the founder of the firm, appears as a frontispiece, and the tasteful character of the cover design is maintained throughout the journal.

Ventilation and Health.

A Leaflet Issued by the Health Committee of the J.I.C.

One of the main causes of ill-health and lack of energy amongst workers is the want of proper methods of ventilation in the works—states a leaflet issued by the Health Committee of the Joint Industrial Council of the Printing and Allied Trades. To enable them to use their powers to the highest capacity the air they breathe must be pure. In other conditions, owing to the lack of fresh air, their physical energy is reduced or they have to use greater effort than is normally necessary in order to produce a given amount of work. Close and stuffy rooms tend to sleepiness, and this condition is fatal to efficient and economic work. In the interest alike of employer and employed fresh air should be provided. There is little doubt that one of the principal causes of the excessive number of fatal cases of tuberculosis amongst workers in the printing trade is the vitiated air they breathe in works not provided with efficient means of ventilation or in which the means installed are not utilised by the workers.

In many up-to-date works sufficient exhaust fans are provided. In others, ventilation depends upon the opening of windows or air outlets, and, through fear of cold and draughts, there is a disposition to neglect to use the means available.

There are various systems of ensuring a proper supply of fresh air, but probably the simplest and best is that of exhaust ventilation. "It is at once the most direct, the simplest and cheapest to design, install and maintain, the easiest to extend, and the most efficient" (Home Office Report on "Ventilation of Factories and Workshops."). Under this system, the air of the works is extracted by means of fans, and is renewed by the natural flow from inlets provided at suitable places some distance from the fans. The fans can be worked either by belts from shafting or by a small electric motor. Exhaust fans of various sizes, each with motor attached, are obtainable at reasonable prices, and experience shows that the cost of power to run them is small.

Moving air is very desirable. In rooms where printing machines are at work the movement of the air is assured, but in others it is often desirable to install propeller fans or wafters, which can be fitted to the shafting.

The Home Office has issued a very useful Memorandum entitled "Ventilation of Factories and Workshops," which may be obtained from His Majesty's Stationery Office at the price of sixpence. Various systems are illustrated by photographs and diagrams which will be found useful in determining the method most suitable to any particular works. Some of the suggestions contained in the Memorandum are embodied in this leaflet.

There are several makers of efficient fans, and their representatives are always willing to inspect works and submit estimates. Amongst these are: Jas. Keith and Blackman Co., Ltd., Sturtevant Engineering Co, Ltd., and Aland and Co., all of London; Jas. Stott and Co., of Oldham; and Davidson and Co., Ltd., of Belfast.

Advice to Employees.

Remember that lack of fresh air reduces efficiency and is a serious menace to health Fresh air is the principal defence against tuberculosis and other diseases of the respiratory organs.

Make use of whatever means of ventilation are available in the works. Do not block up the air inlets and outlets. Draughts can be avoided by other methods.

Stagnant air is quickly deprived of its natural proportion of oxygen, which is absolutely essential to health. It becomes vitiated by the impure air which is expelled from the lungs with every breath.

Fans ensure satisfactory ventilation. See that they are used wherever they are installed.

Summary.

(1) Impure air decreases efficiency, and, in time, seriously undermines health.
(2) When foul air is extracted and fresh air admitted, the workers are alert and active.
(3) The capital cost of installing and maintaining fans is very small.
(4) Economically, it pays to have fresh air.
(5) It is to the interest of every employer to investigate the air conditions of his works and to take such steps as may be necessary to ensure the presence of vitalising air.

Phthisis in the Printing Trade.

Slur on Reformers' Efforts.

Mr. C. W. Bowerman (ex-president of the Joint Industrial Council of the Printing and Allied Trades) wrote to *The Times* last week as follows:—

"My attention has been drawn to an observation made by Dr. T. M. Legge, Chief Medical Inspector of Factories, who, in presiding over a meeting convened to consider 'Hygienic Methods of Industrial Painting,' and in referring to the question of fibroid phthisis in the house painter, is reported, in the *Journal of the Royal Society of Arts* of January 17th last, to have said that 'he deprecated anything in the nature of a "stunt," such as that which took place a couple of years ago in connexion with the same condition among printers.'

"I do not understand why Dr. Legge should apply the word 'stunt' to the efforts put forth by the representatives of employers and employed through the Joint Industrial Council of the Printing and Allied Trades to check phthisis among workers in the printing industry. I well remember Dr. Legge attending a meeting of the council, and delivering a most interesting address upon the subject of ventilation and the need for increased protection of the health of the workers. He must on that occasion have been impressed with the earnestness of those he addressed as to the council's desire to improve the atmospheric conditions under which printers worked, and which rendered them specially liable to contract phthisis.

"I also remember the valuable services which Dr. E. Halford Ross has, during the past five years, voluntarily rendered to the Joint Industrial Council in connexion with the health of those employed in printing offices. As a matter of fact, the Joint Industrial Council has, from its inception, treated the conservation and improvement of the health of the workpeople as one of its most urgent functions.

"I am therefore entirely at a loss to understand why the Chief Medical Inspector of Factories should have applied the word 'stunt' to efforts which an official of his standing should have been the first to commend. It is the more extraordinary in view of the results obtained by the Bank of England printing department by dust abatement, as published in *The Times* of January 26th 1923, for, as stated in your leading article of February 10th, this is work which ranks in a high category of health endeavour."

Stationers' Organisation.

Under the auspices of the Stationers' Association, a conference of stationers was held recently at Newcastle.

Mr. Esmond Morgan (Messrs. Mawson, Swan and Morgan) presided, and Mr S. J. Sandle and Mr. Clifton Tollit, past chairman of the council of the Association, were present.

The chairman said the year 1923 had already shown signs of improvement in trade, and they all expected that it would be a better year for the trade than 1922 had been. Their Association had done a great deal for the stationery trade, and it was desired that more might be done in the way of co-operation.

Mr. Sandle said he had come from London, with his colleague, to fish for men, and they hoped to bring all the stationers of Newcastle and district into the Association. It was founded in 1905, and in that year they had nine firms on the protected list, whereas now they had nearly a hundred. In 1905 the membership of the Association was numbered by hundreds, whereas now it was numbered by as many thousands. They were anxious that there should be more local associations.

Mr. Tollit supported, and said the Association was out to help members in their local difficulties.

Various resolutions on trade matters were carried, and ultimately a sub-committee was appointed, with the chairman as convener, to call a meeting for the purpose of forming an association for the North-east district.

An article on "Wireless for Welfare Work" is a feature of the February issue of *Industrial Welfare*, the monthly journal of the Industrial Welfare Society.

The Printer's Oil Engine.

A Tale of De Wet.

The following story, said to be a true one, is related by "C. W.C." in the South African *Printer and Stationer*:—

Near the end of the Anglo-Boer War, when military law and police were supreme in Bloemfontein, and the notorious *Bloemfontein Express* had been rechristened the *Post*, and the notorious De Wet was trying to cut off "de wet"—I mean the water supply of the town, the writer fell foul of the Provost Marshal.

We had been working considerable overtime for the then "powers that be," and our 20-horsepower oil engine had fouled in the exhaust. The work being very urgent, we had to use every endeavour to complete. About 10 o'clock in the evening the engine began to "jib," and we began to "force"; the result was a succession of very loud explosions from the exhaust chamber. We could hear mounted men galloping about the streets, but were too busy to take any particular notice.

Next morning, about nine o'clock, I heard a military voice outside the office door inquire if the manager was in; the office boy said he was. "The Provost wants you." "Yes? Well, I'm very busy, will come presently." "Very sorry, sir, but you must come with me." On second thoughts, I went. I was marched through the town, up the middle of Maitland-street, in absolute military style, right-wheeled into the Provost Marshal's house and charged with, what do you think? The Provost, with purple face, etc., glared and yelled: "Do you know, sir, you had the whole of the garrison under arms last night, through your confounded engine! We thought De Wet was in town, sir! Yes, sir! we did, by Gor-r-r-r-r!!!"

"Trap" Envelopes Prohibited.

In view of the frequent complaints received of the delay of letters and postcards which have become accidentally enclosed in open packets, the Postmaster-General draws attention to the desirability of enclosing printed papers, commercial papers and samples in covers which are not likely to entrap other packets. He states that envelopes similar in pattern to the embossed envelopes bearing a halfpenny stamp, which are on sale at post offices, are best suited for the purpose if the contents are not of a bulky nature. An envelope of this pattern has the opening at the end and a specially shaped flap which can be turned in so as to prevent other packets from slipping into the envelope. If the contents are too bulky for the use of an envelope of this pattern, the type of envelope to be preferred is one secured by means of a blunt metal fastener which will not prevent the easy examination of the packet and at the same time will not be likely to injure the hands of postal officials dealing with the packet, or to damage other packets. An envelope with the flap merely tucked in is not open to objection if the opening does not exceed 4½ inches in width.

The editor of the *Studio* has in preparation a profusely illustrated volume dealing with "Old English Sporting Prints and their History."

Export of Printed Books.—Printed books were exported from this country last month to the extent of 26,847 cwts. (£282,560), as against 18,650 cwts. (£228,537) in January, 1922, and 49,304 cwts. (£495,162) in the corresponding month of 1921.

A review of Norway's trading during the past year says that the paper industry has done remarkably well, quantitatively. Thanks largely to the American market there have been big increases in both printing and packing paper and also in wood pulp and cellulose.

The Moscow daily newspaper, *Ekonomicheskaia Zhizn* (Economic Life), claims to be the sole example in the world of a daily which concentrates on the general questions of a country's industrial conditions and prospects. Its London representative is at 68, Lincoln's Inn-fields, W.C.2.

SOUTH-WEST London Master Printers' Association

Day Continuation Schools.

The monthly meeting of the above-named Association, held on February 6th at the Public Library, Lavender Hill, proved to be a very instructive and enjoyable evening, owing chiefly to the spontaneous and unexpected turn of events, and the gratitude of the members is due to Mr. W. Whyte (secretary, London Master Printers' Association), in supplying the surprise.

Owing to the unavoidable absence of Mr. A. E. Goodwin (Federation secretary), Mr. F. B. Hart, B.Sc., principal of the L.C.C. Southwark and Bermondsey Day Continuation School, held the members in wrapt attention with an important appeal.

The preliminary business of the Association being quickly disposed of, Mr. Wise (president) explained that as members might be aware, trouble had again broken out with one of the unions, and this was taking a good deal of Mr. Goodwin's time. He had pleasure in calling upon Mr. Hart to give his address.

An Appeal by Mr. F. B. Hart.

Mr. Hart began by intimating his purpose of soliciting assistance towards the solution of a grave problem which concerned his hearers as employers and himself as a schoolmaster. In the course of his duties, he said, he came into contact each term with some hundreds of boys who are about to leave the elementary school and enter the working world. He had been struck by the large number of these boys who were anxious to enter the printing trade, and also by the very considerable number of parents employed in it. He had often felt that some of these boys were not suitable for the trade, and he had had a little experience in that direction, for some 12 years ago as responsible master of the Wild-street Evening Institute he had the boys for a two, or even three, year course from St. Clements Press. From Mr. George Eaton Hart, who is so well known throughout the printing world, he had learnt something of the type of boy likely to make a suitable printer, and he was sure that some of the boys who are looking towards the printing trade as a career would be well advised to look in another direction. This was one end of his problem. At the other end he had had experience with a considerable number of lads between 16 and 18 years of age, now drawing unemployment pay, who had been employed for some part of their short working life in the printing trade. These had evidently been rejected as unsuitable for the work, and from very careful observation he had no fault to find with the trade on account of its decision. His object that evening was to persuade his hearers that this end, so unfortunate for the boys, could be in a large measure avoided if a more careful selection were made at the beginning, and as a schoolmaster he wanted to assist them in making that selection.

In the day continuation schools they took boys who had left the elementary school and were waiting for employment. Instruction was partly educational and partly vocational. He suggested that they should give these schools their active support; give those responsible an indication of the qualities they looked for in the boy they were ready to employ; support their efforts by promising to select from their boys, and it would be advantageous to them as employers and to the boys as workers. They could establish classes for boys who sought to enter the trade; they could go on with the education which must be the foundation on which to build skilful craftsmanship. The boy who was unsuitable for permanent employment in the trade would be quickly noted and advised to seek another career. In this way they could get nearer to the ideal of fitting square pegs into square holes, and the trade would get a larger proportion of the boys it required.

DISCUSSION.

The president invited the members to discuss any of the points raised and to question the speaker upon them.

Mr. E. G. Cole (vice-president) pointed out that the trade unions placed a limit upon the number of boys to be admitted into the trade, and asked how the speaker proposed to overcome that difficulty in order to get his boys employed if the suggested classes were formed and whether it was not possible to shorten the apprenticeship period so as to include the period at school.

The speaker replied that he was not asking employers to take more boys, but rather the contrary. The total number of boys employed was the trade's own domestic affair; he only asked that in its selection of suitable boys the trade should not injure the unsuitable one by taking on many more than it could possibly absorb and then dropping those it did not want between the ages of 16 and 18, a most awkward period for boys who had to make a fresh start in life. He agreed that the shortened apprenticeship might be an additional benefit.

Mr. Walmsley asked Mr. Hart whether he was aware of the fact that of the numerous boys sent from the Employment Exchanges to his firm for employment it was not possible to employ one tenth of the number and if this kind of procedure could not be stopped by Mr. Hart's method.

Mr. Hart replied that he was out to alter this procedure, inasmuch as he was prepared to sort out the boys before they were sent to worry employers for situations.

Mr. W. J. Boyle pointed out that the subject that evening was on somewhat the same lines as Mr. Closh's address in December, and went on to express approval of the lecturer's suggestion.

Mr. Simnett informed the members that he had obtained excellent lads from the Central School of Arts and Crafts—lads who were educated with a view to entering the trade and who evinced a pride and interest in their work and who ultimately became highly skilled craftsmen. He strongly recommended the proposal.

Mr. Whyte mentioned that Mr. Riddell, the principal of the London School of Printing, had proposed a scheme whereby two years spent in further education at a continuation school should rank as two years of apprenticeship in the printing trade.

Mr. Buchenham told of personal observation of benefit by attendance at a secondary school. He was strongly in favour of the suggestion.

Mr. Wise, in expressing the thanks of the meeting for the very useful address, said that personally he should use his best efforts to assist any attempt to solve the problem on the lines indicated and he was sure the Association would support him.

Mr. Hart thanked the president and members for their sympathetic attention. It was the first time he had addressed an audience of employers, he had only been able to face such an ordeal because he was deeply anxious to assist the boys and the kindly encouragement they had given him that evening would stimulate him to repeat the process elsewhere.

Mr. Whyte, after tendering apology on behalf of Mr. Goodwin, made some interesting remarks about the position reached in respect of the dispute in the bookbinding trade.

French Paper Market.

Nearly all the paper mills of the Paris district are in normal work, and exports, which were languid, are picking up. Complaints about poor sale of pulp is ascribed to the enormous use made of waste paper.

In Marseilles the markets are satisfactory. Kraft paper is taking the place of all other kinds of packing. Cigarette paper mills are busy. English papers, in spite of the rate of exchange, are regularly imported.

Australian Notes.

Some Recent Dividends—New Companies—Printers' Premises Sold—Newspaper's Success—Provincial Press Conference—Lino Operators Needed—Paper Contract Lawsuit—German Cardboard Boxes—Advertisement Hoardings — Personal Items.

(From Our Sydney Correspondent.)

THE directors of Edwards, Dunlop, Ltd., have decided to pay a dividend of 6d. per share on the ordinary shares for the quarter ended July 31st, and a dividend at the rate of 5 per cent. per annum on the preference shares for the half-year to October 31st.

AFTER providing £10,719 for specific reserves, J. Fielding and Co., Ltd., disclose a net profit of £24,329 for the year ended September 30th. For the previous year the net profits were £11,348. The balance-sheet discloses that the company had a better year than the earnings really suggest, for whereas specific reserves have increased from £6,412 to £39,695, only £15,219 of this increase is accounted for in the published accounts—£10,719 as a charge against profits, and £4,500 as an allocation of profits. In addition, a general reserve of £6,000 has been established out of current earnings.

DIVIDENDS on the preference shares, which have now been repaid, amounted to £1,400, and an interim dividend of 9d. on the ordinary script took £4,125. At the general meeting it is proposed to pay a further ordinary dividend of 1s. 6d. a share (making 11¼ per cent. for the year), absorbing £8,250, leaving £378 to be carried forward. The company intends to acquire an interest in the Corrugated Fibre Container Prop., Ltd., Melbourne, and trade operations there should commence early in 1923.

AMONG recent new companies registered in Sydney are the following:

PENCARBON CO. (AUSTRALIA), LTD. — Capital: £10,000. To carry into effect an agreement which has been prepared between Pencarbon Co., Ltd., and this company; to deal in all kinds of carbon and duplicating papers, typewriter ribbons, etc.; to carry on the businesses of engravers, bookbinders, die-sinkers, stationers, etc.

THE STAR PRINTING CO.—To take over the business as now and for some time past carried on by the "Watchman Newspaper, Ltd.," printers and publishers; to print and publish the *Watchman*, and to carry on business as proprietors and publishers of newspapers, etc.

TATLER PRESS, LTD. — Capital, £5,000. Proprietors and publishers of newspapers, books, etc.

SMITH AND MILES, LTD.—Capital of 20,000 in £1 sheres. The company will take over the business of trade linotypers, now carried on by "Smith and Miles" at No. 24a, Jamieson-street.

IMPORTANT Sydney printery premises of Messrs. John Sands, printers, in George-street, have been sold for £80,000.

OWING to the progress of the *Sydney Sun*, the directors has been forced to practically double the premises in Castlereagh street. The first issue of the *Sun* appeared on July 1st, 1910, but it incorporated in that year the *Star*, which was founded in 1887.

THE Australian and New Zealand newspaper world were in Sydney in full force in November, when two conferences were held, at which 850 newspapers were represented. The first was the 11th of the Australasian Provincial Press Association, and the second the 23rd of the New South Wales Country Press Association.

AT the Australian Provincial Press conference, a motion was carried to the effect that the Governments of the several States be urged to add linotype machines to the equipment of printing classes in connection with technical schools where young men and women might obtain efficient instruction in the mechanism and operation of the machine. A number of speakers pointed out that there was a dearth of linotype operators, and some such scheme was imperative.

AN action in the Courts by W. V. Bowater and Sons, Ltd., of Sydney, against David John Wildey, also of Sydney, to recover £326 compensation for alleged breach of contract in connection with the supply of a quantity of machine-finished printing paper, has been concluded. The defendant pleaded that the paper was not of the quality ordered and counter-claimed for damages for a breach of contract which he alleged the plaintiffs had committed in this respect. The jury gave a verdict for the plaintiffs for the amount claimed.

A MESSAGE from Melbourne states that German cardboard boxes have been brought within the scope of relevant provisions of the Anti-Dumping (Industries Preservation) Act. The applications mostly have a retrospective effect, according to the dates of arrival of shipments represented as detrimental to established Australian or British industries. Upon German goods much heavier special duties will now be chargeable to nullify the effect of the low exchange.

CONSIDERABLE discussion has taken place lately on the question of the control of advertisement hoardings; and an important conference of the local authorities and interests involved has been held on the initiative of the Minister for Local Government to discuss the Local Government (Advertisement Hoardings) Bill, 1922. On behalf of the printing and allied trades strong arguments were advanced for the preservation of the hoardings, which were the only outlet for a very important industry. Mr. Brooks declared that there was hardly any more important class of printing than that of posters.

EVENTUALLY it was agreed that the Local Government authorities should circularise the whole of the councils and shires, pointing out the arguments put forward and asking them to use their powers in a liberal manner. In the meantime the conference was formally adjourned.

MR. GEORGE ANDERSON, of Anderson, Gowan Pty., Ltd., was re-elected president of the Victorian Master Printers' Association for the ensuing year, at the annual meeting of the Association.

MR. N. HONEYCOMBE, on his retirement from the position of overseer of the *Sydney Daily Telegraph* composing room, was presented by the general manager with a wallet of notes on behalf of the various departments. He was also the recipient of an illuminated address at the hands of the father of the chapel, on behalf of the employees of the reading, composing and stereo. rooms. Mr. Honeycombe is returning to New Zealand to take up a position on the New Zealand *Herald*, Auckland.

MR. J. K. SMALL, who has been appointed overseer of the composing room of the *Sydney Daily Telegraph*, was the recipient of a silver entree dish and a pair of silver vases from the composing, reading and linotype engineering departments of the *Sydney Morning Herald*, with which office he has been associated for many years, the last ten as sub-overseer of the composing room.

British Paper in Canada.

H.M. Senior Trade Commissioner in Montreal reports that, according to figures recently published by the Dominion Bureau of Statistics, the share of the United Kingdom has increased in the majority of the main groups of imports. In many of the groups, however, it appears clear that the United Kingdom cannot compete successfully with the United States, but it would appear that under improved conditions the share of the United Kingdom might increase still further.

Imports of wood, wood products, and paper from the United Kingdom now amount to 8 per cent. of the whole—an increase of 1 per cent. They include printing, wrapping, and writing papers, advertising pamphlets, and playing cards.

Imports of chemicals and allied products from the United Kingdom show an increase of 2 per cent., and now amount to 14 per cent. of the whole, whilst imports from the United States, show a decrease of 3 per cent., and now amount to 71 per cent.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.
2.—It occupies a space of only six feet on the run, and is quite noiseless.
3.—The power required is such a small amount that it can be driven from any existing shafting.
4.—Centres of any kind or width can be worked on the machine.
5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.
6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Photo-Litho and Photo-Offset.

How the Printer can Start, in a Comparatively Simple Way, to Use these Important Processes.

By WILLIAM GAMBLE, F.R.P.S., F.O.S.

Paper Transfers.

Photo-lithography originally meant the production of a paper transfer by making a photographic negative, usually of a line subject, and printing through this on to a gelatinised paper made sensitive to light by bathing in the solution of a bichromate salt. After drying the paper it is given a suitable exposure under the negative either to daylight or electric light. Then the paper is inked thinly all over with a special ink. By placing the inked transfer in water or by sponging it gently with water the surplus ink is removed and a sharp transfer print in black lines is secured.

Such a process requires only the very simplest of apparatus and materials. Apart from the camera, lens, and photographic accessories which are required for any photo process, only a special printing frame for the exposing of the paper under the negative, an ink roller, and a developing tray are required.

For repeat work, as many transfers as the number of repeats desired may be made and attached to a sheet for transferring at one operation.

This process is not suitable for half-tone reproduction.

Paper transfers have the advantage of being convenient for transferring to stone for ordinary lithography.

By the Identograph process transfers may be made from prints or tracings without a camera.

Direct Printing on Zinc.

A piece of grained zinc as usually employed for lithographic printing is coated with a bichromate solution to make it sensitive to light. The coating is dried and exposed under a photographic negative, in line or half-tone dots. After the necessary exposure the plate is thinly inked all over with a special transfer ink. Then it is placed in a tray of water and by slight rubbing with a tuft of cotton wool the surplus ink is removed, and the lines or dots left clear and sharp. The plate then needs only to be gummed and rolled up by the lithographer as usual.

Direct Printing without a Negative.

By a modification of the above process a thin paper print or tracing in good black ink can be used instead of the photographic negative. A white line on black ground is thus obtained, but by suitable treatment this effect can be reversed and the customary black line image secured. It will be seen that no camera is required for this method.

In coating the zinc for direct printing it is necessary to use a whirler for securing a thin even film of the sensitive solution. It is also necessary to employ a special printing frame, with screw or lever pressure, or preferably one of the vacuum type. Otherwise the only appliances required are the roller, ink, slab, drying stove, and developing tray.

Half-Tone Work.

To make half-tone negatives a special camera is required, fitted with a mechanism for holding and adjusting the ruled screen, and special diaphragms are required for the lens. A Levy screen is required of such a ruling as will suit the kind of work required. Usually for lithographic work, the rulings are 120, 125, or 133 lines per inch. The actual procedure in making the negative is fairly simple, but instruction from an expert and considerable practice are necessary for a beginner. The negatives for photo-lithography have to be made different in character from those for etched blocks. The printing of the negative on to zinc is practically the same as described above for line negatives, but the development can be manipulated to secure particular effects desired.

Colour Work.

Simple colour work with flat tints and solids may be done by the ordinary line negative process. For half-tone colour work the procedure is the same as in making half-tone black-and-white negatives, except that a colour filter (*i.e.*, a glass plate bearing a transparent coloured medium) is placed behind or in front of the lens and three or more negatives are made through different filters. The negatives are made on panchromatic dry plates or with colour sensitive collodion emulsion. The printing down of the negatives on to zinc is done in the same way as for half-tone negatives, and the development of the image on the zinc is done in a similar manner. To emphasise particular colours, or to stop out others, retouching is resorted to on the negatives. This can only be done by men having a skilful appreciation of colour values.

Register work is obtained by having cross lines on the drawing so that they appear on the negatives and print on the zinc plates.

Duplicate prints on large plates can be made by having a face-up vacuum frame, which enables the negative to be laid to marks on the zinc plate. A special mechanical device can be applied to this form of frame for the purpose of laying duplicate prints in register.

Step and Repeat Work.

For repeating a number of small images on one plate as for stamps, labels, etc., various methods can be employed, such as a repeating darkslide for the camera, or a repeating transparency frame, placed in front of the camera. Simple repeats such as 4-on can be done by masking the plate by shutters in the camera in front of the plate. A negative with 4-on can be again repeated in the printing frame. For some purposes it is sufficient to make a number of prints on bromide paper and paste up to form a multiple original.

There are no patent rights in the Step-and Repeat idea. Existing patents are for the various mechanical means for doing it.

Grain Processes.

These may be worked by means of grained screens in the camera, or by special coating of the zinc plates. There are also grain processes with paper transfers.

Proofing Offset Plates.

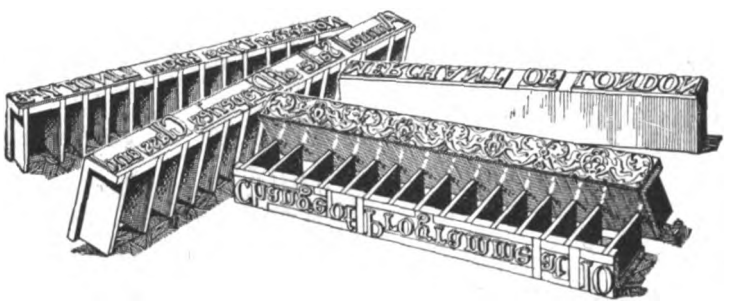
This can be done best on a hand offset proofing press, which is also suitable for reversing, re-transferring, or taking transfers from type formes.

General Hints.

The size of camera required is determined by the largest size of image to be reproduced, not by the size of the zinc printing plate.

For some processes it is necessary to have a transparency holder for copying from glass negatives or positives.

The size of the printing frame is proportional to the zinc printing plate, and several negatives may be printed at once in a large frame.



The size of Levy screens to be chosen is according to the largest size of picture to be reproduced. For colour work a circular screen is required. Alternately a pair of screens may be used for three colours or a set of three for four colours. These screens will also serve for black half-tone.

The size of colour filters is governed by the diameter of the lens. A camera which will do half-tone will also do line work, and by the addition of colour filters becomes a colour camera. Special registering cameras for colour work can be supplied.

The size of whirler is according to the size of the largest zinc plate to be coated. It will take any size smaller plates.

Reprint of a leaflet now being issued by Messrs. A. W. Penrose and Co., Ltd., the well-known manufacturers of apparatus and materials for photo-litho and photo-offset printing. The leaflet (which is obtainable on request) is itself of interest from the fact that the letterpress has been reproduced from Monotype-set matter by photo-offset, without the aid of a camera—use being made of a sensitive film, somewhat after the fashion of the Manul process.

New display type is expensive—in initial cost and subsequently in composition and distribution. And it is new only once

When you have a Linotype you will avoid heavy bills for new display and body founts, your composition charges will be far less, and distribution nil.

The Linotype will give you new type for *every* job—and not merely type but composed type, ready for make-up and printing.

And as regards make-up: Do you know how simple, safe, and speedy it is where Linotype matter is concerned? The machine leads its own matter; and, as every line is a complete unit, much larger quantities can be handled at a time than is possible with movable type.

Unlimited supplies of decorative material can be cast on the machine; lines can be repeated as many times as required, so that a job can be printed as many "up" as required to reduce long runs on the presses.

The Linotype can be equipped to suit your immediate needs. You can install it with one magazine only or as many as eight; with one distributor or as many as four.

These are but a few of the advantages you will gain when you have a Modern Linotype. Come and see the machine for yourself, and bring samples of your work with you.

Linotype and Machinery Ltd.
9 Kingsway, London

THE ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED.

A Specialised Trade Protection Office for Paper Makers, Merchants, Agents, Wholesale Stationers & Allied Trades.

OBJECTS AND POINTS OF VITAL INTEREST TO THE TRADE.

Enquiries. Precise up-to-date Status Reports furnished by this Society which operates exclusively in your trade.
Collection of Accounts. Trade protection specialisation makes it possible for this Society to render a valuable service in the connection mentioned and, through up-to-date and efficient methods, costs are reduced to a minimum.
Insolvencies. This department will be under the control of an accountant with 15 years' experience in this class of work, and fullest investigations will be conducted and Meetings of Creditors attended free of charge.
The Society will be controlled by a directorate to be elected from the principal houses in the Trade.

Managing Director, Accountant & Valuer: PARKIN S. BOOTH.
Described by the "Chemist and Druggist" as "The Live Wire of the Trade Protection World."

FORM OF MEMBERSHIP.

To MR. PARKIN S. BOOTH.

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from .....192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.
All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.
Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.
The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.
In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—
Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.
" Debt " " " " 1/6 "
The Collection of an unlimited number of Accounts at the following rates of Commission:—
5% on amounts recovered up to - - £20
2½% on amounts over £20 and up to - £100
1% on amounts over - - - £100
5% on amounts recovered in Ireland, Scotland and the Channel Isles.
Special terms in respect to Foreign Debt collections and enquiries.
Representation at Meetings of Creditors free of charge.
Searches of the Registers (unlimited) free of charge.
Legal Advice by the Solicitors to the Office upon ordinary business matters free.

It is in all cases advisable to have electric arc lighting for copying and printing. Daylight is uncertain and even the most powerful incandescent lamps require too long exposures to be useful; bichromate printing cannot be done by such lamps as the latter.

Dry plates, of the special kind for process work, can be used for line or half-tone, but where a large amount of work is to be regularly done, and particularly where the negatives are large, wet collodion is the most economical process.

Panchromatic dry plates are used for colour negatives, but collodion emulsion is more economical for large work, and results are better.

Any room of suitable size on any floor will serve as a photo-litho studio. The vibration of machinery does not affect the photography as the camera is supported on a base suspended on springs to neutralise the vibration. The size of room is determined by the length of the camera stand, which for small cameras is 10 or 12 ft. and for larger cameras 18 to 24 ft. Gas and water must be available and suitable sink drainage provided. Electric light mains must be heavy to carry the required current for the arc lamps.

In a small establishment where sufficient time can be allowed, one man can carry through all the operations of making negatives, printing down, and developing the zinc plates. In larger establishments the negative making and printing down is divided between two or more men.

Standard "News" Defined.

The provision in the U.S. tariff allowing the free importation of "standard newsprint" has led to the appraisers at the Port of New York acting on a tentative definition for this class of paper. This tentative definition, according to the *Paper Mill*, is that standard news-print is news-print weighing within 5 per cent. of 32 lbs. on 24 by 36–500 sheets basis, white or natural in colour and containing a predominance of ground wood pulp.

"New Jerusalem" is the title of Jerusalem's first daily newspaper to be published in English. The journal is due to the enterprise of an American woman, Mrs. Gatling, who is proprietor and editor. It is an independent daily, with an Arabic and Hebrew edition. It is reported that the printing machinery for this venture was brought over specially from America.

WEST & NORTH-WEST London Master Printers' Association

Wages Negotiations Further Discussed.

At a meeting of the West and North-West London Master Printers' Association on February 13th, the discussion on the recent wages negotiation was continued by Mr. A. Bonner, who spoke with much sympathy for the employees though he regretted the lack of interest generally existing amongst them towards the employing houses. He strongly advocated a more democratic view of the position of employer and employed.

Mr. Goss, of Messrs. Baines and Scarsbrook, followed with some friendly criticism of the existing relationship between the L. M. P. A. executive and the ordinary member. He said too much was made of the privileges of the latter and too little of the obligations of the former; and complained that the admission of the allied trades to membership had been allowed to result in unreasonable increases in prices. He advocated the appointment of an organiser for each district, friendly gatherings at one another's houses, the pooling of experiences for mutual benefit, the stressing of efficiency rather than the imprint, and conferences between houses engaged in the same class of work.

Some Practical Suggestions.

Mr. J. R. Burt, filling a gap caused by Mr. Skelton's absence in the North of England, briefly reviewed the conditions and difficulties the Council had to work under, stressing the need for more confidence, a better understanding between the different sections of the trade, and greater consideration for one another. He disagreed with the differentiation of union and non-union houses, as operating against favourable agreements and because it gave the impression of a divided Association. Turning to Labour matters he felt that the efficiency of the employers in negotiating was second to that of the men, and advocated the appointment of an expert adviser to investigate points put forward by the unions and the probable effect of any demands made on the trade as a whole or individual houses. Agreements should not be come to till this had been done. He also advocated the formation of a guarantee fund which he thought could be invested to produce a dividend and could be applied in reduction of subscriptions or other ways. Such a fund he felt sure would not be looked upon with disfavour by the union leaders as it would have a steadying effect on the trade.

In the discussion that followed, Mr. Langley analysed the criticism generally directed against the Association, bringing it all back to the absence of interest and effort on the part of the individual member.

Co-operative Selling.

Mr. W. L. Sidders welcomed the constructive policy put forward. He instanced the activity and thoroughness of the advertising agencies as compared with the apathy of the printer, and advocated the formation of a fund to push print, and the pooling of salesmanship for the benefit of groups of the small houses.

Mr. Young agreed generally with Mr. Burt, and regretted the want of cohesion amongst printers, who, he felt, were too much in opposition to one another. He also thought that the position of the small printer in the Association would have to be reconsidered.

Mr. Perry considered the criticisms justified up to a point. If the Association had failed in some ways, it had more than justified its existence in other. The friendly feeling engendered had been of immense service in welding together the members.

Mr. Searle felt the members were not sufficiently consulted, more matters should be remitted to the districts and the meetings should be made more educative. The questions of advertising and office routine and management needed special attention.

Mr. R. A. Austen-Leigh in response to the president's invitation briefly reviewed the discussion. He thought the engagement of a counsel to advocate the master's side might not prove an unmixed blessing. Such a man would certainly be difficult to get, and would be expensive. Having referred to matters now under discussion at 24 Holborn, and expressed his pleasure at being again at one of the meetings, the discussion was closed by the president thanking those who had come forward with information and suggestions on the important matter that had been before them.

The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letter-press or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.

Keeps up with the speed of the fastest running machine.

Feeds all kinds of paper from thinnest tissue to cardboard.

Register is assured even at maximum speed.

The only Feeder adaptable for very short runs.

Quick changing from small to large sizes and *vice versa*.

Changing to hand feed in a few minutes.

Purely mechanical Automatic Throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.

The Winkler Feeder is also built with a Stacking Arrangement.

Trade Notes.

Bookbinders' Wages Arbitration.—The Right Hon. Sir David Harrel, K.C.B., has been selected to preside over the arbitration proceedings at which the wages dispute in the London bookbinding trade will be settled. Sir David Harrel served on a number of arbitration boards during the War, and has also been chairman of the Durham coal trade Conciliation Board. Mr. R. A. Austen-Leigh and Lieut.-Col. H. Rivers Fletcher will represent the employers, whilst the employees will be represented by the Right Hon. C. W. Bowerman, M.P., and Mr. W. C. Warren. Arrangements are in hand for the arbitration proceedings to take place at Montagu House, on March 6th, though at the time of writing these arrangements are not concluded.

Bookbinders' Summonses.—Arising out of the bookbinders' dispute, the summonses of Messrs. J. Burn and Co., Ltd., bookbinders, Hatton-garden, London, against 56 men for a week's wages in lieu of notice, were adjourned last Thursday, the men having returned to work pending arbitration.

The dispute between Messrs. Samuel Jones and Co. and the Union is in its eighth week. We learn that the firm are carrying on and fulfilling orders; they have practically a full complement of staff and production is nearly normal. On the union side a determination to continue the fight is maintained.

Lithographic Wages.—At the largely attended meeting of the Amalgamated Society of Lithographic Printers (London branch), held at the Memorial Hall, on February 12th—at which Mr. Thomas Sproat was present—it is understood that the feeling of the meeting was in favour of the claim for a re-adjustment of wages so as to place their members on the same footing as the majority of the other sections of the industry. It was also decided to approach the London Master Printers' Association again with a view of bringing about the desired re-adjustment. We understand that correspondence has since passed between the Society and the L. M. P. A., and that the L. M. P. A. is calling a meeting of employers in the litho section of the trade to consider the London wages position.

Lino Piece Scale.—A conference was held between the London Society of Compositors and the London Master Printers' Association on Friday on the question of the application of the linotype piece scale to periodical houses. The conference was adjourned for both sides to report to their executives before meeting again. The L.S.C. has also asked for a conference with the L.M.P.A. in the hope of reaching a settlement on the monotype piece scale.

The Paper Workers' Union (London Central Branch) has asked for a conference on proposed rates for binding and stitching machines in printing houses.

The business of Iliffe and Sons, Ltd., is to be combined with that of Kelly's Directories, Ltd., but will still be carried on separately. The only change will be that Sir William Berry and Mr. J. Gomer Berry, directors of Kelly's Directories, Ltd., will join the board of Iliffe and Sons, Ltd.

A Receiving Order has been made in respect of Mr. F. W. Tongue, 35, Eastwood-road, Cannon-hill, Birmingham, lately carrying on business at Herald-chambers, Martineau-street, and 16, New Meeting-street, Birmingham, paper and paper bag merchant.

Wages Reduction at Sunderland.—At the time of the wages negotiations of last July, when eventually a wages reduction of 12s. 6d. in four instalments was agreed to, Mr. S. Storey, the proprietor of the *Sunderland Echo*, gave a guarantee that no reductions would be made until the end of 1922, in consideration of which the Typographical Association was not withdrawn from his office. Mr. Storey has now notified the Executive Council of the Association of a first reduction of 7s. dating from January 14th, with a further reduction of 3s. on May 6th next, and that wages will then be stabilised until the end of 1923.

State of Trade.—In printing and bookbinding the improvement hoped for and expected in the new year has not been maintained, although in some cases orders are plentiful and works are busy, says a report of the Leicester Chamber of Commerce. In the letterpress section a fairly good flow of small orders continues, but larger orders are few and far between. In the lithographic section business is fairly good, but bookbinding is below normal. Unemployment is not excessive, although it is higher than might have been expected. On the whole the industry locally compares very favourably with other parts of the country.

New Standard Rates.—Members of the Federation of Master Printers throughout the kingdom have this week received a new issue, revised, up to February, 1923, of the "Standard Hourly Rates." The booklet is issued for the guidance of members by comparison with their own hourly rates as worked out according to the Federation Costing System.

The Vellum Binders' and Machine Rulers' Pension Society is to hold its eighteenth annual meeting at the St. Bride Institute on Wednesday next, March 7th.

Newcastle Lectures.—In the series of lectures arranged by the Newcastle District Committee of the Joint Industrial Council (Printing and Allied Trades), a lecture on "The Need for Craftsmanship," was delivered at the King Edward VII. School of Art, Armstrong College, Newcastle, on February 16th, by Mr. A. J. Platt, of Messrs. Mawson, Swan and Morgan, Ltd., Newcastle. Mr. Platt dealt mainly with the letterpress side of the printing industry, and gave interesting examples in make up, etc.

Joseph James Grinyer, a printer, was sentenced to six months in the second division at the Surrey Assizes on Tuesday for fraudulently converting money belonging to the Guildford Slate Club.

The death is announced of Mr. E. P. Haslam, formerly a director of Messrs. Benn Brothers, Ltd., and one of the proprietors of the *Gas World*.

The death occurred last week of Mr. Percy Christopher Wootton, editor of the *Chatham, Rochester and Gillingham News*.

Mr. William Greenhalgh, of Ramsbottom, died suddenly last week, aged 77 years. He was employed in the block-printing department at Messrs. Turnbull and Stockdale, Ltd.

The death has occurred of Mr. F. C. Sawtell, who for the last ten years had been connected with the Reference Department of the *Daily Chronicle* and *Lloyd's Weekly News*.

The late Mr. George Lancaster Stephenson, of Paddington, journalist, son of Sir Albert Frederick Stephenson, newspaper proprietor, of Southport, left £8,643.

Mr. George Frederick Munford, of York Cottage, Kingston, Yeovil, Somerset, late editor of the *Western Gazette*, left £2,236.

Newspaper Amalgamation.—The *Consett Chronicle*, which was founded nearly 28 years ago, and in recent years had its name expanded to the *Consett and Stanley Chronicle*, has just issued its last number, and will cease to exist as a separate publication. The copyright of the paper has been acquired by the North of England Newspaper Co., Ltd., and from to-day's date is amalgamated with the *Stanley and Chester-le-Street News*, and issued under the title of the *Stanley News and Consett Chronicle*.

The clerical section of United Newspapers (1918), Ltd., met at dinner on Monday evening at the Florence Restaurant, Mr. W. H. Sparks being in the chair. Among the guests were the Right Hon. C. A. McCurdy, K.C., M.P., Brig.-Gen. E. B. Cuthbertson, Sir Howard Spicer, and Mr. J. H. Parham, of the Board of Directors.

The Northcliffe Estate.—Probate was granted on Monday of the will and three codicils of Viscount Northcliffe, of Carlton-gardens, S.W., who died on August 14th. The value of the estate is sworn at £3,250,000, with net personalty £1,250,000.

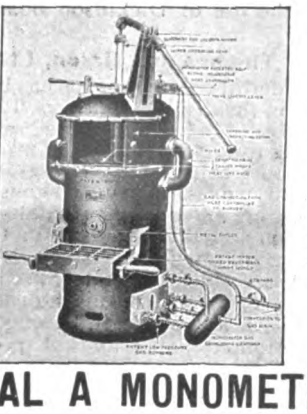
The *Sketch* is offering a prize of £1,000 and many consolation prizes for a competitive selection of designs for its cover.

The American Institute of Graphic Arts is holding, in New York, from February 15th to March 17th, an exhibition of "The Printed Book before the Nineteenth Century"—an exhibition arranged for the study of decorative typography.

To facilitate the journey of representatives of British firms to Leipzig in connection with the Fair, arrangements have been made by the L. and N.E Railway for a through carriage to leave the Hook of Holland for Leipzig on March 3rd and 4th, and if sufficient passengers leave England through carriages will also be run on March 1st and 2nd.

Trade Union Matters.

Home Counties Group, T.A.—The Home Counties Group of the Typographical Association held a special meeting at the Memorial Hall on Saturday, when a representative gathering assembled. Amongst the fraternal delegates attending was Mr. F. O. Roberts, M.P., who delivered a very eloquent address on the aims and prospects of the Labour Party. The joint secretaries of the Joint Industrial Council were also present and addressed the meeting. Mr. A. E. Goodwin (who is also secretary of the Federation of Master Printers) spoke of his presence there as a unique experience, and he went on to indicate the many points of common interest to employers and employed which the J.I.C. had brought to light. He stressed particularly the work of the Health Committee, and pointed out the utility of the J.I.C. in respect of such matters as postal rates, and legislation affecting the printing industry. Mr. A. E. Holmes also referred to the many occasions on which the J.I.C. had proved its usefulness, and he cited the recent dispute in the London bookbinding trade as an outstanding example. All the speakers were well received and accorded hearty thanks.



The Typographical Association is considering the claiming of extra remuneration for linotype operators employed on multiple-fount machines.

The T.A. general secretary has received from the International Typographical Secretariat a request that outside printing workers keep away from Switzerland owing to unsettled conditions following the strike in that country. Similar warning is issued regarding Holland and Iceland, it being stated that a dispute is likely to take place in Holland concerning the questions of wages and the length of working day, and that all the trade union members in Iceland are out on strike in consequence of a wages dispute.

The E.C. of the National Society of Operative Printers and Assistants have formulated a superannuation scheme on the basis of 15s. a week at 60 years of age—no payments until three years have elapsed. The scheme is prepared subject to the approval of the membership.

The Manchester branch of the National Union of Journalists proposes that the National Executive be requested to buy and set up its own printing plant. At the forthcoming annual delegate meeting at Portsmouth the matter will be considered.

North London branch of the National Union of Journalists, which includes the reporting staffs of most of the North London journals, held a very successful dinner at the Alexandra Palace on Friday evening. The occasion was unique inasmuch as the company included for the first time many representatives of the proprietorial interests.

The British Industries Fair.

Paper and Stationery Exhibits.

Information received since our report last week of the opening of the British Industries Fair at White City appears to indicate improvement in the amount of business transacted. We gather that provincial buyers have been more numerous than those from overseas, but more inquiries are reported this year than last from certain overseas countries, notably Spain, Canada, Scandinavia and South America.

Following upon our account last week of exhibits more closely connected with the printing trade, it is of interest to review the excellent display of paper and stationery shown at the Fair.

Spicers Ltd.

The largest stand in the stationery section is claimed for that of Spicers Ltd., and the display is certainly a very comprehensive and attractive one. Every grade of paper and stationery almost, together with boards, containers, cards and other lines are on exhibition. As a testimony to the quality of the papers, raw materials in the form of rags in various stages of treatment are on view, representing the ingredients of the high grade papers manufactured by Spicers Ltd. For the first year flat papers are shown, being the actual manufactures of the Eynsford and Sawston mills. Large rolls of special ledger, fine cream laid, British and Tudor bond, and assurance bond, white and tinted, readily attracted attention. In wax papers also Spicers Ltd. are making great headway. There is a growing demand for this class of paper in the wrapping of foodstuffs. A particular line is "Klene Loaf," a special wrapper for bread. Incidentally it may be observed that this firm are selling a bread wrapping machine, which is held in high favour on account of its efficiency and rapid operation. An important connection is being developed for ivory cards and boards, and the competition from Germany and other countries is being well met.

John Dickinson and Co., Ltd.

As usual, Messrs. John Dickinson and Co. Ltd., have a very fine stand exhibiting the varied classes of paper, boards and stationery, for which they are well known. Having been manufacturing paper for 120 years and reaching a weekly output of 600 tons, Messrs. John Dickinson have a big range in every class of paper and paper product, and very excellent specimens were tastefully arranged on their stand. So much so that the King expressed great surprise at the infinite variety of stationery, especially envelopes, made by the firm at Apsley Mills. Their Majesties spent quite a while in the stand and were obviously impressed with all they saw. The large stocks carried, representing an active and flourishing British industry, carried a lesson which was not lost upon King George. One of the interesting windows was devoted to a bookbinding exhibit, which demonstrated the use of Dickinson boards in the process.

Thomas and Green, Ltd.

A wonderful colour scheme has been incorporated in the display of Messrs. Thomas and Green, Ltd. This firm have evolved an enormous range of tints for printings, banks, bonds, super-calendered writings and cream laids and woves. They are constantly experimenting, and all the varied shades, which make such a striking contrast on their stand, are to be obtained from stock. Among the new colours which have lately been placed on the market are a maize and a peach of great beauty. An advantage in having such strikingly coloured paper as that produced by Messrs. Thomas and Green is associated with office organisation, since papers of strongly contrasted tints can be readily recognised. A strong point of the T. and G. colours is their fastness to light. Special features of the Soho Mills are also ledger laid and account book papers.

Spalding and Hodge.

Boxed stationery formed a very striking feature of the stand organised by Messrs. Spalding and Hodge. Silk tapestry and tinsel covered boxes were of a very handsome order, while the real silk tinsel and cretonne were also shown in very charming designs. A new line of stationery is Old Drury Bond which was done up in various attractive forms. There are also ornate writing pads and compendiums, a very large range of envelopes, and a big selection of Drury cards, white tinted, and coloured.

Limehouse Paper Board Mills.

Boards in wide variety are shown by the Limehouse Paper Board Mills, Ltd. Their boards have a general range of caliper of from .013 inches to .045. Considerable enterprise is displayed at Limehouse in producing material to meet the commercial needs of the day.

Various Stationery Exhibits.

The exhibits comprised in the section devoted to paper, printing, publishing, stationery and office appliances, is very extensive. Account books, for instance, are to be found on the stands of John Knight and Co., Ltd., Millington and Sons, Ltd., Sandle Bros., John Walker and Co., Ltd., Andrew Whyte and Son, Ltd., and others. Cardboard boxes are a prominent feature of the displays by the Thompson and Norris Manufacturing Co., Ltd., The Chad Valley Co., Ltd., and Nature Products, Ltd. Calendars are a big section of the Fair, and most of the firms already mentioned make a feature of them, together with C. W. Faulkner and Co., G. H. Harrison and Son (Leeds), Chas. Letts and Co., and Wm. Ritchie and Sons, Ltd. Carnival articles are shown by the British Crepe Manufacturers, Ltd., Cross and Co., Ltd., and others. In addition to the firms mentioned Messrs. Cooper, Dennison and Walkden show fancy paper articles. Directories, including that of the Papermakers of All Nations, and a variety of painting and story books, are shown by Messrs. Dean and Son, Ltd. In the gummed paper section, of course, Messrs. Samuel Jones and Co., Ltd., are prominent exhibitors, while the Pytram Manufacturing Co. are responsible for papier mache articles. Playing cards, fancy stationery, tags, manilla, etc., and stationer's sundries are other items in the comprehensive list.

Federation's Annual Gatherings.

London's Programme of Events.

A notable programme has now been provisionally arranged for the twenty-third annual meeting and cost congress of the Federation of Master Printers, which are to be held in London from May 26th to 31st, by invitation of the London Master Printers' Association.

Proceedings begin on the evening of Saturday, May 26th, with a reception by the Lord Mayor and Sheriffs at the Guildhall 8 p.m., followed by music and dancing at Stationers' Hall, 9 p.m. On Sunday representatives will attend morning service at Westminster Abbey (seating accommodation being provided for visitors), and in the afternoon and evening there will be concerts, visits to art galleries and other places of interest and usual music at hotels. Monday will bring the commencement of business, a cost congress being held at Hotel Great Central. At the same time ladies' excursions by motor charabancs will visit places of interest in London. Visitors will have luncheon at Hotel Great Central by invitation of the London Master Printers' Association. On Tuesday arrangements include Federation Annual Meeting, Hotel Great Central, and ladies' excursion at 1.30 by motor charabancs to Hampton Court, the day concluding with the Federation Annual Banquet at Hotel Great Central. For Wednesday there is arranged a whole day excursion to Marlow and Windsor, and Thursday will provide opportunities for outdoor recreations, including golf, cricket, etc.

NEWSPAPER FUND.—At the annual meeting of the Newspaper Press Fund at 11, Garrick-street, Covent-garden, on Saturday, Mr. Robert Keir, chairman of the council, presided in the absence abroad of Viscount Burnham, the president of the council. He pointed out that it was important that the public should know at least 50 years must elapse before they came into their inheritance under Lord Northcliffe's will. The membership, it was stated, was now 3,330, and the Fund had paid £160,000 in grants and annuities since its institution sixty years ago.

MESSRS. WIDDOWSON AND CO., colour printers and lithographers, of Millstone lane, Leicester, send us a neat wall calendar with tear-off pad.

Bristol Master Printers' Association

Successful Annual Dinner.

The annual dinner of the Bristol Master Printers' and Allied Trades Association, held at Fortt's Restaurant, Clifton, on February 22nd, was a successful function. The president (Mr. E. W. Allen) presided, and there was a large attendance of nearly 80, which included the Sheriff of Bristol, the president of the National Federation of Master Printers (Mr. R. A. Austen Leigh), the Mayor of Bath (Alderman Cedric Chivers), the Mayor of Dorchester (Mr. E. L. Ling), Mr. F. W. Glossop (chairman of the Cardiff Association), Mr. H. V. Chappell (chairman of Bristol Association), Mr. W. T. Bodey (vice-chairman), Mr. Thos. Goulding (hon. treasurer), Councillor H. Rankin, Messrs. R. Cuthbert Hobbs, H. G. Tanner, L. Good-enough Taylor, J. Corrigan, J. Wright, F. W. Lee and W. Harding (Bath), and representatives of several trade houses.

The loyal toast having been honoured, Councillor Rankin proposed "The City and Trade of Bristol," which was responded to by the Sheriff.

"The Federation of Master Printers of the United Kingdom of Great Britain and Ireland" was proposed by Mr. J. Corrigan, who made reference to the many-sided nature of the work of the Federation, and eulogised the fine leadership of the present and former presidents.

Mr. R. A. Austen-Leigh, in his response, said that that night he had met two gentlemen, in the Mayors of Bath and Dorchester, who had added lustre to their craft. The present constitution of the Federation, which divided the country into Alliances, had been in existence only four years, but that period had covered a searching time. The Federation had been put to the test, and had not been found wanting. It would never use its strength despotically nor take up an unsympathetic attitude to the employees. He hoped the annual gatherings might some day be held in Bristol.

Mr. R. Cuthbert Hobbs proposed "Our Visitors," the Mayors of Bath and Dorchester suitably responding.

Mr. F. W. Glossop proposed "The Bristol Master Printers' and Allied Trades Association" and in doing so made reference to the co-operation possible between Bristol and Cardiff.

In his response Mr. H. V. Chappell said that a circular suggesting the formation of a Bristol Association was sent out in 1904, and he desired to utter a special word of thanks to those who were the pioneers of that work, especially Messrs. Hobbs and Goulding. It had always been a live organisation, and amongst the first subjects discussed were those of technical education and correct costing. That evening's gathering was the largest of the kind ever held in connection with the Association. As to the future they wanted to be as bright as they could and to help each other along.

"The President" was given by Mr. H. G. Tanner, the toast being received with musical honours. Excellent musical and elocutionary items were rendered by Messrs. F. H. Baber, F. Knight and G. H. Holloway, whose services were fittingly recognised by the chairman of the Association.

THE death occurred on Sunday of Mr. Ralph George Lucas, aged 75, of Trowbridge, Wilts, and late of Malton, Yorks, for over 40 years editor of the *Malton Messenger*.

THE annual dinner of the London Master Printers' Association, to be held on Tuesday next at the Connaught Rooms, promises to be a very successful function. We understand there has been a big run on tickets, and no time should be lost by members who have still to apply for accommodation.

"EUREKA" PAPER REEL CONES.—With reference to the article which appears on page 152 of this issue relating to "Eureka" paper reel cones, it should be mentioned that inquiries for the newspaper and printing trade should be addressed to Salmon's Automatic Patents, Ltd., trading as S.A.P., Ltd., 1, Gough-square, Fleet-street, London, E.C.

MESSRS. SLATER AND PALMER are sending out examples of illustration work showing well the effects obtainable with different qualities of their black letterpress inks.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The February meeting of the Association was held on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4, when the chair was occupied by the president (Mr. A. Chadwell), who was ably supported by the vice-president (Mr. J. Black). Most of the evening was taken up by a very interesting and instructive lecture—illustrated by limelight views—on the subject of "Fuel Economy," given by Dr. E W. Smith, F.I.C., vice-chairman of British Furnaces, Ltd. There was a very large attendance, which not only comprised practically every foundry overseer or manager in London, but also included many representatives of leading concerns whose interests are closely identified with the subject dealt with by the lecturer. Among these were Messrs. A. F. Bell (Fry's Metal Foundry), J. W. Garner (works manager, Amalgamated Press), W. J. Light (W. J. Light and Co.), W. S. Mackay (mechanical manager, Amalgamated Press), A. H. Mundey (London manager, Fry's Metal Foundry), and J. B. Titchener (manager, B. Dellagana).

After the reading of the January minutes the president took the opportunity of eulogising Mr. A. E. Wood for the excellent result of his concert on behalf of the Stereotypers' Auxiliary, and then called on Dr. Smith for his lecture, which we hope shortly to report in full.

Dr. Smith dealt fully with the quality of town gas as it is used in the printing trade. As regards the troubles caused by heat spots, he thought they were the result of the use of unsuitable equipment. Dr. Smith said he was not concerned so much about the reduction of the price of gas; what he was more particularly anxious about was to find out how it could be more successfully and economically utilised in the foundry, and to that end he dealt extensively with the problems connected with heating and melting.

At the conclusion of the lecture Mr. Black, in the absence of Mr. Chadwell, who had to leave early for business reasons, invited questions to be put to the lecturer. He said as electrotypers and stereotypers they were deeply interested in questions relating to the heating and melting of metal, and after having had such a splendid demonstration of how best that could be done, he thought the system that had been so ably expounded to them was the one that most of them should adopt. What struck him particularly was the design and method employed in this system whereby the heat was not impinged on the pot, a matter which had been to them a bugbear all along. Heat spots on the pot have by Dr. Smith's method been eliminated, and that in itself was a great step forward.

On behalf of the members he extended to the lecturer grateful thanks for his clever and lucid address.

To Mr. Wood, who asked the lecturer the best method to adopt to get rid of condensation, Dr. Smith replied that the difficulty could be got over by the use of a properly designed separator.

Questions were also asked by Messrs. J. W. Garner, J. S. Sunderland, and others.

Mr. S. Huggins related an experience regarding the use of gas in heating metal on autoplate machines. He explained that after he had been working these for a length of time with the use of gas at ordinary pressure and with the use of what stereotypers called a blower, a certain amount of trouble was caused, as the pressure of gas was not always the same. An engineer ultimately thought of an idea of putting a burner under the furnace, which already had as many as forty-eight burners, each with perforated tops. This engineer later invented a burner and did away with the blower and dispensed with three dozen of the original burners, leaving only twelve. The results obtained were eminently satisfactory, considering they passed through their pots a matter of between thirty and forty tons of metal from the time they lighted up till the time they closed down. Concluding, Mr. Huggins believed the inventor of this burner eventually sold the patent rights for £1,000.

Dr. Smith, replying to several questions, said he would be glad to discuss the difficulties met with by the overseer in the foundry if the opportunity was given him of inspecting the appliances and equipment on the spot. He would then know better what they were up against. He thanked his listeners for the hearty reception extended to him.

Before closing the meeting Mr. J. Black, on behalf of the Association, gave a warm welcome to the visitors who were present.

The informal members' dinner of the Association is to be held at the "Florence," Rupert-street, Soho, on Monday, at 7 o'clock.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous,

One Insertion 3/-
Three Insertions... ... ... 6/-
For every line exceeding three lines 1/.

Situations Wanted,

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions... ... ... 3/0
For every line exceeding three lines 6d.

Sales by Auctions, Tenders, Patents for Sale, Legal and Financial Announcements,

Per line 1/-

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe Lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

AGENT and REPRESENTATIVE wanted by high-class firm of Belgium Lithographers.—Write full particulars and qualificatioes to Box 683, Clark's Advertising Service, 57, Mortimer-street, W 1. 14068

Situations Wanted.

ACCOUNT-BOOK BINDER, half extra, cutting, etc., requires situation (town or country).—G., 169, Pelham-street, London, E.1. 14064

ALL-ROUND JOBBING COMPOSITOR (non-soc.) requires situation; small works preferred.—B.C., 13, Old Palace-road, Croydon. 14063

COMP., First-class, Modern Display, Catalogue, etc., seeks perm., London.—S., Box 14067.

COMP. requires situation at once, small provincial office, good All round General Jobbing experience, moderate wage.—Pulsford, 30, Gladstone-road, Watford. 14062

LETTERPRESS MACHINE OVERSEER, with practical experience on all classes of work; keen organiser, estimator, colour work a speciality; highest references.—Box 14058.

NEWSPAPER ENGINEER and MACHINE OVERSEER desires change; evening or weekly preferred; vast experience with up-to-date High-speed Rotary and Stereotyping Machinery.—Box 14055.

OVERSEER Machine Department (Letterpress), desires re-engagement; experience of High-class Half-Tone, Three-Colour, Book and Catalogue work; excellent testimonials.—Box 14057.

SMART ARTIST (lady, 26), General Commercial, three months' experience, desires Progressive Post in Studio; willing pay £25 premium. Box 14065.

WORKS MANAGER seeks any Post, prac. all depts., Gen. Printing, Ruling, Binding, Man. Stationery; also Tag, Label and Dup. Book Trade; est., costing.—Smith, 60, Lynn-road, Wisbech. 14066

Machinery for Sale.

DAWSON'S TWO FEEDER WHARFEDALE NEWS MACHINE, for sale, flyers with cutter, bed 65 in. by 40 in., ink slab 60 in., £100; also MENTGES NEWS FOLDER, No. 2 868, folds 4, 6, 8, 10 or 12 pages, with paster, trims top of page, £40; sold to make room for Web Machine.—Caldicotts "News" Office, Gainsborough. 14045

FOR SALE.—TWO 42-in. DAWSON'S SELF-CLAMP GUILLOTINES, in good working condition, price £85 each.—Can be seen by appointment with Factory Manager, E. J. Arnold and Son, Ltd., Butterley-street, Leeds. 14060

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

STANDING PRESS, 5-ft. high, to press 22 by 15; £7 net (Wood and Iron).—Write, E. Garner, 446, East Park-road, Leicester. 14048

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

THREE-HOLE THREAD STITCHER, must be in first-class condition.—Full particulars, to Box 14051.

Miscellaneous.

NUMBERING MACHINES, 7 movements, 6 wheels, listed £6 15s.; brand new; nine only left, our price to clear, 55s.; money returned if not satisfied.—Kidd's Business Service, Ltd., 59, Albert-road, Middlesbrough. 14052

RECIPROCATING RIDER ROLLERS give perfect distribution at one-third the cost of other systems; One Thousand Sets running; also makers of the perfect Jogger-up.—F. Bedfield, Stanley-place, Burnley. 14044

WANTED. THREE or FOUR-COLOUR BLOCKS, Odd or Series, suitable for Wall Calendars, size about 6 by 8 cm.—Price and colour proof to L. F. De Vos and Co., 37, Canal de l'Amidon, Antwerp. 14050

Tenders.

H.M. STATIONERY OFFICE.

SALE of LITHOGRAPHIC, LETTERPRESS and BOOKBINDING PLANT and MACHINERY at the Ordnance Factories, Royal Arsenal, Woolwich, including:

A Double Demy ROTARY LITHO OFFSET MACHINE, in splendid condition, by Geo. Mann and Co., Ltd.

Four "Falcon" PLATEN MACHINES, Foolscap Folio to Royal Folio, by Waite and Saville, Ltd.

An IMPERIAL IRON STANDING PRESS, by Harrild and Sons.

About 3 Tons of LITHOGRAPHIC STONES in various sizes.

About 5 Tons of old TYPE METAL in slabs.

Imposing Surfaces, Composing Frames, Type Cases, etc.

Tenders for the purchase of the above are invited by the Controller of H.M. Stationery Office, and should be delivered not later than the morning of Tuesday, March 20th, 1923.

Tender forms, with permission to view, may be obtained on application to the Controller, H.M. Stationery Office (Printing and Binding Division), Princes-street, Westminster, S.W.1. 14061

Posting and Printing Abroad.

THERE have been numerous examples recently, as we have from time to time notified our readers, of firms in this country taking advantage of the collapsed exchanges and cheap Continental postal charges by having circulars printed abroad and posted to addresses in this country. The Federation of Master Printers has called the attention of the Postmaster-General to the prevalence of this practice and a reply has been received, thanking the Federation for its communication and stating that in view of the fact that circulars have been received in considerable numbers from Germany recently Mr. Chamberlain is considering the question of obtaining legislative powers for putting a stop to the practice of posting circulars from countries of abnormally depreciated currencies. Commenting upon this reply, the secretary of the Federation remarks that it should be recognised that the legislative programme of the Government may prevent the postal authorities from carrying out their intentions in this direction. It would seem, therefore, that there is room for all the efforts that can be made by the printing trade to discourage this practice of posting abroad. The case of the Free Church Touring Guild, on which comment was made in our issue of February 15th, has been taken up by the Joint-Industrial Council of the Printing and Allied Trades, which has drawn the attention of the president and vice-president of the Guild to the matter. We understand that replies have been received from Dr. Scott Lidgett and Dr. F. B. Meyer to the effect that they are giving the question their consideration. Mr. Donald Maclean, who is abroad at present, has also been asked to look into the case. The joint secretaries of the J.I.C., in writing to these gentlemen, said that British printers do not desire any measure of protection, but whilst so many printing workers are unemployed and so much plant is lying idle in this country, British advertisers should not take advantage of abnormal rates of exchange and deprive this country of legitimate revenue. Of course, one of the things to be desired in this connection is a cheapening of our own postal rates, and we think the Post Office has not made out a satisfactory case against the call for further postal reductions, which would give British producers some relief from Continental competition. Paragraphs have been appearing in the Press to the effect that the receipts of the postal services have fallen short of anticipations by approximately £2,000,000. No account is made, however, of the savings the Post Office has made during the past nine months. It was promised that economies effected would be considerable, and still further cost-reductions are expected. Further economies should make possible further cheapening of the postal services, a course which would undoubtedly prove a stimulus to British trade.

* * *

Unemployment.

EMPLOYMENT in the paper industry during last month is officially described as "fair on the whole" and "showed a further slight improvement as compared with the previous month." Statistics, however, indicate a slight increase in unemployment, although there is a sharp drop in the general unemployment curve. It is curious that the curve showing the percentage unemployed among work-people insured against unemployment under the Unemployment Insurance Act records a sharp rise, going up from 12 per cent. to nearly 13 per cent, while the fall in general unemployment is from 14 per cent. to 13¼ per cent. These percentages, which refer to trade unions making returns, seem to prove that the paper and allied trades were better off than industry generally. In papermaking and staining, for instance, out of an estimated number of insured workpeople of 61,000, the total number of unemployment books remaining lodged on January 22nd was 4,579, representing 3,542 males and 1,037 females. The total percentage of 7·5 marked an increase of 0·5 compared with December 18th. The estimated number of insured workpeople in manufactured stationery is put at 70,200, of whom 4,873 were unemployed (1,794 males and 3,079 females). The total percentage of 6·9 is an increase of 1·2 compared with a month earlier.. Printing, publishing and bookbinding give an estimated number of insured workpeople of 213,150, in respect of whom 14,804 unemployment books remained lodged at January 22nd, 10,367 representing males. The total percentage unemployed of 6·9 represented an increase of 1·0 as compared with December 18th. The relative bearing of these figures is borne out by the reports in the *Ministry of Labour Gazette*. Compared with the rather encouraging note on papermaking and staining, we are told that "in the printing trade employment was generally slack and worse than a month ago; it was still reported as good, however, with electrotypers and stereotypers in London, and letterpress printers at Leicester and Nottingham reported a slight improvement. Employment showed a decline in the bookbinding trade and was bad generally, with much short time; in London it was affected by a dispute in the latter part of the month."

* * *

Paper Prices.

COMPARING to-day's market prices for paper with those ruling in January last year, there appears to have been a reduction of over 15 per cent., *i.e*, bulking all classes together. It will be remembered that printings and writings stood at their lowest level in June last, after which there came a general hardening. On the other hand tub-sized writings and ledger papers followed an opposite tendency and gradually approximated to a relationship with pre-war prices comparable with those existing in E.S. papers.

Death of Mr. R. J. Lake.

We much regret to learn, just as we go to press, that Mr. Reginald J. Lake died on Wednesday morning. Mr. Lake, who was known and respected throughout the printing industry of this country, was chairman of the Master Printers' Association in 1894, president of the Federation 1904 5, and director of the Federation from 1910-19.

Personal.

THE Duke of York last week unveiled the personal memorial to the late Sir Arthur Pearson subscribed for by the blinded soldiers and sailors of St. Dunstan's.

VISCOUNT BURNHAM sailed for this country from New York on Saturday, having reached New York from the West Indies last Thursday. He remarked that "stupendous" was the only word to convey his impressions of all the developments in America since his first visit twenty-nine years ago. The British, he said, are behind the United States in advertising and publicity methods.

LORD BURNHAM hopes that the proposal for an Anglo-American Press Conference may be adopted.

LORD RIDDELL, Lord Marshall, Sir George W. Truscott, Sir William and Lady Waterlow, and Sir John and Lady Baddeley were amongst the guests at the luncheon given last week by the Lord Mayor and the Lady Mayoress to celebrate the 80th birthday of Sir William Treloar.

LORD RIDDELL, Sir Albert and Lady Spicer, Sir Wm. Berry, and Col. R. R. McCormick (President of the *Chicago Tribune*) were among those who attended the English Speaking Union Luncheon at the Connaught Rooms last week to celebrate the anniversary of the birth of George Washington.

SIR WILLIAM BERRY presided last week at the luncheon given by the Aldwych Club to Mr. Ramsay MacDonald, M.P.

MR. J. GOMER BERRY will preside at the Printers' Peace Memorial Dinner in aid of the funds for a wing of 40 beds at the Lloyd Memorial Caxton Seaside Home for Men and Women, dedicated to the officers and men of the Printing, Stationery and Allied Trades who fell in the war, 1914-18. The dinner will be held at the Hotel Cecil on Saturday, March 10th, 1923, at 6.30 p.m., and workpeople in the allied trades are specially invited.

MR. R. A. AUSTEN-LEIGH is attending the annual dinner of the Sheffied Master Printers' Association on Wednesday next, and is spending the week-end at Grange-over-Sands with the Lancashire and Cheshire Alliance of the Federation of Master Printers.

MR. JOSEPH MORTIMER, O.B.E., secretary of the Printers' Pension Corporation will lay the claims of this excellent charity before the members of the South-West London Master Printers' Association, at the Westminster Public Library, Buckingham Palace-road, S.W.1, on Wednesday, March 7th, at 6.30 for 7.0 p.m.

MR. SIDNEY HODGSON, of Messrs. Hodgson and Co., is to deliver an address on "Bibliography" at Stationers' Hall on Friday, March 9th, at 6 30, the chair being taken by Mr. John Ballinger, C.B.E., M.A., president of the Library Association.

MR. E. E. STARKE, a senior manager of Benn Brothers, Ltd., has joined the board of directors, and Mr. A. R. Pain, solicitor, has been appointed secretary.

MR. A. H. ISAAC has been appointed London sales manager of the well-known printing firm of Loxley Bros., Ltd., of London and Sheffield.

PROFESSOR HODDER-WILLIAMS has resigned his Professorship of History at the University of Toronto in order to join the publishing firm of Hodder and Stoughton in London.

Presentation to Mr. George Douglas

A testimonial concert and presentation were given to Mr. George Douglas, late assistant secretary of the London Branch of the Amalgamated Society of Lithographic Printers, on Friday, at Anderton's Hotel, Fleet-street, E.C.4, the chair being occupied by Mr. C. Alexander. The event constituted a red-letter day in the annals of the Society. There was a representative gathering, which included Messrs. T. Sproat (general secretary), Woodgate Stevens (London secretary), F. C. Tolhurst, J. Garner, F. Howe, A. E. Earl, J. J. Mackenzie, J. Brenchley, M. D. Sturgis and Mr. and Mrs. Bond, Mr. and Mrs. Dowden, Mr. and Mrs. Lucas and Mr. and Mrs. George Douglas.

The presentation took the form of a handsome illuminated address (executed by Mr. Hollis, of the Clifton Studios), and was accompanied by a wallet containing treasury notes.

Mr. Thomas Sproat, in making the presentation, referred in a striking speech to the many sterling qualities possessed by Mr. Douglas. In eulogising Mr. Douglas he made frequent quotations from the poet Burns, and also drew attention to the fact that the guest of the evening was a "Douglas" and that Mrs. Douglas was a "Bruce."

Mr. George Douglas, who was deeply moved by the expressions of good feeling that had been made, returned suitable thanks for the gifts. He was pleased to see such a rally of old and new friends around him.

Mr. W. Stevens, in proposing a vote of thanks to the stewards, Messrs. T. Hammond and J. Dowden, also took the opportunity of corroborating the kindly words of congratulation that had been extended to Mr. Douglas.

An excellent musical programme was gone through. Of the artistes perhaps Mr. E. Mullens (baritone), Mr. Arthur E. Cox (violin solo) and Mr. George Buck were the most successful, whilst some fine contributions were also made by Miss Doris Nichol and Mr. H. Whittaker. Mr. Mullins' kindness and forethought was also much appreciated in other directions.

The singing of Auld Lang Syne brought a memorable gathering to a close.

South-East London M.P.A.

Printing Ink Problems.

At the February monthly meeting of the Association of Master Printers of South-East London held at Lewisham, Mr. Ilston Cox, of Messrs. Shackell, Edwards and Co., Ltd., entertained a representative audience to an address on "Colours and Printing Inks." He reviewed a set of problems different from those which he referred to in his lecture to the same Association at London Bridge four months ago, and succeeded in imparting a great deal of useful information in the space of three-quarters of an hour.

On the two occasions mentioned he dealt with about forty different questions, so that it is quite evident that a printing ink maker needs to have a wide knowledge of the printing trade to be able to deal adequately with all the difficulties that are brought to his notice.

The lecturer gave a test-tube illustration of one of his points, showing the advantage of using colours struck on a base of hydrate of alumina, thus ensuring clean working conditions on a long run. Heavy inks, he said, are always liable to give trouble, and even if low in price will not prove economical in practice. They are only used on dark cover papers and for other purposes where opacity is a primary consideration.

Mr. Cox was most warmly thanked for his address, and the hope was expressed that he or his firm would be willing to help any members of the association when they ran up against problems that needed a little outside assistance.

MR. E. S. AGNEW, son of the proprietor of *Punch*, who contested the Holland-with-Boston Division of Lincolnshire at the last election, was at Spalding presented with a a silver tea service and tray by the Liberals of the division in recognition of his fight.

A Fifty Years' Record.

Stephenson, Blake and Co.'s Manager.

We learn that Messrs. Stephenson, Blake and Co., Ltd, the well-known typefounders, are shortly to lose the active services of their London manager, Mr. E. B. Hanson, who is soon to enter into well-earned retirement.

Mr. Hanson, who is a native of Bradford, Yorks, where his father was the proprietor of a newspaper, and, later, for many years chairman of the School Board, entered the service of Messrs. Stephenson, Blake and Co., Ltd., Sheffield, as managing clerk as long ago as June, 1873. He discharged the continuously increasing responsibilities of that position for some 25 years, working during the whole of this period in close association with the late Sir Henry Stephenson, then head of the firm. In 1898 Mr. Hanson was appointed assistant manager to the late Mr. E. Peachey, then in charge of the firm's London establishment, succeeding to the management on Mr. Peachey's death in 1901. From that date he has been one of the best known and most highly esteemed men in London printing circles, his knowledge regarding all that concerns the art of typography and his readiness and courtesy in placing it at the disposal of his firm's customers being greatly appreciated.

We are informed that Mr. Hanson's resignation will not take effect till the end of June next, but that after March 31st he will have associated with him as joint manager, Mr. R. B. Fishenden, who will take up full management on July 1st.

Mr. Fishenden who is already well and favourably known to the printing trade, requires no introduction. From 1902 to 1921 he filled a responsible position in the College of Technology, Manchester, where, during the latter portion of the time, he was director of the printing department. His work for the printing craft in Manchester was much esteemed. Joining Messrs. Stephenson, Blake and Co., Ltd.'s London staff in October, 1921, Mr. Fishenden has had the opportunity of acquiring not only the necessary commercial experience, but also an intimate knowledge of the technicalities of typefounding, which he has used to excellent purpose in recent lectures to printers. Mr. Hanson thus has the satisfaction of knowing that when he relinquishes the management of 33, Aldersgate street, competent hands will be ready to carry on his work, while moreover, it is gratifying to know that after his 50 years of active service he is not to sever his connection with the company, but will remain at its call in a consultative capacity. The best wishes of his many friends will go with him in his retirement, for which Messrs. Stephenson, Blake and Co., Ltd., have made generous provision.

Settled!

Agreement Reached in Swedish Paper Industry.

Agreement has been reached between the employers and the workpeople in the Swedish paper mills. News to this effect arrived in London on Thursday morning.

The subject of wages came up for consideration between the parties last month, and these were continued without any cessation of work at the mills. The hope expressed by Dr. Jahn in a telegram to the Swedish Consul-General in London that the dispute would be settled this week has been happily fulfilled.

Some doubt might have been created as to whether the paper plants would be able to obtain supplies of raw material in view of the lock-out in the pulp industry. Many of the Swedish mills, however, produce their own pulp, and these pulp-producing plants are not affected by the shut-down in the independent industry, except so far as they may require raw material beyond their own manufacturing capacity.

GERMAN PAPER MONEY.—The daily note production in Germany has swollen to 45 milliards of marks, and is to be increased in coming weeks to 75 milliards a day. In all, there are 12 paper mills aad 33 printing works occupied on this increased activity.

DIVIDENDS AND REPORTS.

ANNANDALE AND SON, LTD.—Annual report shows balance at credit of profit and loss of £11,447. It is proposed to place to depreciation and reserve £1,000, and write off outlay on new machinery £927, leaving £6,191 to be carried forward, after paying dividend of 5 per cent. on preference and 2½ per cent., free of tax, on ordinary shares. Previous year only preference dividend was paid.

NEW COMPANIES.

A. B. SWAIN AND CO, LTD.—Capital £12,000; to adopt an agreement with A. B. Swain and to carry on the business of manufacturing stationers, paper merchants and warehousemen as formerly carried on by the said vendor at 69-73, Mansell street, Aldgate, E. Private company. First directors: A. B. Swain, Mrs. E. Swain, E. W. Luke, Mrs. M. E. Luke and A. Bruce. Registered office: 69-73, Mansell street, Aldgate, E.

E. BARTLETT AND SONS, LTD.—Capital £5,000; to take over the business of printers, paper merchants and wholesale stationers carried on by E. Bartlett and H. E. Bartlett at Bristol as "E. Bartlett and Sons." Private company. First directors: E. Bartlett and H. E. Bartlett. Registered office: 1, Unity-street, College green, Bristol.

PRINTERDOM, LTD.—Capital £100; printers, lithographers, die-stampers, relief stampers, stereotypers, typefounders, Christmas card makers, photographic printers, engravers, etc. Private company. First directors: J. H. R. Renwick and R. Renwick. Registered office: 37, Kirkgate, Otley.

J. LOCKWOOD AND SON, LTD.—Capital £4,000; to take over the business of commercial stationers, account book manufacturers and printers, carried on by the executors of the late John Lockwood, at 15, Shudehill, Manchester, as "Joseph Lockwood and Son." Private company. Permanent directors: Mrs. E. Hughes, S. S. Taylor and D. W. Hudson. Registered office: 15, Shudehill, Manchester.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

FRANK PHILLIPS, LTD. (printers, stationers, etc., Birmingham).—Debenture dated January 20th, 1923, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: F. Phillips, 9, Edmund-street, Birmingham.

T. H. GOOD, LTD. (paper and packing material merchants, etc., Leeds).—Debenture dated February 13th, 1923, to secure £1,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: W. S. Sykes, Netherleigh, Roundhay, Leeds.

F. AND B. GOODWIN, LTD. (music publishers and librarians, etc., London).—Particulars filed of £2,000 debentures authorised February 15th, 1923, charged on the company's undertaking and property, present and future, the whole amount being now issued.

ODHAMS PRESS, LTD.—Particulars filed of £200,000 debentures (with authority to issue a further £150,000 authorised January 31st, 1923, and covered by trust deed of even date, charged on 64, 85-94, Long Acre, W.C.2, 27, St. Bride's-street, and 10, Shoe-lane, E.C., and the company's other assets, present and future, including uncalled capital, the amount of the present issue being £181,100. Trustees: Lloyds Bank.

J. G. TOMKINS, LTD.—Further charge on 373, High-street, West Bromwich, dated January 29th, 1923, to secure £100. Holder: P. L. Whitehouse, Lombard-street, West Bromwich.

LEIGHTON, SON AND HODGE, LTD. (printers, etc.).—Charge and Land Registry Charge on certain property in Plough-court, New-street-square and Dean-street, E.C., both dated January 30th, 1923, to secure all moneys due or to become due from company to L.J.C. and Midland Bank.

NEVETT BOOKBINDING CO., LTD.—Mortgage on Nevett Bookbinding Factory, Hendon, N.W.9, machinery, fixtures, etc., dated February 14th, 1923, to secure all moneys due or to become due from company to L.J.C. and Midland Bank.

LONDON AND CONTINENTAL MUSIC PUBLISHING CO., LTD.—Debenture dated February 12th, 1923, to secure £700, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: J. Curwen and Sons, Ltd., North-street, Plaistow, E.13.

J. CURWEN AND SONS, LTD. (music publishers, etc.).—Satisfaction to the extent of £5,900 on October 1st, 1922, of debentures issued under trust dated September 29th, 1897, securing £24,500. (Notice filed February 15th, 1923).

PHILIPSON AND SON, LTD. (process engravers and art photographers, etc., Newcastle-on-Tyne).—Mortgage dated February 8th, 1923, to secure £1,000, charged on 22, Oxford street, and 8, Snowdon-street, Newcastle-on-Tyne. Holders: Rock Permanent Benefit Building Society.

GUILBERT-WENHAM PRINTING CO., LTD. (printers, stationers, etc., London)—Issue on January 29th, 1923, of £200 debentures, part of a series already registered.

A. WHEATON AND CO., LTD. (stationers, printers, etc., Exeter).—Satisfaction in full on February 16th, 1923 (a) of mortgages dated August 20th, 1920, securing £2,800 and (b) of debentures dated April 9th, 1906, securing £6,000.

HARRY SMITH AND SON, LTD. (paper tube manufacturers, paper machinists, etc., Keighley).—Satisfaction in full on February 7th, 1923, of debenture dated April 25th, 1921, securing £7,000.

"COMING FASHIONS," LTD.—Particulars filed of £38,000 debentures authorised January 29th, 1923, charged on goodwill so far only as relates to the periodicals *Coming Fashions* and *Toby* and copyrights, etc., therein; the whole amount being now issued.

BANKRUPTCIES, etc.

Re MYER ZANG (engraver and die sinker, 6, Canal-road, and 26, Rookwood-road, Stamford Hill, N.).—The public examination of this debtor was held on February 20th, at the London Bankruptcy Court, the accounts showing liabilities £8,652 against assets £12. The debtor stated that he came to this country from Poland in 1906, and was in employmen for four years. He commenced business with £400 capital, at 1, Fann-street, Aldersgate, removing in 1913 to 11, Little Sutton street, Clerkenwell. In May, 1914, witness formed "M. Zang, Ltd." to acquire his business; three months later it was amalgamated with that of another person, and the name was changed to "Edwards and Zang, Ltd."; he held 900 shares and acted as a director of the company until March, 1917, when he resigned from the company, and received £47 for his interest in it. In the following September he purchased the assets of "Edwards and Zang, Ltd." for £2,·00, and again commenced business at 154, Dalston-lane; in December, 1918, he registered "Cecile, Ltd.," to acquire the business for £5,000 in shares; he acted as managing director of the company, the name of which was changed in April, 1919, to "M. Zang, Ltd."; the business was removed to Canal-road, Kingsland-road, N., in December, 1919, and was carried on till September, 1922, when a receiver for debenture holders was appointed and he had since been employed by the latter as works manager. Witness attributed his insolvency to liabilities incurred on behalf of "M. Zang, Ltd.," for cash advanced; to the failure of the companies into which he put the greater part of the money, and to heavy interest on such advances. The examination was concluded.

French Paperstock Co., Ltd.

The petition of Co operative Vereeniging Stroocartonfabriek "De Toekomst" for a compulsory order to wind up the French Paperstock Co., Ltd., was again before Mr. Justice Astbury, in the Companies Winding-up Court last week. Mr. Grant, K.C., for the petitioners said Mr. Luxmoore, appearing for the company, and he had come to an agreement. There was a voluntary liquidation, and a meeting of creditors was to be held to consider whether that should be continued. He asked his Lordship to let the petition stand over for a fortnight, when, if the meeting of creditors was favourable, there would be a settlement.

His Lordship assented.

The Cleveland Guild of Printers.

An interesting lecture on "Newspapers: A Retrospect and a Forecast," was delivered by Mr. Ernest Fisher (Fry's Metal Foundry, Manchester), to the members and friends of the Cleveland Guild of Printers, Lithographers, Bookbinders and Kindred Arts and Crafts, on Wednesday, February 14th, at the Literary and Philosophical Institute, Middlesbrough. By the aid of lantern slides and copies of newspapers printed in the early days, Mr. Fisher was able to link up the chain of newspaper progress from ancient times to present-day productions, bringing to notice the triumphs of the papermaker, the typefounder, and the engineer. The lecturer aroused great interest in his "Forecast," describing the photo type setting machines and processes of the future which are already being perfected. He showed the latest examples of newspapers produced by photographic methods. An interesting discussion followed, many questions being asked and ably answered on the future of newspaper and jobbing printing. The Master of the Guild (Mr. C. H. Scaife) presided, there being a good attendance of members and friends.

Amalgamation and Reconstruction of Printing Companies.

By HERBERT W. JORDAN.

(*Continued from page 123*).

The terms "amalgamation" and "reconstruction," although fairly well understood by the commercial world, are not defined by the Companies Acts. For our present purpose let us regard as an "amalgamation" the merging of two or more undertakings, or the merging of the control thereof (whether the undertakings are owned by firms, limited partnerships or companies) into one company, and let us use the term "reconstruction" in a restricted sense by applying it only to the case of the winding-up of a company and transfer of its undertaking to another company formed with the express object of making such acquisition, the members of the old company exchanging their shares for shares of the new company.

It will be readily understood that the merging of undertakings owned by different companies, or the merging of the control thereof, does not necessarily bring the existence of the companies to an end. The undertakings may be taken over by a new company, or one of the existing companies may swallow the others, as Aaron's rod swallowed the rods of the magicians; or, on the other hand, the existing companies may continue as separate entities and carry on their respective undertakings as hitherto, the control however being vested in a new company. If either of the undertakings should be owned by an individual or a firm, and it is desired to preserve the identity of the undertaking, it is usually advisable to convert the business into a limited company before carrying through the amalgamation scheme. When this course is adopted, it would obviously be desirable that the trading style should be retained in the title of the new company with the addition of the word "Limited," but if such title could not be registered, owing to the existence of another company bearing the same title, a name as similar as permissible would be adopted.

It will also be understood that in the case of a reconstruction the name of the new company need not be identical with or similar to that of the old company, although, in most cases of reconstruction, the new company is registered by the same title as that of the old company, either with or without the addition of the year of incorporation. Nor is it essential that the membership of the old and new companies should be identical; in fact, in some cases one of the main objects of the reconstruction is to facilitate the raising of further capital by the issue to outsiders of shares with special rights. However, whether or not there are to be additional members, a reconstruction implies that the members of the old company are to become members of the new company if they so desire. Any members of the old company who do not wish to exercise their right to become members of the new company have certain rights conferred upon them by statute, as I will explain after dealing with the subject of amalgamation.

Amalgamations are effected, as is well known, with the object of combining different undertakings or of bringing them under one control and thus co-ordinating the businesses, improving the organisation, avoiding overlapping, minimising competition and strengthening the stability of the undertakings as a whole.

Reconstructions are effected for one or more of the following purposes: (a) Raising fresh capital; (b) reorganising the capital; (c) reducing the paid-up capital or extinguishing the liability in respect of uncalled capital; (d) enabling a return of capital to be made to the members; (e) effecting a compromise with the creditors; (f) enlarging the powers of the memorandum of association; (g) increasing the paid-up capital without any corresponding increase in the value of the assets. These purposes can generally be attained by other methods, but instances frequently occur where a reconstruction is the only practicable course. Moreover, where the sanction of the Court would otherwise be required, a reconstruction may frequently be resorted to with advantage in order to save delay in carrying through the proposals or to avoid compliance with the statutory requirements which an application to court would involve.

Printing Trade Amalgamations.

The printing trade has produced numerous amalgamations and reconstructions—a larger number, in fact, than is generally realised by the trade itself. Moreover, in a considerable number of cases where amalgamations are believed to have been effected it is not possible to adduce proof thereof, as it is not difficult for one company to acquire an absolute control over another company without disclosing the fact to anyone beyond employees in their confidence.

Several amalgamations and absorptions are well known, such as the merging of the business of Messrs. Waterlow Brothers and Layton, Ltd., with that of Messrs. Waterlow and Sons, Ltd., the absorption of the London works of Messrs. J. G. Hammond and Co. by Messrs. Cassell and Co., Ltd., the shares of which have since been acquired by Messrs. W. E. and J. G. Berry, who have acquired also practically all the shares of St. Clements Press, Ltd., and have obtained a controlling interest in Messrs. Kelly's Directories, Ltd. The London works of Messrs. Love and Malcomson, Ltd, and Messrs. R. Clay and Sons have been acquired by the Fleetway Press, Ltd., and the Cornwall Press, Ltd., respectively. Messrs. Loxley, Bros., Ltd., have acquired the undertakings of Messrs. Hampton's and the British Periodicals, Ltd. Last year the businesses of Messrs. Alf. Cooke, Ltd., Messrs. Bemrose and Sons, Ltd., and Messrs. Norbury, Natzio and Co., Ltd., were amalgamated, and the business of Messrs. Roworth and Co., Ltd., was taken over by the Solicitors' Law Stationery Society, Ltd. This information is given in the excellent Master Printers' Annual, and is consequently known to printers generally, or will be known on the issue for the current year being published. Thanks to the courtesy of Mr. R. A. Austen-Leigh, I have had an opportunity of seeing a proof of the portion relating to amalgamations that will appear in the 1923 edition.

When I come to explain in some detail the various methods of effecting amalgamations and reconstructions, it will no doubt assist you to grasp my meaning if I give illustrations of transactions of the kind that have already been effected in the printing industry. I fear, however, I shall have to give fictitious names, as it is conceivable that exception might be taken by interested persons to my going into certain details relating to any particular company.

Let us now confine our attention for a time to the subject of amalgamations, using the term in the wide sense I have already indicated The methods of amalgamation are various. For the sake of example we will take the case of three undertakings engaged in businesses of a similar or cognate character, which it is considered might advantageously be merged. The businesses may be owned by firms, limited partnerships or companies, but for the purpose of illustration it will be convenient to assume that in each instance the ownership is vested in a company.

Let us describe the three concerns as A, B, and C companies and consider the different methods of merging the undertakings or the control thereof as the case may be. The methods would be:—(1) To form a new company to acquire the existing undertakings; (2) To form a new company to acquire a controlling interest in such undertakings; or (3) For one of the undertakings to absorb the other two (or acquire a controlling interest in them). We will take the methods in the order mentioned.

Merging of Undertakings by New Company.

If the businesses are to be transferred to a new company the chief difficulty will be to arrange terms as between the different companies. As a rule each undertaking will be transferred to the new company for fully-paid shares of that company. The directors of the respective companies will go carefully into the subject and endeavour to agree on equitable considerations for their particular companies. When the terms have been settled the directors of each company will execute a provisional agreement for the sale of the undertaking to the company about to be formed; these agreements will be submitted to general meetings of the respective companies, and, if they are all approved, the new company will be formed; and, in the ordinary course the A, B, and C companies will be wound up. The new company may conveniently be described as the D company (to aid us in identifying the company we may perhaps regard "D" as standing for "dominant," as whenever reference is made to the D company it will be to the company that dominates the A, B, and C companies if they are kept in existence, or the sole company if those companies are dissolved).

If the A, B, and C companies are wound up, the liquidators of the respective companies will transfer the undertakings to the D company for the agreed number of shares in each case, which shares will be allotted to the members of the respective companies. The result will be that the D company will own the three undertakings, and its membership will consist of the former members of the A, B and C companies. The board of the D company will probably consist of certain of the directors of the old companies, and it may be that the remaining individuals who were directors of the old companies will be compensated by the D company for their loss of office.

If any of the members of the A, B and C companies should not be willing to exchange their holdings in such companies for shares of the D company they would have the rights of dissentient members as in a case of reconstruction. Their position will be explained when we come to that subject. In the event of the proposals receiving general approval, objections nevertheless being raised by holders of an appreciable number of shares of the A, B and C companies, it will probably be advisable to proceed with the amalgamation but to keep the three companies in existence and to forego the contemplated exchange of shares. In that case the respective undertakings would be transferred to the D company, as mentioned, and the shares of that company allotted to the A, B and C companies in proportion to their respective interests. The assets of the A, B and C companies would thus consist of shares of the D company instead of the undertakings formerly owned by them. As the A, B and C companies received dividends from the D company they would distribute the sums amongst their respective members in proportion to the shares held.

Some Actual Examples.

Mallet and Shooter, Ltd., are an example of a company being formed for the purpose of merging two existing undertakings (carried on by firms instead of companies). The company was registered in 1921 with a nominal capital of £300,000 to acquire the businesses then carried on under the styles of "Mallet and Shooter" and "Quoins." On the same day a company was registered as "Quoins, Ltd.," with a nominal capital of £20,000, and thus the goodwill attaching to the name of Quoins was preserved. The boards of directors of the two companies are identical.

An amalgamation of two firms was also effected by Frisket and Tympan, Ltd. On its registration in 1906 (as Frisket, Ltd.), it acquired the business then carried on under the style of "Frisket" and in the following year it acquired the business of "G. Tympan," and altered its one name. In 1921 the whole of the issued capital, consisting of 36,000 shares of £1 each, were acquired by Rounce, Ltd., and its nominees.

Rotary, Ltd., was registered in 1920 and has amalgamated with its own business (acquired from the original company of that name registered in 1911) the businesses of Two-Revolution, Ltd., Wharfedale, Ltd., Tumbler, Ltd, and Platen, Ltd. All the companies, the businesses of which have been absorbed, have been dissolved.

Merging of Control.

If a merging of the control of the A, B and C companies, as distinct from the undertakings of the companies, were determined upon, it would probably be found the best course to form a new company (the D company) to acquire controlling interests in the existing companies. The D company would offer to take over the issued capital of the A, B and C companies from the members of

Digitized by Google

those companies in exchange for its own fully (or partly) paid shares, the offer being conditional on its acceptance by the holders of the bulk of the shares of each company (usually the acceptance of from 75 per cent. to 90 per cent. is required). The amount paid for the shares of the A, B and C companies (in shares of the D company) would vary according to the results of past trading of the respective companies, the state of affairs as disclosed by the balance-sheets and any valuation, and other circumstances; and, of course, in the event of the capital being divided into shares of different classes, the relative values of the respective shares would have to be taken into consideration. If the shares of the A, B and C companies should be quoted on the Stock Exchange, the prices ruling at a given date would, as a general rule, be largely influential in determining the values for the purpose of the amalgamation.

The A B and C companies will continue to carry on their respective businesses in their own names, but, as the holder of the bulk of the capital of those companies, the D company will have absolute control over them. It will have its own representatives on the boards of those companies, and will probably arrange for the articles to confer upon it power to appoint and remove the directors generally, and it will be able to alter the articles as may be deemed desirable. The bulk, if not all, of the earnings of the associated companies will pass to it in the shape of dividends declared by those companies, and it will in turn pass on such profits (less any sums placed to reserve) to its own members (namely the former members of the associated companies).

The A, B and C companies will not be under the necessity of keeping reserve funds and can therefore pay out their entire profits in dividends on their respective issued capitals. But the D company will be careful to build up a substantial reserve fund and thus have resources to enable it to render assistance to any of its associated companies that may be embarrassed financially or to develop the business of any of such companies, or to form subsidiary companies to carry on any business of a character similar or cognate to the businesses carried on by the A, B and Companies.

Any members of the associated companies who declined to part with their holdings in such companies would of course receive dividends on their shares at the same rate as the dividends paid on the shares held by the D company. But such outside shareholders might not be in so favourable a position as those who exchanged their holdings for shares of the D company, seeing that the boards of their respective companies would be nominees of the D company (and some, if not all, of such nominees would be on the board of that company), so that in practice, if not in theory, the interests of the associated companies are liable to be subordinated to those of the D company.

In the somewhat unusual case of the shares of an associated company not fully paid up being exchanged for partly paid shares in the new company, it is important to bear in mind that those who make the exchange are not immediately relieved of the liability attaching to their former holdings, as in the event of the company of which they were members going into liquidation within twelve months of the transfer of their shares to the new company, their names would be placed on the "B" list of contributories. The result would be that if the transferee (*i.e.*, the new company) should not be able to pay any calls on such shares, they would be liable for calls (but only in respect of debts or liabilities contracted before they ceased to be members). The probability would be (as painful experience in a recent notorious case has demonstrated) that not only would the new company be unable to meet the calls, but it would itself be under the necessity of making calls on its own members. Thus the unfortunate persons who were induced to make the exchange would be under a double liability; they would have to face calls by the new company and also by the company of which formerly they were members.

The merging of the control of different companies in a new company is well exampled in the case of Process, Ltd., which was registered in 1921 in order to acquire the issued capital of Zinco, Ltd., Stereo, Ltd., and Half-Tone, Ltd. The new company was registered with a nominal capital of £600, which was shortly after increased to £800,000, divided into 300,000 7½ per cent. preference shares and 500,000 ordinary shares. The 20,000 ordinary shares of £5 each of Zinco, Ltd., were taken over at the price of £250,000, which was satisfied by the issue of 83,333 preference and 166,667 ordinary shares of Process, Ltd.; the 95,004 ordinary shares of Stereo, Ltd., were exchanged for 50,744 preference and 101,488 ordinary shares; the 85,676 ordinary shares of Half-Tone, Ltd., were exchanged for 58,236 preference and 116,472 ordinary shares, and their 20,169 5 per cent. preference shares were exchanged for shares of Process, Ltd., two shares of the latter company being allotted in respect of every three shares of Half-Tone, Ltd. Recently Process, Ltd., entered into an agreement to acquire all the issued shares of Gold Bronze, Ltd., the terms being that 1,939 7½ per cent. preference shares and 3,878 ordinary shares should be issued in exchange for the 7,008 ordinary shares of £1 each of Gold Bronze, Ltd., and that four preference shares should be issued in respect of every five preference shares of Gold Bronze, Ltd.

Merging Undertakings or Control in one Member of Group.

If it should be proposed that one of the existing companies (say, the A company) should absorb, or obtain control over, the remaining (B and C) companies, one of three cources may be taken. First, it may acquire the undertakings of the two companies, and allot shares to their members, the two companies then being wound up; secondly, it may acquire the undertakings of the two companies, issuing shares to the respective companies instead of to their members (if the memorandum of association of each company authorises a sale of its undertaking for shares of another company); or, thirdly, the A company may acquire the shares of the B and C companies from the existing members in exchange for an issue of its own shares. Of course, cash may be paid instead of shares, but in that case the transaction would be regarded rather as in the nature of a sale and purchase than an amalgamation. The respective procedures already outlined will hold good, except that the formation of a new company is not involved, and a saving in expense is thus effected. Probably, however, it will be necessary to effect an increase of the nominal capital of the A company, and in that case duty on the new capital at £1 per cent. and fees according to a sliding scale will be payable.

As examples of printing companies that have acquired the undertakings of other companies, and paid for them in shares or cash, the concerns absorbed having then been dissolved, may be mentioned the amalgamation of Type, Ltd., and Ink, Ltd., the acquisition of Litho, Ltd., by Letterpress, Ltd. (the name being then altered to Letterpress and Litho, Ltd.), and Pen and Pencil, Ltd., which purchased the business of Page Cord, Ltd.

In the case of Type. Ltd., and Ink, Ltd., part of the consideration was paid in shares and the rest in cash or War Loan. The position in that case was complicated somewhat owing to the issued capital of Ink, Ltd., consisting of two classes of shares, namely, preference and ordinary shares of £10 each, and the sanction of the Court was necessary before the undertaking of Ink, Ltd, could be transferred to Type, Ltd. The holders of preference shares of Ink, Ltd., were offered the choice of either 5 per cent. War Loan at the rate of £10 nominal in respect of each preference share held by them, or £9 in cash, with in either case a cash payment equivalent to a dividend on their shares in respect of a specified period; and the holders of the ordinary shares were given the right to a cash payment of £5 and to an allotment of three fully paid deferred shares of £10 of Type, Ltd., in respect of every two ordinary shares of Ink, Ltd., held by them. The directors of Ink, Ltd., joined the board of Type, Ltd., with the exception of two members, who were compensated for loss of office by Type, Ltd. In due course Ink, Ltd., was dissolved.

Examples of companies having acquired the undertakings of other companies and having issued shares to the vendor companies without the latter going into liquidation, are afforded by Pica, Ltd., Reglet, Ltd., and Galley, Ltd.

Pica, Ltd., took over in 1915 the undertaking of "Nonpareil, Ltd.," allotting to that compaay a number of fully paid participating preference shares and ordinary shares. The business formerly carried on by Nonpareil, Ltd., is accordingly now carried on by Pica, Ltd.; Nonpareil, Ltd., merely being one of the shareholders in Pica, Ltd. In 1920 Pica, Ltd., consolidated its 30,000 participating preference shares, 7,000 cumulative ordinary shares and 13,000 ordinary shares into 50,000 ordinary shares.

Reglet, Ltd., acquired the business of Process Black, Ltd., for the sum of £227,659, which was to be satisfied by the issue to the vendor company, or its nominees, of debentures of the purchasing company to the amount of £215,000 and ordinary shares to the amount of £12,659. The businesses of the two companies were thus amalgamated, Process Black, Ltd., ceasing to carry on business and merely holding certain debentures and shares of Reglet, Ltd. Previous to this transaction Reglet, Ltd., had acquired the business of Colour and Varnish, Ltd., in consideration of the allotment to the holder of the shares or his nominees of 3,993 ordinary shares of £1 each and the payment of £8,007 in cash.

Galley, Ltd., was registered in 1920 to acquire the printing branch of Cardboard, Ltd., the transactions resulted in Cardboard, Ltd., becoming the holders of 220,100 fully-paid shares of £1 each of Galley, Ltd. (Cardboard, Ltd.), retaining the rest of their assets).

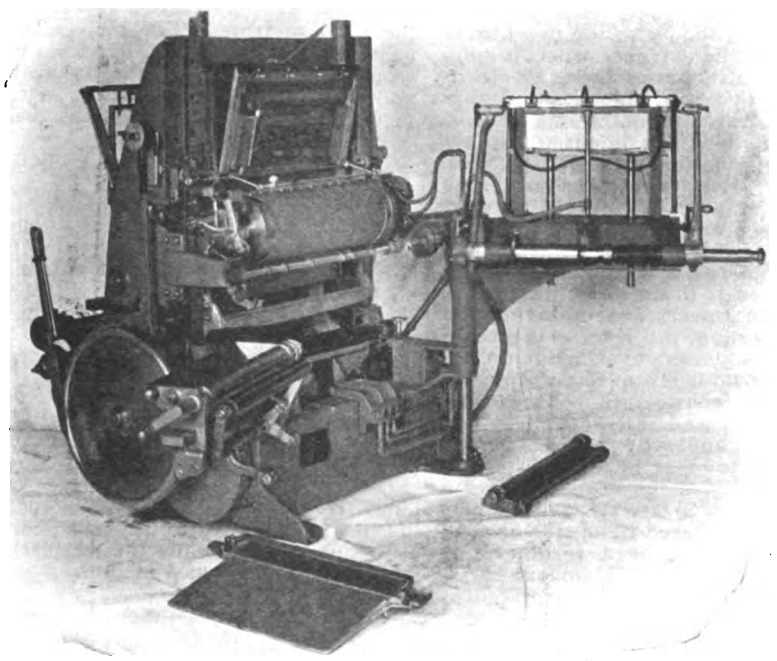
(To be Concluded.)

Lloyd Memorial (Caxton) Seaside
HOME FOR MEN AND WOMEN, DEAL.

A Bohemian concert on behalf of the funds of this important trade institution was held on Saturday last at the Dulwich Constitutional Club, East Dulwich Grove, by kind permission of the management committee, the chair being occupied by Mr. Cyril Colgate, supported by Mr. H. F. Parker, secretary, and Mr. J. L. Scorgie, one of the life governors of the Home, to whom the success of the function was entirely due.

The concerts promoted by this institution are famous for the galaxy of talent they always secure, therefore there is no surprise in finding they have discovered a new contralto whose tone and power is of an exceptional kind. The lady made her debut to a London audience under the stage name of Madame A. Barrie. She is immensely popular in the North of England under the name of Miss Agnes Barr, and is an acquisition to the London concert platform.

The musical directors, Mr. F. C. Palmer and Mr. W. A. Fricker, are to be complimented on their efforts, for seldom has a better concert been organised in East Dulwich. The programme opened with the pianoforte solo, "Si J'étais Roi," by Mrs. E. Stevens, who was the accompanist for the evening. Madame A. Barrie first sang "Land of Hope and Glory," her rich voice being heard to special advantage in the low notes of the refrain. For an *encore* "Angus Macdonald" was given, and merited the storm of applause received. Mr. F. Pratt sang with effect, as also did Miss Clara Harvey who has a pretty soprano voice. Mr. E. Hoyle sang with good judgment in a tenor solo, whilst in the duet "The Battle Eve" with Mr. F. G. Scorgie he was particularly fine, the two voices blending splendidly, the effect being heightened by the brilliant pianoforte accompaniment of Mrs. E. Hoyle. Mr. Clifton Richards, the popular raconteur of printerdom, evoked great applause, whilst a real musical treat was Mr. Reuben Henry's rendering of "A Pair of Sparkling Eyes."



Mr. F. G. Scorgie's fine baritone voice was heard to advantage in "Roadways," and Miss Ruby Thornton, a favourite at printers' concerts, was, as usual, well received, as was also Miss Gertrude Matthews. The violin solo, "Scène de Ballet" was skilfully given by Mr. W. E. Hulme, who had the advantage of Mrs. M. Green, the well-known pianist, to bring out the varying effects of this intricate solo. An undoubtedly talented artist is Master E. Bampton whose monologue was cleverly delivered. The humorous turns were Miss Babs Manchester, a clever little child artiste, Miss Elsie Steadman and Harry Speller. The stewards were Messrs. H. Field, J. Davis and A. Oddy. The programme sellers were Miss C. B. Hales and Miss L Keyse, who most successfully conjured profiteering prices for the dainty little printed sheets entrusted to their charge.

The . . .

American Miehle Company's VERTICAL Job Press.

Three quarter view, showing method of inserting forme; showing also pile-table and fountain swung back and forme roller unit and transfer table removed from Press.

SPECIFICATION.

Inside Chase Measurement, 13¾ in. × 19¾ in.
Type matter locked in chase, 12½ in. × 19 in.
Largest sheet which can be delivered, 12½ in. × 19 in.
Distribution—2 forme rollers with geared steel vibrator, 2 composition distributors with geared steel vibrator, 10 in. full length ink plate, ductor roller, full length ink fountain.
Over-all measurements:
Width, 4 ft. Length, 5 ft. Height, 4 ft. 6 in.
Net weight, with motor, approximately 2,600 lbs.
Speed Range 2,000 to 3,600.

THE American Miehle Company's Vertical Press will produce job printing more cheaply than any other press on the market because it will produce printed impressions for a greater portion of its chargeable time by reason of the enormous reduction in the time required to change from one job to another.

All interested are cordially invited to see the American Miehle Company's Vertical Job Press now being exhibited at our Showroom address, No. 2, Salisbury Court, Fleet St., E.C.4

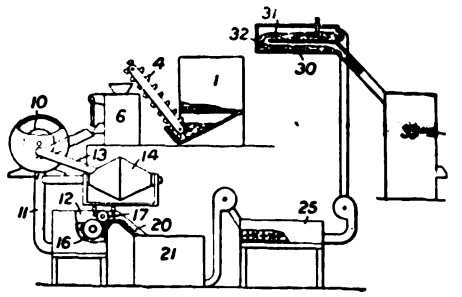
New Inventions

Engraving Machines.

In an engraving machine, patented by Messrs. H. G. Springate and H. Pearce, which is applicable also for straight or circular dividing, the work is supported on a table *b*, movable rectilinearly on a revoluble support



a, and is engraved by a tool *q* mounted on a universally pivoted shaft *p*, which is controlled either manually by passing a tracer *t* over patterns on a plate *r*, or automatically by a pattern cam *j*, which is geared to the revoluble support *a*, and engages a link *k* connected by a lever *n* and link *o* to the shaft. When the shaft is controlled manually the lever *n* is thrown out. The cam is mounted on a gear wheel carried by a slide j^1, which is adjusted when a different gear wheel is substituted. The shaft *p* passes through a sleeve *x* trunnioned in a yoke *w*, which is adjustable in a guide *v*, revolubly mounted in a slide *u*, by means of balls b^1. The slide is adjustable vertically on a standard *m* by means of a rack and pinion u^1. By adjusting the slide *u* or yoke *w*, the patterns can be enlarged, reduced or distorted; the pivot of the lever *n* may also be adjustable for this purpose. The plate *r* bears a number of patterns and inscriptions, and can be turned to bring any of these into register with the tracer. In employing the machine for dividing, the lever *n* is thrown out, the tracer is passed over a line on the pattern, and the table is moved rectilinearly or revolubly after each operation of the tool *q*. The table can be moved rectilinearly in two directions at right angles by means of screws operated by micrometer heads *i*, i^1 respectively. The screw *f* of the head *i* engages a threaded depression in a lever which is held in engagement or released by means of a set screw. The table is moved revolubly by means of a worm spindle *e*, which engages a wheel *d* on the support *a*, and is operated by a micrometer head.

Fibre Board.

Included in a number of patents relating to fibre board are two by Mr. M. Chew, to which we have already briefly referred.

In producing fibre board, chip waste is moistened and steam-heated for 10 to 24 hours in a container 1 preferably with the addition of powdered talc, soda ash, or ground asbestos, transferred by an endless chain of buckets 4 to a beater 6, which may be a ball mill, separated from tailings by a screen 10, and passed to a receptable 12. At this point hair or fibre, animal, vegetable, or mineral, such as horsehair, shredded flax, hemp, jute, or asbestos, is introduced. A screen 16 collects and a felt roll 17 takes off strips of the pulp mixture. The pulp with water passes down a shoot 20 into a vat 21, from which it is pumped to an agitating tank 25 and from thence over slats 31, 32 in a receptacle 30 to a press 33, which is preferably

hydraulic. The boards thus formed are dried in kilns and finally waterproofed. The tailings from the screen 10 pass through a pipe 13 to a ball or roller mill 14 and from thence to a pipe 11 leading to the receptacle 12. A chemical binder may be mixed with the pulp.

Watermarked Paper.

A British application on this subject has been made by Geb. Ebart. In the manufacture, in paper machines, of watermarked paper, strong and difficult to imitate, a layer of pulp, ground short, is superposed on a layer of long fibre pulp. The upper layer, which receives the watermark, may be of the same colour as that of the lower layer, or of a different colour, and may be narrower, in which case the merging of the upper layer into the lower layer at the edges produces an effect difficult to imitate.

ENTHUSIASM is the headlight on the train of progress.

"Eureka" Paper Reel Cones.

Considerable economies in time, expense and material are effected by means of the "Eureka" Paper Reel Cones (Salmon and Smith's patent) for securing the paper reel to the reel spindle on rotary printing machines.

CONE LOOSE ON SPINDLE AND PAPER TUBE.

CONE FAST ON SPINDLE AND PAPER TUBE.

The device, which is here illustrated, presents substantial advantages over those hitherto in use. It is common knowledge in rotary work that the process of detaching the roller centres from the cone fasteners is attended with considerable difficulty, owing to the fact that it is not possible to loosen more than one cone, whilst the other has to be knocked off by force. This, of course, occasions damage, involving time and expense. This difficulty is entirely overcome by the new arrangement, as by tightening a single screw the cone is simultaneously fastened to the reel spindle and clamped to the reel tube centre.

Many are the advantages which are thus ensured, and these may be set forth as follows: Entire reliability, as the reel spindle is firmly gripped and the paper tube engages tightly with the device; exact axial position (centring) of the paper reel, by uniform rise of the conical extensions on tightening the screw; avoidance of damage to reel centres and the bottom layers of paper, as the device is not driven into the centre, but only surrounds it on both sides; complete running off of the reel, with very wide centres, this has not always been possible, because the collars of the cone press laterally on the last part of of the reel; saving of time in mounting and taking off the paper reels; saving of materiai as the system, being uniform, allows of free interchange and does not require any intermediate centres.

Messrs. Ewart and Collis, Ltd., 350, Euston-road, London, N.W.1, are the sole agents for paper mills and paper bag manufacturers, and from them all particulars may be obtained.

THE LM CUTTER AND CREASER

Specially designed for the accurate cutting and creasing of carton work at high speed.

SPECIAL FEATURES

Built on similar lines to the Miehle Press, and all the desirable features of the latter, ensuring dead register, smoothness of working, etc., are incorporated in it.

The tympan or cutting plate on the cylinder is held at the front and rear edges by special locating and clamping devices.

The cards are fed to the front lays in the usual manner, and are then taken by the cylinder grippers at the front edge of the tympan plate with a small amount of over-lapping gripper edge.

The cylinder with the card around the tympan plates comes into contact with the forme in the same way as on the two-revolution printing machine.

The card is taken directly off the cylinder by a special gripper delivery mechanism.

Delivery grippers and pads are adjustable.

An endless band travelling at the same surface speed as the cylinder extends from the point of take-off to beyond the point of release of the delivery grippers.

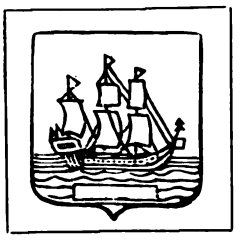
Another endless band on the delivery carriage receives the card from the first endless band.

The card is transferred from the first to the second endless band at the commencement of the outward stroke of the delivery carriage; the second band rolls away from under the card, leaving it to fall directly on to the pile delivery.

The delivered cards are jogged up so that they can be easily stripped.

There are no tapes or sticks in the pile delivery. From the point of take-off from the cylinder until the card is deposited on the pile it is supported by endless bands.

It is easily handled, and requires no special knowledge on the part of the operator.



This Cutter and Creaser can, if desired, be supplied with a specially designed pile hoist for raising the cards to the feed board.

Type Metal Melting by Means of Town's Gas.

By Dr. E. W. SMITH, F.I.C.

(Vice-Chairman, British Furnaces, Ltd)

Town's gas has been widely applied in the printing trade for many purposes, and its utilisation for bulk metal melting is not one of the smallest signs of progressive enterprise in some of the larger concerns. There are, however, still a number of coal and coke fired pots in use, and it is to engineers employing these that my remarks are more particularly addressed.

Objections to Gas Answered.

Why is not town's gas universally used for bulk metal melting in the printing trade? The answer to this is to be found in a number of directions. Some engineers claim that they can melt much more cheaply by means of solid fuel. Others are suspicious of gas, and are not prepared to throw over a long experience in the use of solid fuel for an unknown, and, so far as they are concerned, an untried fuel. Variations in the quality of solid fuel can be corrected for, whilst variations in the pressure and quality of gas are more difficult to cope with. Coal and coke can be stored and a sufficient stock maintained—but gas cannot be stored. Some assert that they have heard that there is a tendency to produce hot spots on the cast iron pots when using gas, and fractured pots are the consequence. This, I think, summarises the usual case against gas, but when the subject is thoroughly examined it is found that all these objections border on the frivolous, and there is no conceivable doubt that town's gas is far and away the most suitable fuel for bulk metal melting in the printing trade. The actual cost of the gas used, though of prime importance, is not all-important. Such factors as ease of temperature control, cleanliness, speedy melting from cold in times of high pressure of work, comfort for the worker, long life of furnace and pots, are really the deciding factors in well organised works. It is rarely, however, that even the fuel cost is higher for gas than for solid fuel. Now that the gas industry has again got into its stride after the upset of the war conditions, the gas consumer need have no fear that gas pressures and gas qualities are subject to objectionable variations, and there is just as much security as regards the maintenance of supply as there is in the case of solid fuel. In fact there is a much greater security, as was well demonstrated during the coal strike, when it became extremely difficult to obtain coal, and the gas supply in nearly all cases was fully maintained. As regards hot spots and fractured pots, trouble does arise from this cause when wrongly designed cheap equipment is installed, but there is absolutely no need for this to occur. Indeed, I will go further, and assert that when gas is burnt in suitable equipment the risks of pot breakage are considerably reduced by the use of gas.

As to the question of cost of melting by means of gas—for gas alone, apart from any other costs—this depends only partly on the price of gas per thousand or per therm. The efficiency of the apparatus used is of more importance than the actual price of gas. It is not uncommon for metal melting furnaces to have an efficiency of no more than 10 o per cent. This means that for every thousand feet of gas paid for, only 100 cubic feet are usefully used. But, if the furnace can be improved and the efficiency increased, say, doubled, then for every 100 cubic feet usefully employed only 500 cubic feet are paid for, so that in effect the price of gas would have been halved.

Before town's gas can be satisfactorily applied to bulk metal melting, it is essential that the furnace designer shall be fully acquainted with all the salient features of this important operation, and apply his knowledge of the combustion of gas so as best to meet the requirements of the process.

The essential factors are, therefore: (1) A knowledge of the details of the operations involved in bulk metal melting; (2) a thorough working knowledge of the principles governing the combustion of gas; and (3) a capacity to apply the most efficient methods of combustion to bulk metal melting.

Problems of Metal Melting.

In speaking of metal melting I include all the different alloys used in the printing trade. These alloys vary in their composition very considerably, their exact analysis depending on the use to which they are to be part. It is not my intention to weary you with a treatise on the various alloys in general use. I only intend to deal with them in so far as their differences affect the problems of heating and melting. The following table compiled from a paper by Mundey, Bissett, and Cartland, read before the Institute of Metals in September, 1922, indicates the approximate composition of some of the well-known alloys.

	Hand-Set Type.	Linotype Metal.	Monotype Metal.		Stereotype Metal.
			a	b	
Tin	5·0— 2·0 per cent.	2·5— 8·0 per cent.	8·0	10·0	8·0 - 10·0 per cent.
Antimony...	25·0 - 80·0 " "	10·0 " "	15·0	20·0	15·0 " "
Lead	The balance	87·0—87·5 " "	77·0	60·0	82·0—75·0 " "

The conditions covering the melting of these alloys will vary with the composition of the alloy, the use to which it is to be put, and with the nature and volume of the work, intermittently or continuously carried out in each individual furnace. Before it is possible to obtain really satisfactory results the whole routine of work must be thoroughly studied.

The main problem is a thermal one—namely, a heat problem. To get down to any true understanding of results obtained—apart from the gas company's quarterly account, a matter of very great importance, it is true—the rudiments of the subject of heat must be grasped.

(The lecturer here proceeded to set forth some of the fundamental facts relating to heat, pointing out the difference between heat and temperature, and explaining "specific heat" and "latent heat," then introducing the table here reproduced).

	Specific Gravity.	Melting Point deg. C.	Boiling Point deg. C.	Total heat in molten metal B. Th. Us per lb at melting point.	Latent heat of fusion B. Th. Us per lb.	Specific heats.
Tin	7·2	232	1,550	50·4	24·7	·056
Antimony... ...	6·697	630	1,300	90·0	28·8	0 deg. C —·05; 500 degs. C.—·0592
Lead	11·4	327	1,560	28·8	9·9	0 deg. C.—·0293; 300 degs. C.—·0342

It will be noted from the tables that although antimony has a melting point as high as 630 degs. C. it is used in linotype metal to the extent of about 10 per cent. and the alloy melts at a considerably lower temperature—approximately 238 degs. C. This

applies to all the alloys, the melting point of them all being much lower than the average melting points of the individual metals making up the alloys.

Gas as Source of Heat.

Town's gas is a mixture of a number of gases, chief among which are hydrogen, methane, carbon monoxide, benzene, ethylene, etc. There are also present non-combustible gases such as nitrogen and carbon dioxide. Each constituent has a different heating value when burnt with air, but we only need concern ourselves with the heating value of the mixture known as town's gas. This heating value is known as the calorific value. It is expressed as the number of heat units, or British Thermal Units, that are generated when burning a standard cubic foot of the gas in air.

The calorific value of the town's gas per cubic foot may vary from different gas companies, but the gas from any particular company nowadays remains fairly constant. The calorific value adopted by some London companies is about 500 B.Th.U's per cubic foot. Formerly one bought gas at so much per 1,000 cubic feet. If each cubic foot has a value of 500 B.Th.U's then each 1,000 cubic feet would be equivalent to 500,000 B.Th.U's, and the price per 1,000 cubic feet would be equivalent to the price per 500,000 B.Th.U's. But a new method of charging has been enacted by Parliament. This entailed the introduction of a new unit of heat called the "therm." This was equivalent to 100,000 B.Th.U's, so that one thousand cubic feet of gas having a calorific value of 500 B.Th.U's is equivalent to five therms, and the price per therm would be one-fifth the price per thousand cubic feet for gas of this calorific value. But if the calorific value of the gas were 475 B.Th.U's then 1,000 cubic feet would be equivalent to 475,000 B.Th.U's, or 4 75 therms, and the price per 1,000 would be 4·75 times the the price per therm. So that the only effect the change in the method of charging can have on those who are buying gas is that it ensures that they shall pay for heat units whereas in the former sytem they actually paid for cubic feet of gas, and without any certainty of obtaining a full quota of heat units for the money paid.

When gas burns it requires oxygen, and the energy or heat generated comes from the union of a definite and exact amount of oxygen with the various constituents of the gas. The heat evolved by this union is absorbed by the new gases that are formed. These gases are called the products of combustion or waste gases. If the gas is completely burnt the products of combustion consist of carbon dioxide, water vapour, and nitrogen. If the amount of air with the gas during the process of combustion is just sufficient to completely burn the whole of the gas—and no more—then the temperature of the flame produced during the burning of the gas and air will be as high as possible, and the temperature of the products will be as high as possible. This statement is true only if the air and gas are well mixed prior to their being burnt Under these circumstances, even when a large volume of gas is being burnt, the flame will be a comparatively small one. It will, however, be a hotter flame. If, on the other hand, a more or less large excess of air be present with the gas, the fixed amount of heat evolved will be employed in heating up the excess air, the temperature of the flame and products will be nearly proportionately reduced and a proportionate amount of heat will not be available in the heating process in which the gas is being used. It will be realised from what I have said that, directly and indirectly, it is of the greatest importance that maximum flame temperatures should be attained in all heating processes, and the only way to ensure maximum flame temperatures is to mix intimately the correct proportions of air and gas prior to their being burnt.

Efficient Gas-Burning.

What are the conditions under which gas should be burnt in order to ensure maximum efficiencies and minimum gas consumptions in metal melting in the printing trade? I place first in importance the question of the correct and automatic proportioning and mixing of air and gas prior to combustion in order to attain the maximum temperature of flames and products. In all heating processes—even though the temperature to be attained in the material treated be only a low one—the highest efficiencies are obtained when the gases are burnt under maximum flame temperature conditions. "Heating" is a process of heat transference from the flames or products of combustion to the material that is being heated. The greater the difference in the temperature between the heating gases and this material, the more efficient and speedy will be the heating process. Consequently the greater the head of heat the better. But it must be noted that it is not advisable in melting metal in metal pots to have direct contact between the high temperature flames and the pots. This causes fractured pots due to hot spots.

This brings me to the second important consideration in heating processes. Radiation. Flame contact with pots at a black heat interferes with the combustion of the gas. It has been found, after long experience, that if the gas and air can be burnt under theoretically proper conditions in contact with fire brick material, this material will become incandescent and radiate its heat in any required direction. The higher the temperature of radiation, the more heat will be radiated This depends on flame temperature. Radiant heating eliminates hot spots and ensures even heating.

The bugbear to radiant heating is leakage of extraneous air into the furnace. This has the effect of cooling down the incandescent fire brick material, reducing the amount of heat radiated, and carrying the heat away to the flue instead of making it available for the metal melting. It is, therefore, vitally necessary that the furnace shall be totally enclosed so as to provide that the only access to the combustion chamber shall be through the burner. It is equally necessary that the fire brick lining to the combustion chamber shall be well backed up with insulating material in order that heat losses through radiation to the atmosphere shall be reduced as much as possible. This side of furnace construction is too often either inadequately provided for or even ignored, in order, in most cases, to keep down the initial cost of the furnace, even though the extra cost entailed by proper construction would be completely wiped out by reduced gas consumption within a very short period.

Many low temperature operations, such as soft metal melting, are carried out by means of atmospheric burners, namely burners in which the gas is used at town's pressures and some air is drawn in through the burner for combustion. Under these conditions not more than about half the requisite air is injected by the gas through the burner and this is improperly mixed with the gas. The rest of the air has to be supplied to the flames from the surrounding atmosphere within the furnace. The flames are long because the unburnt gas finds difficulty in reaching its quota of air and the products of initial combustion tend further to interfere with their rapid union. With such atmospheric burners the quantity of available air in the furnace has to be in considerable excess of actual requirements. This air takes up heat, reduces flame temperatures, and carries away the heat to the flues, consequently the thermal efficiency of the furnace is greatly reduced. Apart from this, where flame contact heating is employed with these low pressure burners, the products of combustion form a pad of insulating gas on the surface of the pots and heat transmission from the flames to the pots is reduced.

The only way to produce efficient results is for the whole of the gas and air in their correct proportions to be well mixed prior to the commencement of combustion. To do this it is necessary either that the air shall be under at least 12 in. of fan pressure and the gas at town's pressure or that the gas shall be under a pressure of at least 2 lbs. to the square inch and air be drawn in from the atmosphere. The necessity for pressure in either the gas or the air is twofold. Firstly it is required for the injection of the correct quantity of gas or air as the case may be. It is also necessary in order that the explosive air-gas mixture shall have a sufficient velocity through the burner so that "lighting back" at the burner shall be prevented.

(To be Concluded.)

Messrs. W. R. Royle and Son, a firm of manufacturing stationers established as far back as 1833, have recently removed from St. John-street and Clerkenwell-road to 1, 2 and 3, Ludgate-square, London, E.C. Expansion of business has necessitated the change. Large stocks of all papers are held, especially banks, and the firm possess extensive plant for engraving and dye stamping, letter headings, etc.

Chinese stationery is among the principal commodities imported into Indo-China from Hong Kong.

Selection of Appropriate Paper.

By Ed. A. Borden.

All of the characteristics of a sheet must fit the personality and business of the advertiser or customer, and must appeal to the taste of the recipient. A mailing piece on pink papeterie would hardly be suitable for a hardware company to use in advertising to farmers. Neither would a hard white enamel be suitable to the advertising of a beauty parlour—nor could it be used well for a musical programme. The finish must be considered in relation to the type where the latter has been previously determined. A type with hairline elements and angular serifs does not harmonise or work well on a cockle or eggshell finish, while the ecclesiastical black letter looks out of place on the modern enamel or "super." A rough letter, such as Pabst or Packard, is inappropriate on a highly-surfaced stock.

The finish necessary for illustrative work requires careful consideration, often being a very technical matter when fine-line halftones are involved. Etchings may be used on some soft, rough stocks if the run is not too long or the lines are not too fine.

Finish often governs the appropriateness of the paper for the subject matter. Thus the laids, eggshells and antique finishes denote antiquity; the enamels, supers and dull coats on the other hand have a distinctly modern tone. Some jobs call for soft finishes; others for novelty and fancy finishes, and still others for dignified, glossy finishes. A white, dull-coated stock would soon become soiled and worthless as advertising matter if put in rough, soiled hands. A smooth hard finish in a dark colour would be much better for such a purpose.

Durability is necessary for mailing pieces and folders requiring much handling, and for loose leaf work and blank books. A job that is to be punched by all means should be on a rag content bond with proper formation and finish. Any important correspondence calls for a light bond second sheet. Many executives have been rudely awakened by finding an important file of letters torn, frayed and undecipherable when a few pence added to the cost of the paper would have been insurance against the loss.

Insurance policies, bonds, deeds and similar instruments call for the most durable of bond papers. A printer who suggests cheap paper when durability is required does his customer a grave injury instead of a service. The printer should be wary of a paper that is heavily surface-sized to give it a crackle and high pop test. This sizing deteriorates and is a false surface indication of quality.

Emotional Tints.

Coloured papers serve to produce various desired emotions and to fit particular grades of work. Light tints of warm colours express frivolity and passing fancy. The cool colours and dark shades are adapted to serviceability and advertising which bids for concentration on the subject matter. A folder announcing a dance could be printed to advantage on a pink or orange sheet, but an advertisement of specifications for engineers' supplies should be on gray or blue shaded stock.

White is always a dignified colour. A cream white shows sedateness and often indicates antiquity. It is suitable for brown or warm coloured inks. An intense white or blue-white would be ideal for reproducing a snow scene, white objects and for cold coloured inks.

Weight, of course, denotes quality, other factors being equal. A letterhead on sixteen pound bond, even if of good quality, would hardly suggest dignity and reliability for a banking institution to the same extent as would a twenty four or twenty eight pound stock. Weight in cover papers not only gives distinction for booklets, but also affords added protection.

Mailing pieces require careful attention to the matter of weight in order to reduce postage The alert printer can serve his customer well by careful attention to the weight of the finished piece

Special processes require special qualities of paper, as in the case of offset and rotogravure work. Certain lines of work have clearly defined practices in paper selection. The old familiar handbill would show something amiss even to the layman if printed on a crackly bond It cannot be stated too strongly, however, that the best quality of its kind is none too good for any paper which bears a selling message.—*The American Printer.*

The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letter-press or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.

Keeps up with the speed of the fastest running machine.

Feeds any stock from thinnest tissue to cardboard.

Register is assured even at maximum speed.

The only Feeder adaptable for very short runs.

Quick changing from small to large sizes and *vice versa*.

Changing to hand feed in a few minutes.

Purely mechanical Automatic Throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.

The Winkler Feeder is also built with a Stacking Arrangement.

COME AND SEE IT RUNNING IN LONDON.

Trade Notes.

Associated Newspapers Fresh Capital.—A circular has been issued announcing that the Associated Newspapers, Ltd., have taken power to increase the deferred capital of the company by 500,000 shares to a total of £2,600,000.

Newspaper Fire.—A slight outbreak of fire occurred in the machine-room at Carmelite House on Saturday, but was extinguished within twenty minutes. Damage was done to two printing machines, but this did not interfere with the publishing of the *Evening News*, the *Daily Mail*, or the *Weekly Dispatch*.

Poster Competition Judgment.—Judgment was given on Tuesday in "The Great Poster Competition" case by Mr. Graham Campbell, the Bow-street magistrate, who imposed a penalty of fifty guineas on the promotor, Mr. Joseph Weiner, of J. Weiner and Co., Ltd., printers, of Long-acre. Notice of appeal was given. The magistrate said that as the case was in the nature of a test the penalty he imposed was "mitigated."

"Daily Herald" Development.—At an important meeting of prominent people of the Labour movement, held in the Committee Room of the House of Commons last Thursday, important decisions were made, as a result of which the *Daily Herald* anticipates being able to blossom out next month as a 12-page paper. Its financial difficulties are to be surmounted by a plan of capitalising the annual affiliation fee of the unions to the General Council, and when the paper has been made "as complete in every way as any of its capitalist competitors," a big new circulation push is to be inaugurated.

"Times" Pension Fund.—Major Astor, M.P., presided at a largely attended meeting of members of *The Times* Newspaper Pension Fund at the Memorial Hall, Farringdon-street, on Saturday. He said the board of directors had adopted the scheme on the basis of the actuary's valuation, and hoped that it would be of real advantage to all members of the staff. The best way to build up the Fund was for all to join, especially the younger men. After reports by the deputy chairman and the secretary the meeting unanimously adopted the draft rules, which provide for a contribution of 2½ per cent. of earnings by members and an equal contribution by the company, with a pension, at age 60, of at least 1 per cent. on aggregate earnings during the whole period of service with the company, on completion of twenty years' service or forty years' contributions. The Fund is open to all the departments, and they were fully represented at the meeting.

Liverpool P. M. and O. A.—The Liverpool Centre of the Printers' Managers and Overseers' Association held their annual dinner at the Angel Hotel, Dale-street, on Saturday evening last, and the president, Mr. Charles Mackie, presided over a gathering of close upon 100. The toast of the evening, "The P. M. and O. A.," was proposed by Mr. W. M. Schofield, president of the Liverpool Master Printers' Association, and acknowledged by Mr. E. W. Whittle, general secretary (of London), and Mr. F. Robinson, president of the Manchester Centre. The toast of "The Ladies and the Visitors" was proposed by Mr. James N. Poole, secretary of the Liverpool Centre, and responded to by Mr. G. F. Byrnes, president of the Liverpool Typographical Society, and Mr. A. E. Griffiths. An enjoyable entertainment was provided by the "Silver Stars."

Aberdeen Printing Students.—The termination of evening continuation classes conducted under the direction of the Aberdeen Education authority was marked last week by displays of the students' handicraft. There were many visitors to the Central School to view the displays of continuation class work of young printers. Some thirty members of the printers' classes met in the Art Room, upon the walls of which their handicraft was displayed. This covered a wide range of work, ranging from visiting cards, menu cards, business headings for notepaper and account forms to specimens of skilled four-colour printing. The teachers—Mr. W. W. Gray, who taught the compositors, and Mr. J. M. Dawson, who gave tuition in machine work—were complimented, as were their pupils, upon staging such a fine exhibition. Mr. John Milne, Central Press, presided, and introduced Colonel Dawson, director of education, who presented prizes to the best compositors and machinemen.

Rochdale Printing Trades Dance.—The Rochdale and District Printing and Allied Trades Guild held a very successful whist drive and dance on Saturday last. The large hall of the Provident Hall was arranged to accommodate the party. There was dancing all the evening, and an alternative programme was arranged for those who preferred whist. About 200 persons were present.

Many expressions of thanks have been received by Mr. F. G. Oldfield for his activities in connection with the concert and presentation to Mr. George Douglas, reported in last week's issue.

At the sale concluded at Sotheby's on Friday of the first portion of the Gardner collection of prints of old London, about £6,000 was obtained.

There was published last Thursday the first issue of a new monthly journal, *Jewish Life*, printed under one cover in both English and Yiddish.

The Leipzig Fair has opened with 14,000 exhibitors, about 700 of whom are foreign.

The Inter-Allied Rhineland High Commission suspended the *Frankfurter Zeitung* for three months.

French Printers and the Ruhr.—With reference to a recent paragraph in our columns, we are asked by the Master Printers of France to point out that this Association, in expressing anxiety about the possible consequences of the military occupation of the Ruhr, think that "the failures of the German capitalists and Government will not have compensation from the distrainment on the industrial properties of the Ruhr basin. This serious and dangerous military operation can only have one certain result, the excitation of patriotic cant and revenge spirit in Germany. The Federal Committee cannot admit that the necessary efiorts to the restoraiion of the wasted provinces may be left to the appreciation of the German Government and capitalists. The Federal Committee, therefore, declare clearly that in accordance with the C.G.T., they wish to see the intervention of the Society of Nations, so that all lands be admitted to act with a view to the restoration of the French ruins caused by the German invasion. The committee hope that the trade unions adhering to the International organisation will do their best in order to induce their own Governments to intervene."

The editors of *El Lewa* and *El Balagh*, Nationalist newspapers, were arrested in Cairo on Tuesday.

Fourteen members of the editorial staff of the *Avanti* have been arrested for participating with Signor Serratti, chief editor of that paper, who was arrested on Thursday, in an alleged conspiracy against the State.

Trade Union Matters.

Unemployment amongst London Society of Compositor members for the week ended February 24th stood at 1,076, a figure which shows a satisfactory decrease compared with the four preceding weeks, which were as follows: February 17th, 1,146; February 10th, 1,169; February 3rd, 1,191 and January 27th, 1,218. The 1,149 given as unemployed for the week ended February 24th also represents a decline of 73 against the similar month last year.

T.A. and Strike Levy Arrears.—The secretary of the Leeds Branch of the Typographical Association publishes in the official circular of the branch the names of 38 members who are placed out of Association benefits because of non-payment of the strike levy imposed on members working during the wages dispute of last summer. The amounts in arrear range from 14s. up to £4, and these members are notified that even if the arrears are paid they must remain out of benefit until three months after the date of payment.

A statistical summary issued by the Chief Registrar of Friendly Societies shows that in the papermaking, printing, etc., group, 22 unions were registered in 1921 under the Trade Union Acts. These had a membership in round figures of 145,000. The income amounted to £545,000, and the expenditure is set out under the following headings: Unemployment, travelling and emigration benefits, £379,000; other expenditure, £188,000. Funds at the end of 1921 amounted to £350,000.

Cornwall Press Athletic Club.

Second Annual Dinner.

On Saturday evening last a company approaching a hundred ladies and gentlemen assembled at Anderton's Hotel, Fleet-street, for the second annual dinner of the Athletic and Social Club connected with the Cornwall Press, Ltd., Paris-garden, Stamford-street, S.E.

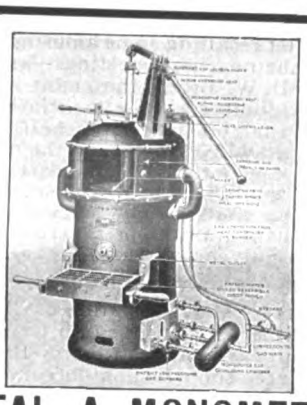
Mr. J. Griffiths (manager), who is president of the Club, occupied the chair, being supported by Mr. Cyril Smith (secretary to the company) and Messrs. Frost and Hullett (guests from the Tudor-street establishment of Messrs. Iliffe and Sons), as well as by a representative body of the heads of departments at the Cornwall Press.

After a really excellent dinner, "The King" was toasted, and then

The President, in proposing "The Club," gave particulars as to the progress it had made in the various sections—football, cricket, as well as social events. He expressed the hope that the activities of the Club would be further extended, and held out inducements for the promotion of sections for boxing and billiards, as well as advocating inter-departmental competitions. He trusted too that the social side would be developed, and suggested several ways in which this could be done.

Mr. C. Knatchbull (the hon. secretary), in reply, thanked the president for the interest he had displayed in the welfare of the Club, and expressed the hope that they would next year be able to report an increase in numbers and usefulness.

Mr. W. A. Perkins gave "The Chairman," a toast which was received with much enthusiasm, the company joining heartily in "For he's a jolly good fellow."



Mr. Griffiths (in reply) expressed the great pleasure it gave him to do anything to promote the happiness of those engaged in the works.

The tables having been cleared, the company enjoyed an excellent programme of dance and song, Mr. S. Young acting as M.C.

Capital songs were contributed by Miss Griffiths (daughter of the president) Mrs. E. Jeffery, Miss Hampton, Miss Le Comte, and Mr. W. Cook, whilst duets were given by Miss O'Leary and Mr. T. Blogg.

The stewards responsible for the arrangements (and who must be congratulated upon the success of their efforts) were Misses E. Munns and Gotts, Messrs. W. Cook, F. Marchant, C. Hawkes, E. C. Jeffery and C. Knatchbull.

The February issue of the *Print Collector's Quarterly* contains profusely illustrated articles on "The Master FVB," "The Etchings of Walter Sickert," "Rubens as Etcher," "Valentin Sezenius" and "Arthur Boyd Houghton."

INSTAL A MONOMETER

£2000 per annum saved in metal alone by using a MONOMETER FURNACE.

A large London Printers' have found by test that they get 48½ lbs. less dross per ton of metal melted with a Monometer Furnace.

They melt 8 tons per day, so a direct saving of over £2,000 is effected.

Just calculate how much you melt per day and see what you will save.

With Christmas Card Publishers.

A Merry Annual Dinner.

The fourth annual dinner of the Association of Christmas Card Publishers, which proved a most pleasant and successful function, was held at Gatti's, King William-street, W., on Wednesday of last week. Sir Adolph Tuck, Bart., who gave the dinner as president of the Association, occupied the chair, and upwards of 50 guests attended, at the top table being, besides the chairman, Mr. Andrew Lyon (the retiring president), Mr. Percy Barringer (president of the Stationers' Association), Mr. Gustave Tuck, Mr. William McKenzie, Mr. Claude Taylor, Dr. Owen Lancaster, Mr. W. R. Codling (Controller of H.M. Stationery Office), Mr. A. Spottiswoode Ritchie, Major W. R. Tuck and Mr. P. H. Euesden.

The dinner was held in the beautiful Adelaide Galleries of Gatti's, and the repast that was served provided indubitable evidence both of the donor's generous good taste, and of the capabilities of this excellent restaurant.

Presentation to Mr. Andrew Lyon.

A notable feature of the occasion was the presentation to Mr. Andrew Lyon on behalf of the Association, of a handsome solid silver rose-bowl, bearing an inscription testifying to the members' esteem and their appreciation of his services and of the deep interest he had always taken in furthering the objects of the Association.

Sir Adolph Tuck, in a very graceful speech, paid tribute to the valuable work which Mr. Lyon, "the friend of everybody," had done as president of the Association since its inception three years ago. Members' appreciation of Mr. Lyon's services, he said, had been made evident by their pressing upon him not only a second year of office, but a third, and he was sure it was only Mr. Lyon's firmness in crying a halt that prevented his being elected to further years of presidency. The speaker pointed out that the fact of Mr. Lyon's being resident in Glasgow—which had necessitated his travelling some 800 miles to attend any meeting in London—enhanced the cost in time and expense of the splendid work Mr. Lyon had done for the Association. The appreciation with which his services were regarded had been evidenced by the spontaneous manner in which that evening's presentation had been decided upon and carried through. He added that the Association had happily secured Mr. Lyon as vice-president, and though they might not see him so frequently in London as before, yet, whenever duty called, Mr. Lyon would be with them to give them the benefit of his ripe experience and practical knowledge. Sir Adolph then proceeded to made the presentation of the rose-bowl, reading the complimentary inscription upon it, and expressing the hope that Mr. and Mrs. Lyon would long continue to enjoy the esteem of their fellow men, and would ever be able to fill the bowl with roses. (Loud Applause).

Mr. Lyon, who was evidently moved by the honour done him, made fitting response. After recalling some amusing reminiscences of their earliest meetings—and passing on to Mr. W. Brown the credit of being the "real originator" of the Association—Mr. Lyon said that on his own behalf and on behalf of his wife and family, he thanked them from the bottom of his heart for this gift, which would ever be treasured.

At the close of his speech Mr. Lyon received a tumultuous ovation, all present rising to sing "For he's a jolly good fellow."

Many Clever Speeches.

The toast of "The Association of Christmas Card Publishers" was given in characteristically happy fashion by Mr. Percy Barringer, who introduced some laughable comparisons between the business of the stationer and that of the Christmas card publisher, together with clever burlesques of some of the conventions of Christmas card design. He concluded with tributes to the value of the Christmas card in fostering good feeling, and to the great utility of the Association.

Able responses were made by Messrs. Wm. McKenzie and G. Delgado, the former's speech including a strong plea for further extension of the membership of the Association, and the latter adding earnest commendation of the Association's co-operative advertising campaign—which is evidently producing very satisfactory results.

Captain Desmond Tuck gave the toast of "Our Guests" in exceptionally witty style, and Messrs. Claude Taylor and W. R. Codling made clever speeches in reply.

The toast of "The Trade Press" was given by Mr. Frank P. Dorizzi, who, whilst admitting that the trade Press was never before so good as it is to-day, tempered his praise with criticism. He suggested particularly that trade papers had not paid sufficient attention to the Merchandise Marks Act, and that a campaign was wanted advocating the boycotting of all classes of stationery not bearing a British trade mark.

Response was made by Mr. Owen Jones, who, as an ex-service man, waxed eloquent on the subject of the value set upon Christmas cards by those who were on active service in the War.

The artistes contributing to the evening's enjoyment were all thoroughly successful. The conjuring tricks and the remarkably clever "patter" of Mr. Herbert J. Collings took the house by storm; Miss Marion Browne's expressive soprano singing was deservedly applauded, as were also the baritone solos of Mr. Clay Thomas and the amusing stories and songs of Mr. Rex Harold, whilst Miss Hilda Bertram entertained the company with songs at the piano and also proved herself an able accompanist.

The exigencies of train-catching necessitated our leaving without having the pleasure of listening to Dr. Owen Lancaster or to the proposing by Mr. Euesden of the well-deserved toast of "The Chairman." The time was already 11.40 p.m., but interest was still unabated and numbers but little decreased—which says much for the sociable enthusiasm of the Association of Christmas Card Publishers.

Cassell's Foundry at Dinner.

The electro and stereo "chapel" of Messrs. Cassell and Co., Ltd, on Friday held a very successful dinner and concert. The function took place at the "Ship" Hotel, Ivy-lane, Newgate-street, and the chair was occupied by Mr. W. M. Forsyth, foundry manager. An interesting feature of the event was the presence of a number of erstwhile apprentices of Messrs. Cassell's, which included Messrs. W. Bishop, G. K. Naylor and W. Bullett. Others present included Messrs. T. Middleton and W. H. Longley. Mr. Warren sent an apology for his unavoidable absence, and Mr. W. H. Clark owing to illness was not able to be present.

After an excellent repast, Mr. Taylor proposed the toast of "The Visitors," and Mr. George Naylor replied. Mr. Middleton proposed "The Chapel," and Mr. Hale replied. Mr. Cox submitted "The Stewards." Mr. W. H. Longley gave "The Chairman," Mr. Forsyth suitably responding.

The musical items were secured from among the company, and the unusually good talent dislayed was greatly enjoyed.

From the London Gazette.

PARTNERSHIP DISSOLVED.

S. E. Boyd and H. M'Cardell, under the style of M'Cardell and Son, at 15, Market street, Stoneclough, Lancaster, printers and stationers.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

Annable, R., residing at 40, Sherborne-road, Cheadle Heath, Stockport, Chester, and carrying on business at 1, John-street, Gorton, Manchester, under the style of the Gorton Printing Co., printer.

Houghton, A. L., residing at 64, Guilford-avenue, Surbiton, lately carrying on business at 83, Upper Thames-street, E.C., and at 58, Ludgate hill, E.C., paper agent.

Suggested New Paper Mill.—There are many rumours in regard to the acquisition of the old dockyard at Northfleet, Kent, for papermaking purposes. Various firms of papermakers have been mentioned as having bought the property for the purpose of new mills. According to some authorities an American firm has under consideration the manufacture of vulcanised fibre, which, of course, involves papermaking plant.

Do more than you are paid for. Some day you will collect.

Sale of Printing Plant.

The Field Press, Ltd.

A two days' sale of printing machinery and plant took place last week at Windsor House, Bream's-buildings, E.C., by order of Messrs. Hudson and Kearn's, Ltd., who have purchased the printing plant of the Field Press, Ltd. On the first day an extensive and varied assortment of type and composing room accessories came under the hammer, and many bargains were secured by purchasers. A super-royal Albion proof press brought £9 5s.; a super-royal Imperial proof press, £8; and a double crown Albion proof press £14. A lever galley proof press, by Esson, went for £6 5s.; another, by Hopkinson and Cope, for £5 5s., and a demy Albion proof press for £15. A number of iron imposing surfaces were disposed of, and found ready buyers, half a dozen, 72 by 40½ inch, being knocked down at £9 and £8 10, a 56 by 38 inch at £3 10s., and another of the same size at £5 10s.; a 72 by 36 inch went for £13 10s., and a 64 by 45 inch at £11 5s. The second day's sale included the heavier machines, and among the lots disposed of were a crown folio Anglo-American Arab platen printing machine, by Wade, which went for £57; a double royal "Reliance" Wharfedale brought £215, and a similar machine £240. Two 14 by 22 inch Colt's Armory platens went for £110 each; a No. 9 "Golding" platen was knocked down at £85, and a Duplex book trimming machine, by Horne, at £50. Among the prices realised for a number of guillotines were the following: A 48 inch "Express," by Furnival, £75; a 42 inch, by the same makers, £65; a 43 inch, by Dawson, £55; a 42 inch "Diamond," by Payne and Sons, £51, and three similar machines brought, respectively, £82 10s., £57 10s., and £50. Several No. 24 reel wire stitching machines, by Brehmer, went for prices that varied from £8 10s. to £10 10s., and a No. 4A, by the same maker, brought £20. A No. 3 Boston reel wire stitching machine sold for £17 10s.; a similar machine went for £25, and two No. 6 wire stitching machines, by the J. L. Morrison Co., brought £30 each. A 33 inch book trimming machine, by Harrild, went for £40, and a No. 3 book sewing machine, by Smyth, at £70.

Bottomley and His Papers.

Horatio Bottomley's creditors have now received from the senior official receiver a summary of his statement of affairs showing liabilities £105,405, of which £90,272 are expected to rank, and estimated net assets £27,206. The official receiver reports that Bottomley, after his second failure, continued to act as editor of *John Bull* and of *Mrs Bull*.

In March, 1920, a resolution was passed for the voluntary winding up of *John Bull*, Ltd., in order that the company's business could be amalgamated with that of a firm of printers and publishers. He registered a company with a capital of £1,500,000, to which, *inter alia*, the assets and liabilities of the old *John Bull* Co. were transferred, and as promoter he received £88,000, out of which he made payments amounting to £30,000. From his shareholding he realised between June, 1920, and June, 1921, some £60,000 or £70,000.

In September, 1919, Bottomley bought a shareholding interest in the "National News, Ltd.," and about the same time he also acquired the copyright and goodwill of the *Sunday Evening Telegram*. In February, 1921, his interests in both were acquired by "Sunday Publications, Ltd."

In June, 1921, the *Sunday Illustrated* was launched, and from time to time he advanced "Sunday Publications, Ltd," moneys, the company now being indebted to him on open loan account for £69,438.

Bottomley attributes his insolvency to losses in connection with the Victory Bond and allied clubs and the *National News* and *Sunday Evening Telegram*, also to the dislocation of his newspaper interests owing to litigation during the year before the receiving order.

Co-workers.—*Messenger:* "Who's the swell ye was talkin' to, Jimmie?" *Newsboy:* "Aw! Him an' me's worked together for years. He's editor o' one o' my papers."

Hudson, Scott and Sons, Ltd.—Satisfaction to the extent of £5,000 on February 13th, 1923, of debentures dated October 1st, 1918, securing £12,200; satisfaction (a) to the extent of £5,000 on February 14th, 1923, of debentures dated March 13th, 1917, securing £19,750.

Birmingham Gazette, Ltd.—Deposit on February 14th, 1923, of deeds of 169 and 170, Fleet street, and 2-7, Red Lion court, E.C., to secure all moneys due or to become due from company to L.J.C. and Midland Bank.

Meyers, Brooks and Co., Ltd. (newspaper proprietors, etc., Enfield).—Particulars filed of £2,000 debentures authorised February 19th, 1923, charged on the company's undertaking and property, present and future, subject to £3,000 prior debentures, the whole amount being now issued.

Money, Hicks and Mills, Ltd. (paper manufacturers, etc., Wimbledon).—Particulars filed of £500 debenture authorised February 16th, 1923, charged on the company's property, present and future, including uncalled capital, the amount of present issue being £200.

Carlton Paint-Printing Process, Ltd. (London).—Particulars filed of £3,000 debentures authorised December 15th, 1922, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £1,500.

Alleged Trade Custom Denied.

Printer's Lien on Goods.

An interesting case was concluded in the King's Bench Division last week when Mr. Justice Bray gave judgment in the action brought by the Regency Press, Ltd., proprietors of the *Brick and Pottery Trades Journal* and the *Glass Trades Journal*, to recover from the defendants, a firm of printers, certain printing blocks and paper handed to them in pursuance of contracts made with them by the plaintiffs for the printing of their journals, and damages for their detention.

The defence was that the defendants were entitled to retain the blocks and paper as lien.

The plaintiffs' case was that they entered into contracts with the defendants for the printing of the journals owned by them, and the contracts having been determined, the plaintiffs, owing to the defendants' action in retaining the printing blocks, had been unable to publish the journals, with the result that they had been unable to fulfil advertising and subscribing contracts, or to earn any profits on the publications.

The defendants' case was that after the contracts had been entered into the plaintiffs determined them, and, except for one issue of the *Brick and Pottery Trades Journal*, had refused to pay for the work which had been done. In support of their case, evidence was called that there was a custom of the printing trade that where printing blocks and other materials were lent to the printer to be used in the execution of work entrusted to him, he had a lien over such articles against his unpaid bill.

The defendants counterclaimed for £212 1s. 8d, the sum alleged to be due from the plaintiffs for work executed, of which amount the plaintiffs admitted liability for £116 16s. 6d.

His Lordship held that the custom set up by the defendants had not been established, and he gave judgment in favour of the plaintiffs for £45 damages, with costs on the High Court scale, for the detention of the printing blocks and paper by the defendants. He also gave judgment for the return of these articles or the payment of their value, £100. On the counterclaim, he gave judgment for the defendants for the amount admitted by the plaintiffs, without costs.

United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MARCH 8, 1923.

A Trade Leader Mourned.

THE funeral last week of Mr. Reginald J. Lake brings to the whole of the printing industry feelings of mingled sorrow and gratitude, sorrow at the loss of one who served it so well, and gratitude for the example and work of the gifted and high-principled leader who for so long held the helm of the master printers' organisation. His enthusiastic devotion to duty was such that, although he did more than justice to the work entrusted to him, he did less than justice to himself, his health suffering in consequence. To his personal ability and immense capacity for work, striking testimony has been put on record by his colleagues. Several big forward movements in the trade are also reminders of Mr. Lake's progressive leadership. He was the principal organiser of the first printing trades Cost Congress, was a leading spirit of the Betterment Committee (the forerunner of our present Joint Industrial Council), and the first national wage agreement was made under his regime. A pleasant recollection, too, is his kindliness to colleagues and staff, whilst his willing helpfulness to those in difficulties will long be remembered by many a printer. We propose to pay further tribute to Mr. Lake's character and career in next week's issue, when we are promised a personal appreciation from the pen of Mr. Frank Colebrook.

* * *

Colour Printing Developments.

DIRECT colour photography has not made any great advance recently, but processes where the print itself is produced by means of the printing press or otherwise, and the colours obtained by the use of inks of appropriate hues, are continually being improved. At the Photographic Fair to be held at the Holland Park Hall, March 15th-24th, there will be a display of colour printing, demonstrating the progress that has been made and we gather that printers will find at this Fair many exhibits worth noting. Of particular interest are examples of colour printing in which the surface of the original, whether canvas or drawing paper, rough or smooth, is so imitated as to defy detection either by ocular examination or by touch. The best of colour printing, like the best of everything else, is expensive, but thoroughly good work for ordinary purposes is now producible at quite reasonable rates.

* * *

Unemployment.

THIS is a problem which closely affects the welfare of the nation as well as of individual industries. It is a distressing fact from every point of view and no suggestion has yet been adopted which offers a satisfactory cure or even palliative. A proposal is now put forward by the Industrial League and Council that the Industrial Councils and Re-construction Committees and other similar organisations should initiate a definite inquiry into the question of unemployment. It is quite rightly intimated that neither employers nor union institutions would be the proper means of making the investigation, while a problem which is so essentially an industrial concern should, it is argued, not be left to the responsibility of the State. Whether, on the other hand, there would be sufficient authority behind the Industrial Councils and Committees to render an inquiry of this nature sufficiently sufficing may be a moot point. However, the suggestion offers the best prospects at the moment, and it would be a great service to the country if the scheme outlined by the Industrial League and Council could be made to help to a mitigation of the cruel disease.

* * *

The Swedish Paper Settlement.

SO FAR as it goes, the news of the agreement in the Swedish paper industry over the question of wages is good. These have been stabilised now for another year or so. Unfortunately this cannot be said of the pulp side of the industry. There the lock-out is still in force, and according to the general view it is likely to be a lengthy business. Both employers and union leaders appear to have adopted a reasonable view of the situation, while the workpeople have taken it upon themselves to reject the proposal put forward by the State Mediator. This decision is a regrettable one from every point of view, but it is particularly serious for the British paper trade. It means, of course, that costs will be forced up. Whether this applies also to the Swedish paper mills which are able to rely upon their own production of raw material it is impossible to say. If not, then British mills will be under a further handicap in placing their goods on the home and overseas markets.

* * *

The Paper Market.

THE paper market is in a steady condition, with prices on a firm and stable level. Despite rumours of advance, no definite evidence of any increase in selling or quoting figures has come under our notice. The mills are in a satisfactory position as regards forward bookings and merchants report a steady flow of small orders. It must not be thought for one moment, however, that the home demand is yet approaching normal. There is too much quietness in trade generally to warrant any such supposition. Paper is not being used to anything like the extent it should be or would be if the future course of trade was a tangible proposition. The state of business throughout the country for a week at a time is known, but the next week cannot be anticipated. The effect of this condition is reflected in the consumption of paper. Buyers will not look ahead further than immediate requirements, and consumers of printed matter are working to minimum limits. Printers' stocks of paper are being maintained in a depleted condition and the general policy is one of conservation.

EXPORTS of paper from Czecho-Slovakia last year amounted to 97,000 tons.

Bookbinders' Wages Arbitration.

Decision in Favour of Union.

At the Ministry of Labour on Tuesday, arbitration took place, as agreed, in respect of the wages dispute in the London bookbinding trade. We understand that the Court eventually decided in favour of the trade union, but the exact terms have not been received at the time of writing.

Sir David Harrel presided, and the Court consisted of Mr. R. A. Austen-Leigh and Lieutenant-Colonel Rivers-Fletcher (for the employers), and Mr. C. W. Bowerman, M.P., and Mr. W. C. Warren (for the workpeople).

The question referred for settlement was:—Were the members of the Master Printers' Association of the London Chamber of Commerce, as affiliated members of the London Master Printers' Association and the Federation of Master Printers, parties to the wages agreement entered into in December last between the London Master Printers' Association and the Central Branch of the National Union of Paper Workers?

The case for the union was presented by Mr. T. G. Newland, and evidence in support was given by Messrs Harraway, Stubbings, and Larcey. The employers' case was presented by Major Robert Leighton, and evidence was given by Mr. A. E. Goodwin.

At the close of the hearing, the parties to the dispute conveyed their thanks to the arbitrators in a resolution proposed by Mr. Newland and seconded by Major Leighton.

Personal.

Alderman Sir Rowland Blades, M.P., will preside at the annual meeting of the Printers' Pension Corporation at St. Bride Institute on Saturday, April 14th, at 1.30.

Sir George Truscott is suffering from a severe cold.

Mr. Howard Hazell, the president, was in the chair at the 21st annual dinner of the London Master Printers' Association, held at the Connaught Rooms on Tuesday, and a brilliant gathering assembled.

Mr. R. A. Austen-Leigh proposed the toast of the Association, and Sir Cecil Harrison the Visitors, Lord Askwith of St. Ives responding in the latter case.

Mr. Neville Chamberlain, Postmaster-General, is the hon. president of the International Stamp Exhibition to be held in London in May. He is supported by the line of living ex-Postmasters-General, including Earl Buxton, Mr. Austen Chamberlain and Sir Herbert Samuel, as vice-presidents.

Mr. William Steer entertained the Printers' Managers and Overseers' (Parent) Association on Tuesday evening with a lecture on "English, Scottish and Irish Humour."

Mr. Ernest Zaehnsdorf lectured on "Bookbinding" at the monthly meeting of the Printing, Bookbinding and Kindred Trades Overseers' Association at St. Bride Institute on Tuesday evening. As at his recent Stationers' Hall lecture, there were many interesting exhibits, and members had an enjoyable and instructive evening.

To celebrate the completion of 45 years' service as editor of the *Leicester Daily Mercury*, Mr. H. Hackett was the recipient at a dinner given by the firm of Messrs. F. Hewitt and Son, Ltd., last week, of a silver rose bowl, a salver, a cake basket, and a cheque, the gifts of the firm.

Mr Newman Flower, who is the editor of *Cassell's Weekly*, the new publication announced for March 15th, has been associated with Cassell's since 1906, and literary director for some seven years.

M. Rene Doumic, editor of the *Revue des Deux Mondes*, has been elected secretary of the Academie Francaise.

Mr. Reginald J. Lake.

An Honourable and Useful Career.

The passing of Mr. Reginald John Lake—briefly announced in our pages last week—removes one of the outstanding figures of modern British printing trade history. No story of our printing trade development will be complete which does not, in dealing with the last 30 years or so, give Mr. Lake's name a very prominent place, for he was for a long period the very head and front of organisational progress amongst employing printers, and the whole industry has borne witness to the truth of the simple legend which is inscribed upon the portrait of himself presented three years ago to Mr. Lake by the Federation of Master Printers: "He left the craft better than he found it."

The funeral took place on Saturday, the service being conducted in Watford Parish Church by the Vicar of Watford. In addition to Mrs. Lake and other relatives and personal friends of the deceased, the printing trade was of course well represented. Representing the Federation of Master Printers were Mr. R. A. Austen-Leigh (president), Sir Wm. A. Waterlow (ex-president), Mr. A. E. Goodwin (secretary), and Mr. W. A. Clowes, whilst others present included Mr. W. Whyte (London Master Printers' Association), Major H. B. Viney, Mr. W. P. Griffith, Mr. E. G. Cole, Mr. D. Greenhill, Mr. P. D. Michael, Mr. Frank Bird, Mr. F. W. Bridges, Mr. Hudson and Mr. W. Miles. Wreaths were sent by the Federation of Master Printers, the London Master Printers' Association, the Home Counties Alliance, the Printers' Trade Board, the Watford Master Printers' Association, Messrs. W. P. Griffith and Sons, and from the staffs of 24, Holborn, "In Affectionate Memory of our late Chief"; a wreath was also borne by two officers of the King's Royal Rifles.

A number of messages were received expressing regret at absence, amongst these being one from the Pro-Chancellor of the University of Leeds (Mr. E. George Arnold), ex-president of the Federation, 1916-1918, who was unavoidably prevented from being present in consequence of pressing engagements at the University.

A very notable testimony to Mr. Lake's work and influence is found in the fact that in 1893, when he became chairman of the master printers' organisation, the total membership throughout the country was only about 1,380, whilst when he gave up the control the numbers had risen to 3,800, and the organisation had received an impetus which was largely effective in bringing about its development to the extent of its membership to-day of some 5,000 printing firms.

Before becoming prominent in connection with the organisation of employing printers, Mr. Lake was himself in the printing trade, being from 1881 to 1906 a director, part of the time managing director of Messrs. Gilbert and Rivington, Ltd., the London firm of oriental printers (subsequently absorbed by Messrs. Clowes) Mr. Lake's career in the printing trade was prefaced, as has been the case with several notable printers, by legal training, he having been called to the Bar in 1874, after an education at Rugby and New College, Oxford.

As a leading spirit amongst master printers his public career commenced in 1893 with his election as chairman of the London Master Printers, and his course was marked by continued and increasing responsibilities and authority. In 1904 he was elected president of the Federation of Master Printers of the United Kingdom. In 1910 he was made secretary both of the London Master Printers' Association and of the Federation of Master Printers. With the growth of work during the war, a rearrangement of duties was forced upon the organisation, and Mr. Lake was nominated director of the Federation in 1916, and carried out the duties of that office in conjunction with those of secretary of the London Master Printers' Association until 1919, when he retired from active work.

Public testimony was borne to the exceptional services rendered by Mr. Lake to the industry when in February, 1920, the presentation portrait of himself painted by the late Mr. Arthur Hacker, was presented to Mr. Lake at a complimentary dinner at the Connaught Rooms, London, attended by a representative assembly of the master printers of the country. Born in February, 1850, Mr. Lake had already passed his 70th birthday when he retired from active work, this retirement being largely due to the unsparing assiduity with which he carried out his official duties, and also to the strain of the War period when Mr. Lake not only himself entered into additional activities in public service, but also suffered bereavement by the loss of his two sons, who were killed in action. He leaves a remarkable record of public service and ungrudging effort for the employing printers' organisation, in whose annals his name is sure of a most honoured place.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

Informal but Happy Gathering.

Arising out of a suggestion made by Mr. H. Crossland, the Association held an informal dinner on Monday at the Florence Restaurant, Rupert-street, W., the chair being occupied by Mr. W. Bishop. Throughout the whole proceedings there prevailed an atmosphere of conviviality and camaraderie, and the event will undoubtedly be recorded in the history of the Association as one of the most enjoyable ever held. The few toasts that were offered—though not appearing on the programme—were given in informal and friendly fashion and elicited from the proposers and from those who responded amicable raillery and many jocular remarks. After an excellent repast "The Chairman" was proposed by Mr. A. Chadwell, who, after some facetious remarks aimed at the Scotsmen present, dealt in praiseworthy manner with the splendid character of Mr. Bishop, mentioning at the same time the very friendly spirit that gentleman had shown towards Mr. Reveley, who was present and who had had the misfortune to lose the fingers of both hands.

Mr. Bishop briefly replied and thanked the company for the hearty way it had drunk his health.

Mr. Sharvell, senior, gave "The Hon. Members," and in doing so extended a very hearty welcome to Messrs. Glen Steel, A. F. Bell, W. J. Light, H. Williams, W. C. Warren, T. Middleton and the representative of the *British and Colonial Printer and Stationer*.

The toast was very cordially applauded, and, the chairman having called on the gentlemen mentioned to make brief replies, each expressed his pleasure at being present.

Mr. Warren, in the course of his reply, referred to the fact that many of the hon. members present represented firms who supply the materials stereotypers use. They represented the machinery element, while he himself spoke on behalf of the human element. He thought the relationship existing between the Society and their Association was as good as existed in any other body of men, and hoped it would long continue. He made an appeal on behalf of the Printers' Pension Corporation, and in passing expressed pleasure that Mr. H. Williams had consented to occupy the chair at the first Auxiliary Concert next season.

The chairman next proposed "The Stewards," Messrs. J. Craske, W. Crossland and A. E. Wood.

Each of these gentlemen, in replying, disclaimed any credit for the success of the evening, and good humouredly threw all the praise for it on to Mr. W. Bullett, who in turn briefly replied.

The musical artistes—with the exception of Miss G. Jones—were selected from the company. They included Messrs. J. Black, W. Bishop, A. F. Bell, W. Crosby, J. S. Sunderland, H. Sunderland, H. Williams, Harry Crossland, J. Robinson, jun., T. Middleton and G. Hardy.

The regrettable absence of Mr. J. Parker was feelingly referred to by Mr. Chadwell.

A memorable and very successful social gathering was then brought to a close by the singing of Auld Lang Syne.

The *Manchester Guardian Commercial* Year Books have established their value as the business man's reference book for Manchester. A directory of Lancashire Cotton Mill directors, a glossary of textile terms and special articles on Manchester trade are strong features of the new edition. The Year Book was published on February 15th at 2s 6d., post free 2. 9d.

The Bookbinder

Modern Machine Bookbinding.

LECTURE by Mr. GEO. A. STEPHEN. F.L.A.

(City Librarian of Norwich).

In connection with the School of Librarianship at University College (London University) a lecture on "Modern Machine Bookbinding" was delivered at the College, Gower-street, on February 14th, by Mr. Geo. A. Stephen, F.L.A., the City Librarian of Norwich. Mr. Stephen's name is well known in the trade, his writings having included an illustrated volume on "Commercial Bookbinding" (which was translated into German) and several articles on the subject; moreover he was awarded a silver medal by the Royal Society of Arts for an illustrated paper on modern machine bookbinding.

The lecturer said that in an up to-date bindery almost every process in edition binding was executed by machinery, and with the aid of an excellent series of over 60 lantern slides he described the many processes and the various machines used. By the kindness of Messrs. Smyth-Horne, Ltd., the lecturer was able to provide the students with sample books, which had passed through the following machines:—Smyth improved No. 3 book-sewer, making three stitches and sewn on two tapes; Smyth special No. 1 casemaker; Crawley rounder and backer; cloth cut on the Smyth cloth cutting machine. In order that the students could examine the method of binding more clearly, the case was not attached to the book, although this work can be well executed by the Smyth casing-in machine.

After describing the making of book-covers by machinery, the lecturer paid some attention to their decoration, and also to decorative end papers. He said that during the past twenty-five years or so a distinct school of book cover designers had arisen, and artists in other and wider fields of decorative art had contributed their quota to book cover decoration. He classified the designs of book-covers and end papers into four main groups—(1) æsthetic, (2) symbolic, (3) heraldic, and (4) pictorial—and typical illustrations of them were shown on the screen.

In concluding the account of machine bookbinding the lecturer referred to Messrs. Nelson and Son's Parkside Works, which he visited some fifteen months ago. In this up-to-date bindery there are veritable automatons, some of which have been specially designed and patented by Nelson's own engineers. When all the machines are running there, the minimum output is 2,000 books per hour, and nearly 200,000 books per week are produced at the busiest times of the year.

The lecturer then proceeded to discuss the qualities of publishers' bindings, or "cases" as they are technically called.

Publishers' Bindings.

These bindings, he said, could be produced quite satisfactorily if the machines were worked at their maximum efficiency. Owing to the demand for cheap books by the public and the great stress of competition between publishers, the latter were practically compelled to reduce as much as possible the cost of production, and consequently the wholesale binders to secure contracts had to turn out inferior work. On the publishers rested the responsibility for the inferior physical qualities of books. They were generally more concerned with low prices than with quality and serviceability, and even when they were prepared to pay fair prices for bindings they frequently handicapped the binders severely by giving them books to bind that were printed on the detestable featherweight paper, or the heavily-loaded art paper, both of which were most unsatisfactory from the binding standpoint—to say nothing of other objections. The binders must not even press featherweight paper heavily because that would reduce the bulk of the book considerably; and bulk was an important factor with publishers in regard to certain classes of books, because bulky books suggested to book buyers and recipients that they were obtaining books which contained a large amount of reading matter. Publishers of high reputation frequently paid considerable attention to the typography and decoration of their books, but one had the feeling that they knew that the public believed that "fine feathers make fine birds," so in addition to decorating the book cover, the paper wrapper or "book-jacket," originally provided merely for protecting the book, was now oftentimes a work of art. Well might one exclaim with Antonio "O, what a goodly outside falsehood hath!" So far as the lecturer could judge, the publishers, during and since the war, curtailed the production of highly decorated book covers in favour of the greater use of pictorial book jackets which could be produced more cheaply.

The heavily-loaded art paper was a serious defect of modern book production. By the usual methods of machine bookbinding it could not be bound satisfactorily. The surface of the paper flaked off from its meagre basis of fibre after comparatively little usage; the glue on the back of the book cracked and broke away from the paper, and this accentuated by the weight of the paper, caused the whole book to become loose, and the sections speedily broke at the folds. Furthermore, unless the paper experts were wrong, the paper was doomed to rot speedily. In a lecture at the Stationers' Hall last November Mr. R. W. Sindall, F.C.S., a paper expert, had said of the heavy art papers: "It is surprising after the many years' experience with this class of material that so many books are printed on such paper, the durability of which can only be guaranteed when the book is never used, and is kept carefully packed away on a dry shelf."

Causes of Defective Binding.

The lecturer recalled that he had previously stated elsewhere that the defects of publishers' bindings were generally assignable to one or more of the following causes:—*Materials.*—1. The use of thread, tapes, cords and mull of inferior quality. 2. Sewing or stitching with wire not rust-proof. 3. The use of inferior glue, or glue of the wrong consistency. 4. The use of inferior cloth, neither fast to sunlight nor to water, and soon becoming faded or discoloured and shabby. 5. The use of cheap metal foils instead of gold leaf. 6. The use of unsuitable blocking inks. 7. The use of white or coloured foils, easily rubbing off when the books are handled a few times. 8. The use of paper illustrations or paper titles on the covers.

Methods.—1. Sewing with thread under insufficient tension, thereby resulting in loose sewing. 2. Sewing on the "two sheets on" principle, considerably decreasing the strength of the binding. 3. Sewing on the "all along" principle on an insufficient number of tapes or cords, and with less than the maximum number of stitches—in some cases the tapes or cords being dispensed with, and the books simply sewn on to mull of poor quality. 4. Fixing the back lining of mull to the book prior to the rounding and backing operations. 5. "Tipping" plates, maps, etc., or other single leaves with paste, instead of "guarding" them round the adjoining section. 6. Cutting the ends of the tapes or cords too short, and cutting the mull of a less width than necessary to make a strong joint. 7. Defective execution of the casing-in operation. 8. Square backs, generally causing the fore-edges to assume a convex shape. 9. Allowing insufficient pressing in the standing press, thus leading to general looseness of the book.

In almost all publishers' bindings of the present day, said the speaker, some of these defects were to be found. Librarians and their assistants knew that in a public library the average life of a publishers' binding was less than 30 issues, unless it was kept in circulation after it had become quite loose—a most unwise practice. As a rule, private book purchasers received adequate value for their money, so far as works of fiction and cheap books generally are concerned, but the bindings were quite unserviceable for public or school libraries.

Need for Better Bindings.

Some 14 or 15 years ago the American Library Association had succeeded in inducing several of the leading American publishers to issue some of their important and popular books in a strong binding, suitable for library requirements, at a small extra cost, generally about ten cents, and fifteen cents for some of the larger volumes. In the main, these books were sewn and cased by machinery; in some cases the books were bound in a good strong buckram, whilst in others the cloth for the ordinary trade edition was used. These books were very satisfactory. The chairman of the Binding Committee had then informed the lecturer that there was no comparison between the durability of the good special binding and the ordinary publishers' binding. The American reinforced bindings had given complete satisfaction to American librarians; one librarian had stated that one book had circulated 142 times without a single visit to the repair room.

In this country three or four large publishing firms had followed the example of the American publishers. A number of volumes in the "Oxford Books for Children" series, published jointly by the firms of Henry Frowde, and Hodder and Stoughton, had been issued in special library bindings. Messrs. Nelson and Son had issued some of their 2s. novels in a special binding at an extra cost of 6d. per copy; and Messrs. Dent and Son had put the whole of their Everyman series in two styles of library binding.

Specification for Cased Work.

The Book Production Committee of the Library Association had hoped that these encouraging pioneer efforts would be copied by other publishers, but unfortunately they had not been. In 1913 the Book Production Committee of the Library Association had published its interim report, which contained two specifications for "Publishers' Cased Work," as follows:—

Specification 1.

Publishers' Cased Work Generally.

1. Books to be sewn with strong thread.

2. Books to be sewn "one sheet on" on strong tapes; at least three tapes to be used for crown octavos, four for royal octavos, and an increased number of tapes for books of larger size. Two of the tapes to be placed not more than one inch from the head and tail of the book, and the slips to be of good length. (NOTE.—In the case of extra thick volumes printed on thin paper it may be necessary to sew "two sheets on.")

3. All single leaves and plates to be guarded round the adjoining section and

Digitized by Google

sewn through. Or, when the plates are few, they may be pulled on paper with the inner margin extra wide in order to allow the paper to be folded round the adjoining section.

4. End-papers to be of good quality.
5. Flexible glue to be used in glueing up.
6. The lining to be of a strong open fabric.
7. Good quality cloth of a fast colour to be used.
8. Books to be lettered on back with title and author's name at least.

Specification II.

Publishers' Cased Work for Libraries.

1. Books to be sewn with unbleached thread.
2. Books to be sewn "one sheet on" on unbleached linen tapes; at least three tapes to be used for crown octavos, four for demy octavos, and a proportionate increase in the number of tapes for books of larger size. Two of the tapes to be placed not more than one inch from the head and tail of book, and the slips to be of good length. (NOTE.—In the case of extra-thick volumes printed on thin paper it may be necessary to sew "two sheets on.")
3. All single leaves and plates to be guarded round the adjoining section and sewn through. Or, when the plates are few, they may be pulled on paper with the inner margin extra wide in order to allow the paper to be folded round the adjoining section.
4. The first and last sections to be guarded with linen; fine cambric for books printed on thin paper.
5. End-papers with cloth joint sewn as a separate section.
6. Flexible glue to be used in glueing up.
7. The lining to be of a strong open fabric.
8. Good quality boards with a strip of strong linen glued over the slips inside the case.
9. Good quality cloth of fast colour to be used.
10. Books to be lettered on back with the title and author's name at least. Where the covers of books are printed and not lettered in gold or blind, in the ordinary way, the ink used should always be of a fast nature. Flat back bindings should also be avoided.

Mr. Stephen added that the war, which disorganised all trade and industry, had had a bad effect on book production; greatly inferior paper and materials had been used, and bad workmanship was unavoidable. At present there seemed to be small chance that the publishers would entertain the idea of issuing on a large scale reinforced publishers' bindings on the lines indicated in the Book Production Committee's specifications.

Each member of the audience received a copy of the Specifications of the Library Association's Book Production Committee, and a reading list on machine bookbinding.

Bindery Overseers' New President.

Mr. H. Milton.

Mr. H. Milton, whose portrait is reproduced herewith, has been appointed president of the Printing, Bookbinding and Kindred Trades Overseers' Association, a position which had been so ably filled by his predecessor, Mr. A. W. Hunt. In accepting this appointment Mr. Milton places himself in company with an excellent coterie of men whose influence for the good of the Association and its members has been marked by complete success. Those gentlemen who occupied the presi-

Mr. H. Milton.

dential chair in the days gone by had a comparatively easy task. The Association was then numerically not so strong, and its operations did not cover so wide a field as now. To-day conditions are far more difficult. Not only is the Association's membership rapidly increasing, but it is up against problems which seem to be inevitable to all organisations as they reach a point when their influence becomes felt in the working life of an industry. Mr. Milton takes up his duties amid these constantly changing conditions, and there is no doubt he will succeed in his endeavour to justify the confidence placed in him by the members.

Mr. Milton started first in print at Messrs. Pollet and Co., Fann-street, Aldersgate-street. Leaving here as quite a young man he next spent about twelve months in the trade at various establishments, where he was able to make himself familiar with all the different methods and processes then in use. In 1892 he joined the London Colour Printing Works, where he occupied the position of overseer for a period of eight years, and when that firm was taken over by Newnes and Pearson Printing Co., Ltd., Mr. Milton also transferred his services to the latter concern, being placed in charge of the warehouse and binding staff—male and female—which to-day consists of over two hundred employees.

Mr. Milton was elected a member of the Printing, Bookbinding and Kindred Trades' Overseers' Association ten years ago, and in 1921 was appointed vice-president. During his connection with the Association he has taken a keen interest in questions relating to apprenticeship and the training of boys in the warehouse and binding departments. Last year he was responsible for one of the best outings the Association has ever undertaken, a visit being paid to the London Paper Mills at Dartford.

Rejuvenating Binding Rolls.

When the finishing rolls become worn or dented, as they invariably do, says a writer in the *American Printer*, touch up the face with a piece of fine sandpaper or emery cloth. This will make them good as new. Great care should be taken to sandpaper them evenly. To insure this hold roll in an upright position, pressing it gently but firmly on a sheet of emery cloth tacked to a table, turning the roll slowly with one hand while holding it with the other.

U.S. BINDERY COSTS.—Owing to recent wage increases, employing bookbinders of New York have sent word to all customers that the cost will advance approximately 10 per cent. on all new work. This means a very definite increase in the cost of book manufactur in the New York area, the increase in the cost of printing having been estimated at about 8 per cent.

Notes and News.

The State of Trade.

Things are far from satisfactory in the bookbinding industry. True, the London dispute has been settled and the binders are back at work with some prospect of a period of stability so far as wages and conditions are concerned. Business generally, however, is poor, and the earlier promise of improvement has not noticeably matured. Unemployment is not quite so bad as it was last year, but there are far too many names on the books to warrant confidence in the outlook. There is a total lack of big work from official and commercial sources. Users are keeping their requirements down to the absolute minimum, and orders are issued only after a thorough testing of price.

Prices of Boards.

The prices of bookbinders' materials are keeping very steady and there is very little to record in the way of alteration either up or down, with the possible exception of boards. Millboards and English boxboards are firm, but Dutch strawboards have advanced fairly rapidly in recent weeks. The price quoted for light weight boards a month ago in these notes was £9 5s. to £9 10s. per ton. To-day's figure is slightly over £10 with the usual extras for heavy weights. According to report the market is still advancing and higher quotations must be expected. Stocks on this side are below normal. Glazed leather boards are quoted from £18 per ton second quality to £19 10s. per ton first quality. English black millboards first grade machine-made are listed at £28 per ton, hand-made at £48 per ton. English grey boards are on offer at £24 per ton. White wood pulp boards are available in two qualities at £17 and £20 per ton respectively.

The Leather Market.

Leathers are firm in price and unaltered from last month's figures, which read: Glazed skivers 4½d. to 6d. per sq. ft., pastegrains 5d. to 7d. per sq. ft., thin red glazed basils 7d., stout red glazed basils 9d., coloured basils 9d. and 10d. per ft., roller basils 6½d. to 8d., fair basils 8d. to 10d., rough fleshes 8d., rough goat 10d., rough morocco 10d., rough calf 1s. to 1s. 3d., fair calf 1s. 9d., anglo-russia 1s 9d., hard-grained goat 1s. 9d. to 2s. per sq. ft., pig skin 1s. 3d. to 1s. 9d. according to size and quality, morocco 2s. to 2s. 3d.

Some Cheap Offers.

Some remarkably cheap offers are to be noted, including red glazed basils for half binding at 5d. per sq. ft., glazed skivers at 4½d., 40-inch leather cloth clearance (chocolate brown, grained) at 1s. 6d. per yard, 50 yard pieces. White calico is offered at 5½d. per yard 36 ins., common label cloth at 6½d. From foreign sources there is an extremely low offer of fancy marbled end, cover or box-lining paper at less than 3d. per lb.

A Rexine Development.

A new line in Rexine has been issued, the special feature in which is a special backing to dispense with interlining. The qualities are listed under Numbers C.B. 7 and C.B. 5, width 48-50 ins., price 4s. 6d., and 3s. 2d. per yard respectively.

Progress of Costing.

Following the lead of the printers, the Boxmakers' Federation has evolved a sound system of cost-finding which is set forth in a 5s. booklet issued from the Federation offices. Schemes for large and small scale treatment are dealt with and in a simple and practical manner the routine of costing is described. In every industry the subject of costing now ranks prominently among the fundamental matters affecting progress and only the survivors of earlier rule-of-thumb generations remain indifferent. The modern and progressive mind, with controlled development as a policy, accepts organised costing as a vital factor in that policy. Boxmakers will be well advised to study the schemes promulgated on their behalf.

The Ruler's Lost Work.

Those who study closely development in trade practice will have noted the gradual diversion of certain classes of work from the ruling section to the litho department and letterpress-room. Progress in office systems is to some extent eliminating the need for ruling. Typewriting machines have dispensed with feint rulings, adding machines have simplified down lines and largely converted them to letterpress rule. Offset machines have demonstrated their ability to perform much of the work hitherto the peculiar province of the ruler, at a higher speed and with greater accuracy at less cost. More delicate results also are attained by rotary offset practice.

Digitized by Google

German Competition.

We were recently shown some pocket cases in imitation leather arranged to serve the purpose of wallet, note book and memo pad, the latter being in the form of refills. The corners of the refills were gilt and the general get-up of the whole affair was excellent. They cost the retailer 5½d. each, sold at 1s. 3d. and came from Germany. As a comparison a much simpler English production something on the same lines but much less comprehensive cost 11½d. From the wholesalers or manufacturers point of view here is an iniquity, but from the retail aspect here is a quick-selling catch line that promotes business.

Boards at the Fair.

The display of boxboard and boards for binders' use at the British Industries Fair serves to emphasise once again the fact that our mills are in a position to fill the needs of home industries so far as the ordinary run of boards is concerned. The foreigner may still hold the field which comprises friction glazed boards, wood pulp boards and yellow strawboards, but for every other grade of board used by the boxmaker and the bookbinder the English manufacturer can fill the bill with a superior product at a competitive price. The board-using industries owe it to themselves to keep their business as far as possible within our own shores.

U.S. Bookbinding Figures.

The United States Department of Commerce announces that according to reports made to the Bureau of the Census, the value of products of establishments engaged primarily in bookbinding and blank-book making amounted to $63,854,000 in 1921 as compared with $66,021,000 in 1919, and $38,104,000 in 1914, a decrease of 3.3 per cent. from 1919 to 1921, but an increase of 67.5 per cent. for the seven-year period 1914 to 1921. This industry, in addition to establishments engaged in bookbinding and blank-book making, also includes embossing, book gilding, paper ruling, paper cutting, card, book and paper edging, card bevelling and bronzing, etc.

Post Office Autocracy.

Mr. W. H. Burchell, governing director of the Caxton Press, Ltd., writes us protesting against what he terms "the absurd methods the Post Office adopts towards the public." "Quite recently," he says, "the Postmaster-General issued a notice to the Press, stating that the width of aperture of an envelope carrying 'printed matter' must not exceed four and a half inches, although the custom of sending 'printed matter' through the post, in envelopes, with a width aperture regulated by the width of the enclosure has been in operation for many years past.

"Is it fair of the Post Office," he asks, "to impose such a restriction without due notice to all concerned, considering the important issues involved to the trades so seriously affected? Has it not occurred to the Postmaster-General and his advisory council that there are huge stocks of wide aperture envelopes in existence, and that there are contracts in the hands of envelope manufacturers, ready for delivery to large users of the post? Should he not know that there are millions of art catalogues sent in envelopes at printed matter rate, and that the restriction of 4½ in. aperture will stop these being sent out? Many clients of envelope manufacturers have threatened to cease sending out catalogues if this restriction is enforced. This would mean unemployment in the printing and allied trades, and affect the paper trade, railways, envelope makers, folders, envelope addressers, etc."

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous,

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines 1/.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines 6d.

Sales by Auctions, Tenders, Patents for Sale, Legal and Final Announcements

Per line 1/0

Replies may be addressed to Box Numbers, Office of the, "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

APPRENTICE.—It is desired to apprentice well-educated, intelligent youth, 16 years old, to the Printing Trade, either Compositor or Machine or both; London office preferred.—Address, W.C., 241, Evering-road, Upper Clapton, E.5. 14072

Situations Wanted.

ACCOUNT-BOOK BINDER, half extra, cutting, etc., requires situation (town or country).—G., 169, Pelham-street, London, E.1. 14064

ALL-ROUND JOBBING COMPOSITOR (non-soc.) requires situation; small works preferred.—B.C., 13, Old Palace-road, Croydon. 14063

COMP., First-class, Modern Display, Catalogue, etc., seeks perm., London.—S., Box 14067.

COMP. requires situation at once, small provincial office, good All-round General Jobbing experience, moderate wage.—Pulsford, 30, Gladstone-road, Watford. 14062

EDUCATED Young Man wants Position as CLERK or SECRETARY to Master Printer, has practical workshop experience and a working knowledge of M.P.F. Costing System.—Box 14073.

GENTLEMAN, aged 23, good education and appearance, requests Position as ASSISTANT REPORTER; excellent references.—Write, Box 14070.

LETTERPRESS MACHINE OVERSEER, with practical experience on all classes of work; keen organiser, estimator, colour work a speciality; highest references.—Box 14058.

NEWSPAPER ENGINEER and MACHINE OVERSEER desires change; evening or weekly preferred; vast experience with up-to-date High-speed Rotary and Stereotyping Machinery.—Box 14055.

OVERSEER Machine Department (Letterpress), desires re-engagement; experience of High-class Half-Tone, Three-Colour, Book and Catalogue work; excellent testimonials.—Box 14057.

SMART ARTIST (lady, 26), General Commercial, three months' experience, desires Progressive Post in Studio; willing pay £25 premium. Box 14065.

WORKS MANAGER seeks any Post, prac. all depts., Gen. Printing, Ruling, Binding, Man. Stationery; also Tag, Label and Dup. Book Trade; est., costing.—Smith, 60, Lynn-road, Wisbech. 14066

Machinery for Sale.

DOUBLE CROWN FLAT-BED LITHO MACHINE, by George Mann (complete with Flyers); modern pattern; in perfect running order; can be inspected by appointment.—Pettitt, Cox and Bowers, Ltd., 33-34, Rathbone-place, Oxford-street, W. 14074

FOR SALE.—TWO 42-in. DAWSON'S SELF-CLAMP GUILLOTINES, in good working condition, price £85 each.—Can be seen by appointment with Factory Manager, E. J. Arnold and Son, Ltd., Butterley-street, Leeds. 14060

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

STANDING PRESS, 5-ft. high, to press 22 by 15; £7 net (Wood and Iron).—Write, E. Garner, 446, East Park-road, Leicester. 14048

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

THREE-HOLE THREAD STITCHER, must be in first-class condition.—Full particulars, to Box 14051.

WANTED, QUAD CROWN VACUUM BRONZING MACHINE; must be in good condition.—Cadbury Bros., Ltd., Engineers' Office, Bournville. 14069

Patents, etc.

PATENTS AND DESIGNS ACTS, 1907 and 1919.

NOTICE IS HEREBY GIVEN that The CANADIAN-AMERICAN MACHINERY CO., LTD., of Camco House, 63, Farringdon-street, London, E.C.4, seek leave to amend the Specification of Letters Patent No. 146,674, granted to Frederick William Wood for "Improvements in or Relating to Die-Presses or Machines for Printing or Embossing from Engraved Plates."

Particulars of the proposed amendment were set forth in the "Illustrated Official Journal (Patents)," issued on the 28th February, 1923.

Any person, or persons, may give notice of Opposition to the Amendment by leaving Patents Form No. 19 at the Patent Office, 25, Southampton-buildings, London, W.C.2, within one calendar month from the date of the said Journal.

W. TEMPLE FRANKS,
Comptroller-General. 14071

Tenders.

H.M. STATIONERY OFFICE.

SALE of LITHOGRAPHIC, LETTERPRESS and BOOKBINDING PLANT and MACHINERY at the Ordnance Factories, Royal Arsenal, Woolwich, including:

A Double Demy ROTARY LITHO OFFSET MACHINE, in splendid condition, by Geo. Mann and Co., Ltd.

Four "Falcon" PLATEN MACHINES, Foolscap Folio to Royal Folio, by Waite and Saville, Ltd.

An IMPERIAL IRON STANDING PRESS, by Harrild and Sons.

About 3 Tons of LITHOGRAPHIC STONES in various sizes.

About 5 Tons of old TYPE METAL in slabs.

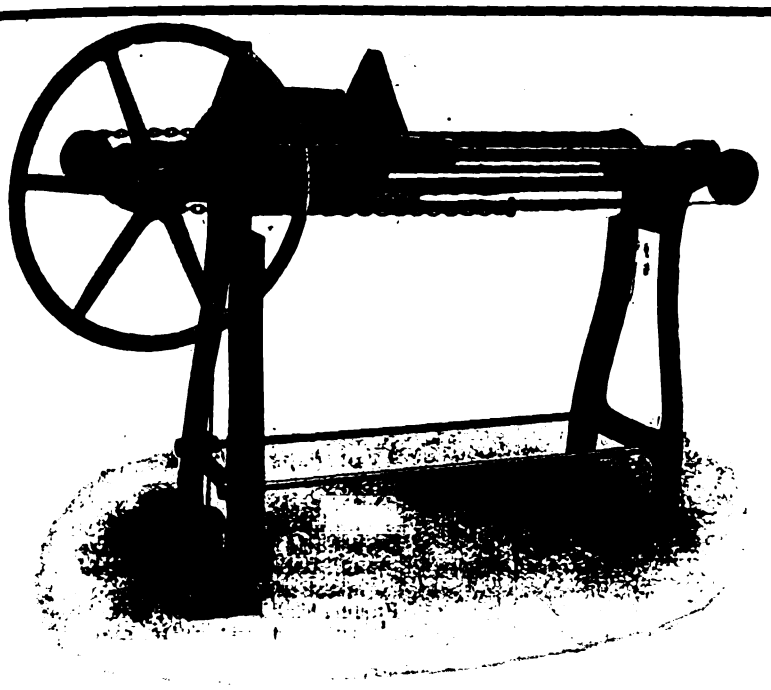
Imposing Surfaces, Composing Frames, Type Cases, etc.

Tenders for the purchase of the above are invited by the Controller of H.M. Stationery Office, and should be delivered not later than the morning of Tuesday, March 20th, 1923.

Tender forms, with permission to view, may be obtained on application to the Controller, H.M. Stationery Office (Printing and Binding Division), Princes-street, Westminster, S.W.1. 14061

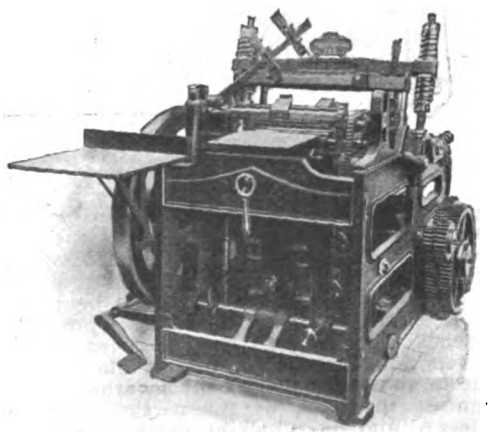
FLAT BED OFF-SET.

Have your Litho converted by the Flat Bed "Off-set" Specialists and make your Short Runs pay.



We have converted over 200 Machines—10 Repeats from one House.

Full particulars from Patentees and Sole Makers:



J. & S. EYRES, Ltd., 2 MILES PLATTING, MANCHESTER.

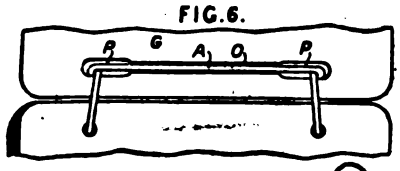
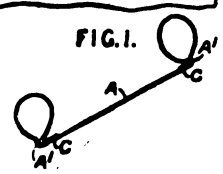
New Inventions

Metal Ring Binders.

Ring or semicircular metal binders for shorthand notebooks, tablet diaries, and the like, as patented by Messrs. Shaw and Sons, Ltd., and F. E. T. Fox, are formed from a length of metal wire A, Fig. 1, which is bent near each end to form shoulders A^1, the projecting ends being threaded through the leaves and covers and bent round into circular or other form, the ends C being bent inwardly to lie against the back of the wire in the shoulders A^1 and act as locking-pieces for the leaves and covers. The back cover G is provided with a groove O for the reception of the

FIG.6.





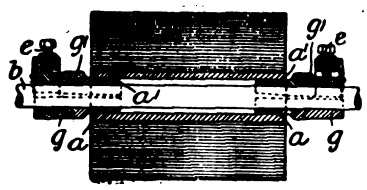


FIG.1.

wire A, slots P being formed at the ends of the grooves to accommodate the bent parts C, so that the covers may lie flat on the leaves. In a modification, the locking-pieces lie against the front of the wire, which is provided with a loop at the centre for suspension purposes, the leaves being formed with a cut-away portion to facilitate passage thereover.

Securing Paper Rolls.

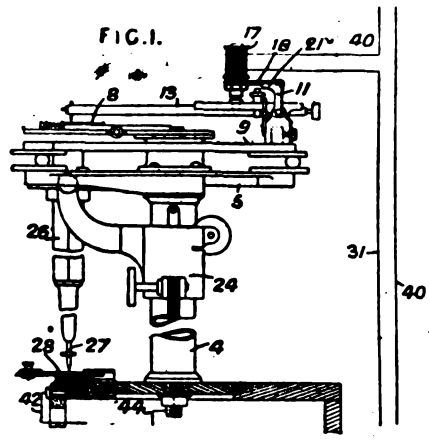
In an invention by H. J. Salmon and J. H. Smith there are described means for securing the paper roll of a printing or other machine upon its shaft which comprises a pair of devices each of which consists of two members g, g^1 having conical surfaces adapted to

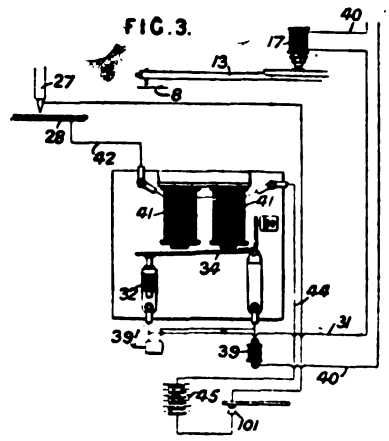
bear upon the shaft b and to rock thereon, so that the inner ends a, a^1 of the members g, g^1 can expand and grip the bore of the roll. This expansion is effected by a screw e passing through a looped part of the member g and bearing against the other part g^1.

An Engraving Machine.

Mr. H. C. Allan has patented an invention in which in an engraving machine for copying a pattern in a resist prior to acid etching, the tracing stylus is adapted when manually brought into engagement with the pattern to operate electric means whereby the engraving needle is simultaneously applied to the work by a force independent of the electric means, for example, by gravity. As shown, the invention is applied to a known type of machine wherein a stylus 27, which is adapted to be moved over a pattern 28, and is carried by a pendulum arm 26, Fig. 1, jointed to a yoke 24 carried by a fixed column 4, operates a table 9 movably mounted on the fixed head 5 of the column and carrying a needle arm 13 extending over the work 8. The stylus 27 on touching the pattern closes a primary circuit comprising leads 42, 44, the pattern 28, the stylus 27, electro-magnets 41, a battery 45, and a treadle operated switch 101, a weak current being used to avoid sparking and shocks. The electro-magnets 41 when energized attract an armature 34 spring-pressed against a contact 32 thus opening a secondary circuit including leads 31, 40, connected to high voltage mains and an electro-magnet 17 whereby the latter releases the arm 13 and allows it to drop down on to the work. Spark condensers 39, 39^1 are also included in this circuit. The magnet 17 is carried by a pivoted arm 16, releasably supported on a lug 21 extending from a yoke 11 mounted on the table 9 In a modification, a vertical rod spring-pressed upwardly to raise the arm 13 is attracted by an electro-magnet to allow the arm to drop when a relay is operated as before described, the secondary circuit in this case being closed when the

FIG.1.





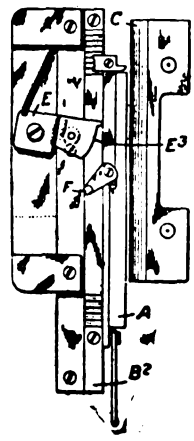


FIG.3.

stylus 27 touches the pattern. In a further modification the arrangement is similar to that shown in Fig. 1 but a storage battery is used in place of the mains for the secondary circuit and the electro-magnet 17 is supported in proximity to the outer end of the arm 13 so as to increase the leverage to compensate for the use of a weak current.

Trimming Type Bars.

In an invention patented by the Cornwall Press, Ltd., W. A. Chapple and S. Reed, in trimming mechanism of the kind provided with a sliding knife for trimming type bars having two-line letters, means is provided for

positively locking the sliding knife against its guide during the trimming. The sliding knife A, which moves in a guide B^2, carries a stud F or the like, which, as the knife nears the upper end of its stroke, engages the inclined edge E^3 of a pivoted spring controlled lever E. The knife A is thereby forced against the side of its guide adjacent to the fixed knife C.

Mechanical Features of Printing MACHINES.

Mr. Frank Colebrook's Lantern Talk.

By invitation of the Derby Master Printers' Association Mr. Frank Colebrook, F.A.I., gave a lantern illustrated address on "The Evolution of the Printing Machine." He had brought many slides showing the main actuating movements of the best-known printing machines—past or present—or even future, for his slides included one which illustrated the Robertson, Orell and Brown phototype composing patent, and another showing what Mr. Colebrook thought was a very promising machine designed by Mr. W. T. Fletcher of the *Irish News* office, Belfast, for printing from the web on a flatbed. These two have yet to be made. Regarding existent machines, he said that the knuckle-joint rod of the "mother's mangle" of bygone years gave the German compositor, Koenig, and the London (Bolt Court) master printer, Bensley, their method of actuating the machine bed. Napier in 1828 also adopted a like movement. This knuckle-joint drive became known to us in later days as the two-revolution drive, the drive, that is to say, which is produced by a wheel moving always in the same direction but making the machine bed move to and fro, through the wheel engaging first with the teeth on the top of a rack and next with the teeth at the bottom of that rack. Koenig (1819) employed spring buffers for the reversal. Hoe much later used the same motion, employing an enclosed rack with the smooth sides towards each other. Miehle adopted the same motion but made his rack with the toothed sides towards each other; and he provided other ways of easing the reversal—of guiding the traverse wheel smoothly round the "shoe" ends of the rack. Mr. Colebrook explained the essential movements of the ingenious and most serviceable Wharfedale; the variable speed of its bed travel, with its slowing down before the reversal; and the slight over travel of the cylinder and the "pushing back" to the stop, by the push bar, to secure dead register. A great many machine movements were alluded to—including that of the stop cylinder vertical platen, made (in demy folio) by the Miehle Co.

Mr. Simpson (chairman), Mr. Evans (general manager of Bemrose's), Mr. Buckley and others spoke, and several students gathered round the blackboard at the end for questioning, or to see a few specimens or illustrations. Mr. Colebrook has received the pleasing testimony from Mr. Evans: "The unanimous opinion of those present at the College expressed the view that you have afforded one of the most instructive and enjoyable meetings which we have yet had in connection with this series."

We understand that so far as his engagements permit Mr. Colebrook is quite willing to give this lantern talk on machine movements, freely, in other places; to associations of employers or of managers or of journeymen and apprentices; or to all together. Anyone interested might communicate with him at 146, Fleet-street, E.C.4.

Amalgamation and Reconstruction

OF

PRINTING COMPANIES.

By HERBERT W. JORDAN.

(*Concluded from page 148.*)

Reconstruction of Companies.

I have already stated the purposes for which reconstructions of companies are effected. Before determining upon such a course, inquiry should be made as to whether or not it is possible to obtain the desired result by some other method. The raising of fresh capital may conceivably be effected by the creation of debentures or a mortgage or some other charge, or by an issue of shares of a new class carrying attractive rights; with the sanction of the court (a) a re organisation of the capital may be effected pursuant to Section 45 or 120 of the Act of 1908, (b) a reduction of capital or return of capital may be effected by special resolution pursuant to Section 46, (c) a compromise with the creditors may be effected pursuant to Section 120, and (d) the objects contained in the memorandum of association may be enlarged by special resolution pursuant to Section 9; and (without the sanction of the court) the paid-up capital may be increased by a distribution out of the reserve fund if the company has accumulated profits to a sufficient extent. Sometimes, however, for various reasons none of these courses is available, and in such cases the object desired can only be attained by a winding up and reconstruction.

The most common purpose of a reconstruction is to put the company in a position to obtain further capital to enable its operations to be continued. In such a case the company has usually borrowed up to the hilt, and it cannot get any of its unissued shares taken up, or create a new class of shares carrying rights sufficiently attactive to induce persons to subscribe for the new shares. But if a reconstruction is effected on the basis that the members of the existing company shall receive in exchange for their present holdings partly paid shares of the new company, it will be possible for the new company to make a call on its members and thus obtain additional capital.

A re-organisation of capital also is usually effected with the object of raising further capital The company may be overburdened with debts and unable to obtain further loans, although it might be able to create a new class of shares of a sufficiently attractive character to ensure an issue being taken up, but for the existence of certain preference shares the holders of which would doubtless refuse their consent to the creation of the new class, considering that such an issue would be an infringement of their rights.

Reduction of Capital.

Where, owing to losses due to bad trade or other causes, a substantial proportion of the capital has been lost, so that the prospect of the shareholders receiving any dividend is remote if the deficit must first be made good, a reduction of capital is advisable. This may be effected by special resolution confirmed by an order of court pursuant to section 46; but if the requirements of the section should be deemed too onerous or a more expeditious method should be desired, the reduction may be effected by means of a reconstruction. The amount of the share capital may be reduced to any extent that may be necessary, and it is possible also to extinguish or reduce any liability on the shares which may not have been called up. On such a reduction being made the directors will be in a position to declare dividends out of future profits without waiting for the former deficit to be cleared off.

As an example, I may mention the case of a company intimately connected with the printing industry, the paid-up capital of which at the present time is being reduced from £126,500 to £35,575 by the reduction of its preference shares from £1 to 10s., and its ordinary and management shares from £1 to 1s., and the conversion of the capital into ordinary stock. This reorganisation and reduction does not involve a winding up and reconstruction, although such a course has been adopted in many cases of a similar character.

If the capital of a company should be in excess of its requirements a reduction of capital may be made with the sanction of the court pursuant to Section 46, or the excess may be returned to the members under a scheme of reconstruction, the members taking their proportions of the shares of the new company in exchange for their shares of the old company, and also receiving cash payments from the liquidator.

A compromise with the creditors may sometimes be effected by means of a reconstruction without an application to the court pursuant to Section 120. Holders of debentures, for example (as part of a larger scheme) may surrender their securities, and take in exchange fully paid shares of the company, and unsecured creditors likewise may accept shares in satisfaction of the amounts due to them. No debenture holder or other creditor, however, can be compelled to agree to any such arrangement unless an order of court is obtained under Section 120.

If the memorandum of association should not authorise the company to carry on some business which it might with advantage undertake, and it should not be desired to make application to the court pursuant to Section 9 for an order confirming an alteration of the objects, the requisite power can be obtained by means of a reconstruction, the memorandum of association of the new company being made more comprehensive than that of the old company. In such a case the members of the old company would, as a rule, take precisely the same number of shares of the new company as they held in the old.

Concealing Big Dividends.

Sometimes, in the case of a particularly successful company, it is feared that the payment of dividends at high rates may stimulate competition and it is considered that it would be wise to increase substantially the issued capital, and thus effect a reduction in the rates (but not the amounts) of the dividends. If the company should have accumulated profits made in previous years to a sufficient extent a capitalisation can be effected by the payment of a special dividend out of reserve in the form of fully-paid shares, the articles of association being first altered if necessary. But where the reserve is insufficient for the purpose the increase of the paid-up capital (without payment being made for the new shares) can be effected only by means of a reconstruction, the members of the old company receiving in exchange for their present interests a considerably larger sum in shares of the new company. This course is also taken for other and often quite different reasons, I may add. As might be imagined, in such cases there never are any dissentients.

As a rule there are few, if any, dissentients where the shares are of one class and the holders are entitled to an allotment of fully-paid shares of the new company. But where the shares of the new company are only partly paid up it is not unusual for some of the members of the old company to decline to accept the new shares to which they are entitled. Any such person should not vote in favour of the special resolution adopting the scheme, either when the resolution is submitted for passing or confirmation, and he should send written notice of his dissent from the scheme addressed to the liquidator and lodge it at the registered office of the company within seven days after the confirmation of the resolution, and he should intimate that he requires the liquidator either to abstain from carrying the resolution into effect or to purchase his interest at a price to be determined by agreement or by arbitration in the manner provided by Section 192 of the Companies (Consolidation) Act, 1908.

If the liquidator elects to purchase the interests of the dissentients the purchase money must be paid before the old company is dissolved and it must be raised by the liquidator in such manner as may be determined by special resolution.

It is usual for the scheme of reconstruction to impose on the new company the obligation to pay out dissentients. But if the onus is on the liquidator of the old company the scheme will probably provide for the transfer of the undertaking to be made in return for a definite number of shares of the new company (instead of the allotment of, say, one share of the new company in respect of every two shares of the old company), and authority will be given to the liquidator by the special resolution approving the scheme to sell a sufficient number of shares to enable him out of the proceeds of the sale to pay out any dissentients (and the cost of the liquidation). Any surplus must be distributed among the members who accepted the scheme. Any member who did not vote in favour of the scheme but neglected to give notice of his dissent to the liquidator will have no claim against the liquidator for the value of his interest. If there is a liability on the shares of the new company and he is not prepared to accept those he is entitled to have allotted to him, he loses the entire value of his interest in the old company.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

NEW ZEALAND.

A well-established firm of agents in New Zealand desire to be placed in touch with British manufacturers of stationery sundries, printers' and stationers' machinery and supplies, and all articles of interest to printers and stationers, with a view to representing them in the Dominion. The New Zealand firm have an office in London. (Reference No. 227.)

SWITZERLAND.

A firm of wholesale stationers in Basle is desirous of obtaining the general agency for Switzerland of British firms manufacturing writing paper, blotting paper and all kinds of fancy paper articles. (Reference No. 262).

Big Order for Boilers.

Placed by Edward Lloyd, Ltd.

The Stirling Boiler Co. have accepted an order from Messrs. Edward Lloyd, Ltd., for ten water tube boilers having a total steam raising capacity of 300,000 lbs. per hour. This is certainly the largest contract for boiler plant in the history of the allied trades; in fact it is doubtful whether a firm in any other industry has ever placed a contract of such magnitude.

IT PAYS

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

The Size of the Book.

It has been suggested more than once during recent years that in size nomenclature actual dimensions in inches or centimetres should be recognised, as well as arbitrary paper mill names such as "post," "foolscap," "crown," etc, writes C. M. Jackson in the *Publisher's Circular*. These latter, through a recognition of watermarks and chain-lines, have come to be superimposed upon the nomenclature due to folding—"quarto," "octavo," and so on.

The bibliographers of the early part of last century, in their desire to recognise and give due credit to all these factors, produced a complicated system of size tabulation which confounds rather than explains. Few laymen unversed in the intricacies of book or printing lore can read and grasp the meaning of such descriptions with ease. When an attempt is made to bring into harmony such varying and conflicting factors, nothing but inconsistency and discrepancies can result; for hardly two papermakers coincide in the exact dimensions of the sheet designated "post-quarto," "post-octavo," "crown-folio," and so on.

Again, it is hardly wise to rely on sheet-folding alone when describing size, for this has not always been strictly consistent. Moreover, folding has lost its former significance in describing the size of a book; "quarto," "folio," "octavo," nowadays imply definite dimensions rather than the relation of leaf to sheet, and these dimensions are not always the same.

It follows that where there is such variety amongst the terms themselves, there must be even greater variety in the interpretation of them by various bibliographers, each swayed by his own opinions. In fine, it is not too strong a statement to assert that the thing is impossible; mill names for papers cannot be forced to fit the sizes of books.

A uniform system is eminently desirable. The best would appear to be that suggested by Henry Bradshaw, one-time librarian of Cambridge University. His use of the symbols "fo," "4°" and "8°" gives due credit to folding, as in other systems; while the addition of the height of the book-page in inches (and sometimes of the width abolishes the use of confusing terms like "Royal" and "Post," and precludes any possibility of mistaking the *actual* size of the book.

These suggestions of Bradshaw's are worthy of general acceptance. Modern cataloguing practice has already begun to ignore the names of book-sizes, and is adopting the rule of "actual measurement."

Making and Printing Containers.

Wonderful improvements have been made in the methods of manufacturing fibre board containers during the last few years. A new rotary container making and printing machine was recently invented which will handle fibre board from 8¼ to 120 in. wide and a correspondent of *The Times* (Trade Supplement) gives the following particulars.

This machine will take a sheet of board, trim the ends, slot it, crease both ways, cut out for the staple flap, and then print the board in two colours, all in one operation. This machine can be equipped to produce two complete containers with a single operation, and it will handle the raw material in varying thicknesses. Both kinds of fibre-board packing case, the solid and the corrugated, are produced in different ways to make them suitable for the special goods they are to hold.

In the corrugated series, one of the best types is known as the centre special slotted case. This can be stored in a flat condition when not in use, thus saving warehouse space, and it can be produced in the following five varieties:—it can be made with double-faced board having a resistance of 275 lb. to the square inch; it can be made of double wall or double strength corrugated board, glued together so as to make one piece, the case being fastened with a regular taped corner; a third variety is known as the strong box of double faced board, with a resistance of 200 lb. to the square inch, which has an extra double two-inch fold, giving a triple edge to the case, and ensuring that the contents would not touch the crease of the covering flaps; a fourth variety can be of the double wall pattern, but with a triple taped corner; while a fifth style can be made of corrugated board resisting 200 lb. to the square inch, lined with a thin sheet of board having a resistance of 175 lb. to the square inch.

A significant advantage about all these varieties is that a typical wooden case, when filled with the same contents, weighed 4½ lb. more than the first, third and fifth types described and 4 lb more than the second and fourth. Fibre board containers are now being used for such heavy goods as machinery parts, electric cable, mattresses, furniture and for many other articles which were formerly packed in wooden boxes. The material used for the construction of fibre board packing cases is so adaptable that almost any thickness and density are procurable, so that a case for heavy goods can be obtained as easily as one for lighter traffic.

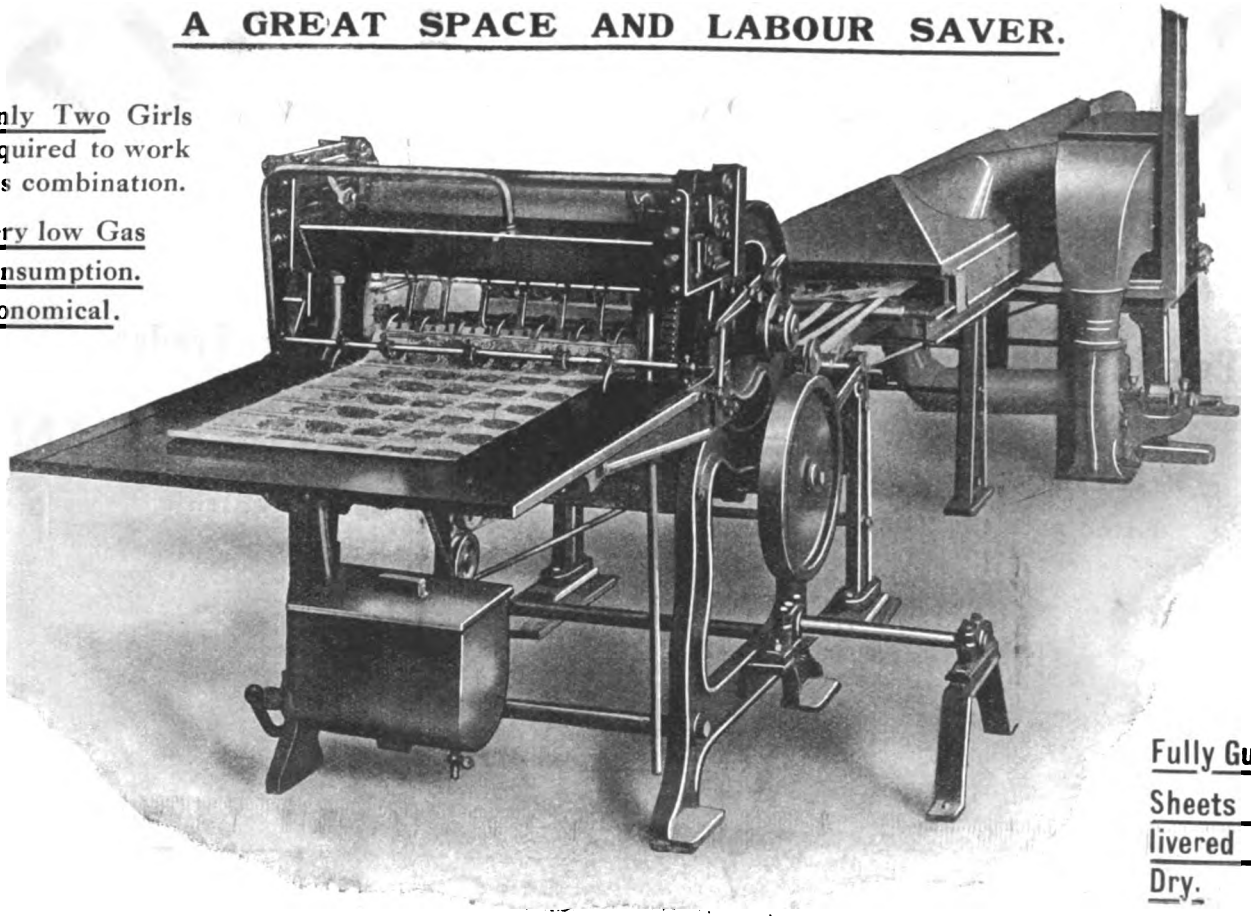
BUSH'S PATENT COMBINED

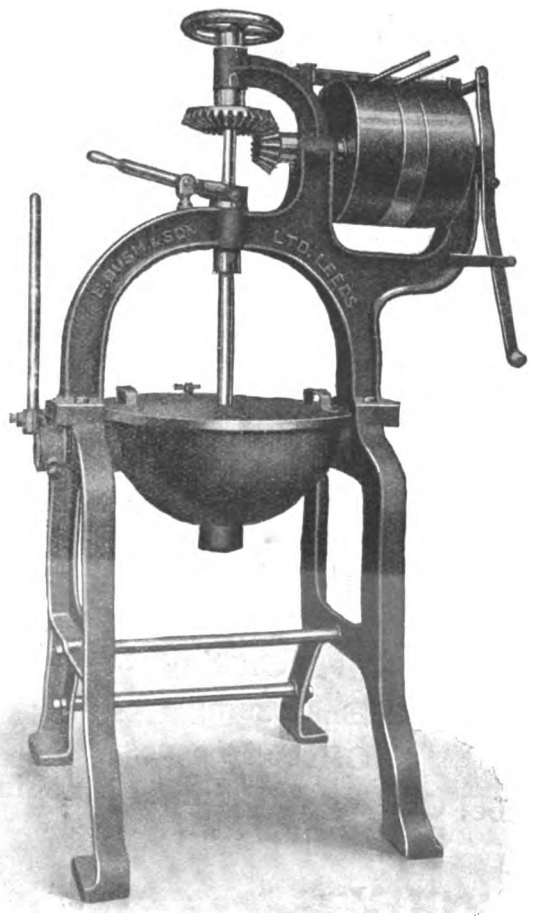
(Patented in Great Britain and Abroad)



Varnishing and Gumming Machine and Hot-Air Drying Apparatus. (Patent No. 141,997).

A GREAT SPACE AND LABOUR SAVER.

Only Two Girls required to work this combination.



Very low Gas Consumption.

Economical.

Fully Guaranteed.

Sheets are Delivered Perfectly Dry.

The above illustration shews both our machines combined, but we can supply either machine separately.

Made in 4 sizes, D. Crown to Quad Demy.

Supplied to many of the leading Printing Offices at Home and Abroad.

*

Bush's Patent Ink Mixing Machine

(Patent No. 8,623).

The only Machine fitted with Tilting Bowl, Removable Blade, etc. Blade can be reversed by moving belt handles either to left or right.

Illustration shewing Machine in operation.

Made in 2 sizes. For 75 lbs. Colour or 150 lbs.

Its Good Points.

1. Economical.—Old Ink can be speedily restored to working consistency.
2. Strongest Inks and Varnishes are thoroughly amalgamated with the greatest of ease.
3. Dispenses with old slow process of Hand Mullering and Blending.
4. A Machine which requires no special attention.

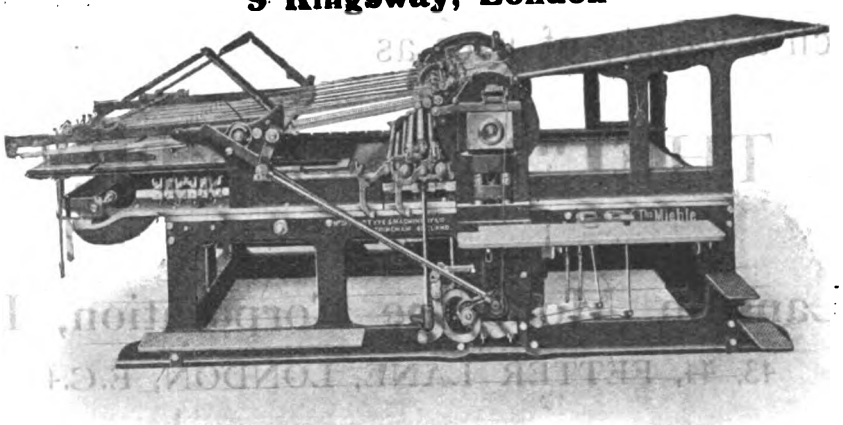
Every printer appreciates Miehle work—and so does the buyer of printing. Miehle printing does not cost more than ordinary printing, but it commands better prices.

The Miehle is prepared for a job more quickly than an ordinary press. The rollers are quickly set, the ink duct can be accurately adjusted to suit formes of any kind, make-ready is reduced to the mimimum owing to the scientific construction of the press, and the little make-ready required is quickly effected.



There is no risk in installing a Miehle. It is a sound investment for every printer—a perfect tool and a real asset at all times.

If the work you are now doing is "ordinary," you can raise your standard of printing to the highest level by installing the Miehle.

The Miehle is built in this country, in our Works at Altrincham, Cheshire, and can be obtained only from us.

VOLUME 92. NUMBER 11. [REGISTERED AS A NEWSPAPER.] LONDON: MARCH 15, 1923. Special Export Issue 4d.

Export Notes and Comments

What of Export Trade?

DESPITE the Ruhr debacle and the precarious condition of Europe generally, coupled with financial stringency throughout our own Empire, the encouraging fact is clear that British export trade is definitely on the mend and gives promise of steadily increasing improvement. This is the case not only in respect of trade in general but also in respect particularly of exports of products and materials relating to the printing and allied trades. As to the general aspect, we had the Director of the Overseas Department of the Board of Trade saying the other day that the revival of trade which began last autumn is slowly and steadily progressing, that there are indications of a continuance of that revival, and that we shall show this year a considerable improvement upon the figures for 1922. Says the Chancellor of the Exchequer also: "Whereas the year before last our export trade only amounted to about 50 per cent. of the volume of pre-war trade, last year that 50 per cent. had crept up to 69 per cent., while the last quarter of the year showed 75 per cent. All the omens combine to show us that if we can only secure and maintain peace, we may hope to see this figure gradually, but surely, approximating to the pre-war figure." Whilst exports of widely varying commodities do not, of course, show uniform improvement, evidence will be found in an article on another page, "British Exports of Printers' Supplies," that last year's exports of goods in which printers are specially interested show a markedly healthy tendency.

The Australian Market.

THE proportions to which our export trade with Australia has grown is indicated by the fact that to-day Australia is the best customer Great Britain has, with the single exception of India. With increasing population, Australia's purchases from Great Britain will increase in volume. Export trade with Australia in supplies for the printing and allied trades is attended in some directions—printing machinery in particular—with very severe competition from the United States as well as from Australia's own developing manufactures. To make progress in this market at the present day, it is necessary to aim high. As our Senior Trade Commissioner in the Commonwealth declared recently: "The best goods, the best sales methods, the best type of visiting representative are not too good for the existing valuable Australian market with its vast future possibilities."

Australia Wants British Catalogues.

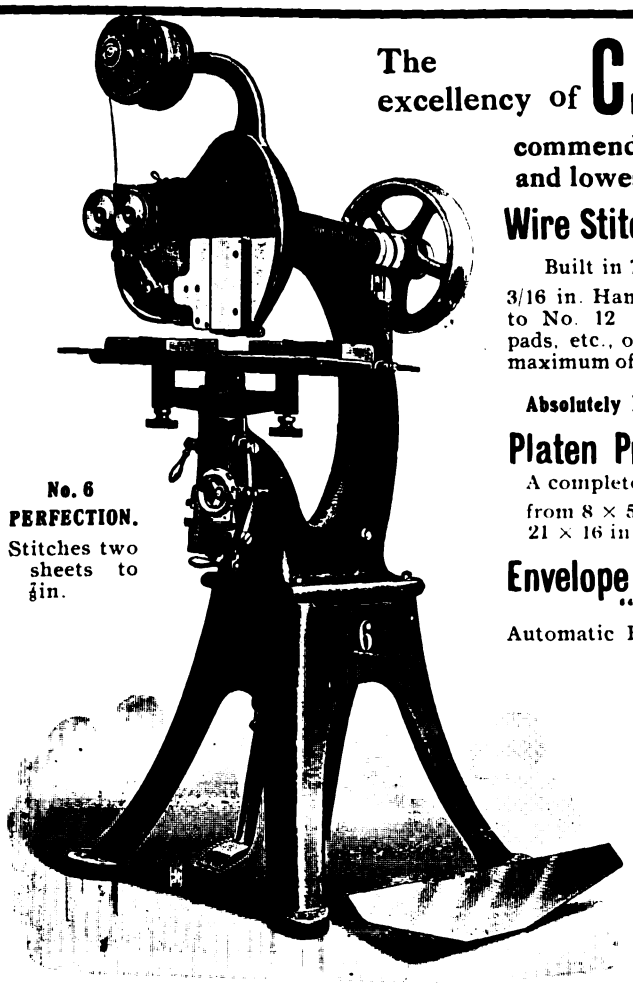
RECENT complaints as to the scarcity and poor quality of the catalogues sent to Australia by British exporting houses as compared with those from American exporters, have resulted in a big change in favour of this country. British firms are waking to the value of supplying well produced lists to the public libraries, etc., of Australian cities. Australian buyers want them, and the providing of them must mean increased business for British manufacturers.

South Africa's Attitude.

CLEAR indication of the attitude of South African importers towards British exporting firms was given when the Congress of South African Chambers of Commerce passed in September a resolution stating "That in view of the very generous preferential duty given by the United Kingdom to goods of South African origin, this Congress is of the opinion that the present rebate of 3 per cent. granted by South Africa to British goods is insufficient." Clear expression was made of the favour with which British goods are regarded, and it is evident that there are strong influences to back up the buying of these goods in so far as economic conditions make it practicable.

Better Times Promised.

SOUTH AFRICA has experienced during 1922 one of the most difficult years in her trading history, the labour upheaval being mainly responsible. The printing and allied trades have suffered severely in the general slump, but it is pleasing to learn that the outlook is now beginning to brighten considerably. Says the *South African Printer and Stationer*: "There is good reason for holding that the worst is over for us, and a broad survey of the position increases our confidence for the future. In the first place, good rains have fallen throughout the country, which should spell increased prosperity for the agricultural districts, and gradually give an impetus to trade. Secondly, the mining industry is in a far healthier condition, economically considered, than has been the case for a number of years. Another favourable factor that should assist in the trade revival is the considerable amount of Government capital expenditure that has been sanctioned, the first effect of which must be to alleviate the unemployment so much in evidence during the last few months. We are not going to prophesy anything in the nature of a 'boom' for 1923, as it would appear that in the first part of the year improvement will be slow, but are certainly of the opinion that the gradual recovery will bring us by the middle of the year to a more satisfactory condition of trade than even the present outlook indicates."



Facilities in South Africa.

USEFUL facilities are offered to British producers desiring to enter the South African market by the British Manufacturers' Representatives' Association of South Africa, whose headquarters are at Cape Town. The Association is out to look after the interests of British manufacturers and their agents in all possible ways, and the Association's services are not limited to taking action in regard to legislation affecting British export trade, providing all kinds of information for members, and performing other familiar functions of manufacturers' associations, but they have also instituted a very useful series of "Sample Rooms"—at Durban, Queenstown, East London, etc.—which offer substantial advantages to those needing a simple and inexpensive means of introducing certain lines of goods to South African buyers.

Canada: British Branch Factories.

One of the most frequent complaints from representative Canadians, both State officials and business men, is what they term the neglect of the Canadian industrial field by British manufacturers. If, they say, the latter cannot sell their goods in the Dominion against domestic and foreign competition, then they should set up branch works and make them on the spot. They go further, and even omit the previso. The question is fully discussed in the *Manchester Guardian Commercial* in an article on British and American factory investments in Canada. It is pointed out that United States firms have erected some six or seven hundred branch plants in Canada, and the erection of many more is projected; and that United Kingdom firms will find it increasingly difficult to maintain their business in the face of the competition from the local industries so established. This appears to be a serious state of affairs, but when the position is examined it is found that in the circumstances it cannot fairly be said to be due to apathy and indifference in this country. The principal reason for the present state of affairs is that the American has far more inducements to manufacture in the Dominion than the Briton. In the first place, the Canadian tariff is protective. To the American manufacturer

Canada is really an extension of his home market cut off by an artificial frontier and Customs barrier. Canadian consumers have similar tastes to American; their requirements are similar, and the standard productions of American industry will sell in the Dominion without alterations. The United Kingdom producer, however, is in a totally different position. His branch plant would be selling only to the Dominion market, and this, though it will grow enormously in the future, does not at present hold out any very great inducement when compared with the rest of the world, in much of which business is not so difficult to find, and retain. The average concern of moderate financial resources, if its productions are losing ready sale in Canada, is apt rather to look for easier markets than to contemplate tying up a large part of its capital in branch works in the Dominion, where, in any case, a fair return from the investment is, for the immediate present, somewhat problematical.

Increased Trade With Russia.

There is ever-increasing opportunity now for extending the market which Russia offers for British goods. Though at present the opening for supplies relating to the printing trade is small, steady expansion is certain, and the traders in closest touch with the market are those who will earliest benefit by the improvement. Trade between Britain and Russia is increasing with extraordinary rapidity, says the *Russian Information Review*. The Russian organisation in London has done business, since trade was resumed, amounting to £25,000,000, of which more than £15,000,000 has been done with British firms. A feature of the All-Russian Agricultural Exhibition, which will open in Moscow on August 15th, is the protection sought to be afforded for British traders. The regulations state that all privileges granted to Russian exhibitors will apply equally to foreign exhibitors.

Printing Supplies in the Argentine.

Opportunities for British Manufacturers, who are Poorly Represented on the Market.

"There are few lines of British manufacture so poorly represented on the Argentine market as printing presses and printers' supplies in general. This is the more strange in view of the known excellence of British presses—especially platen presses."

These sentences form part of a foreword to a report on the market for printing machinery and supplies in the Argentine Republic, issued by the Department of Overseas Trade and prepared by the Buenos Aires Branch of the Anglo-South American Bank, Ltd. The report has been carefully compiled on the spot and there is much in it that should give encouragement to the British printing supply houses which seek to extend or to open up connections in that part of the world.

That there is a demand for printing machinery and accessories is shown by the fact that, although the general standard of work is not so high as in the United Kingdom, the practice of the art of printing has attained to a high degree of perfection in the city of Buenos Aires, and there are many houses capable of turning out high class printing, colour work and lithography that will bear favourable comparison with that produced in any other part of the world.

Normal Market Conditions.

Following the disturbance created by the war, we are now told that the market for printers' supplies and machinery is about normal. In recent years, the chief movement has been in the direction of replacing German or other Continental machines with American machines of the latest, that is, lavour-saving types. This applies largely to perfecting newspaper presses. Wealthy newspapers have been laying down the most up-to-date machines and selling their former Continental machines to other newspaper concerns.

Metal Types.

Under this heading, we are told that before the war Germany supplied 47 per cent., Italy 24 per cent., United Kingdom 10 per cent., and the United States 6 per cent. of all the metal types imported into the Republic. In 1920 the percentages were:—Germany 24, Italy 14, United Kingdom 12, and the United States 21.

The type used in Argentina is cast on the Continental Didot system and, consequently, it was very difficult to introduce type cast on the American and British point systems. American types are extensively advertised throughout South America and many printers would have liked the American faces if they could have got them on the Didot bodies. Eventually, the American houses gave up the effort to put their type bodies on the market and made arrangements with a United States foundry to have types cast on the Didot system especially for the South American market.

One famous British house has type in this market cast on the Didot system, and has had for many years. That its sales are not greater in comparison with the American types is due to the greater advertising of modern American faces and the more effective representation of the American distributing houses.

Although Argentine types are on the Didot body, they are the same height as British types and less than continental.

It is gratifying to learn that British type has a good reputation on this market for the enduring quality of its metal and the opinion is expressed that the market in this line is capable of extension.

Importations of type into the Argentine increased from 59,385 kilos in 1914 to 99,557 in 1920. Of the 12,018 kilos of type which was received from the United Kingdom in the latter year practically all was supplied by one firm to their local agents, and inquiries as to the reputation of British type elicited the general concensus of opinion that there was no better type on the market.

Printing and Lithographic Inks.

The average pre-war importation of printing and lithographic inks into the Argentine is about 500 tons per annum.

Before the war Germany and France between them supplied nearly 80 per cent. of the Argentine's requirements, but the United States is now the chief supplier, her percentage being 77 in 1920. Of the total weight of ink supplied it is estimated that 50 per cent. is news ink for newspapers and periodicals and the balance for jobbing printers and lithography. The percentage of British ink imports has fluctuated very much during recent years, and is now at its highest figure of 7·1. British ink has a good reputation in the country, but the agents of manufacturers are not so well situated for distribution as those firms which supply all requisites to the printer. It is also difficult for imported ink to compete with those firms who receive ink in bulk, modifying it to suit individual requirements or conditions of temperature. The importation of ink in cans has been found very unsatisfactory as compared with that in barrels or iron drums.

Mechanical Composition.

Mechanical composing machines, which were introduced into the country some 20 years ago are extending throughout the printing plants. It is estimated that the total number now in use is between 550 and 600. In recent years electric heaters and burners have been supplanting the gas heaters. The larger firms have more recently been going in for machines for composing and casting type in separate units and for casting leads.

Printing Machines.

Since the war, the importations of printing machines into the Republic has not regained the position it held in 1914, when imports represented a total of 55,743 kilos, the figure in 1920 being 7,989. According to the statistics published the United Kingdom comes after Germany and Italy in the matter of supplying machines. With regard to platen machines, it is difficult to find British products in the Argentine. Of the British machines which do exist, some had been running in one shop for over 30 years and had cost nothing practically in renewals or repairs. While the majority of platen presses in the country are of German origin, American machines, although 30 per cent. or 40 per cent. more in price, are said to be selling in satisfactory numbers.

In magazine presses also Germany holds a foremost position, along with France. Some American machines have been placed on the market, but the difference of exchange is working in favour of the Germans. A few British cylinder machines are apparently in use, but the report under notice makes no further comment in this respect.

In the matter of offset presses there is a more encouraging note. Prior to the war there were only 12 of these machines in the country, and they were all British. There has been an increased demand since the war, local industries undertaking the printing of labels and containers on their own account, instead of importing them, as hitherto, from Germany. As showing the effect of a showroom on the spot, it is pointed out that an American house had an automatic offset press on view, with the result that between 25 and 30 presses had been sold during the past five years.

The lithographic machines now in use in the Republic are mostly of German or French origin, but it is intimated that one important local concern has in use 12 British stone lithographic presses. It is not anticipated, however, that there will be any great demand in the future for this class of machine, its place being taken by offset presses and two-revolution presses doing three colour work.

Other Printing Accessories.

While the German stitching machine dominates the market and a book-sewing machine from the same source is equally popular, the galvanised and tin wires for books and magazines are imported in the better grades from the United States and the United Kingdom. Most of the wire is imported without spools, with which the German stitching machines are fitted. A few British cutting machines are in use, but the great majority of guillotines in Argentina have come from Germany. In ruling machines also there are a few British makes in use, but the preference is said to be decidedly in favour of disc rulers, the German pattern being the most popular.

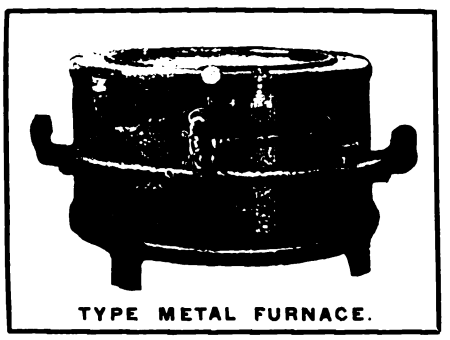
Advice to British Manufacturers.

Coming to the methods by which British manufacturers might be able to secure a more important place in the Argentine market, it is shown that the four most important houses selling printing machines and materials and carrying stocks are American (2), German and Italian. There is no British house carrying stocks of machines and supplies.

The compiler of the report is of the opinion that the most practical, if not the only way, for a British manufacturer to place his machines in the Republic is by sending them to the country and having them on view, erected and in running order. Except at enormous expense, however, this could not be done, unless in combination with other firms selling associated, but not competing, lines. On this system it is pointed out there is a great economy in organisation and overhead charges are distributed.

Accordingly the writer of the report concludes:—

"Possibly the ideal system would be for a number of manufacturers of printing and associated lines, including paper, to form an association for representation on this market. The association might take the form of a limited company with the capital found by the firms whose goods would be carried. Inks and paper would be a strong line, and carbon and blotting papers, pens and pencils, and other associated stationery lines could be sold wholesale.



"Given efficient management, there would seem to be no reason why such an association of manufacturers should not place themselves firmly and profitably on this market. It would start with the prestige that British goods already have in this Republic and as Argentina develops, the association would grow with it."

Envelope Cutting Machine

(Friction Clutch).

Size of Platens 30 in. × 20 in.

THIS Machine is fitted with our original Patent Adjustable Bottom Platen, and with Friction Clutch Gear. It is built on sound mechanical principles; the parts are easily accessible to the operator, being of simple construction; it is fitted with mahogany table, 4 ft. × 2 ft. 6 in., which is easily removed if the machine is required for hand cuts; it is very powerful and strong, and of the best materials and workmanship, and is the best machine of its kind on the market.

The bottom platen remains stationary at the end of each cut, thus giving the operator ample time to set his cutter.

British Exports of Printers' Supplies.

Returns Indicate greatly Improved Demand for British Products, with still Brighter Prospects for the Future.

The statistics relating to the exports of printing and allied products during last year give ample evidence of substantial improvement. The acute depression experienced in 1921 was succeeded last year by steady expansion of exports in nearly all the classes of goods coming within the purview of the printing trade. The following returns, which deal mainly with the course of trade during last year, give ground for hope of a still further improvement for the future.

Boards.

A considerable improvement has taken place in the export of boards in recent months. During the whole of last year the quantity of this class of goods exported—comprising millboard, strawboard, cardboard, etc.—exceeded in bulk that sent overseas during the corresponding period of the preceding year, although compared with the twelve months of 1910 a slight decline is recorded. Last year's figures were 85,198 cwts (of the value of £188,860) as against 74,902 cwts. (£243,273) in 1921, and 96,507 cwts. (£366,137) in the twelve months of 1920.

Boxes and Cartons.

Overseas consignments of boxes and cartons of paper and cardboard (including folding boxes) are being dispatched in increasing proportions. During the year under review exports under this heading amounted to 19,572 cwts. (£105,309), as against 18,582 cwts. (£133,527) in the twelve months of 1921 and 23,271 cwts. (£168,879) in 1920.

Coated Papers.

A glance at recent figures relating to the exports of printed and embossed paper hangings gives evidence of the greater activity that is being shown on the part of the home producer in supplying the needs of foreign and colonial markets. For the whole twelve months of last year this class of merchandise dispatched abroad represented 66,932 cwts. (£370,207), as contrasted with 45,524 cwts. (£340,793) in 1921 and 142,976 cwts. (£862,733) during 1920. Other sorts (which does not include waterproof wrappings, roofing, or sensitised photographic paper) were exported during the year to the extent of 28,408 cwts. (£239,465). This figure compares with 23,320 cwts. (£289,488) in 1921 and 35,048 cwts. (£419 998) during January to December, 1920.

Packings and Wrappings.

The demand for packings and wrappings, including tissue paper, was consistently steady during the first part of the year, and towards the close of the year the statistics show that a greatly increased quantity was sent overseas. During the whole of 1922 exports of this class of merchandise reached 325,437 cwts. (of the value of £430,302), compared with 281,097 cwts. (£478,363) in the previous year, and 343,876 cwts. (£992,855) in the twelve months of 1920. The shipments of "packings and wrappings" alone, amounting to 314,142 cwts., and representing 12·3 per cent. of the total exports of paper and cardboard during last year show a notable advance of 142,929 cwts. over those for the preceding year.

Paper Bags.

Many improved devices are being placed on the market for producing paper bags in large quantities to meet the ever-increasing demands for this important article. During the year a slightly improved demand was made for paper bags from oversea markets compared with the previous year, although contrasted with the twelve months of 1920 the quantity dispatched abroad was not so large. The quantities and values for the three periods were as follows: 1922, 17,343 cwts., £62,171; 1921, 16,018 cwts., £82,911; 1920, 34,719 cwts., £156,219.

Playing Cards.

In face of keen competition, much enterprise is now being displayed by several British firms in supplying this class of manufacture to oversea markets. During the year just closed playing cards were dispatched abroad to the extent of 2,204 cwts. (£43,350), as against 1,052 cwts. (£24,406) in the preceding year and 1,860 cwts. (£44,296) in the twelve months of 1920.

Printed Books.

In spite of the rather dull state of trade at home amongst printers generally during 1922, the statistics relating to the shipments of printed books evidence a favourable comparison with the two preceding years. Last year's exports of this important branch of British trade stood at 276,765 cwts. (£3,171,834), as contrasted with 272,967 cwts. (£3,436,649) in the twelve months of 1921 and 286,514 cwts. (£3,770,191) in the corresponding period of 1920.

Printing Paper.

Printed paper—not coated—exported during last year stood at 1,499,210 cwts., a figure which represents the big proportion of 61 per cent. of the total quantity of paper and cardboard dispatched overseas during the period. A satisfactory feature of these returns was the big proportion sent to British Possessions compared with what was forwarded to foreign countries. For instance, 1,098,534 cwts. went to the former markets and 400,676 cwts. to the latter.

Australia again figures as by far the best customer for British printings, the preferential tariff encouragement now given by that Colony to the products of the Mother Country being no doubt responsible for the continual expansion in trade. Australia last year took British printings to the extent of no less than 641,236 cwts., compared with 290,950 cwts. in 1921 and 202,116 cwts. in 1920 (twelve months).

British India, a market which at one time showed signs of dwindling, is now moving in the right direction and took this class of goods to the extent of 175,830 cwts., as contrasted with 106,650 cwts. in 1921. In 1920, however, 294,577 cwts. were taken by this dependency.

New Zealand has been a much improved market, shipments to that Colony easily eclipsing those for the two preceding years. For instance last year consignments reached 114,507 cwts., against 48,766 cwts. in 1921, and 56,590 cwts. in 1920.

British South Africa has purchased less during the year, this Colony's requirements amounting to 69,803 cwts., against 73,068 cwts. in the preceding year and 90,290 cwts. in 1920.

Canada was a liberal buyer, shipments to that market having risen from only 2,165 cwts. in 1921 and 3,893 in 1920 to 26,524 during last year.

Ceylon took 13,935 cwts. last year, 16,298 in 1921 and 21,735 cwts. in 1920, whilst shipments to the Straits Settlement were 13,227 cwts. last year, 10,480 cwts. in 1921 and 14,617 cwts. in 1920.

Printing Types.

Shipments of printing type of British manufacture consigned to overseas markets during the year were not so good as in the two previous years. This is difficult to understand considering the reputation which the famous typefounders in this country have gained for the high quality of their productions. Exports under this heading represented 172 tons (£58,849) last year, 285 tons £103,879) in 1921, and 292 tons (£89,345) in 1920 (twelve months).

Stationery.

Envelopes, not including boxed stationery, were exported to the extent of 37,350 cwts. (£184,687) last year, 25,737 cwts. (£243,522) in 1921, and 55,188 cwts. (£435,341) in 1920. Other sorts of stationery sent overseas last year represented 128,367 cwts. (£1,465,730), against 135,566 cwts. (£2,023,636) in 1921, and 169,154 cwts. (£2,154,964) in 1920.

Writing Paper in Large Sheets.

Last year's exports of writing paper in large sheets—amounting to 171,467 cwts.—show an increase against the quantity sent overseas in 1921 of 38,767 cwts., although, compared with the twelve months of 1920, a falling off is recorded of 78,560 cwts. Of the total shipments during the year under review it is gratifying to find that by far the larger proportion of these exports went to the Colonies, the actual amounts indicating that 139,170 cwts. went to the former markets and 32,297 cwts. to the latter.

Australia was the largest buyer during the year, with 73,051 cwts., showing increases on the 34,639 cwts. in 1921 and 57,206 cwts. in 1920.

India was the second largest buyer, the requirements of that market standing at 33,638 cwts. last year, 33,841 cwts. in 1921, and 70,754 cwts. in 1920.

New Zealand took 13,143 cwts. last year, 13,099 cwts. in 1921 and 15,809 cwts. in 1920.

Ceylon made purchases to the extent of 2,216 cwts. last year, 1,658 cwts. in 1921, and 4,426 cwts. in 1920. The supplies to the Straits Settlements amounted to 1,923 cwts. last year, 2,903 cwts. in 1921 and 5,674 cwts. in 1920, while the requirements of Canada were only 849 cwts. against 1,143 cwts. in 1921 and 744 cwts. in 1920.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Switzerland.

A firm of paper agents in Basle are desirous of importing writing and printing paper of all kinds, especially in cheap qualities: Art paper, bag paper, blotting, brown, card, cartridge, drawing and envelope paper, etc. Pasteboards, pulpboards, wrappings, tissue, waxed, waterproof and parchment papers in quantities of one ton. Tracing cloth. They would be willing to act as sole agents for Switzerland or they would buy on their own account. (Reference No. 218.)

South Africa.

A manufacturers' representative in Cape Town is desirous of securing agencies for typewriter supplies, general stationery lines and office accessories. He has had some 25 years' experience of the market. (Reference No. 277.)

Uruguay.

The British Vice-Consul at Montevideo has informed the Department of Overseas Trade that the State Electric Light Works of Montevideo is inviting tenders for the supply of coloured paper, cartons, greaseproof, etc., for submission by April 17th next. A copy of the conditions of tender is available at the Department (Room 42), 35, Old Queen-street, London, S.W.1, but no samples of the paper, etc., required are available. All quotations must be in Uruguayan currency. (Reference D.O.T. 7592/F.L./M.P.)

Argentine.

The Commercial Secretary at Buenos Aires has notified the Department of Overseas Trade by cable that he is forwarding by post particulars of tenders to be submitted by July 2nd for stamped paper and double imperial brown paper required by the Argentine Mint. One of the conditions is that the tenderer must have an authorised representative in Buenos Aires.

In the event of any interested United Kingdom firms not being represented in the Argentine Republic, the Department will be pleased, on application, to suggest the names of local firms who have been reported as suitable to act as representatives for the submission of tenders. (Ref. 7631/FL/MP).

Latin America's general requirements in paper relate to news-print in rolls and sheets; machine-finished and super-calendered book, preferably hard sized, so that it can be used for either printing or writing; sulphite bond in white and colours, watermarked and unwatermarked; sanitary and ordinary wrappings; white and coloured writings; ruled and folded note paper and envelopes.

What our Manufacturers are Doing

British Machinery and Other Products that Merit the Attention of Overseas Buyers.

Litho Machinery: George Mann and Co., Ltd.

Messrs. George Mann and Co., Ltd., the well-known specialists in lithographic machinery of all descriptions—particularly rotary offset and tin-printing machines—report that they are now experiencing a flow of orders approaching that of early 1914. However, with their large works considerably increased, and all the very latest and most accurate machine tools obtainable installed, they are able to deal with this welcome flow of business and are asking for more. Among the many sizes and styles of rotary offset machines manufactured by them are two outstanding successes. The first is the world-famous series of two-colour and perfecting rotary offset machines, built in sizes from quad crown to eight crown, with patented front delivery and lowering pile delivery table. More than 200 of these machines have been sold, something like 75 per cent. being repeat orders. The second is the "Baby" or Demy Folio (20½ ins. by 12½ ins.) single-colour rotary offset machine. For some time past orders for this special machine have been received at the rate of one per day. This machine can be easily hand-fed, and gives perfect register at 3,000 impressions per hour. One well-known London house recently installed five of these machines and threw out eleven flat-bed litho machines. A new and extremely simple Automatic Feeder is now being tested in Messrs. Mann's Leeds works which promises to be a great success. Offset machines, both single and two colour, have during the last few months been shipped to Australia, South America, China and Japan. The firm have in most countries practical agents, who are equipped with the latest prices and information.

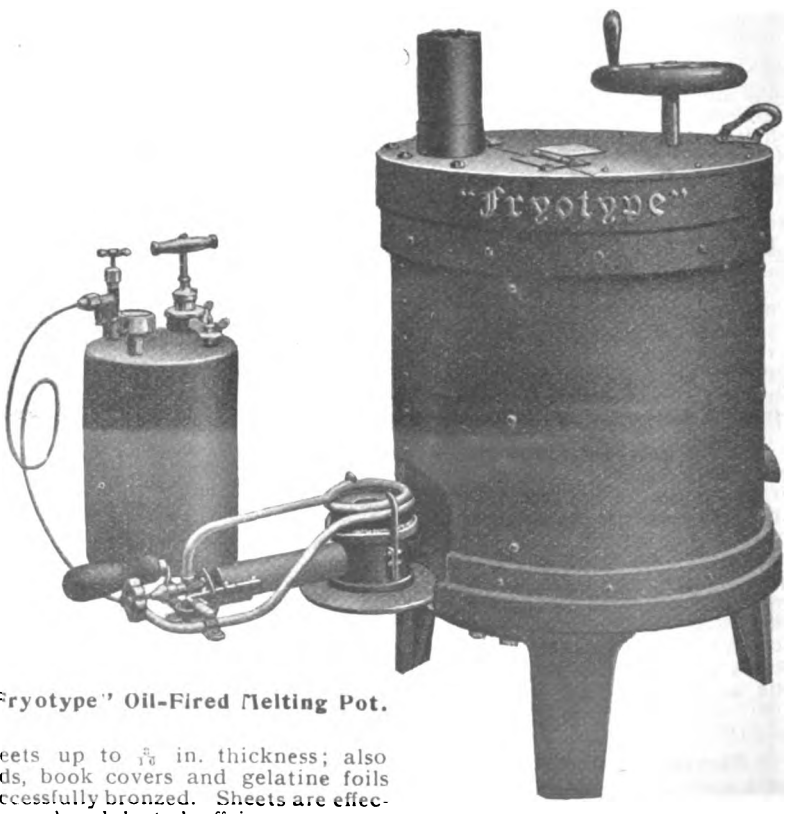
Type-setting Machinery: Lanston Monotype.

There would appear to be no limit to the uses to which the "Monotype" may be put. Starting as a composing machine twenty-five years ago for the composition of straightforward matter it was very soon discovered that tabular composition of the most intricate nature could be composed with the same facility as book and newspaper matter. It was next applied to the casting of display type for hand work, followed by lead and rule casting. The forms of composition possible on this versatile machine are simply amazing, and now we learn that it is possible from one operation at the keyboard to reproduce the type at the casting machine in any size and measure proportionate to the original size and measure composed. This has great advantages in book and newspaper work. Books once composed may be reproduced, without further keyboard work, in any size decided upon, and special newspaper articles, such as reports of company meetings, law reports, etc., may be reproduced in larger type in book and pamphlet form, and thereby present a much better appearance than when reprinted in the type in which the matter appeared in the newspaper.

Typecasters: The Williams Engineering Co., Ltd.

The demand for typecasters, both for export and for use in this country is steadily growing, and since the purchase in 1919 of the goodwill and business of Grant, Legros and Co., Ltd., by the Williams Engineering Co., Ltd., Nodis Works, Ealing, W.5, great strides have been made in perfecting and improving upon the typecasters in which this firm has specialised. The Nodis is the result of their successful efforts to produce a machine which will cast perfect type not only in small sizes, but up to 72 point, and printers who are interested in typecasters would do well to see one at work and test for themselves the running of this machine, which has been designed on an entirely new principle. The type cast from the Nodis is ready for the case without further dressing, and spaces, quads and hollow quotations can also be cast in perfection. The Davis (Williams Improved) is a big advance on their old model, and one which enables those jobbing printers who asked for a smaller machine to effect a saving in both time and type. We are informed that many have been installed with great success, and are doing all that was expected of them. The makers' aim to manufacture a machine at the extremely low price of £50 has resulted in a bench model of the Davis, which at last brings a typecaster within the purchasing power of even the smallest printer, more especially as we understand the company are willing to supply equipments on extended payments. The Williams Engineering Co., Ltd., guarantee both the Davis and the Nodis, and all accessories they make. Their Library of Matrices is a special feature and those installing their machines can, by having the use of this Library, equip their works with a very wide assortment of type faces. Readers desiring to investigate and to see a machine running can do so on application to the company at the address given above.

Machinery: Oscar Friedheim, Ltd.



This old-established firm of 7, Water-lane, Ludgate, London, have for many years specialised in labour-saving machinery for the printing, bookbinding, box-making and allied trades, and at present handle a very wide range of machinery with all the latest and most up-to-date improvements. The "Friedheim" fully automatic Folding Machine, fitted with the "Camco" continuous rotary feeder—Spiess Patents—is a very reliable machine capable of handling all papers, including highly glazed art and is fitted with a special arrangement to prevent creasing. The latest model Flat Bronzing Machine, manufactured in five sizes, is simple in design, rapid in operation and economical in working. The machine will handle all kinds of paper and metal sheets up to $\frac{5}{16}$ in. thickness; also cardboards, book covers and gelatine foils can be successfully bronzed. Sheets are effectively bronzed and dusted off in one operation, the surplus bronze being carried away by suction into the dustproof collecting box under the feeding table, so that dustless working is assured, and the machine fulfils every requirement of the Factory Act. The firm have been appointed sole agents for a combine of envelope machine manufacturers who are in a position to supply all the latest and most up-to-date machines for every style of envelope and bag. There is also the well-known "Martini" Simplified Book-Sewing Machine whilst this firm handles many other machines for every branch of these particular trades. Full particulars may readily be obtained on application.

Miscellaneous Machinery: Edmund Bush and Son, Ltd.

Messrs. Edmund Bush and Son, Ltd., printers' engineers, furnishers and valuers, of Crown Point-road, Leeds, have amongst their manufactures many items of interest alike to overseas and home buyers. A piece of apparatus tending to economy and efficiency in the printing office is their patent ink-mixing machine which is admirably adapted for the restoring of old inks to working consistency. Especially powerful ink grinding mills are another notable item. Moreover they make varnishing and gumming machinery with important special features, also patent hot-air drying apparatus for drying varnished or gummed sheets. Overseas inquiries receive prompt and careful attention.

Melting Pots: Fry's Metal Foundry.

Of special interest to many overseas printers is the melting pot which we are able to illustrate herewith, made by Fry's Metal Foundry of Holland-street, Blackfriars, London. The "Fryotype" melting pot is fitted with an oil burner for use in countries where a gas supply is unobtainable. This pot embodies the same features as the "Fryotype" melting pot used in England, but an opening is made at the back of the casing in order that the oil burner may be inserted. The burner is supplied complete with container, to hold two gallons of paraffin oil, hand-pump and vapourising coil. In a melting pot fitted with this type of burner 3 cwt. of printing metal can be melted, cleaned and poured into ingots in 25 minutes, the fuel consumption being, we are informed, two pints at a cost of 1d. per cwt. of metal melted.

"Fryotype" Oil-Fired Melting Pot.

Digitized by Google

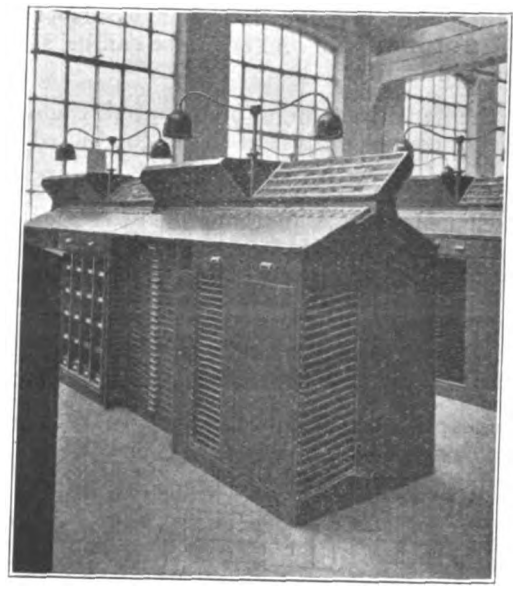
Melting Furnaces: Monometer Mfg. Co., Ltd.

This firm of manufacturers is going strong on the "Monometer" Furnace for the re-melting of old type metal, and for producing a good, sharp, clean type without any bad feet or sinks whatever. The illustration is from a photo taken at the recent British Industries Fair at the White City (February 19th to March 2nd), and speaks well for the "Monemeter" Furnaces, as practically all

"Monometer" Stand at the Fair.

the furnaces sold on the stand were "repeat" orders after many years' experience with the "Monometer" Furnace, and these repeat orders are surely the best testimonial one can obtain. Amongst the most up-to date plant must be reckoned the "Monometer" temperature-controlled non-oxidation furnaces, the efficiency of which is claimed to be 48½ per cent. above that of any other system. The makers tell us that after ten years' experience with a "Monometer" a firm writes, "The pot is still as sound as the first day it was installed."

Feeding Apparatus: W. J. Light and Co., Ltd.



The chief item to which the overseas user's attention is drawn by this well-known firm of providers of machinery for the printing and allied trades is the "Winkler" automatic sheet feeder. This feeder, an announcement of which will be found on another page, has a number of points of special interest. For one thing, the separation of the sheets has been treated with special care in designing the apparatus. By using a rotary pump generating both suction and pressure, the time for separating the top sheet from the pile, in contradistinction to other systems having cylinder pumps, can be considerably lengthened. As a consequence this separation, even at highest speed, always takes place sufficiently slowly and with unfailing exactitude. Again, the transport of the sheets to the lay on marks is carried out by two to four under-tapes and rubber rollers running on same, the sheet being led to the front gauges as gently as by hand, an advantage which is of greatest importance in assuring safe running and accurate register. The feeder works in unison with the machine and at variable speeds. It will keep up with the speed of the fastest running machine under recognised conditions. Amongst its many other points of advantage, it should be noted that there are no tapes or friction wheels to smear the sheets, and freshly-printed matter can be at once backed-up without the risk of marking or smearing, also that there is no necessity for feeding the first sheet by hand.

Paper Bag Machinery: Bumsted and Chandler, Ltd.

Some of the most up-to-date apparatus in paper bag-making machinery is being produced by these well-known manufacturers, of Staffordshire. The most interesting item is their machine for making and printing lined square-bottomed bags, this wonderful piece of machinery carrying out all the operations right from the paper on roll. Two rolls of paper are used, one for the bag and one for the lining, the two sheets being pasted and rolled together, printed and made up into bags with wonderful efficiency and economy. All interested in paper bag machinery would be well advised to get particulars from these makers at Cannock Chase Engineering Works, Hednesford, Staffs.

Composing-Room Furniture: Stephenson, Blake and Co., Ltd.

Messrs. Stephenson, Blake and Co., Ltd., have taken a strong lead in the design and manufacture of composing-room furniture for the past fifteen years; their products are of the highest grade and they have been largely responsible for extending the use of dust-proof cabinets in this country. The most recent development on these lines is the introduction of models which allow of the utmost possible economy of space; and by the adoption of a new system of organisation in conjunction with these models, make possible also a greatly increased output combined with additional comfort for the staff. These models are built on a unit basis in either English or American standard sizes so as to meet the requirements of any office whether large or small. The company are the pioneer manufacturers in Great Britain of a full range of highest-grade steel composing-room furniture on the above lines, in addition to similar models in wood which have received the highest commendation from the offices where they have been installed. Messrs. Stephenson, Blake and Co.,

A Complete Steel Equipment.

Ltd., make a special feature of the planning and reorganisation of composing-rooms on the most up-to date methods and the accompanying illustration shows a portion of a complete steel equipment recently provided for a large London office.

Types etc.: P. M. Shanks and Sons, Ltd.

A new type face of interest to both home and overseas printers is the "Bloomsbury" series which Messrs. P. M. Shanks and Sons, Ltd., of Red Lion-square, London, have just completed, and of which we show an example herewith. The demand for Old Style display faces is an ever-increasing one and overseas users are watching with interest the products of British founders.

Special Trade Printing: Cash and Clare.

Amongst the foremost London manufacturers of leatherette desk or wall calendars, Embossed Seals, gold blocked or embossed showcards, Messrs. Cash and Clare, of 75, Great Eastern-street, London, E.C.2, will be found very useful to overseas traders. This firm specialises in the above mentioned goods and many other kinds of work. They invite inquiries direct or through shippers, and can render to printers and dealers much valuable service.

Printing Inks: Coates Bros. and Co., Ltd.

This well-known London firm of printing ink and varnish manufacturers are now issuing a striking series of picture cards, entitled—with a pun on the firm's name—"Coats of Many Colours." No. 1, representing a beau attired in a coat of almost dazzlingly effective blue, shows particularly Messrs. Coates's "Beau Brummel" blue lake. This it does very excellently, and other cards are to follow to illustrate other colours. "Quality First" would seem to be this company's motto, and they emphasise to their customers the fact that quality inks, if they are sometimes dearer than inferior makes, are the most profitable in the end.

Printing Inks: Slater and Palmer.

Messrs. Slater and Palmer's many years' experience in providing inks adapted to the climatic and working conditions of their numerous overseas friends enables them to vary the colour, body and consistency of the mediums of their four distinctive black inks—Journal, 1,019, "Acme," Stratford 1705 and Satin Process 134—to meet all requirements, resulting already in a steady demand from all quarters. The recently issued specimens of a good standard grade of general jobbing inks—"Guards" Scarlet, Rose Red, 406, Geranium 642, Pale and Mid Chromes, Browns, Deep Green and other shades—are offered as being just the inks for India, South Africa, Australia, New Zealand, Canada, and other parts of the Empire, for which "S. and P." especially cater: useful inks at moderate prices. Fine double-tone inks have recently come into more general demand, and we are informed that specimens of "S. and P.'s" make have awakened interest in this class of ink in Australia, New Zealand, South Africa and India, as they have proved well suited to the respective climatic conditions and capable of very fine results.

Messrs. Pirie, Wyatt and Co., Ltd., Wells, Somerset, have issued in an attractive form a quarto booklet descriptive of the St. Cuthbert's Paper Mills. In addition to photographs of the directors and staff, there are illustrations of various sections of the mill and grounds, concluding with a reproduction of the war memorial. Conveniently fitted into a pocket of the cover are various samples of the excellent cream-wove and laid papers made at the St. Cuthbert's works.

The Bruce Society will hold their Annual Garden Festival in the Grounds of Byfield Hall kindly lent for that day by Lord Bruce

Members who desire to attend should address application for Tickets, etc., to the Hon. Secretary, at the Town Hall, Byfield

Important Notice to the Trade.

PATENT "PRINTEX" NEGATIVE PRINTER.

AFTER spending much time in experimental work during the last few years, Pictorial Machinery Limited have great pleasure in stating that they have now succeeded in manufacturing a Mechanical Negative Printing Machine particularly adapted to the requirements of the Offset and Direct Lithographic printer. It has been for some time suggested that if a satisfactory device could be placed on the market at a reasonable figure, and if such device had the exactness and mechanical precision of the patent Lithotex Step-and-Repeat Machine it would be of great service to the trade. The problem has not been an easy one, the Company being determined not to complete such a machine **unless assured of the well-known perfection of action of the Patent Lithotex Step-and-Repeat Machine.**

The "Printex" Negative Printer takes any size negative up to 20 × 16 ins., and prints same once or as many times as may be required, that is a negative of size stated or any size up to that size on to any size plate up to 66 × 49 ins., and this in any required position on the metal plate, be it in the extreme corners, in the centre, or elsewhere.

The accuracy of the instrument is such that you can print an image once at the extreme edge, switch over to other extreme side of plate and then fill in from either side, whichever is preferred, and the plate will be found to be of unfailing accuracy of register, in other words—**the accuracy of the Patent Lithotex Step-and-Repeat Machine.** No higher praise can be said than this, as every user of the Lithotex Step-and-Repeat Machine will testify.

Exposures of the negative on to the sensitised metal plate and all the operations of the machine require no dark room, all the operations being conveniently and safely conducted in subdued light.

The machine weighs approximately 55 cwts. and occupies a space of 9 ft. × 4 ft. and is 8 ft. high.

It is particularly pointed out that this Machine is not intended to supersede or take the place of the well-known Lithotex Step-and-Repeat Machine, for it does not at all cover the field of that Machine in any way, but it will be found in practice that the "Printex" Patent Negative Printer, combined with the Lithotex Step-and-Repeat Machine, will be close allies of the greatest practical importance.

Price on Application.

A very attractive proposition appealing to good class printers is that of Pictorial Machinery, Limited, in their

Conversion of a Flat-bed Lithographic Machine into a highly satisfactory

SHEET-FED PHOTOGRAVURE PRINTING MACHINE

printing from Flat Photogravure Plates.

THE striking advantage of Sheet-fed Photogravure is in its economy of production, especially for small editions (say from 500 to 5,000), flat copper plates being used, thus dispensing with the usual heavy expenditure on heavy printing cylinders. The metal printing plates used in this converted machine can be supplied by process engravers. Special arrangements are being made for the supply to the trade of printing surfaces. There is also the advantage of being able to stock these plates for repeat orders if necessary, for cylinder designs are taken off. If necessary, plates can be put on the machine and impressions pulled in a very few minutes. All the expensive procedure of lathing, grinding and polishing of intaglio cylinders is entirely obviated.

Dead Register can be relied on in conjunction with Chromo or Photo-Lithography or other work.

The speed of converted machine is that of ordinary flat-bed lithographic machine. Damped or dry paper can be used.

For an arranged fee Pictorial Machinery, Limited, will instruct assistants in the making of printing plates, for any intelligent craftsman should be able to acquire the necessary ability in a few weeks.

Terms on Application.

Printers' Managers and Overseers (PARENT) ASSOCIATION.

The March Meeting.

The March meeting of the P. M. and O. A. held at the "Old Bell," Holborn, on Tuesday of last week, was mainly of a recreational character, the principal item on the agenda being a lecture entitled "English, Scottish and Irish Humour, by Mr. Wm. Steer. There was a very fair attendance of members, the president, Mr. S. M. Bateman, being in the chair. In the course of the brief business of the evening the chairman called attention to the forthcoming annual dinner of the Association, and indicated that requests for tickets had been received in very good numbers, and there were already indications that over a hundred ladies would be present.

The president also announced that there were a number of members on the unemployed list, and he urged that any who knew of suitable openings should communicate.

The general secretary made reference to the coming pension election in connection with the Printers' Pension Corporation, and appealed for members' votes on behalf of the five candidates of the Association.

New Members Elected.

There were on this occasion no less than six applications for membership, and in announcing these the chairman remarked that several other applicants had either been rejected or deferred for further inquiries, in accordance with the more stringent application of the qualification tests. The following were elected to membership, and those of them who were present received a personal welcome from the president:—Mr. F. J. Boddy (Victoria House, Tudor-street, Whitefriars, E.C.4. Overseer—Rotary Dept.); Mr. A. Browne (the *Croydon Times*, 108, High-street, Croydon. Overseer—machine-room); Mr. L. A. Eden (Fosh and Cross, Scrutton-street. Overseer—lithographic); Mr. J. A. Haddock (Messrs. Billing and Sons, Ltd., Royal Mills, Esher, Surrey. Overseer—machine-room); Mr. E. C. Potts (W. P. Griffith and Sons, Ltd., Prujean-square, E.C.4. Overseer—composing); Mr. F. Stapleton (the Amalgamated Press (1922), Ltd, Sumner-street, S.E.1. Manager—jobbing dept.).

Lecture by Mr. William Steer.

The routine business being concluded, the chairman called upon Mr. Steer for his lecture, making appreciative reference to previous occasions on which Mr. Steer had lectured to the Association. Though described as a lecture, Mr. Steer's contribution to the evening's entertainment was more in the nature of a continuous stream of amusing stories. Whilst some attempt was made to analyse the different varieties of humour and to distinguish between the predominant characteristics of English, Scottish and Irish types, the critical or scholastic note was not greatly stressed, and the lecture proved to be predominantly a demonstration of the art of the raconteur. Mr. Steer's capabilities in this direction were shown by the fact that his string of stories stretched out well over an hour, and kept his audience continually entertained.

The conclusion of the lecture was fittingly followed by short speeches in which the story-telling mood of the evening was given further expression. After a few words of appreciation by the chairman, Mr. E. H. Berryman proposed a hearty vote of thanks to Mr. Steer, Mr. J. A. B. Reed seconding, and the motion being very heartily carried.

An interesting feature of the occasion was that, in the room adjoining the meeting place, Mr. F. Bruff (a very old member of the Birmingham Centre) gave a demonstration of his patent type page storer, as shown at the last Printing Exhibition.

Printers' Peace Memorial Dinner.

The Printers' Peace Memorial dinner was held at the Hotel Cecil, on Saturday Mr. J. Gomer Berry presiding. The object of the dinner was to assist the funds of the wing of forty beds dedicated to the officers and men of the printing, stationery, and allied trades who fell in the war, shortly to be added to the Lloyd Memorial (Caxton) Seaside Home at Deal. Over six hundred guests were present. Mr. J. Gomer Berry was supported by Sir Robert Horne, Mr. C. A. McCurdy, Sir William Berry, Sir Campbell Stuart, Sir Ernest Hodder Williams, Mr. C. H. St. John Hornby, Mr. G. Eaton Hart, Mr. W. H. Eyre, Mr. Sydney Spalding, Mr. T. W. McAra, Mr. Joseph Mortimer, Mr. H. A. Randall and many others.

Sir Robert Horne, M.P., proposed the toast of "The Printing and Newspaper Industry," and Mr. T. E. Naylor, J.P., replied.

The chairman proposed "The Continued Prosperity of the Lloyd Memorial (Caxton) Seaside Home and its Peace Memorial Wing," and response was made by Mr. W. T. McMullon, chairman of the home.

It was announced that the total amount contributed to the Home as the result of the dinner was £1,600, as against a figure last year of £1,148.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,

Situations Vacant.

H.M. STATIONERY OFFICE.

AN Examination, open to ex-service men only, for EIGHT Permanent Appointments as PRINTING and BINDING CLERK will be held on June 5th, 1923.—For full particulars apply to the Controller, H.M. Stationery Office (Establishment Division), Princes-street, London, S.W.1. 14082

Situations Wanted.

ACCOUNT-BOOK BINDER, half extra, cutting, etc., requires situation (town or country).—G., 169, Pelham-street, London, E.1. 14064

ACCOUNT-BOOK BINDER (all-round), single-handed, seeks permanency; town or country,—Box 14081.

ALL-ROUND JOBBING COMPOSITOR (non-soc.) requires situation; small works preferred.—B.C., 13, Old Palace-road, Croydon. 14063

ASSISTANT ENGINEER and DESIGNER seeks Position, London or Provincial (age 25); good technical training; eight years experience workshop and drawing office of large City Printing House with all types of machines and plant maintenance work; good commercial knowledge.—Box 14076.

BINDING OVERSEER seeks re-engagement; practical all-round; good organiser and disciplinarian; London or Provincial.—Box 14080.

COMP., First-class, Modern Display, Catalogue, etc., seeks perm., London.—S., Box 14067.

COMP. requires situation at once, small provincial office, good All-round General Jobbing experience, moderate wage.—Pulsford, 30, Gladstone-road, Watford. 14062

EDUCATED Young Man wants Position as CLERK or SECRETARY to Master Printer, has practical workshop experience and a working knowledge of M.P.F. Costing System.—Box 14073.

GENTLEMAN, aged 23, good education and appearance, requests Position as ASSISTANT REPORTER; excellent references.—Write, Box 14070.

LETTERPRESS MACHINE OVERSEER, with practical experience on all classes of work; keen organiser, estimator, colour work a speciality; highest references.—Box 14058.

NEWSPAPER ENGINEER and MACHINE OVERSEER desires change; evening or weekly preferred; vast experience with up-to-date High-speed Rotary and Stereotyping Machinery.—Box 14055.

OVERSEER Machine Department (Letterpress), desires re-engagement; experience of High-class Half-Tone, Three-Colour, Book and Catalogue work; excellent testimonials.—Box 14057.

PHOTO-LITHOGRAPHY.—Gentleman with exceptional practical experience of all branches desires change; all latest methods, half-tone, colour, etc.—Box 14084.

SMART ARTIST (lady, 26), General Commercial, three months' experience, desires Progressive Post in Studio; willing pay £25 premium. Box 14065.

STATIONERS' ASSISTANT, 15 years experience wholesale manufacturing trade, desires Position of Trust; highest references.—Write S., Box 14083.

WORKS MANAGER seeks any Post, prac. all depts., Gen. Printing, Ruling, Binding, Man. Stationery; also Tag, Label and Dup. Book Trade; est., costing.—Smith, 60, Lynn-road, Wisbech. 14066

Machinery for Sale.

DISC RULER (Brissard), take sheet 24-in. by 26½-in., two-side, two-colour, £110, or offer.

DISC RULER (Brissard), take sheet 26½-in. by 33-in., two-sider, two-colour, £120, or offer.

DITTO, £120, or offer.

DITTO, with perforator, £120, or offer.—Box 14079.

DOUBLE CROWN FLAT-BED LITHO MACHINE, by George Mann (complete with Flyers); modern pattern; in perfect running order; can be inspected by appointment.—Pettitt, Cox and Bowers, Ltd., 33-34, Rathbone-place, Oxford-street, W. 14074

LINOTYPES FOR SALE.—Model No. 1, overhauled and converted to Model No. 4 with regard to vice, jaws, etc., very little used since; double letter, universal mould (Nonpareil to Pica), two magazines, and two sets of matrices.—Apply, Box 14078.

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

STANDING PRESS, 5-ft. high, to press 22 by 15; £7 net (Wood and Iron).—Write, E. Garner, 446, East Park-road, Leicester. 14048

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

THREE STOKES and SMITH MODEL "D" WRAPPING MACHINES.—Maker's specification says "Capable of making boxes ranging from 1⅛-in. to 8-in. in length, 1⅜-in. to 4-in. in width, ¼-in. to 2¼-in. in depth, and producing with one operator 7,000 to 9,000 tight wrapped lids or boxes in eight hours."—Apply, Cadbury Bros., Ltd., Engineers' Office, Bournville. 14075

Machinery Wanted.

THREE-HOLE THREAD STITCHER, must be in first-class condition.—Full particulars, to Box 14051.

Tenders.

PARISH OF LAMBETH.

STATIONERY.

THE Guardians of the Poor of the Parish of Lambeth desire to receive TENDERS for the supply, from time to time as required, of ITEMS OF STATIONERY, during the year commencing April 1st, next.

Printed forms of tender with conditions annexed (which alone will be received), may be obtained at this office any day (except Saturday) between the hours of 10 a.m. and 5 p.m.

The tenders must be sent by post, on or before Tuesday, the 20th inst., and will be opened at a meeting of the Guardians on the following day, but will be decided upon at a subsequent meeting.

The Guardians do not bind themselves to accept the lowest or any tender.

By Order,
JAMES L. GOLDSPINK,
Clerk to the Guardians.

Guardians' Board Room and Offices,
Brook Street, Kennington Road,

Machinery Rating Bill.

ASSOCIATIONS of master printers throughout the country have received instructions to approach Members of Parliament urging them to support a measure dealing with the Rating of Machinery, which, if adopted, would initiate uniformity of rating practice throughout England and Wales. We understand that encouraging replies have already been received from a large number of M.P.'s; amongst others, Sir John Simon has intimated his readiness to support the measure. It is much to be hoped that, if the Bill passes its second reading, the Government will afford facilities for the further stages.

* * *

Shipping Rates.

CONSTANTLY have British traders to complain of the high ocean freights which are imposed upon them by shipping rings. It is not only in one, but in every direction, that the fault lies. A case in point are the rates from Atlantic to British ports. These are probably, considering the volume of trade, the highest in existence, and are controlled by a ring of steamship companies who work together as the Atlantic Conference. That the conference rates are not justified is shown by those of an independent company who are outside the ring. Thus the Conference rate on paper is 50 cents per lb., while the Reardon Smith Lines, which are not subject to the dictation of the ring, quote 30 to 35 cents per 100 lbs. Moreover, we understand they are giving excellent service. In these days of severe competition in paper prices, the question of freight costs is a vital one. There is good ground, therefore, for the argument that freight rates should be subject to reasonable competition and not dictated by a ring of steamship owners.

* * *

Paper Over Production.

SOME authorities in Canada appear to be concerned over the rapid development being made by the pulp and paper industry of the Dominion. There is a suggestion that a danger exists of over production, especially when the new plants and extensions come into operation this year. This is a problem which must concern the paper trade throughout the world, and particularly the British section of it because of our export trade. In the event of over-production in Canada, output will exceed demand, the inevitable result of which will be unfair competition. Moreover, since mills must keep their machines employed, the surplus paper will be launched upon the export markets, where it will come in competition with British products.

* * *

British Methods.

THERE is, however, no need for alarm over this somewhat gloomy prediction. Our friends on the other side are rather prone to adopt extreme views. For instance, there are rather extravagant and divergent opinions regarding the resources of the States and of Canada in relation to the supplies of raw material. Nerves continue to dominate trade views, and perhaps nowhere to a greater extent than in America. Nevertheless, the prospect of growing production, especially on the scale which is undertaken on the other side of the Atlantic, deserves the careful consideration of industrial leaders in the Old World. British papermakers and British paper workers will need to look to their laurels. With the exercise of prudence, foresight and honest endeavour, there need be no fear on this score. Quality and reliable methods have long stood the industry in this country in good stead and they will continne to do so as long as the sound character of the race is allowed to show itself in the products of our mills and the activities of our commercial houses.

* * *

Popularising Cover Papers.

MESSRS. L. S. DIXON AND CO., LTD., have recently issued some remarkably fine advertising in cover papers in the form of specially devised sample sets embodying suggestive treatment. Rarely a week goes by without additions from some quarter to the range of covers available for use in printing and advertising. The current standard is already well in advance of pre-war excellence in cover papers, and English productions are showing to greater advantage. Quite naturally the American houses hold the lead in fashions, finishes and novelty treatments and will no doubt continue to do so if only for the reason that U.S.A. consumption of cover papers must always reach a level unattainable in our smaller sphere. There is nothing in this, however, to prevent the English manufacturer from increasing his range and extending his field on the factor of price.

German Post Cards.

In the House of Commons, last week, Colonel Sir A. Holbrook asked the President of the Board of Trade whether he was aware that picture post cards, executed in fifty different designs, with English texts, were being supplied by German manufacturers to stationers in Great Britain at the price of 2s. 6d. per gross; that the cards bore an imprint of a London firm as publishers, but no imprint of the country of origin; and whether the merchandise marks legislation promised by the Government would contain provisions to stop the importation of unmarked goods of this description.

Sir P. Lloyd-Greame said his attention had been drawn to an offer by a German firm to supply such post cards, the importation of which, if they were correctly described in the question, was prohibited under the existing Merchandise Marks Acts. The Commissioners of Customs and Excise were bringing the matter to the notice of Customs officers throughout the country, with a view to action being taken should any attempt be made to import cards of the description in question.

Master Printer Ideals.

Mr. Howard Hazell Outlines Scope of Future Activity.

The 21st annual dinner of the London Master Printers' Association found that organisation in full strength and vigour, and Mr. W. Howard Hazell, who presided over the gathering, indicated lines of policy for future operations which indicate that there is much useful work for the Association to undertake. Once more the large hall of the Connaught Rooms was well filled with master printers and their ladies, who were thoroughly well entertained during the evening. Dinner, concert and speeches were alike excellent, and the souvenir programme, with its Egyptian decoration in colours, will form a welcome reminder of the occasion. The Egyptian hieroglyphics for the initials "L.M.P.A."—the Lion, the Owl, the Square and the Eagle—were enclosed in a "Cartouche" on each page. The president showed that a master printer should be as brave as a lion, wise as an owl, square in all his dealings, and far seeing as an eagle.

The London Association.

Mr. R. A. Austen-Leigh, in proposing the toast of the London Master Printers' Association, said that in looking back over the past 25 years he thought they would find that printing in London had not made the progress it ought to have made. There was not the larger number of men employed that they might have expected from the growth of the population of London and the increased uses to which printing was put. Book printing had long ago vanished from London, and they had seen several instances of London master printers setting up factories in the country, shutting down the greater part or the whole of their London works. That was due, no doubt, to the difference in wages between London and the country. The trade unions, however, instead of seeking to minimise the difference, continued to discriminate between the wages in London and the country. They were assisted in that policy by the attitude of their friends who produced periodicals in London. So long as the printers of periodicals refused to face the inconvenience of a stoppage of their papers, so long would the London printing trade be at the mercy of the trade unions. The only salvation he saw was that perhaps so many periodicals would fall into the hands of one or other of the millionaires who seemed to be collecting them that they would get tired of the policy of lying down to whatever their unions asked, and would face the risk and expense of shutting down their papers until a proper state of affairs was reached. If such a course were taken, the period of closing down would be very short.

In a reference to the founders of the Association, Mr. Austen-Leigh paid a tribute to the memory of the late Mr. Reginald Lake, who, he said, combined qualities not often found in the circles of master printers.

In conclusion, the speaker paid a tribute to the efficiency of the staff, headed by Mr. Whyte, adding that the Association possessed a valuable and much trusted vice president in Mr. Langley, while its new president, Mr. Howard Hazell, bore a name which had almost an hereditary right to the office, and he had a wealth of experience and public-spirited enthusiasm second to none.

Ideals Worth Working For.

Mr. Howard Hazell, in responding to the toast, indicated some of the directions which the activities of the Association might take in the future. While officials and the council came and passed on, the Association remained to work for the benefit of the industry. Some foolish people thought the sole object of the Master Printers' Association was to fight the trade unions on wages. Nothing could be further from the truth. It was necessary at times to enter into negotiations, and in this respect the past year had been one of great difficulty. He preferred, however, to look to the future, and speak of the other part of the work which the Association would undertake

In the forefront of their programme he would place education—education of themselves and of their employees. The present year was a proud one in the annals of the Association, because it saw the opening of the London School of Printing, a development of the St. Bride Printing School, where, with £15,000 worth of extra machinery, they had a school of which their trade and the city might well be proud. There they had classes for master printers as well as for the youngest craftsmen, and that school would have a great and growing influence upon the future of their industry. The school was the beginning, he hoped, of that Master Printers' College of which he had often spoken. He looked forward to the time, which he hoped would not be far distant, when the teaching of the financial and commercial side of their business would be further developed, and when it would be possible for the sons of master printers to take degrees in commerce based upon the printing industry. Then they would be training leaders fitted to deal with the many problems of the future.

Mr. Hazell went on to emphasise the need for developing scientific costing and estimating, and of promoting efficiency in their trade with a view to the lowering of costs which, in turn, would create a greater demand for their products and provide employment. He observed that he thought it would be well if the Master Printers' Association sent an expert to America and the Continent to investigate the latest methods of production and to present an impartial and authoritative report as to what printers were doing in other countries.

Coming to the standardisation of paper, Mr. Hazell observed that paper at present was bought and sold on old and obsolete methods, and if an improved system were adopted they would all benefit, and costs of production would be lowered. He hoped the Association would in the future be able in many ways to increase efficiency and by the standardisation of methods lower their costs.

After observing that the Joint Industrial Council held large possibilities for the great good of the industry, the president argued that it was desirable they should have a strong organisation, so that they might promote beneficent legislation and prevent harmful legislation. They needed also to watch the activities of public and local bodies, in order to prevent any action that was inimical to their interests. Following a word on behalf of disabled soldiers and the Benevolent Institution, Mr. Hazell looked forward to the time when the master printers would possess a fine and dignified headquarters worthy of their great trade.

If master printers worked with these ideals, the association that they received from their predecessors would be passed on to their successors bigger, better and stronger; the dignity of the industry would be raised, the profits of the master printers would be increased, the position of the employees would be improved, and the industry would be better able to serve the community.

Sir Cecil Harrison, K.B.E., proposed the toast of "The Visitors," and expressed the hope that in the future there would be closer association with the Stationers' Company, so that there might be a representation of the whole industry.

Tribute to British Printing.

Lord Askwith of St. Ives, K.C.B., in responding to the toast, had a reassuring word with regard to the coming of typeless printing. Referring to Mr. Hazell's suggestion of an emissary to foreign countries, the speaker said he doubted whether it would be found that there was much that was superior to what was being done in the printing industry in this country, though information might be found which would lead them to developments of which they had little idea at the present time. It was necessary to apply science to the industry of printing as fully as they possibly could. An association such as theirs could be of extraordinary value in keeping the industry in this country in the van of the printing trade of the world.

Mr. J. H. Williams, the treasurer, submitted the toast of "The President," whom, he said, they all esteemed for his high character, for his sterling worth, and for the great benefits he had already conferred upon the industry.

The toast was accorded musical honours, with a special ovation for Mrs. Hazell.

The president suitably acknowledged the toast.

The musical programme submitted during the evening was of a high character, the artistes being Miss Annie Bartle, Miss Dorothy George, Mr. Edward Dykes, Mr. Walter Churcher, with Miss Bessie Hawes at the piano, the programme being under the direction of Mr. Chas. J. Winter.

MR. G. H. WILKINSON, C.C., has been elected president of the Bartholomew Club, a well known City club which was formed over 50 years ago to discuss all matters of interest, but especially those relating to the City.

Personal.

Mr. R. A. Austen-Leigh and Mr. A. E. Goodwin are attending the annual dinner of the Leicester M.P.A. to-day (Thursday).

MR. J. J. KELIHER (chairman J. J. Keliher and Co., Ltd., and a past president of the L.M.P.A.), as a member of the Royal Amateur Orchestra Association, had the honour of playing in the concert at the Queen's Hall on Tuesday last in the presence of their Majesties the King and Queen.

MR J. D. WISE is to preside at the Ladies' Night of the South-West London Master Printers' Association, which takes place at Pritchards Restaurant, Oxford-street, on Saturday next. Reception at 6 o'clock.

MR. CHARLES PIRIE, the works manager of the Aberdeen University Press, has been presented by the staff of the Press with a solid silver fruit dish on the occasion of his silver wedding.

MR. FRED A. CHIVERS is now associated with Mr. F. H. Cole in the secretarial duties of the South-West London Master Printers' Association.

SENATOR H. S. NEW, whose appointment as United States Postmaster-General has just been confirmed by the Senate, is a well-known journalist, who was previously editor and publisher of the *Indianapolis Journal*.

MR. STANLEY COUSINS, Mr. A. W. Foster and Mr. Geo. E. Oswick have been appointed a committee to make the arrangements for the annual dinner of the Papermakers' Association on March 23rd.

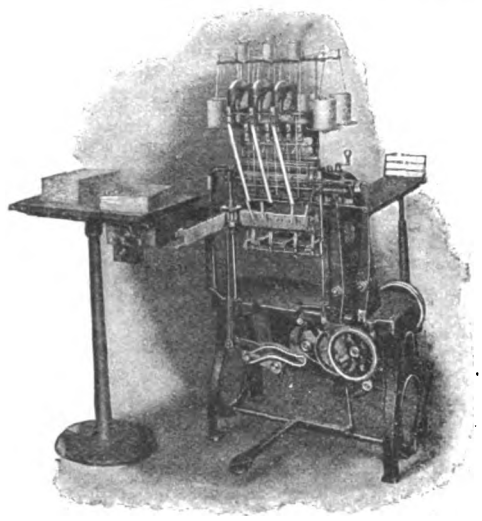
MR. P. W. HOLDEN, chairman of Wiggins, Teape and Co. (1919), Ltd., and Wiggins, Teape and Alex. Pirie (Sales), Ltd., is sailing on the 16th inst. for an extended business trip to Australia and New Zealand. He expects to be absent about six months.

MR. W. A. SHERLOCK, sales representative of the Ulverston Paper Co., Ltd., has been awarded the Henderson, Craig and Co. Golf Trophy for last year with a score of 76. The tournament was played over the course of the Worsley Golf Club, Worsley, near Manchester, on November 30th.

Caxton Home, Limpsfield.

The board of management of this printing trade institution held their annual meeting at St. Bride's Institute, on Saturday last, Mr. C. J. Drummond, J.P., presiding. The representative gathering of supporters present included Mr. C. W. Bowerman, M.P. (treasurer), Messrs. T. E. Naylor, J.P., and W. Vandy (vice-presidents), Mr. W. F. France, J.P., Messrs. E. Briscoe and J. J. Deasy (trustees).

The reception of the annual report was moved from the chair. The income had reached the record figure of £3,322 15s. 4d., an increase of £208 7s. 6d. on the previous year. The War Memorial Wing debt had been decreased by £600, still leaving an indebtedness of £1,800 on this account. The Federation of Master Process Engravers had endowed a War Memorial Ward, and six beds were named by various printing trade societies.



Mr. C. W. Bowerman seconded the reception of the report and balance-sheet, which were adopted.

Mr. C. J. Drummond was re-elected president, Mr. C. W. Bowerman treasurer, and Mr. S. J. White secretary. Mr. G. C. Josland (trustee, South London Caxton Musical Society) was added to the vice president's list, and Mr. A. Hilditch elected a life member of the board. Vacancies on the committee were filled by the election of Mr. A. G. Hammond (East Ham Auxiliary), A. R. Parfitt (Cornwall Press) and W. White (South London Caxton Musical Society). Mr C. Belsham (Fleet Printing Works) was appointed auditor, with Mr. A. D. Maskell (Mathieson and Sons).

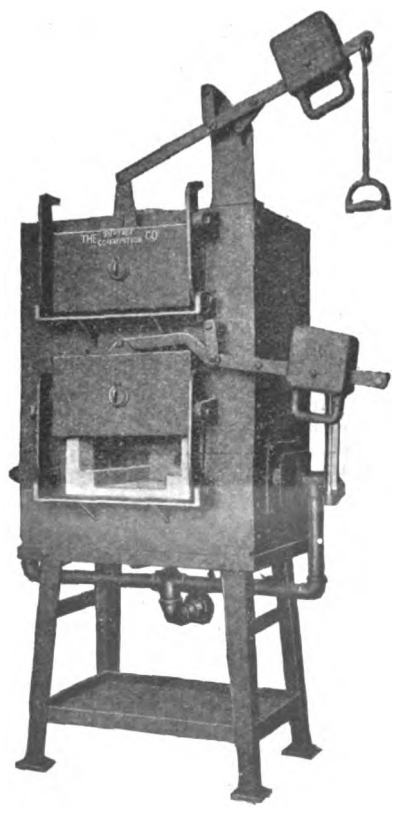
Type Metal Melting by Means of TOWN'S GAS.

By E. W. SMITH, F.I.C.
(Vice-Chairman, British Furnaces, Ltd.)

(*Concluded from page 157.*)

In most systems the previously-mentioned requirements necessitate two control valves—one on the air and one on the gas—in order to regulate the mixtures when changes of gas consumption are required. In the hands of the usual furnace operator a two valve system

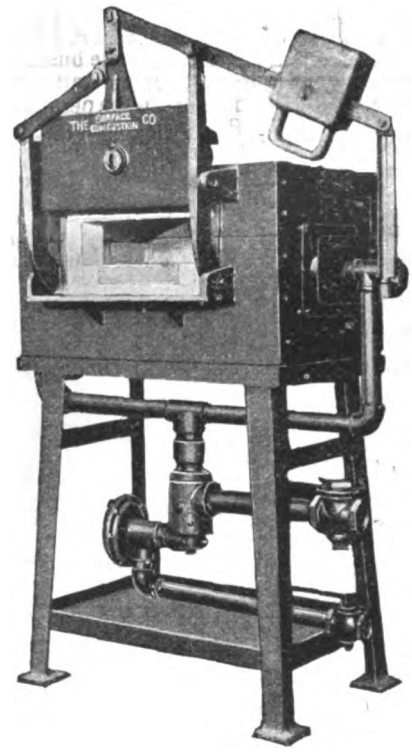
Two Stage Inspirator.
(For Air Pressures over 20 lbs.)



is rarely efficiently used, and in the hands of an expert it is a source of annoyance and trouble.

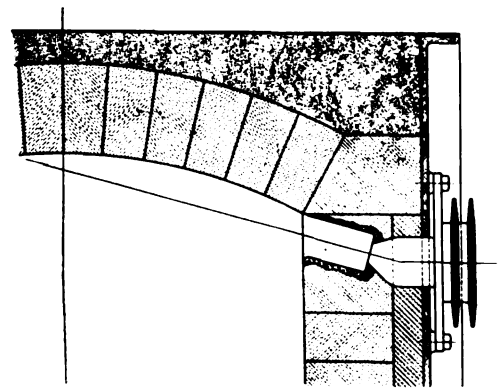
British Furnaces, Ltd., supply a *one-valve* system which enables the operator to vary his gas consumption and speed of heating without altering either the proportions of air and gas or reducing the efficiency of the

High Pressure Inspirator.



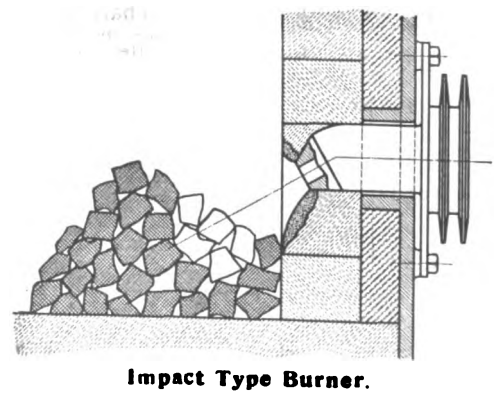
mixture. Maximum flame temperatures are attained. Heating is by means of radiation. The combustion chamber of the furnace is totally enclosed, and the furnace walls are

Double Oven Furnace.



adequately lagged. We believe that, apart from a recuperative or regenerative furnace (which is not justified in such processes as are employed in the printing trade), the equipment supplied by this company incorporates the best of the features outlined earlier in this paper and the results so far attained would indicate that this system will give results that are, to say the least, comparable with the best that have ever been attained.

In regard to the question of furnace efficiencies, a great deal of work has been carried out by a few investigators on this subject, and it is generally agreed that furnace efficiencies are usually much lower than they ought to be. It will be interesting to consider for a moment where the heat generated goes to. I have some particulars that have been obtained from tests carried out on the usual type



Single Oven Furnace.

of furnace on full work. The amount of heat usefully employed amounts to about 5.0 per cent. Of the remaining 95.0 per cent. loss, 15 per cent. is lost from the door, 50 per cent. of the heat passes away to the flue, and 30 per cent. escapes as radiant heat from the furnace

Arch Type Tunnel Burner.

walls, etc. There is room for much improvement here. The efficiency of the furnace falls with increased temperature. It is interesting to note that where the temperatures in the

Impact Type Burner.

furnace are high enough, furnace efficiencies may be very considerably increased by transferring most of the flue heat losses to the ingoing air by means of recuperators or regenerators. Figures prove that our equipment, known as the "Surface Combustion" equipment, gives much better results than the other non-recuperative furnaces. The reasons for this will have been gathered in the earlier part of this paper.

The efficiency of the Soft Metal Melting Furnace, in which printers' alloys are melted, is generally higher than the efficiency of an oven furnace. So far as our equipment is concerned its efficiency depends on the amount of metal melted in the furnace. The gas consumption curve does not rise so rapidly as the output of metal. It is therefore advisable that the size of furnace installed should be suitable for normal output. There is always a tendency to supply one suitable for maximum output. This means lower efficiencies and higher costs of melting when the furnace is working under normal load. I saw a well known make of gas fired rivet heater working the other day, and it was taking over twice as much gas as we were prepared to guarantee in our smaller furnace. The furnace must be made to fit the job, and not the job made to fit the furnace.

The following is the type of gas consumption figures we give: "A 21¾ in. diameter pot will be heated up in an hour on 320 cubic feet of your gas, and would require 40 cubic feet per hour to maintain the metal in a molten condition. The gas consumption for various outputs would be as follows:—4 cwts. per hour, 85 cubic feet; 6 cwts. per hour, 105 cubic feet; 8 cwts. per hour, 120 cubic feet. The burners are so arranged that the gas consumptions can be varied between 35 cubic feet and 350 cubic feet per hour without interfering with the proper proportioning and mixing of the air and gas."

There is no necessity for me to enlarge on the saving in gas consumption to be made by using the equipment I have described. Those already using gas fired furnaces can compare these results with their own. Those thinking of using gas can compare them with the results obtainable from other systems.

Price of Newspapers.

Sir William Berry presided last week at the annual dinner of the Associated Wholesale Newsagents, Ltd., and Sunday Newspapers Distributing Association, held at the Holborn Restaurant. Mr. P. W. J. Surridge stated that the wholesale newsagents distributed 25,000,000 newspapers every week, the majority being in and around London.

Lord Riddell, replying to "The Proprietors and Publishers," submitted by Mr. Arthur Martin, said he sympathised with the suggestion of keeping up the prices of newspapers, and thought that the newspaper trade had for too long produced publications at uneconomic prices. (Hear, hear.) It would be lamentable if they returned to past unfortunate conditions. (Hear, hear.)

H.M. CHARGE D'AFFAIRES at Santiago, Chile, in a recent dispatch to the Department of Overseas Trade, calls attention to the importance of United Kingdom firms interested in Chilean Government contracts keeping the various Government Departments in that country supplied with copies of their catalogues and other trade literature. The Chargé d'Affaires writes as follows:—"American and Continental firms are constantly forwarding catalogues, reviews, calendars, framed photographs, etc., of their products to the different departments of the Chilean Government, whereas only a very limited number of catalogues of British products are to be found in these offices. Such publications are regarded as convenient and handy sources of reference and are largely consulted in the Government Departments concerned. These Departments, when calling for public tenders, on different occasions adopt certain models shown in the catalogues they have studied, and for this reason it would be to the interest of British manufacturers to keep these Departments supplied with catalogues printed, if possible, in Spanish and showing metric weights and measures." A detailed list of Chilean Government Offices and State Institutions who are stated to be open to receive catalogues from British firms interested in supplying materials required by these Departments is on the file at the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, to whom enquiries should be addressed (quoting reference No. 7202/F.L./G.C.).

THE man who wins is he who holds on until he can hold on no longer—and then doesn't give up.

Readers' Pensions Committee.

Annual Meeting Reports Progress.

The annual meeting of the Readers' Pensions Committee was held at St. Bride Institute on Saturday last, when Mr. W. A. Perkins (chairman) presided over a good attendance.

A large number of new members having been elected, the annual report was submitted. In this gratification was expressed at the success attending the annual dinner, and tribute was paid to the work of Lady Hulton, who presided on that occasion. The committee were enabled during the year to complete their 15th pension, which has been named the James Feldwick Pension, in recognition of work on behalf of the cause by the late chairman of the organisation.

The balance sheet showed that £509 had been paid towards the establishment of pensions, making a total of nearly £7,000 invested with the Printers' Pension Corporation for the endowment of pensions in the interests of printers' readers and the widows of readers.

The report and balance sheet were adopted.

Officers were re-elected as follows, the name of Lady Hulton being added to the list of vice presidents: President, Viscount Burnham, C.H.; vice-presidents—Sir William Berry, Bart., Sir Arthur Conan Doyle, Viscount Hambleden, Cecil Harmsworth, Esq., M.P., Sir Anthony Hope Hawkins, Frank Lloyd, Esq., Sir Henry Lucy, Sir Frederick Macmillan, Lord Montagu of Beaulieu, John Murray, Esq., C.V.O., J.P., Sir Frank Newnes, Bart., Viscountess Rhondda, Lord Riddell, J. St. Loe Strachey, Esq., Sir William Treloar, Bart., Sir G. Wyatt Truscott, Bart. Chairman, Mr. W. A. Perkins; trustees, Messrs. J. Chandler and J. Randall; treasurer, Mr. J. Hood; secretaries, Messrs. P. J. Greene and H. M. Gurr; hon. collector, Mr. J. H. Bedford; executive committee, Messrs. A. C. Cook, W. Kemp, J. A. Goodall, C. G. Atherton, E. A. Groves, H. C. Golding, G. J. Warne, and C. J. Tyrer.

Mr. J. Cannon, in view of the fact that the committee were now starting upon the establishment of their 16th pension, suggested that the time had arrived when they should mark their appreciation of the great work which had been, and was being, done on behalf of their trade institutions by the chairman. He therefore proposed that the new pension should be called the "W. A. Perkins Pension."

Mr. J. Chandler, who seconded, spoke in glowing terms of the efforts made by the chairman, as did also Mr. H. M. Gurr, who supported the motion, which was carried by acclamation.

Mr. Perkins, in reply, said nothing would please him more than to have his name associated with one of the committee's pensions, and he thanked the members for the honour they proposed to confer upon him.

Trade Notes.

MEMBERS of the Printing and Paper Workers' Union employed by Messrs. Thomas de la Rue and Co, Ltd., printers and manufacturing stationers, Bunhill row, E.C., ceased work on Thursday, owing to the employment of non-union labour. About 900 workers are reported to be affected.

MESSRS. KELLY'S DIRECTORIES, LTD., the proprietors of the well-known Kelly's Directories—a business which was recently acquired by Sir William Berry, Mr. Gomer Berry and their associates—have acquired the business of Messrs. Iliffe and Sons, Ltd., which consists of the Cornwall Printing Press in Stamford-street, and about eight trade publications.

WE understand that already a large number of members have intimated to the secretary of the London Master Printers' Association their intenlion of being present at the annual meetings of the Federation of Master Printers in London in May. The attractive programme is arousing considerable interest throughout the country.

THE Association of Master Printers of South-East London holds its eighth annual general meeting at the Bridge House Hotel, London-bridge on Tuesday next. Business from 6 to 7 p.m. is to be followed by music and refreshments.

THE North London Master Printers' Association are to hold a bohemian concert, with refreshments, at the Central Library Hall, Holloway-road, N,, on Wednesday next, commencing with a reception at 7.30.

THE S.S. "British Trade," which is being fitted out in order to re-awaken the Overseas markets' interest in English goods and merchandise by a 41,000 miles world tour, will sail from the Thames during the first week in June.

COST OF NEWSPAPER PRODUCTION.—At a meeting of the Midland Federation of Newspaper Owners held in Birmingham on Monday last, under the presidency of Lt.-Col. A. H. Moody, C.B.E., of Stourbridge, a resolution was passed unanimously expressing the view that with the continued high cost of newspaper production, it was impossible to reduce either the rates for advertising, or the selling price of newspapers. It was stated that the cost of producing newspapers at the present time is 180 per cent. above the cost in 1914, and that in no case had the increase in either selling prices, or in advertisement rates been commensurate with this figure.

NEARLY all the principal volumes sold on Tuesday at the Britwell Court Library dispersal at Southby's are to go to America, Dr. Rosenbach, of Philadelphia, buying most of them for sums ranging from £250 to well over £1,000.

THE Westminster Choral Society will give a concert at Queen's Hall on Tuesday, April 10th, to aid the special fund which is being raised in connection with the Prince of Wales's chairmanship of the Diamond Jubilee dinner of the Newspaper Press Fund on May 10th.

THOSE concerned with the export of printers' metals and allied supplies to the Continent should note the International Metal Industries Exhibition, which is to be held in Ghent, Belgium, from June 1st, 1923, to the end of October. This exhibition will be fully representative of every branch of the metallurgical industry, and is officially promoted by the Belgian Government, with the object of furthering inter-allied trade.

RUSSIAN IMPORT PROHIBITION.—Importation of the following articles into Russia has been temporarily prohibited by order of the Supreme Council of National Economy: Printing industry—ink of all kinds and for all purposes (liquid and in powder); inks for stamps and pads; typewriter ribbons of all kinds (ordinary, copying and hectographic); office paste, and liquid gum arabic.

PRINTED MATTER FOR VALLADOLID.—Following the petition drawn up by the Chamber of Commerce at Valladolid, the Spanish Government has decided that printed books and musical works addressed to Valladolid per the postal service, will be subjected exclusively to the payment of the ordinary Custom dues, the legislation which prohibits articles liable to the Customs' tariff being sent through the post not being applicable to that town.

THE members of the *Daily News* and *Star* Guild of Managers and Overseers dined at the Holborn Restaurant on Saturday evening, the occasion being a ladies' night.

THE late Mr. John Mayor Napier, paper ruler, Edinburgh, left £4,756.

THE late Mr. Geo. B. Radford Welch, of Birmingham, founder of the Radford Press Agency, now absorbed by the Press Association, left £4,967.

GERMAN GIRLS' APPEAL.—Pencilled in German on a scrap of paper and enclosed in a copy of a German technical periodical sent to the offices of this journal, we find the following naïve appeal: "German greetings are sent by Misses Neumann, Trauter and Buttner. We should be very glad if we could get from England a few hundred dollars, as we are very poor and want to marry, but unfortunately—no money. So please?!—With greetings, Three German Girls." (Address of a German printing firm follows.)

TUCK'S POSTCARD COMPETITION.—We are informed that with the near approach of the close of Messrs. Raphael Tuck and Sons' great postcard competition the number of replies that are daily being received from competitors is continually increasing, the last few days having contributed by far the highest number on record. There is a big response to the opportunity provided for protest against the restriction on ½d. postcard postage. Those who have not yet given a hand in the matter have still time, before the close, to assist the competition to a triumphant conclusion.

Lancashire and Cheshire Alliance.

Master Printers' Eventful Week-End.

Several very successful gatherings were held at Grange-over-Sands during the past week-end.

At an important meeting of master prinrers, Mr. R. A. Austen-Leigh, president of the Federation, delivered an address in which he touched on many problems which are now being dealt with by the Federation. He remarked that there were still labour questions of importance looming ahead, and said that the Contracts and Legislation Committee had a formidable programme. The question of the rating of machinery was one which particularly interested the printers in that area; postage was another important item, and he expressed the opinion that the postal rates on printed matter would probably be reduced at an early date.

Mr. A. E. Goodwin, Federation secretary, referred particularly to the work of the Joint Industrial Council, and pointed out that the constitution of the J.I.C. had been approved by both the employers' and the trade unions' federations, this rendering it imperative that employers and employees should do their utmost to put the Council into full operation. He alluded to the many points of agreement between the two sides, and stressed the advantage of securing the full weight of the industry when approaching Government departments. There were, he said, good reasons to believe that a further reduction in railway rates would soon come into effect, and he also stated that the Federation was well represented on the special inquiry now being carried out by the Employers' Confederation in regard to unemployment.

The social side of the proceedings was very enjoyable. In the bowling competition Mr. H. A. Bethell, the energetic president of the Lancashire and Cheshire Alliance, was successful in winning the first prize, and Miss Padfield won the first prize in the ladies' bowls competition. Mr. F. Rickett, junr., was first in the golf competition, with Mr. W. H. Andrew second. In whist, Mr. Glover secured first gent's prize, Miss Padfield being first in the ladies' section.

At the dinner, the toasts of "The Federation," "The Alliance," and "The Ladies" were in capable hands, and nearly 80 sat down to table

An excellent concert was provided on the Sunday evening and showed that exceptional musical talent exists among the printers and their families in this area.

An informal conference took place with representatives of the North Western Alliance, the president of the Federation being in the chair, and arrangements were made for strengthening the organisation in this scattered district.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

There was a good muster of members at the February meeting of the Association on Tuesday of last week at St. Bride Institute, Bride-lane, E.C.4, the chair being occupied by Mr. H. Milton (president), supported by Mr. J. Fleming (vice). At the close of some brief Association business Mr. E. J. W. Zaehnsdorf delivered an interesting address on bookbinding, in which he followed closely along the lines of his recent lecture at Stationers' Hall, under the auspices of the Stationers' Company and Printing Industry Technical Board. The former address was reported at length in our issue of February 15th.

After the confirmation of the minutes Mr. A. Cox (secretary) submitted several items of correspondence. Among these, mention was made that Mr. J. Lee, one of the oldest members of the Association, had just undergone an operation at Guy's Hospital, and that he was progressing favourably. The secretary announced that he had sent to Mr. Lee expressing the Association's deepest sympathy and a wish for his speedy recovery.

Owing to the difficulty experienced in former years in securing accommodation for the Association's annual dinners it was decided to leave the matter of fixing the date for this function for 1924 to the executive.

Thirteen New Members.

On the proposition of Mr. A. W. Sandilands, seconded by Mr. E. W. Tuff, the following were unanimously elected to membership *en bloc*:—Messrs. W. H. Edbrook (hon.) (reprentative), E. T. Marler; C. H. Griffis (blocking), R. J. Miller (cloth forwarding), G. A. Huxley (warehouse), Nevitt Bookbinding Co.; R. C. James (hon.) (inboard department), Oxford Press; W. H. Bevan (examining and despatch), H. G. Gawthorne (imperfection and stock), S. J. Hodgett (hon.) (blocking), S. Lambert (warehouse), A. Mountain (casemaking), A. J. Nicholls (forwarding), Greycaine Book Manufacturing Co.; S. E. Irons (general overseer), Kitcat, Ltd.; E. Cornwall (warehouse), Amalgamated Press, Gravesend.

Mr. Zaehnsdorf was next called upon for his lecture, which elicited from the members not only generous commendation for its fluent delivery, but full appreciation of the mass of expert knowledge contained in it. The general feeling of the meeting to this effect was voiced by Messrs. G. A. Eden, A. Cox, A. W. Hunt and others.

On the proposition of Mr. Milton a hearty vote of thanks was accorded to Mr. Zaehnsdorf.

An interesting exhibit of numerous specimens of bindings—from the earliest times to the present day—was on view and members took the opportunity of discussing with Mr. Zaehnsdorf the various methods employed in their production.

TO demonstrate our confidence and at the same time guarantee the efficiency of the

"Monometer" Melting and Refining Furnace

for Printers over any other system at present on the market, we have decided to place installations on a first payment of 25% of the price of same, and to spread the balance over a period of twelve months.

The "Monometer" Furnace never wears out.

"Monometer" Furnaces installed twelve years ago are to-day equal to new, and we have never had to replace a pot.

B. DELLAGANA AND CO., LTD., 11, Shoe-lane, Fleet-street, London, E.C.4. Dellanick and Steeletto nickel steel printing surface, block makers, etc.

DIRECT PHOTO-ENGRAVING CO., LTD., 38, Farringdon-street, London, E.C. Photo etchers, artists, designers.

FLEET FOUNDRY, 91, Blackfriars-road, London, S.E.1. Electros and stereos.

G. H. MADDIN AND CO., LTD., 10 and 11, Middle-street, Aldersgate street, London, E.C. Engravers, die-sinkers, cameo printing, embossing blocks.

MARSHALL ENGRAVING CO., LTD., 12-14, Farringdon avenue, London, E.C. Embossing and process engravers, artists and photographers.

MINTON AND CASEY, 1, Clerkenwell-road, London, E.C. Artists, engravers and die-sinkers.

W. MILES AND CO., 44, Houndsgate, Nottingham. Type-casting machines, engravers and cutters of oriental matrices.

JOHN SWAIN AND SON, LTD., 89-90. Shoe-lane, London, E.C. Photo engravers, designers and electrotypers.

ENVELOPE MACHINE MANUFACTURERS.

ROBERT BROWN AND CO., 119, Oakley-street, London, S.E.1. Engineers to the printing trade.

DAVID CARLAW AND SONS, LTD., 31, Finnieston-street, Glasgow. "Leader" envelope folding and gumming machine.

KRAFT (WATERPROOF).

HYDROLOID, LTD., 179 and 180, Upper Thames-street, E.C.4. Cables: "Hydroloid, London."

Manufacturers of Hydroloid Kraft. Superior to all Pitch Papers for Packing, Tyre Wrapping, etc., etc.

LOOSE LEAF SPECIALITIES.

WEBB, SON AND CO., LTD., Warwick House, City road, E.C.1. Cables "Relieur, Isling, London."

G. WELLS AND CO., LTD., 11, Bread-street-hill, E.C.4.

PAPER AND BOARDS.

HENRY FEATHERSTONE, 13, Whitefriars street, Fleet-street, London, E.C.4; Cables, "Fethpapmill, Fleet, London." Paper agent and merchant.

KAYE'S RUBBER LATEX PROCESS, LTD., 7-8, Great Winchester-street, London, E.C.2. Latex papers.

W. LUNNON AND CO., 59, Carter-lane, London. Paper merchants. Supply Lunco paper in colours and white.

J. AND J. MAKIN, 20, Mount-street, Manchester. Papermakers.

W. ROWLANDSON AND CO., LTD., 4, St. Paul's Churchyard, London, E.C.4. Book Paper Specialists.

VAN HUIDEN, Winschoten, Holland. Strawboards, corrugated boards, mill and leather boards, etc.

HYDROLOID, LTD., 179 and 180, Upper Thames-street, E.C.4. Cables: "Hydroloid, London."

Manufacturers of Waterproof, Oilproof Papers and Boards, Index Cards, Hydroloid Kraft, superior Wall Pitch Papers for Packing, Tyre Wrapping, etc., etc.

PAPER AND BOARDS,

HARRY B. WOOD, 201-5, Produce Exchange, Manchester. Boards, dextrine, leather, wood pulp and straw.

PRINTING TRADE VALUERS.

FRANK COLEBROOK, F.A.I., 146, Fleet-street, E.C.4. Telephone: Holborn 2288.

EDWIN W. EVANS, 150, Fleet-street, E.C.4. Telephone: Central 6678.

N. W. MCKENZIE, 114-115, Holborn, E.C.1. Telephone: Holborn 1805.

PAPER AND PRINTING TRADE PUBLICATIONS.

"BRITISH AND COLONIAL PRINTER AND STATIONER." Publishers: Stonhill and Gillis, 58, Shoe-lane, London, E.C.4.

The *British and Colonial Printer and Stationer*, founded in 1878, is published every Thursday. It has a large circulation among Printers, Stationers, Box Makers, Envelope Makers, Bookbinders, etc., whose interests are catered for by the publication of the latest improvements in machinery, new processes, labour and time-saving devices, etc. A strong weekly feature is its Commercial Intelligence The Quarterly Export Issues of the *British and Colonial Printer and Stationer* afford an unexcelled channel of publicity, seller being introduced to buyer with most successful results. Are you a subscriber? If not, why not? It is a good investment at a low price —13s. for one year (subscription 8s. 8d., plus 4s. 4d. postage). Send a remittance to the publishers, as above, at once.

"THE BOOKBINDER" forms a Monthly Section of the *British and Colonial Printer and Stationer*, and may be obtained for an annual subscription of 3s. 3d., including postage.

"WORLD'S PAPER TRADE REVIEW." Publishers: Stonhill and Gillis, 58, Shoe-lane London, E.C.4.

Anyone interested in the paper market will find a fund of information in the pages of the *World's Paper Trade Review*, established in 1879. Published every Friday, it gives particulars of Papermaking Machinery and Processes, Current Prices of Raw Materials, Market Reports, Interviews with Leading Men associated with the industry, Commercial Intelligence, etc. It surveys the whole field of the paper and allied industries at home and abroad. Become a weekly reader by remitting 32s. 6d. (subscription 26s, plus postage 6s. 6d.), to the publishers. There is no better medium for advertisers, as, to quote one of many testimonials: "We have found your paper at every mill with whom we are doing business, both here and on the Continent."

PLANT AND MACHINERY.

Taylor and Watkinson, Belgrave Foundry, New Briggate, Leeds. Leads and clumps.

MISCELLANEOUS.

Algraphy, Ltd., Philip-road, Peckham, London, S.E. For aluminium or zinc plates.

Cash and Clare, 75, Great Eastern-street, London, E.C.2. Gold blockers, embossers, Show card and seal makers.

Eason and Son, Ltd., Dublin. Commercial indexes, "File" indexes, "Systems" indexes.

London Paste Co., Arlington-street Works, New North-road, London, N. Paste for printers and stationers.

Pollard and Wilson, 25, Manchester-street, Liverpool. Calico post bags. Write for specimens.

Approved "Firms' Own Announcements" may be inserted under the above or other headings in our Export Issues, the additional space occupied being charged at special advertising rates to be obtained on application to the Publishers, Stonhill and Gillis, 58, Shoe Lane, London, E.C.4.

News-Print Records.

Latest Canadian Statistics.

Final figures are now available for the year 1922 to enable a comparison of the news-print situation in Canada to be made with that of previous years. The total news-print production of the Canadian mills during the past year amounted to 1,086,551 tons, the largest in the history of the industry in the Dominion. This shows an increase of 275,000 tons over 1921, or 34 per cent., and nearly 211,000 tons over the high record up to that time of 875,696 tons produced in the year 1920. As compared with the total for the year 1917 of 689,847 tons, there is an increase of no less than 55 per cent.

The export figures are equally satisfactory. For the year 1922 these amounted to 959,514 tons, which shows an increase of 150,000 tons over the year 1921, or 35 per cent. Comparison of the total for 1922 with the total production shows that Canada in the past year exported over 88 per cent. of all the news-print it manufactured, retaining just a little over 11 per cent. for domestic requirements. This shows a slight increase over the proportion exported in 1921, which was slightly over 87 per cent. It is anticipated that with the comparatively small growth of news-print demands in Canada, the percentage of exports to production will rise steadily, and soon exceed 90 per cent. Out of the total exports in 1922, 887,835 tons went to the United States, 33,693 tons to Australia, 12,029 to New Zealand, while the remainder was divided mainly between Great Britain and South America.

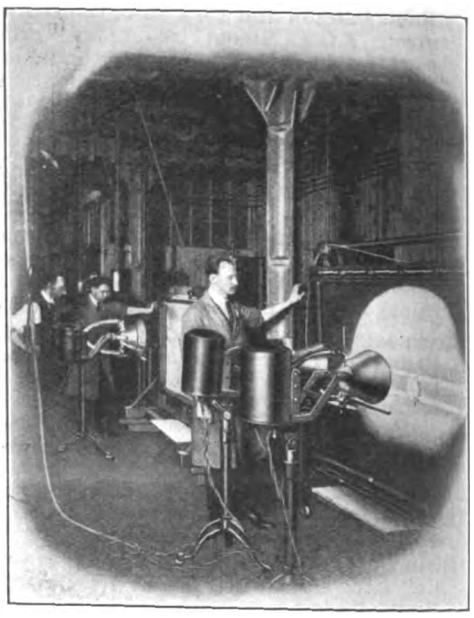
What is Meant by "Step-and-Repeat"?

By FREDERIC T. CORKETT, F.R.P.S.

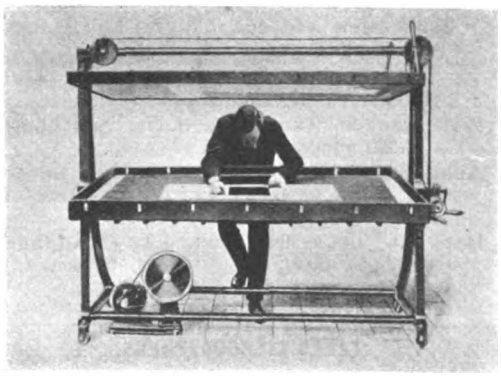
To produce any subject in multiple series—as in the case of labels and the like printed in large sheets and cut afterwards—there are numerous ways of procedure which could be reasonably described as "step-and-repeat" methods. Even to space out duplicate formes of type by hand with the use of a foot rule might come within the category. But in the "Lithotex" process, which has made the term "step-and-repeat" familiar, something very different is connoted, and it may be worth while to clear away some confusion that seems to exist on the subject. The "Lithotex" process is a method of obtaining a negative of a subject in multiple repetition, which negative, or "multi-negative," can be printed by artificial light on to a metal plate,

The "Lithotex Step-and-Repeat" Machine.



the metal plate so made being adapted for use either in typographic printing or lithographic printing (offset or direct). And, be it noted, this process cuts out all stereotyping or plate duplicating as done in typographic printing, and eliminates also all transferring, as is usual in lithographic printing. Further, it should be noted that original plates in multiple series are produced and that consequently impressions from these original plates are of higher qualities than such secondary impressions as are obtained from transfers, stereos, etc. Moreover, and more important still, register—*i.e.*, the fitment of one printing colour to the other—is necessarily very much more exact than can be obtained either from a multiplicity of blocks, all specially mounted and generally of varying heights, or of transfers placed down by hand. These points are denied by no one. Really it would be futile for any one to say that older methods of obtaining register can equal the mechanical precision obtained by the patent "Lithotex" appliances.

But to describe the process, one must start at the beginning. In the first place you photograph your original, that is, you make a negative of whatever you are requiring—letterpress, design, drawing, map, portrait or any illustration either in monochrome or colour—and you make this negative by the aid of "Lithotex" metal cameras. "Why Lithotex cameras?" Because "Lithotex" metal cameras yield images that are dead square and in exactly correct proportion to the copy. Other cameras can be made to do this, but with "Lithotex" cameras you cannot very well do otherwise. In the "Lithotex" method the copy is illuminated by special arc lamps, and when you get used to copying work with "Lithotex" lamps, which throw a magnificent pure white beam of light, you will need no one to tell you that there is nothing else better. Having made your negative, therefore, you proceed to make a positive therefrom; the positive is retouched and is then ready to be taken to the "Step-and-Repeat" machine. What this machine does is to make a large negative (any size up to 31 ins. by 22 ins.), which can be made up of just as many images as required, for it is from these stepped-up negatives that one prepares a printing plate. Let us suppose our job is a two-colour label, say in black and red. We have made our first multi-stepped-up negative of the black plate, and now we have to make the negative for the other colour with the same number of images. All we have to do is to place the second plate in the "Step-and-Repeat" machine, and with the same mechanical movements the second plate is made in just the same manner as the first. (Sounds simple, does it not? And it is indeed simplicity itself; only, of course, demanding exactness, patience and a close following out of instructions.) Now, with our two multi-negatives, in each of which we have, say, 40 images of our label, one multi-negative of the red and one of the black, our next operation is still simpler, for all we have to do is to pour some solution (which anyone can make up in a few minutes) on to a metal plate and dry it in a drying machine. This being done—and ten minutes or so will be all the time necessary—the metal plate is placed in the "Lithotex" printing frame, the negative on top of the sensitive surface, and is tightly secured, and when the proper operations have been concluded (namely, merely exposing the negative on top of the metal in front of the "Lithotex" lamps and rolling up the plate so exposed with ink, followed by the washing off of the solution), the printer finds himself with a wonderfully clean and crisp lithographic image to print from, an image which can be printed from direct or by offset, yielding a wonderful result in monochrome or colour. This is the real revolutionary process which is making such headway as to be the talk of the trade.



"Do the plates last?" you ask. An extract from a recent letter which I have received will serve as an answer: "I see no reason why I should withhold from you the output from our 'Lithotex' or 'Printex' plates. Our record is over 500 reams. Our average, with conditions absolutely satisfactory, is about 200 reams. On a single-colour machine (when properly tuned up) there is no reason why 300 reams should not be obtained. In the above remarks I am referring to offset machines." Just think of 250,000 runs from one photo-litho metal plate!

"Are the multi-negatives exact?" Well, you can scarcely look 50 yards in any direction without seeing around you impressions produced by the aid of "Lithotex" plant—match box designs, cigarette wrappers, soap cartons, tin labels, stamps, cheque tints, playing cards, show cards and printed wrappers, with all kinds of illustrations and designs. Now, if the "Lithotex Step-and-Repeat" machine could not give exactness, this flood of work everywhere over England would not be in existence.

A good deal of misunderstanding or misrepresentation has existed at various times regarding "Lithotex." At first the workpeople objected to "Lithotex" mechanical methods. It was said that the "Step-and-Repeat" machine would throw out of work many artists and transferrers. As a matter of fact "Lithotex," while undoubtedly displacing a certain type of craftsman, makes a place for others, and results have proved that in the end more printers are required and more printing machinery is needed to cope with the larger amount of work printed, so that it really creates more labour than it displaces. Then, again, vested interests were busy. Would-be competitors suggested that this or that appliance, though "very good, you know," was very expensive, the process being thus "damned with faint praise" by those who had nothing of equal merit to suggest as an alternative. The very latest phase of opposition is to tell the trade that anyone can do step and-repeat work. Whilst this is true, if one uses the term "step-and-repeat" in its widest application, printers should note that the patented "Lithotex Step-and-Repeat" methods are the results of very many thousands of pounds spent in investigation and development, and they involve apparatus which is thoroughly protected from being copied by others. There is not a detail but has been carefully tested with all the available skill of experts of the process world in consultation. To-day "Lithotex" is a well-tried-out method, and is backed up by expert craftsmen, advisers and helpers, whose standing is such that the printer who deals with the company concerned (Pictorial Machinery, Ltd), can be assured that he is in touch with workers who are real specialists in material and plant for the graphic arts.

"Lithotex" Lamp and Frame in Use.

Using the "Lithotex" Printing Frame.

BRITISH INDUSTRIES FAIR.—An impression of the stationery and printing section of the British Industries Fair, given in the *Board of Trade Journal*, is as follows: "Business rather quiet, but certain firms express themselves as highly delighted with the orders taken. Among the markets in which new customers have been secured are Canada, the Netherlands, and Portugal." It is also announced that a firm exhibiting in the stationery section secured a £1,000 order as the sequel to inquiries made by a new customer at the 1922 Fair.

REPORTING on the Scottish paper trade, a Glasgow correspondent states that paper-makers are experiencing a good export demand for India, Australia and New Zealand. Some new lines—previously the monopoly of foreign rivals—have been developed with satisfactory results. These include kraft wrapping papers, box boards and cigarette papers. Something is hoped for also from the "bread-wrap" idea—an effort to ensure that every loaf of bread sold over a baker's counter is only handled outside a paper covering.

Rubber Latex in Paper.

A further patent has been taken out by Mr. Frederick Kaye in connection with the use of rubber latex in the manufacture of paper. According to this a small quantity of a solution alkaline sulphide is added to rubber, etc., latex before the latter is diluted and mixed with paper pulp in the process described in the parent Specification. On addition of acid to coagulate the rubber, etc., sulphur is deposited for the subsequent vulcanisation. With acid fibres, or paper sized with resin and alum, the addition of acid may be unnecessary. Sufficient sulphide to produce 1–2 per cent. sulphur calculated on the rubber content is usually enough, but quantities to produce 10 per cent. may be added.

Imports of paper into Russia during November reached 1,450 tons, valued at 374,000 gold roubles (calculated at 1913 prices).

A Photo-Typesetting Machine IN BEING.

Description of the Hunter Apparatus.

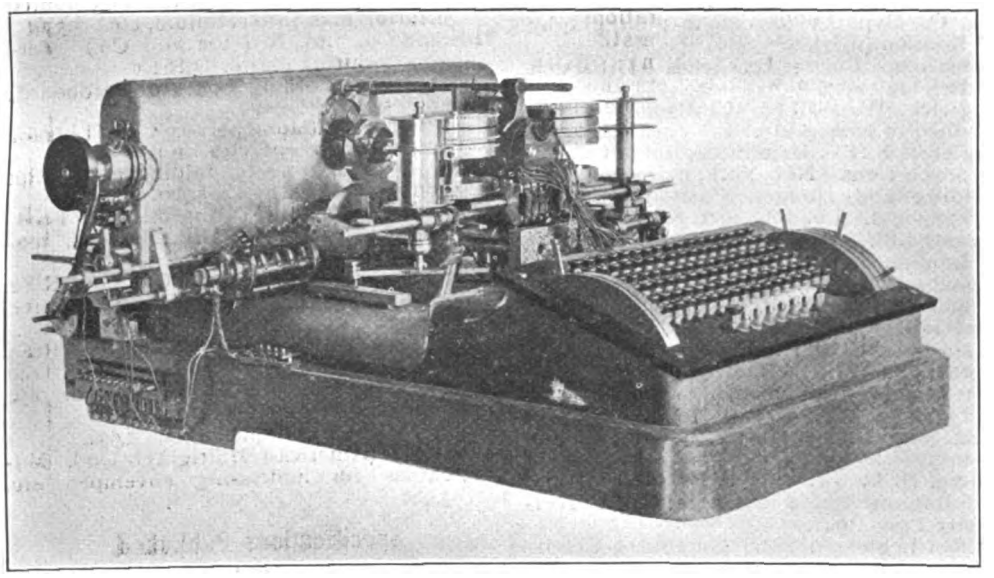

Photo-typesetting is undoubtedly one of the live subjects of the present moment, and no one knows what startling developments in this direction may at any time be announced. It is true that whilst some well-informed people—Mr. William Gamble is an outstanding example—think the project to be certain of practical development within a few years at most, there are others, whose opinions are also worthy of respect, who point to serious difficulties in the way of this development and maintain that there is no likelihood, for a long time at least, of the difficulties being surmounted. All, however, show a lively interest in such news as is available of attempts to solve the problems involved, and we are glad to be able to offer to our oversea readers and to those of our home readers to whom the matter is new, some definite information about the latest thing in attempted phototypesetting.

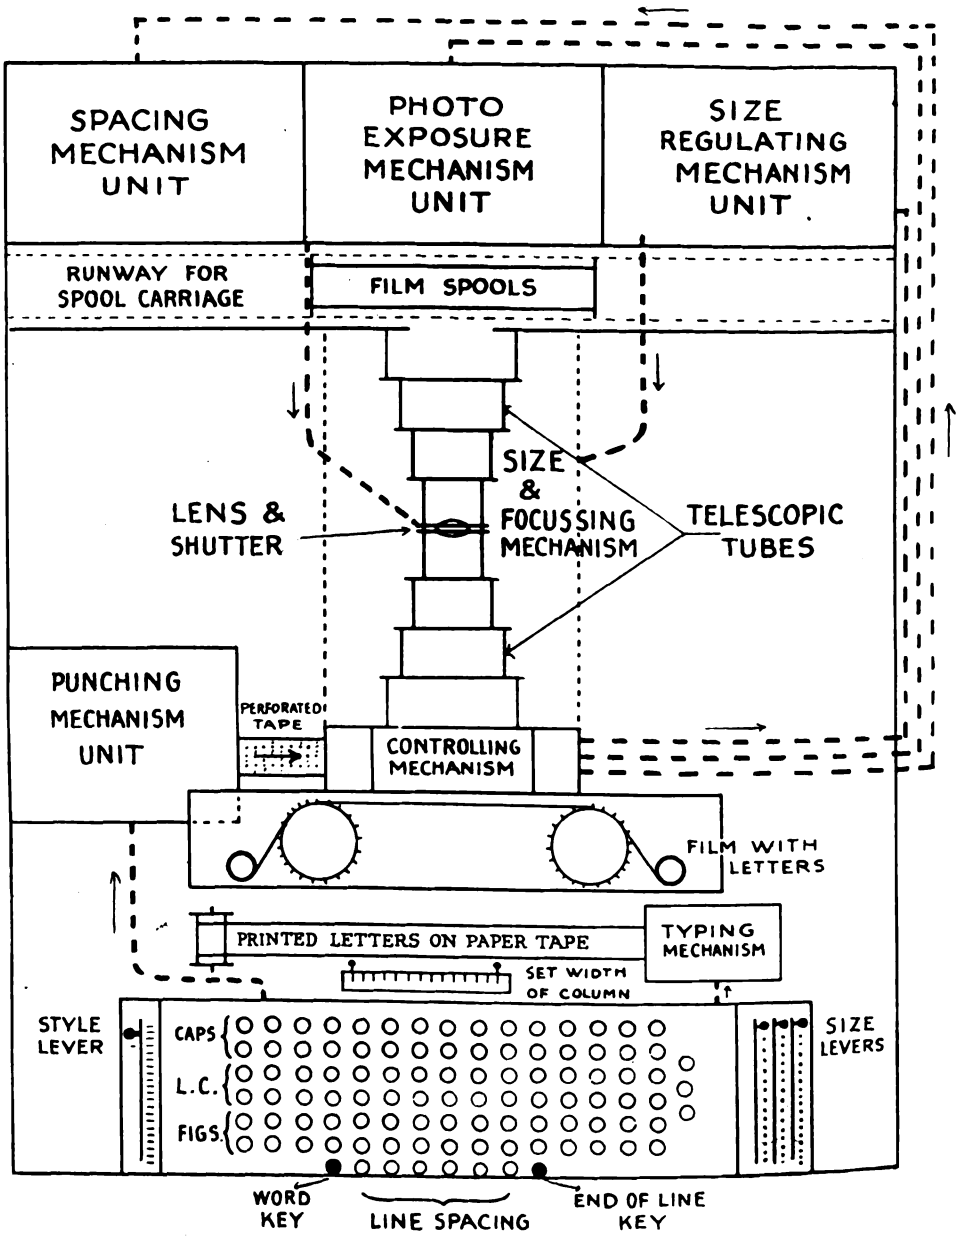
We have been aware for some time that Messrs. Hunters', Ltd., the well-known London printers' suppliers, had a most interesting machine in course of construction, but the inventors have avoided publicity. An Edinburgh printer, however—Mr. W. B. Hislop, of the firm of Hislop and Day, Ltd.—has now been favoured with a personal exposition of the new apparatus, and we are indebted to him for the following particulars and illustrations.

It would be attempting an impossible task, says Mr. Hislop, to try to explain the construction of the machine, because the combination of electrical, magnetic and mechanical devices, which alone make the machine possible, are so unusual that there is no machine in use at present with which to compare its construction. Let me first state clearly that I did not see this machine actually doing the work, nor did I see any work that it had done, but I did examine very carefully the operation of the various parts and the manner in which they work together so wonderfully, and I feel satisfied that the machine is on thoroughly sound lines.

The machine (see illustration) is about the width of a monotype keyboard, but extends perhaps some two feet further back. The attention which the machine will require from the operator will be to change the spool of sensitive film (which is done in exactly the same manner, by daylight, as in the popular Kodak) and to renew two spools of paper tape when they run out. These are the only operations which necessitate his rising from his seat in front of the keyboard, whence all the other working of the machine is controlled.

The keyboard carries six rows of alphabet and figure keys, the two top rows being caps, the two middle rows lower case, and the two bottom rows figures, etc. Below these is a row of six white keys which control the space between the lines, and so give the effect of "leading" in ordinary typesetting. At each end of this line of white keys is a red key, and there are several other keys for the correction of errors, rules, tabulating, and so on. On the left of the keyboard is a lever moving in a quadrant marked in numbers up to 30, and the mere setting of this lever brings any one of *thirty different styles* of letter into operation. On the right of the keyboard is a similar quadrant but with three slots and levers, and by setting these levers to numbers any size of any of the 30 styles, from 96 point to 6 point, 90 sizes can instantly be utilised. If these two points are realised in practice, they at once completely outdistance any method of mechanical typesetting, and I am satisfied that the second point has already been achieved. Above the keyboard is another graduated scale by which the width of line or column can be set, or instantly changed.

The Hunter Photo-Typesetting Machine.



Assuming that the sensitive film has been inserted and the machine is ready for work, the operator sits down at the keyboard, switches on the electric current, sets the width of the column, then the style, and the size levers, and proceeds to press the keys bearing the letters in the correct order. At the end of a word he presses the left-hand red key; when there is room for only eight more letters a bell rings, so that he can decide where to make his break, and after pressing the key for the last letter to go in that line he presses the right-hand red key, and gets on with the next line. Justification and all the little problems concerning the width of the various styles of letter are automatically attended to by the machine before the letters are registered in the sensitive film.

Suppose the operator has a feeling that he has pressed a wrong key, or transposed two letters, he looks at the paper tape running just above the keyboard and sees typed in block letters, exactly similar to the strips of paper pasted on our telegrams nowadays, all the letters he has just pressed, and can locate the error. He finishes the line and returns to the error, holds down the "error" key, and presses the *wrong* key again. Then he releases the "error" key and presses the correct key, and leaving the machine to do the rest, he goes on with the next line.

Only an outline of the sequence of the automatic operations thereafter performed by the machine can be given, but it really does these things, does them accurately, and, perhaps most important, does them by mechanism which cannot be upset by wear.

The operation of the keyboard does three things at one time; it operates the telegraph-like instrument which prints the letters on the visible paper tape, it actuates a remarkable calculating device connected with justification, and it also operates an electrical punching mechanism which records, as perforations in another paper tape, all the data as to the particular letter, style, size, number of words, and other particulars, as well as any corrections. The width of this tape is about one-third that of the monotype, but the mechanism it is used to operate is electrical, not pneumatic.

The "master" or photographic matrix if

Digitized by Google

we may call it so, consists of all the letters in all the styles disposed in three rows along a celluloid film about thirty feet long, each style occupying 14 inches and consisting of transparent letters about 24 point size on an opaque background. The film "master" is wound between two spools mounted on a platform which has a rising and falling motion to bring any of the three rows exactly into the optical axis of the photographic lens, and a small but powerful electric glow-lamp is housed in front of the film, so that the light passing through the transparent letters is sharply focussed on the sensitive film at the back of the machine. These spools are continually tending to revolve in opposite directions and so keep the the film taut, but by means of magnetic clutches either of the spools can be instantly locked to its driving member so that the film winds up on that spool unless controlled. Between the two spools are two sprocketed drums containing a very simple but extremely ingenious electrical control by which their rotation can be controlled in accurate steps corresponding in the right-hand drum to the spacing between the centres of the letters on the film, and in the left-hand drum to the space between two styles. These drums, by means of the little cogs on their surfaces which engage in perforations in the film similar to cinematograph film, control the movement imparted to the film by the varying pull of the spools.

In addition to the three rows of transparent letters, the film has an upper area containing perforations which express the width of each letter or symbol on it, not as one measurement but as two halves. Above the little lamp housing is an electrical contact box which is operated by these perforations in the film, translating the perforations into electrical connections which actuate the spacing and the justifying mechanism. Into a similar and co-related contact box passes the *perforated paper tape*, and between them these two little pieces of apparatus perform something which, if we judge by results, looks very like thinking and remembering. It is important to grasp the point that the perforated paper tape is the link between keyboard and the photographic mechanism.

The method of justification is very simple, but would not ordinarily be considered as a mechanical problem. The machine takes the distance between the last letter (*i.e.*, when the right-hand red key was pressed, and the distance set as the end of the line, or width of column), divides that distance into as many equal parts as there are words in the line, or rather as many times as the left hand red key has been pressed, adds that fraction on to the normal space, and, as the photographing proceeds, moves the carriage carrying the sensitive film that amount whenever it comes to a space in that particular line. The distance moved between each letter in a word is measured as the distance between the centres of the two letters, and as the perforations above the letters on the master film express the width of what would be the type body in two halves, so this mechanism, working from the centre of one letter just photographed, adds the second half of its width to the first half of the width of the next letter, and obtains the correct spacing by moving the film carriage that distance.

As the unit distance of the mechanism which moves the carriage is 1/1000th of an inch, and, like the other essential parts of the machine, is unaffected by wear, the accuracy of spacing should be at least equal to present standards, though this is a point which can only be proved by actual results, as so many factors enter into the problem.

The automatic sizing and focussing system is quite unique, and to one who knows just what is involved in really accurate sizing in the ordinary way, it was almost uncanny to set a pointer to the size desired, and see the lens and copy move rapidly to their exact mathematical positions and clamp themselves there.

All these various, and apparently highly complex, operations are controlled by electric circuits which are made and broken by the perforations in the film and the perforated paper tape, but the actual work is done by power supplied by a small electric motor beneath the machine.

The supplies required by the machine in use would be sensitive film, paper tape, and a small amount of electric current. There would be also the chemicals used in developing and fixing the negative film, ready for printing down on the machine-plate.

The machine is built on the unit system, so that any unit which may give out can be replaced almost as easily as pushing home the plug connecting an electric radiator. Each unit circuit is connected with a small tell-tale lamp on the keyboard which gives warning as to which part is at fault should anything go wrong. Though this machine will be capable of doing so much more than the existing typesetting machines, it is not nearly so complex from a mechanical point of view, and, whilst the combination of the electrical and mechanical devices is new, and covered by a number of patents, the devices in themselves are well known, and in wide use.

The machine is all-British, being entirely conceived and designed by Mr. E. Kenneth Hunter and Mr. J. R. C. August, his brother-in-law. It has no name as yet, but Messrs. Hunters, Ltd., have the sole manufacturing and selling rights for Britain, and the selling price will be £1,100. All the patent rights for this and other countries are held by the A.H. Development Syndicate.

Posting Circulars Abroad.

In reply to a question by Mr. Pennefather regarding British persons and firms who, in order to save money, have posted abroad circulars to be delivered in the United Kingdom, Mr. Chamberlain, in a written reply, says: "A considerable number of circulars have recently been posted in the manner described by the Free Church Touring Guild, Memorial Hall, Farringdon street, and a very large quantity of circulars were similarly posted during the autumn of last year by the Church Travellers' Club, 112, Beaufort-street, S.W. I am aware that the practice referred to occasionally leads also to the printing of the circulars abroad, to the disadvantage of employment in this country, and I am considering the possibilities of legislation upon the subject."

Printers' Pension Corporation.

Enlightening South-West London Master Printers.

Mr. Joseph Mortimer, secretary of the Printers' Pension Corporation, attended the meeting of the South-West London Master Printers' Association on Wednesday of last week, at the Westminster Public Library, and discussed with the members in an informal manner the work of the Printers' Pension Corporation. Mr. J. D. Wise, the president, was in the chair, and extended a welcome both to Mr. Mortimer and to Mr. A. Langley (vice-president of the L.M.P.A.).

Mr. Mortimer began by answering questions put by the chairman, and mentioned that the Corporation made no distinction between trade unionists and others. With regard to the admission of candidates from small houses, candidates came from all sorts of offices, and the system of election was quite democratic. The smaller houses being now organised, it followed that they could bring voting power to bear on a particular candidate.

Mr. Mortimer went on to describe the origin of the institution, and emphasised the fact that it was based upon thrift. No man or woman could obtain a benefit of any kind from the Corporation without having subscribed during his or her working days. For a subscription of a penny a week the widow of a man might become entitled to a pension, and an instance was quoted from last year's records where 13 subscribers, who had contributed among them an aggregate of £150, lived to receive from the Corporation no less than £5,700. These liberal grants, of course were only possible because of the generous contributions of the benevolent public, which augmented the modest subscriptions of the workmen. The Corporation provided a neutral ground for masters and men to join together in helping their less fortunate brethren.

In homely language Mr. Mortimer told a very fascinating story of a visit he received many years ago from an old gentleman in poor attire, who, although he had the appearance of not possessing a penny, handed to Mr. Mortimer a bank-note for £100, and subsequently lived on starvation diet and in a single room in order that he might contribute hundreds of pounds to the Corporation.

The printing industry had got in hand the most wonderful institution that any industry possessed throughout the world, added the speaker. Moreover it belonged to the industry, and therefore it was the concern of the industry to maintain it in its present state of efficiency. A permanent pension cost £400 to establish.

Mr. A. Langley appealed to the small printer to support the institution. Out of 1,100 master printers who belonged to the London Association he ventured to say that 700 of them had never contributed to the funds of the Corporation. Mr. Langley was anxious that local associations should establish pensions under their own names. It might be possible to pool the subscriptions and take credit for the pensions in turn.

Mr. Hedger, a member of the Corporation Council, spoke of the work from the administrative point of view, pointing out that the members of the council undertook the work as a labour of love and with the desire to benefit their fellow-workers.

A number of questions were raised with regard to the voting power and the possibility of scattered votes not being used. This danger, however, was overcome by the bloc vote. For instance, a certain number of votes were allocated to the L.M.P.A. for the amount of money subscribed through that agency, and every member had a right to ask for a section of these votes if he was interested in a particular case.

Mr. Mortimer intimated that subscribers took full advantage of their voting papers, and at headquarters they would not get an average of five sent to them out of the hundreds of thousands that existed. This, he thought, showed that the Corporation was a live institution.

Mr. Wise, Mr. Simnett and other speakers expressed appreciation of Mr. Mortimer's address, and as an outcome of the interest he had aroused it was agreed, on the motion of the president, that a meetiug should be called at the earliest moment with the object of taking steps with a view to more active co-operation in the founding of District Association Pensions.

Direct Paper Supplies.

Master Printers and Wholesale Stationery Houses.

The question of the direct supply of paper by wholesale stationery houses to consumers has been receiving the earnest attention of the Federation of Master Printers. It has been a subject of grievance among the rank and file for some time, but now the organisation is going into the facts more closely. Attention is directed to the matter in the current issue of the Members' Circular.

For a long time past, it is stated, there has undoubtedly been cause for considerable dissatisfaction on this score, with the result that a committee was appointed to make inquiries and to take such steps as it considered advisable to put an end to this system of trading, which bears very unfairly upon printers. The committee met on several occasions, and eventually decided to send out to all wholesale stationery houses a *questionnaire*.

The committee has since interviewed a deputation from the National Association of Wholesale Stationers, as well as representatives of one or two firms outside the scope of the Association.

The *questionnaire* to wholesalers was in the following terms:—

1. Do you confine your business to the trade only?
2. Do you in any circumstances supply direct to consumers?
3. If so, will you say if you supply consumers at the same prices as charged to the trade, or always quote consumers at a price that would allow a profit to the printer if the goods had been supplied through him?

Definition of "The Trade."

Several questions of definition arose in considering this subject. In asking the wholesalers if they confined their activities to the trade, the committee defined "the trade" as "genuine printers with an operative printing plant." The committee held that no objection could reasonably be raised to trade terms being given to manufacturing firms who used an operative printing plant, even if it was employed on specialised printing work only, but they considered that a distinction should be drawn between such firms and those who installed a printing machine for the purpose of claiming trade terms, and that a duplicating machine did not constitute a printing plant.

It was agreed that it was not practicable or desirable to disturb the custom of publishers receiving paper on trade terms, and that it would be necessary to make an exception in the case of public bodies; but that advertising agents should be excluded from the definition of "the trade." Another point that arose was with regard to wholesale firms sending samples of special lines to printers' customers, and it was agreed that no objection could be raised to this practice, provided that trade prices were not quoted.

The outcome of the committee's efforts must so far be considered satisfactory, it is added. Just now a communication is being awaited from the National Association of Wholesale Stationers, which, it is hoped, will clear up one or two points that have arisen during the discussions, and a list will then be compiled of all firms who have given an undertaking which the committee considers will afford the necessary protection to printers. It may be assumed that, if for any reason some firms have been unable to give the desired assurance at the time this list is compiled, they will hasten to have their names added to it. Members are asked, should any cases of direct supply by wholesale firms to consumers come to their notice, to advise the Federation secretary, so that the complaints may be considered by the committee.

Reference is also made in the Circular to unfair competition as the result of Government trading, which, it is pointed out, is a problem which cannot so easily be solved. Undoubtedly the efforts of the Federation to restrict the activities of the Stationery Office have had some effect, but there is still much to be done. The erection of a factory at Cricklewood, which, it is understood, is to be used for the production of official maps and Admiralty charts, is a striking example of Government trading. Although the competition from such a factory may not directly affect many members of the Federation, the principle involved is described as of such importance that it cannot be ignored. The Contracts and Legislation Committee are watching developments.

Overseas Paper Trade.

Some Interesting Calculations.

The *Board of Trade Journal* gives an interesting analysis of the overseas trade for last year, making comparisons at the pre-war values of 1913. Taking paper and cardboard imports, it is shown that the declared value of £12,374,000 in 1922 estimated at the average values in 1913 represents a figure of £7,371,000. The declared value of the imports in 1913 was £7,692,000. Index numbers are given for 1922 as compared with 1913 where 1913 equals 100. On this basis, the average value of paper and cardboard last year worked out at 167·9, and the quantities at 95·8. Imports retained are dealt with in a similar manner. The declared value in 1922 was £12,121,000 and in 1913 £7,415,000. Values in 1922 estimated at the average values prevailing in 1913 are put at £7,302,000. The index numbers for 1922 compared with 1913 are: average value, 166·0; quantity, 98·5. Much interest attaches to the statistics concerning the export of United Kingdom paper and cardboard. Under this heading the declared value in 1922 was £6,737,000 and in 1913 £3,679,000. The value in 1922 estimated at the average values in 1913 is placed at £3,401,000. Index numbers work out for 1922 as follows: average value, 198·1; quantity, 92·4. Exports of "foreign and colonial" paper and cardboard represent figures of much smaller dimensions. The declared value in 1922 was £253,000 and in 1913 £277,000. The value in 1922 estimated at the average values in 1913, works out at £69,000, while the index numbers for 1922 compared with 1913 are thus given: average value, 366·7; quantity, 24·9.

Overseas Trade.

Replying to a question in the House of Commons last week Sir William Joynson-Hicks said the sole purpose for which the Department of Overseas Trade existed was the encouragement of British export trade, and all its activities were directed to that end. In view of the paramount importance of stimulating trade within the Empire, two additional trade commissioners were about to be stationed in India, and the Trade Commissioner Service in Canada was to be strengthened by the opening of an office at Vancouver. Every effort was being made, consistent with the need for national economy, to enable the existing Trade Commissioners to carry on adequately their duties in the interests of British trade.

NORWEGIAN paper exporters complain that Germans are offering large parcels of news on reels cheaper than the Norwegian products when calculated in foreign exchanges.

The "WINKLER" Automatic Sheet Feeder

is supplied at a price within the reach of every printer The principal reason for not universally adopting automatic feed is therefore removed.

Built in all sizes and can be fitted to any Letter-press or Litho Machine.

INTRICATE mechanism is superseded by simple movements. Fitted in its entirety on the machine, so that access to the latter is not impaired.

Keeps up with the speed of the fastest running machine.

Feeds any stock from thinnest tissue to cardboard.

Register is assured even at maximum speed.

The only Feeder adaptable for very short runs.

Quick changing from small to large sizes and *vice versa*.

Changing to hand feed in a few minutes.

Purely mechanical Automatic Throw-off when the paper feed is disturbed.

No tapes or friction wheels to smear or mark the sheets, so that excellent colour printing is assured.

The Winkler Feeder is also built with a Stacking Arrangement.

COME AND SEE IT RUNNING IN LONDON.

"SLOGGER"

METHOD IS THE BEST

Separation of sheets is accomplished by a blast of air directed through the top sheets of the pile, and this blast of air at the same time frees the paper from dust and fluff, very prevalent in certain types of paper. This dust and fluff would eventually find their way to the ink rollers and duct, and detract from the colour of the ink and spoil the quality of the work. By cleaning each sheet before feeding it, the high quality of the work is maintained, and washing up and brushing out of the forme are therefore minimised.

JOBS from letter-press to any colour work.

SPEEDS to suit any press.

STOCK from tissue to board.

RUNS from 500 upwards.

Reginald Lake: An Appreciation.

By FRANK COLEBROOK.

Fear no more the heat o' the sun
Nor the furious winter rages;
Thou thy worldly task hast done,
Home art gone, and ta'en thy wages.
—CYMBELINE.

Shakespeare's beautiful words have sung themselves into the hearts of many of us in many differing connections. They seem to be peculiarly fitting as applying to Reginald Lake, the man whom we all knew, and all honoured, and whom not a few of us felt that we really loved. This very day when I write these few notes, I read in the daily papers of the anniversary dinner of the Printers' Peace Memorial in a London hotel. Sir Robert Horne having spoken as chief guest of the evening, Mr. T. E. Naylor (lately an M.P.—and a future M.P., as one cannot doubt) declared from the fullness of his special knowledge that in no industry had problems of capital and labour been more happily handled, in none had there been more mutual understanding and co-operation, than in the printing craft. That is undoubtedly the case, and the happy contemplation is in large part made possible by the carefulness, high-mindedness and considerateness which the Federation secretary, Mr. Lake, during his ten or eleven years of official life, brought to bear on all that he did and said. I am sure he regarded every wage problem or other problem in which he was involved, as a challenge not simply to his knowledge as a printer, or to his power as an organiser for one party, or to his training as a one-time practising barrister, but also as a challenge to him as a citizen, a patriot and a Christian. It was a challenge not to lower by an inch the standard of conduct he had proposed to himself. He passes from many wage contentions to the receiving of his own reward. We say of him "Home art gone, and ta'en thy wages"; and over those wages there is no contention.

Educational Influences.

Mr. Reginald John Lake was the son of Mr. George Lake, J.P., of Bushey, Herts. He was educated at Rugby. It must have been in the time of Frederick Temple, of whom another Rugbean said "Temple's a beast—but a just beast." Temple, you remember, became Archbishop of Canterbury, and still remained "Our Temple, in whom there are no polished corners." From this sturdy, virile successor of the great Thomas Arnold of undying memory, a receptive mind like Lake's could not fail to gather some of the best lessons of life.

His time at Oxford—at New College—was chronicled as being the end of the sixties and early seventies. But I judge that with his particular sympathies and temperament he, a most zealous Churchman, threw back by a generation, and that it was the Oxford of the late thirties and early forties that was present to his realisation—Oxford of the Tractarians, of Hurrell Froude, of Ward, of Newman, and of their maturer companion, Keble, of "The Christian Year." In a sense Mr. Lake never left Oxford. Although the various contacts of the great university of life corrected any excesses of the Oxford habit of mind, yet the Oxford influence, persisting, tuned and toned the utterance, the expression of his innermost thought, and tempered his conscious or unconscious judgments of men and things. Perhaps it might have gone too far had not his saving commonsense prevented this.

As Oriental Printer.

In the summer of 1881 he joined, as a director, the firm of Gilbert and Rivington, of 52, St. John's-square, E.C., which firm at the same time became registered under the Companies' Acts. It must have been to him deeply interesting ground, for St. John's Gate remains to us as one of the very few relics of old times when the religious orders flourished so numerously in London.

Gilbert and Rivington succeeded the printer Watts as Oriental printers. In 1881 they published a specimen book of some 150 examples of their foreign, and especially their Oriental types. The *Academy*, reviewing this issue, especially noted the double pica Coptic, the estrangelo Syriac, the great primer Persian, the long primer Arabic, the Syro Chaldaic, the small pica Irish, the Schwabacher German and the pica Greek. The firm possessed founts of different sizes of nearly two hundred languages, in addition to about 100 different dialects—indeed, so far as they were aware, of all known written languages in the world.

I suppose it is about sixteen years since an arrangement was made with Messrs. W. Clowes and Son, whereby they took over the goodwill and connection of Messrs. Gilbert and Rivington, and Mr. Reginald Lake, who had been sole managing director of the firm from 1892 to 1906, went with his beloved "stamps" from St. John's, Clerkenwell, across the Thames, to Duke-street. I hope that ghosts of a number of Carmelites and Black Friars and White Friars attended to give him their benison as this head of St. John's House crossed Blackfriars bridge.

For a year or two we knew Mr. Lake simply as one who, quietly fitting into a niche, steadily pursued his old interests. Of course he was not overlooked; he had played parts of two much importance for that; he had been one of the founders of the newly constituted London Master Printers' Association, and became its chairman in 1893. He had been elected president of the Master Printers' Federation at its annual meeting in 1904, succeeding the late Sir James Henderson. He was not overlooked, but for the moment other men held the stage. Unexpectedly there occurred a vacancy in the secretaryship of the Master Printers' Federation at 24, Holborn, and Mr. Lake was installed in that important chair.

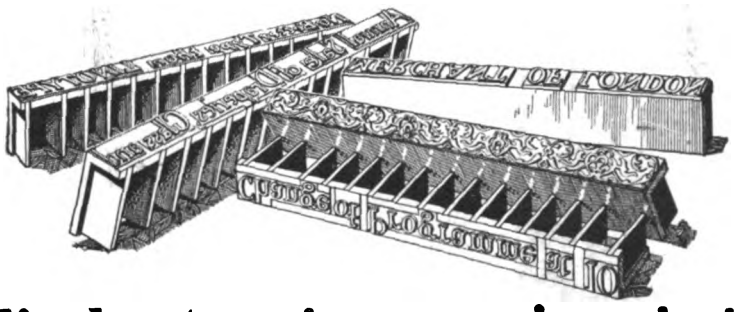
As Leader of Master Printers.

Now for tranquillity! Just congenial organising and administering work—the 1,400 or so members to be doubled if it might be through a decade of steady plodding progress.

Divinity may "rough hew" our ends, "shape" them how we will. The year 1911, almost his first year, saw the 48 hours' printing strike. Tranquillity fled. It was an official baptism of fire. There is no need to dwell now on that episode. I am not trying to sketch his life. Just this I will say at once, that, what with these commotions and alarms, the costing campaign, General Bemrose's and others' projects of constitutional reform, the consequent Alliance and chain-of representation developments, the Joint Council creations and the War—always the War—Mr. Lake lived a century in his eleven or twelve years. And he saw not merely the doubling but a nearly four-fold increase of membership. "Twenty-four Holborn" witnessed a modern miracle of the 5,000.

Well, he has gone, and ta'en his wages. And it is not so much of the quantity as of the quality of his achievements that I am thinking—of himself, as a citizen, and as a man.

Outstanding Loyalties.



The outstanding reflection which his career prompts is the high value of his great loyalty. He was intensely loyal to his country, first of all. It was natural that his sons should be eager to bear their part in the War. Two of them died, making "some corner of a foreign field" become "for ever England." I cannot dwell upon this poignant sorrow. After this he was never quite the same. In truth, he was better; he was enlarged, ennobled.

Again, he was intensely loyal to his Church and gave it official service. As one who had edited "Dodd's Peerage" for years, he must have been familiar with resounding English names, but for his sons he chose the names of Saints. And he, who did so much to please others, pleased himself by flying little flags in honour of particular Saints from a turret of his house, on the days of those Saints.

He was most loyal to his political party, and for forty years gave it cheerful honorary official service at Watford.

He was not only supremely loyal to the Federation. His loyalty to individual members was quite remarkable. I remember how sharply he rounded on me on one occasion, for what I had written in criticism of the utterances of a particularly prominent spokesman of the Federation. We managed to agree to differ as to that, without either of us mincing words. He was hot, and I think

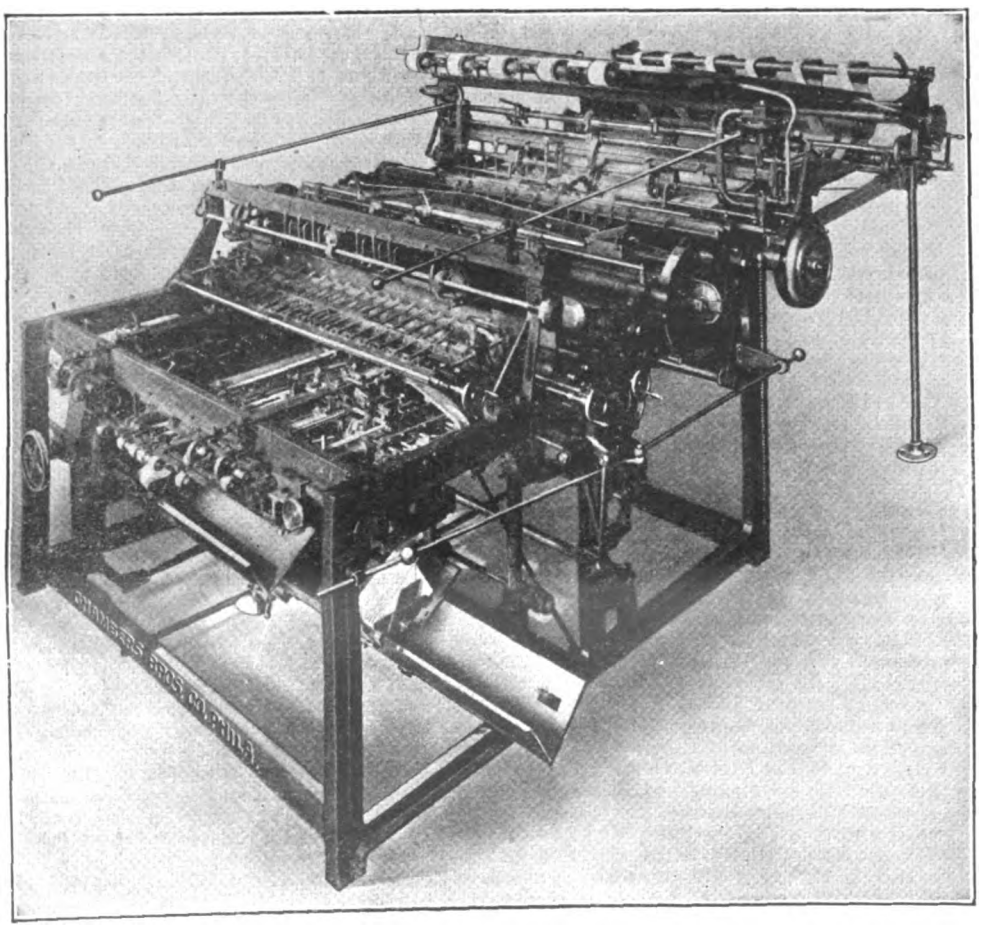
New display type is expensive—in initial cost and subsequently in composition and distribution. And it is new only once

When you have a Linotype you will avoid heavy bills for new display and body founts, your composition charges will be far less, and distribution nil.

The Linotype will give you new type for *every* job—and not merely type but composed type, ready for make-up and printing.



And as regards make-up: Do you know how simple, safe, and speedy it is where Linotype matter is concerned? The machine leads its own matter; and, as every line is a complete unit, much larger quantities can be handled at a time than is possible with movable type.

Unlimited supplies of decorative material can be cast on the machine; lines can be repeated as many times as required, so that a job can be printed as many "up" as required to reduce long runs on the presses.

The Linotype can be equipped to suit your immediate needs. You can install it with one magazine only or as many as eight; with one distributor or as many as four.

These are but a few of the advantages you will gain when you have a Modern Linotype. Come and see the machine for yourself, and bring samples of your work with you.

really angry; yet I feel sure that if some aspersion, which he deemed unjust, had been passed upon myself that very day, he would have testified as warmly for me, as if we had not just been engaged in our little "up-and-downer."

Perhaps just one other personal word may be pardoned. Nothing could have been more noticeable than his ungrudging care and courtesy, when, during the war, he, as rationing authority for certain metals for the printing craft, had to deal with myself, who was then rationing authority for those metals for all the trade foundries of the kingdom. Time and again, on that or related matters, he would climb my stairs to come to see me in regard to particular points. Some, I thought, hardly called for such a visit; but even when I deprecated the intimated visit—"Don't do that; I'm younger than you; I'll look in on you"—still he would come, and with only the one thought of giving me the utmost helpfulness, and of us two giving the utmost help to our respective organisations.

As to his relations with labour, his loyalty was absolute. I can hear him now saying, when some question of a slight arguable deviation from an understanding had been raised—"The Federation *never* revokes." "Revoking" had not been suggested, but his mind had leapt in advance to what might be behind the slightest criticism. It was most fitting that the presentation of his portrait in oils should have been effected by contributions in which representatives of labour joined with employing printers.

What of His Failings?

A few failings saved our old friend from a sense of isolation and of unlikeness to the rest of us. Being human, he, too, was fallible. His weaknesses and mistakes were the defects of good qualities, but, of course, defects are defects. In his plentiful Bible reading he somehow missed, as many zealous men miss, the shrewd hints given to Moses by his father-in-law: "The thing that thou doest is not good. Thou wilt surely wear away. . . . The thing is too heavy for thee; thou art not able to perform it thyself alone."

Just as nothing was too great for him to adventure so nothing seemed too small to require his personal care. He forgot the old Latin tag in which the Romans, two thousand years ago, reminded themselves that "eagles don't catch flies." He did not depute enough. His reason, of course, counselled him to devolve work, to organise assistance and invest helpers with due responsibility, but while reason pointed this road, his instincts drove him another way. He would have liked to be personally playing twenty simultaneous games of Federation-work chess.

Perhaps it was partly from this over-nice scrupulousness of personal service that occasionally a whisper would run that the old gentleman was at times just a little difficult to get on with. No one complained of this, using "complaint" in its ordinary acceptation. His fatherly oversight of the Holborn staff, his desire to make the working conditions as pleasant as he could, his personal interest in the individual workers—these were too manifest, and too much appreciated for criticism to become complaint. But when one is considering the degrees of his successes, one need not hesitate to suggest that what was good may conceivably be bettered, as experience of the work of 24, Holborn, year by year develops.

I really cannot think of anything much to point out that one would have wished to be otherwise, and merest justice calls for a high tribute. It is due to say that for a man trained in Oxford, sometimes called "The home of lost causes," he was wonderfully receptive and sympathetic with the idealism of the 1920's. Oxford's "stone walls" did not for him a mental "prison 'make. He was a citizen of the world. Mankind were his brethren, and to do good was the most fundamental part of his religion. Traditions, forms and ceremonies were always secondary.

Faith, Facts and Fun.

Another reflection outstanding in my thought, is as to that great enlargement and empowerment of his life, which followed upon what might have seemed a lessening of his sphere of influence and of opportunity. To be sure, the occurrence of a vacancy in the secretaryship of the Master Printers' Federation gave him a new field. It is idle to speculate as to how large a place he might have filled, lacking this opportunity. Enough for the moment to reflect that any gloomy forebodings which may have been in his mind as to the shrinkage of his scope, must in retrospect have seemed singularly needless, almost comically uncalled for. When the Clowes business negotiations were completed, Mr. Lake was already nearly sixty years old, and I think he felt it. Probably with him at that time memory was larger than hope. Another decade and he who had been sixty years old had become seventy years young—and hope was as large as memory. At sixty he was a man of the past; one who had at one period presided over the London Association and at another over the federated body. At seventy he was a man of the future—a kind of permanent presiding genius, giving guidance and benediction to a new regime.

He had, I think, quite a happy humour, though it was not always manifest. He lived in very grave times. It was too, of its own kind; a certain cheeriness, and withal a general humility of mind, which often surprisingly marks the man who dares to deviate from common forms and usages; who dares to call his soul his own. He could joke at his own expense. I am assured that his family life at Watford was singularly delightful to himself, to his large family of sons and daughters, and, in its contemplation to all who were ever privileged to come under his roof; and I judge that a certain constant light heartedness and humour had much to do with this.

Faith, facts and fun—that short phrasing may express his distinctive marks as I realise them. A man of deep religion and of intense and earnest loyalty; a man of great common sense, sedulously applied to investigating facts, and acting justly upon their significances; and a man who refused to take himself, or anyone else, too dreadfully seriously. This was Reginald Lake.

He was able to keep a young heart to the very end, responsive to that pervading Spirit, which gives blitheness to youth, and blitheness to age; making "the outgoings of the morning, and of the evening, to rejoice."

De la Rue v. Waterlow.

Appeal Withdrawn.

In the Court of Appeal last week, before Lords Justices Banks, Scrutton and Younger, an application was made in reference to an appeal entered in the case of T. de la Rue and Co., Ltd. *v.* Waterlow and Sons, Ltd., the hearing of which was concluded before Mr. Justice Rowlatt on December 18th last.

Mr. Doughty said that the appeal would have proved a very heavy one, but the parties had settled the case on terms. His present application was to withdraw the appeal, without costs.

Lord Justice Bankes: The ordinary form is "Appeal dismissed without costs." We do not use the word "withdraw."

Paper Exhibition.

The Executive Committee of the American Paper and Pulp Association announces that a Paper Industries Exposition will be held at the Grand Central Palace, New York, during the week of April 9th, 1923.

The exposition will be held during the same week as the meeting of the American Paper and Pulp Association, the National Paper Trade Association and other associations of the paper industry.

The management has engaged an office in the Grand Central Palace and announces that the diagram for the space for the exposition is open and that they are ready to receive applications.

ALAUZET & DERRIEY, Réunis.

Materiel d'Imprimerie & Machines Outils (S.A.)

Main Office - - 81, Av. Philippe Auguste, PARIS.

WRITE TO-DAY FOR FULL INFORMATION ABOUT OUR PERFECT ALL-SIZE ROTARY PRESS.

ALL-SIZE ROTARY PRESS.

THE machine cuts off different lengths before it prints. Any width roll can be used. The change from one size to another is made in a few minutes. The sheets are delivered flat or folded at the speed of six thousand an hour. Adapted for all kinds of work of the best quality printed on one or both sides.

Make a Good Impression!

An unrivalled experience and technical knowledge enable Lorilleux & Bolton, Ltd., to produce Printing Inks of the first quality for the latest processes and with the greatest range of tints, colours, consistencies and drying properties.

Lorilleux & Bolton, Ltd., have an intimate knowledge of the requirements of printers, and make a feature of producing inks for special purposes, and they will be pleased to answer any enquiries and give expert advice if desired.

LORILLEUX & BOLTON, LTD.

31-34, CURSITOR STREET, CHANCERY LANE, LONDON, E.C.4.

Sole Agents for Australia:—

MIDDOWS BROS. & LINTON, Ltd., Sydney and Melbourne.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

THIRD YEAR OF PUBLICATION

Is the Process Block Doomed?

Mr. William Gamble, F.R.P.S., discusses the Present Position and Future Prospects of Photo-Engraving.

Mr. William Gamble, whose recently expressed views on the near advent of photo-composing have created a big stir in printing circles in this country and abroad, has, at an address at the Process Engravers' Club, been telling engravers some interesting and rather startling things about the competition which newer processes are bringing to bear upon the field hitherto occupied by the process block. In the course of a very informative address he indicated the nature and importance of this increasing rivalry.

Quoting his statement, in the "Process Year Book," that "the process block has passed its prime, and there will be a slow but steady diminution in its employment," Mr. Gamble proceeded to give the reasons for his pessimism regarding the future use of process blocks as against other methods of illustration. It was, he said, because he did not see any progress being made in block-making and letterpress printing methods, whilst on the other hand, very great strides were being made by such processes as offset and photo-gravure, and the results of these latter methods were becoming increasingly popular, publishers finding these ways of producing illustrated matter more economical than the old ways.

Increasing Use of Gravure.

A great amount of block work was already being lost by photo-engravers at the present time. If that was so whilst the new processes were still more or less imperfect and not fully developed, what would be the result when they were improved? When they looked at the 40 pages a week of gravure illustrations in the *Illustrated London News*, the 40 pages a week in the *Sketch*, the many pages in *Weldon's Fashions*, the equally large number of pages in several cinema picture papers and in the numerous publications of the Amalgamated Press which are regularly being printed by gravure (some formerly produced with blocks and letterpress printing), it was surely obvious that this was so much work lost by photo-engraving. They might say that this work would not in any case have come to the trade houses, and that it did not affect their turnover. But what about the increasing number of high-class catalogues that were being done by gravure and offset, mostly by firms not blockmakers and in competition with blockmakers?

Offset Steadily Encroaching.

Offset, too, was steadily encroaching on photo engraving. They flattered themselves that the work was not so crisp and clean as letterpress printed blocks, but some people liked it better on that account. Several magazine covers in colour, which were formerly block printed, were now being produced by offset, and one of the latest published novels had a "jacket" done by this process, the publishers, he had heard, being highly pleased with it. Publishers prefer offset because they can print the "jackets" on a rougher surfaced and cheaper paper, more durable for the purpose. Another instance of the success of offset was the excellent results of the process for illustrated newspaper work, as shown in the *Blackpool Times*, the *Sunday Express*, and the *Local Illustrated News* (printed by Lowe and Brydone). He did not think the process would ever be any good for newspapers with large editions, but for local newspapers of limited circulation it would be quite good and economical. These were just the papers which had been depending on the blockmaker for their illustrations —a further loss to the trade. It used to be thought that offset could never do anything good in half tone, but they had now to modify that view, for the work was constantly improving.

Some Other Processes.

Mr. Eamer, jun., said the speaker, had no doubt told them of a process he had seen in America called "Aquatone" which seemed to be a combination of half-tone, collotype and litho offset. The half-tone was done with a 400-line screen, a ruling which few had been able to print in this country; the image was put down on a gelatine surfaced aluminium plate and printed by offset machine at about 4,000 per hour.

There was another process being developed, using a 200-line screen, with which a copper plate was made, and without etching, printed on an ordinary letterpress machine. If this process were brought into use, printers would not want blocks for their letterpress machines. There was one printing firm in this country which had converted a Miehle machine so as to print photogravure.

Again, they had heard, no doubt, about that remarkable collotype process now being exploited by Mr. Gardiner Sinclair. He (the speaker) did not agree with all the claims made for it, and moreover it was not a new idea, but it might become a useful process.

They had also been recently startled by the news of the rapid half-tone process which hailed from Germany, but it seemed to have fizzled out. Who knew, though, what improvements might be ultimately made in it? There were experimenters at work, too, etching celluloid to make half-tone blocks. This was an old idea but someone might make it practicable.

Such methods as the "Manul" were not likely to affect the photo engraver so much as the letterpress printer, because they were suitable only for reproducing text and line blocks. There was a new process of this kind shortly coming on the market which was simpler and better than the "Manul." They would be able to buy a ready-sensitised film which would keep indefinitely, and the method was to lay a piece of this against the page of a book, switch on the light and print through the film. The development was mostly with water, and one got a good dense negative which could be printed down for a line block, an offset plate or a gravure cylinder.

Still another remarkable process he had been testing was one in which the print was made by means of a phosphorescent plate like an X-ray screen. No camera, no arc lights and no elaborate printing frame were required.

No doubt some of them who did the highest class of three and four colour blocks thought that at any rate it would be difficult for the new processes to reach the standard they have attained. They might say that offset plate-makers could never do anything approaching fine etching, so that they could not attain such good results. But there was a firm in Brussels who found it paid to make a set of etched colour plates in the ordinary way and pull transfers from them to put down on offset plates. There were also methods being developed for getting negatives or prints which did not need retouching, nor anything equivalent to fine etching. Mr. Gamble added that he was shown a process in Germany last year which enabled continuous-tone colour negatives to be put down on offset plates by a special printing frame which held the screen as well as the negative, no stopping-out on the negatives being needed. Again, the Levy firm in America had a new camera for colour work which enabled a continuous-tone negative to be made through a filter, and after development this negative was used as a mask through which the half-tone negative was made, thus introducing possibilities in colour separation hitherto unknown. There could be no doubt that if the offset people could get a way of making colour negatives more suitable for their requirements without having to resort to a lot of expensive retouching, they would become powerful competitors of blockmaking.

The Question of Price.

It might be objected that the offset firm or the gravure firm could not do the work more cheaply if they had to go through the same routine as the blockmaker, making the negative, printing it down on the metal, developing the print, and doing something equivalent to etching the plate. It was true that if they took the case of a single illustration containing up to, say, 50 ins., and reproduced this by offset or gravure, it would not be possible to do it any more cheaply, perhaps not so cheaply, than making a block and printing it letterpress, especially for a small edition. But where gravure and offset scored was in printing large sheets and long numbers. If the customer wanted 100,000 prints, even perhaps 50,000, off one picture, it could easily be repeated a number of times on the same plate, thus reducing the number of runs on the machine. They might do the repeats by duplicates or by electros, but it would cost much more than by offset repeats, and the speed of printing on the letterpress machines would be much less. Moreover, the duplicates might not be all alike. On the other hand, if they took a large sheet filled with many different illustrations, they would charge more for the blocks alone than the offset or gravure printer would for making a plate or cylinder, and the letterpress printer would have the expense of making up the forme and making ready on the machine, besides the subsequent printing being slower. Roughly estimating the comparative costs in the case of a large sheet like the *Illustrated London News*, printed 8 pp. up on a cylinder, the speaker reckoned that the cost of blocks would be £60 8s., whilst the gravure cylinder, with an allowance for renewal of copper wastage, would cost £48 2s. The saving was still greater to the printer, because he had a cylinder ready to start printing, whilst he could run at a speed of 5,000 to 6,000 copies per hour printing on both sides, as against a letterpress speed of only 1,000 to 1,200 copies per hour printed one side on a hand-fed machine, or 2,200 with the aid of an auto-feeder. The speaker said he had good authority for stating that the cost of gravure printing, including cost of the cylinder, was about one-third the cost of making half-tone blocks and letterpress printing.

Another interesting point was that text work, including half-tone cuts from proofs on transparent paper, could be done on cylinders at 1d. per sq. inch, exclusive of the cost of grinding and polishing the cylinder.

The Question of Speed.

The next objection that might be raised in regard to gravure work, was the time it took to prepare the cyclinders. They might have been told that it took at least 24 hours to prepare a cylinder. One firm stated that they usually wanted three days to deliver a pair of cylinders. The reason for this time being taken was that the whole cylinder had to be dealt with instead of individual cuts, and the work had to be subdivided so as to be systematically and profitably done. He wondered if any blockmaker would undertake to deliver 8 page size blocks like those in the *Illustrated London News* in less than 24 hours. In any case, if they did so, the time so saved would be more than taken up by the printer in getting the forme ready and on the machine. The gravure printing would be well away before the forme would reach the machine room.

It might eventually be possible to dispense with the heavy cylinders, and produce work on thin plates of copper which could be stretched round iron cylinders in much the same way as is done with zinc plates on offset machines. This had been proved to be practicable.

Another point in favour of gravure was the fact that the commonest and cheapest papers could be used, and a far better result got on them than could be obtained by half-tone. For example, a good art paper for half-tone cost 5¼d. per lb., whilst good paper for gravure cost 3¼d. to 3½d. per lb. Moreover, a gravure paper which weighed 90 lbs. per ream in quad crown would feel as thick as one weighing 100 lbs. per ream for half-tone, thereby effecting a further saving.

If photo-composing became possible, as he believed it would, that would be a great help to gravure as well as to offset printing, but at the same time it would be the doom of letterpress printing, and with the end of letterpress printing the use of blocks would pass

He had not time to say much about offset, but he directed attention to the increasing amount and improving quality of colour work done by its means. As to cheapness of the process, a line plate 30 in. by 20 in., equal to 600 square inches, could be done for £2 12s. 6d., and a half-tone for £4 2s. 6d., according to the price list of a trade house. If produced by line etching at 6d., the price would be £15, and in half-tone etching at 10d., £25.

Mr. Gamble concluded by expressing his strong conviction that there was a great change coming in engraving and printing, and he advised his photo-engraver hearers to prepare themselves for it. They might ask: "How can we do so?" He replied that they must take up these new processes as they came along, so that they could say, "Come what may, I don't mind if I lose all my block orders, because I can make plates for gravure or transfers and plates for offset—probably earning more money on the new processes than on the old ones."

Printers' Ladies Night.

Successful Annual Dinner of the S.W. London Association.

A very pleasant evening's entertainment was provided on the occasion of the annual dinner and ladies' festival, held on Saturday night at Pritchard's Restaurant, Oxford-street. From every point of view it was a most enjoyable and successful function. There was a good attendance; a kindly spirit radiated throughout; an excellent meal was served in comfortable surroundings; the speeches were at once witty and instructive; and the concert was an outstanding feature of a memorable evening. Mr. J. D. Wise, the president, and Mrs. Wise received the ladies and gentlemen as they arrived, and extended a sincere and cordial welcome. Congratulations are due to Mr. F. H. Cole and Mr. F. A. Chivers (the hon. secretaries) and to Mr. R. Kent (musical director) for the completeness of the arrangements.

To deal with the concert first, there was not a fault anywhere. The items on the programme had been well chosen, and each was perfectly rendered. Encores were inevitable. The violin solos of Miss Dorothy Kerr aroused special enthusiasm, while the singing of Miss Juanita Davis (soprano), and Mrs. J. M. Gaskell (contralto), and Mr. Leslie F. Gabrielle (baritone) was uniformly excellent. The humour introduced by Mr. George Buck was of the infectious order and kept the company in a continuous ripple of genuine laughter. Finally, Mrs. J. M. Inskip presided very efficiently at the piano.

The Speeches.

Whilst the amusement of the ladies was the chief consideration, various toasts had to be considered, but the speeches were not the least entertaining part of the programme.

Mr. A. Spring, who had enlivened the dinner in his capacity as a resourceful toastmaster, submitted the toast of the evening—"The Ladies"—in appropriate terms, incidentally alluding to the presence of Mr. J. R. Burt, "the father of the district associations," of which there were now seven.

Mr. A. E. Goodwin (secretary of the Federation), was in his usual happy mood in responding. But for the advocacy of the cost system, he observed, the master printers would have had no such dinners to go to, and certainly could not have afforded to invite the ladies. So if they wanted those functions to continue, the ladies must see that the cost system was duly installed. Instancing the activities of master printers during the previous week, Mr. Goodwin mentioned a series of week end excursions he had attended with the Lancashire Alliance. Then he and Mrs. Goodwin and Mr. and Mrs. Whyte had "appeared before the King" (at Queen's Hall), because a master printer was distinguishing himself by playing the flute on that occasion. Later in the week there were a series of presentations in Leicester. The provincial gatherings had been inspired by ladies and indicated the interest they took in the organisations of master printers.

Mr. W. Whyte (secretary of the London Association) proposed the toast of "The South-West Association" with many bright flashes of wit. He paid a warm tribute to the excellent work which Mr E. G. Cole (vice-president) and Mr. F. H. Cole (hon. secretary) had put in on behalf of the district organisation. He particularly mentioned the pertinacious manner in which the secretary had tackled the Postmaster-General on postal matters. Proceeding, Mr. Whyte said he was expected to point out that the South-West Association was by far the best of the Associations. He would do so officially if not truthfully. (Laughter.) There were distinguished representatives present from other associations, and as he was due at some of their meetings next week, he did not want a "warm" reception, because though they might applaud his judgment inwardly, they might not appreciate his tact. (More laughter.)

Mr. Wise was received with loud applause on rising to respond. He agreed with Mr. Whyte that the S.W. Association was the finest in London, and he was proud of it. Their district extended from Westminster Bridge to Epsom Downs, and all the master printers in that large area had benefited from the activities of the Association (hear, hear), but especially the members who had particular privileges and inside information. While they obtained many advantages from the local association, there were others derived from the bond of union with the London Alliance and with the Federation. Therefore he solicited loyalty and support for the whole organisation and for its component parts. But for the Federation how would they have known that the cost of composition was 5s. an hour, and but for the strength emanating from the same source who would have dared to charge it?

In conclusion, Mr. Wise asked the company to drink to the health of Mr. Goodwin, Mr. Whyte and Mr. Williamson, the representatives from headquarters, and this was cordially done.

Mr. E. G. Cole gave the toast of the Visitors and extended a hearty welcome to them on behalf of the Association. He mentioned that Mr. Burt (of the W. and N.W. Association) the pioneer of the district associations, had attended the inaugural meeting of the S.W. Association in 1917.

Mr. Burt, in reply, said he did not take any pride to himself for the flourishing condition of the district associations. That was entirely due to the backing he had received, and perhaps, in part, also to the conditions of the trade 11 years ago when the local organisations were started. He went on to describe the improved relations which had been created among master printers as a result of associations and gatherings such as they had enjoyed that night.

Mr. R. B. Simnett was entrusted with the toast of "The President" and spoke of the manner in which Mr. Wise had distinguished himself in the chair. He had proved a worth successor to a line of worthy men. During the labour discussions at 24, Holborn, their president's experience and advice had been greatly appreciated by the Council. Not only had he added strength to the local association, but he had helped to improve the central organisation, thus benefiting the craft as a whole and each individual master printer. His beneficent influence had also been felt throughout the wider sphere of the Federation. Mr. Simnett associated Mrs. Wise with the toast.

Musical honours were accorded, with cheers for Mr. and Mrs. Wise.

Mr. Wise, who was obviously touched by the warmth of the greeting, said that in the office of president he had endeavoured to exercise the one talent he possessed, which was common to all of them—that of kindness. For 40 years he had known the trials and struggles of the small printer, and it had been his aim and desire to help his fellows to escape some of those troubles and to enjoy a brighter existence. Mr. Wise acknowledged the loyal assistance given to him by every member of the committee and the Association; he was particularly grateful to Mr. Fred Cole for the amount of work and enthusiasm he gave. Thanks were also due to the officials at Holborn, who had proved themselves friends as well as capable administrators. (Hear, hear.)

This concluded the toast list, and with another song or two, more than four hours of agreeable intercourse came to an end.

Master Printers' Costing System.

Praised at Accountants' Conference.

At the recent second annual conference of the Institute of Cost and Works Accountants, held at the Connaught Rooms, London, the subject of "Standardisation in Cost Accountancy" was discussed in some detail.

In a paper prepared jointly by the Executive Committee of the Council, favourable reference was made to the costing system of the Federation of Master Printers.

Mr. Howard Hazell was one of the speakers, and in the course of his remarks said that in the printing trade they had been working on the question of cost standardisation for over ten years, and a system had been evolved which was peculiarly suitable to the printing industry. When printers met, whether they came from Land's End or John o'Groats, they talked in the same nomenclature. The Federation issued hourly costs of production in seven different areas, and the master printer could find out whether he was above or below the average of his district. That was an incentive to him to try and bring down his costs to the average level. The foolish printer who thought it was a wise policy to undercut his competitors' prices was given the average cost of production for his area, and he was gradually being educated into the proper knowledge of what were his costs. During the war the Federation's method was of great advantage to the industry.

Leicester M.P.A. Annual Dinner.

Two Interesting Presentations.

The annual dinner of the Leicester Master Printers' Association, held on Thursday last in the Oriental Hall, Leicester, was a notable gathering.

Mr. Harry Weston (president of the Association) was in the chair, and was supported by Mr. R. A. Austen Leigh (president, Federation of Master Printers), Councillor Wm. B. Wykes (president, Midland Alliance), Mr. E. W. Silk (chairman, Midland Alliance), Mr. James Forman (Nottingham), Mr. A. E. Goodwin (secretary, Federation of Master Printers), and many other prominent Federation workers.

The outstanding event of the occasion was the presentation to Councillor W. B. Wykes (the new assistant treasurer of the Federation and energetic president of the Midland Alliance), of a gold cigarette case and a substantial cheque, the case bearing an inscription testifying to members' appreciation of the eminent services rendered by Councillor Wykes.

Another presentation, and a novel one, was that of a badge of office given to the president, Mr. Weston, by Mr. and Mrs. C. H. Gee. This was an 18-caret gold and enamel pendent, on a light blue silk ribbon, the face of the pendent being inscribed: "Leicester Master Printers' Association," and the reverse side "1923." This idea of a presentation badge of office, would, if adopted by the other district associations give rise to an interesting array of gold badges at the annual meetings of the Federation.

The president, in the course of his speech, expressed his thanks for the gift of the badge, and proposed the health of Mr. Gee, who felicitously responded.

Mr. Gee, proposing "Councillor W. B. Wykes," told of the many services which Councillor Wykes had rendered, and concluded by making the presentation, as described above.

Councillor Wykes made suitable response, making special mention of the support he had received from Mr. Gee and Mr. J. C. Lawrence.

The president having happily proposed "The Federation," Mr. R. A. Austen-Leigh replied, making interesting references to the development of the organisation.

"The Midland Alliance" was proposed by Mr. James Forman, of Nottingham, and Mr. J. C. Lawrence, response being made by Councillor Wykes, president of the Alliance.

The concluding toast was "The Leicester Association," submitted by Mr. E. W. Silk and Mr. A. E. Goodwin, the president briefly responding.

The British Empire Exhibition.

Collection of Books and Bookbindings.

English Bibles of all ages are to form an interesting feature of the books' section of the British Empire Exhibition. At the last meeting of the management committee, Sir Lawrence Weaver, director of United Kingdom Exhibits, said it was intended to secure a fine loan collection of books and bookbindings, selected and arranged so that it would strike an Empire note. It is suggested that the Bible should be taken as the typical book, and that an exhibition of English Bibles from the earliest times should be shown, with a small special collection showing Bibles and other contemporary books in use when the chief parts of the Empire were discovered or settled, such as books of the times of Cabot, Drake and Captain Cook. Related to the Bible exhibit would be examples of the sacred books of other Faiths of the Empire. Associated with this Imperial exhibit, Sir Lawrence said, there ought to be a few very finely printed books, such as the products of the Kelmscott Press.

Owing to lack of space in the galleries of the Fine Arts Palace, it is intended that these exhibits be placed in a bay of the Industrial Hall, adjoining the Fine Arts Palace, close to the exhibits of British publishers. Current publications will be excluded from the Loan Exhibit, and will find their place in the Commercial exhibits. Although this Loan Exhibit will be housed in the Industrial Hall it will be catalogued as part of the collection of the Fine Arts Palace, or have a separate catalogue.

Government Contracts.

Contracts were placed with the following firms during February :—

Stationery Office.

BINDERS, LOOSE LEAF.—Nevett Bookbinding Co., Ltd, Hendon.

CLOTH, TRACING.—Winterbottom Book Cloth Co., Ltd., Manchester; B. J. Hall and Co, Ltd., Manchester.

COVERS (PLUVIUSIN).—T. J. Weeks and Sons, Ltd., London, N.E.

COVERS (LOOSE LEAF).—G. Wells and Co., Ltd, London, E.C.

INDIA TAGS.—Sensitive Honing Co., Ltd., London, N.; Spickett and Downs, London, E.

LINOTYPE METAL.—G. G. Blackwell and Sons, Ltd., Liverpool.

METALS, LOOSE LEAF.—C. H. Hare and Son, Ltd., Birmingham.

MONOTYPE METAL.—Eyre and Spottiswoode, Ltd., London, E.C.

PORTFOLIOS.—Letter Filing Appliances Co., Birmingham; J. Adams, London, E.C.; Waterlow and Sons, Ltd., London, E.C.

PRESS, PROOF.—Walker Bros., Ltd., London, E.C.

PRESS, HAND OPERATED.—Hollings and Guest, Ltd., Birmingham.

PRINTING, RULING, BINDING, ETC.

Group 45 (1923)—High Class Catalogues, etc.,; Group 46 (1923)—Board of Education, Reports of Inspectors.—H.M.S.O. Press, Harrow.

20,000 Note Books; 700 Books "Cash Receipts U 27"; 600 Books "T.E. 1122".—McCorquodale and Co., Ltd., Wolverton.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

JAPAN.

A Japanese importer in Osaka wishes to get into touch with British exporters of printers' rubber blanket. Samples may be inspected by appointment at the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1, to which applications for the name and address must also be made, quoting reference D O.T. 10093/F.E.

AUSTRALIA.

The Postmaster-General's Department, Melbourne, is calling for tenders for the supply of wneatstone and other telegraph tape papers. Tenders close on April 3rd, 1923. A copy of the specification, schedule, etc., is available at the Department of Overseas Trade (Room 42), 35, Old Queen-street, London, S.W.1. (Reference D.O.T. 10724/E.D/M.P.)

NEW ZEALAND.

A firm of agents resident in Christchurch wish to obtain the sole representation in New Zealand, on a commission basis, of British manufacturers of paper serviettes, tissue paper, crepe paper, envelopes and twine; advertising specialities, including novelties, art calendars, blotters, thermometers, etc. (Reference No 314.)

The above applicant also desires the sole representation of British manufacturers of, aniline dyes, sulphur, caustic soda, alkalis etc. (Reference No. 317.)

SPAIN.

A commission agent of Madrid is desirous of securing the representation for British manufacturers of all kinds of picture prints and engravings and stationers' sundries, etc. He is also interested in patented novelties of all kinds. (Reference No. 336)

THE first number of *Cassell's Weekly*, the new literary paper which Mr. Newman Flower is editing appeared on Thursday, with a very attractive first issue.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investment .
Miscellaneous,

One Insertion **3/0**
Three Insertions **6/0**
For every line exceeding three lines **1/.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion **1/6**
Three Insertions **3/0**
For every line exceeding three lines **6d.**

Sales by Auctions, Tenders.
Patents for Sale,
Legal and Final Announcements

Per line **1/0**

Replies may be addressed to Box Numbers. Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone 8407 City.

Situations Vacant.

WANTED, in a large Publishers' Bindery in the Provinces, a WELL EDUCATED GIRL accustomed to the Making of Estimates and General Office Work; only those who have had good experience in such work need apply.—Write, with full particulars, Box 14086.

Situations Wanted.

ACCOUNT-BOOK BINDER, half extra, cutting, etc., requires situation (town or country).—G., 169, Pelham-street, London, E.1. 14064

ACCOUNT-BOOK BINDER (all-round), single-handed, seeks permanency; town or country.—Box 14081.

APPRENTICE.—It is desired to apprentice well-educated, intelligent youth, 16 years old, to the Printing Trade, either Compositor or Machine or both; London office preferred.—Address, W.C., 241, Evering-road, Upper Clapton, E.5. 14072

ASSISTANT ENGINEER and DESIGNER seeks Position, London or Provincial (age 25); good technical training; eight years experience workshop and drawing office of large City Printing House with all types of machines and plant maintenance work; good commercial knowledge.—Box 14076.

BINDING OVERSEER seeks re-engagement; practical all-round; good organiser and disciplinarian; London or Provincial.—Box 14080.

EDUCATED Young Man wants Position as CLERK or SECRETARY to Master Printer, has practical workshop experience and a working knowledge of M.P.F. Costing System.—Box 14073.

GENTLEMAN, aged 23, good education and appearance, requests Position as ASSISTANT REPORTER; excellent references.—Write, Box 14070.

NEWSPAPER ENGINEER and MACHINE OVERSEER desires change; evening or weekly preferred; vast experience with up-to-date High-speed Rotary and Stereotyping Machinery.—Box 14055.

OVERSEER Machine Department (Letterpress), desires re-engagement; experience of High-class Half-Tone, Three-Colour, Book and Catalogue work; excellent testimonials.—Box 14057.

PHOTO-LITHOGRAPHY.—Gentleman with exceptional practical experience of all branches desires change; all latest methods, half-tone, colour, etc.—Box 14084.

SMART ARTIST (lady, 26), General Commercial, three months' experience, desires Progressive Post in Studio; willing pay £25 premium. Box 14065.

STATIONERS' ASSISTANT, 15 years experience wholesale manufacturing trade, desires Position of Trust; highest references.—Write S., Box 14083.

WORKS MANAGER seeks any Post, prac. all depts., Gen. Printing, Ruling, Binding, Man. Stationery; also Tag, Label and Dup. Book Trade; est., costing.—Smith, 60, Lynn-road, Wisbech. 14066

Partnerships and Financial.

OFFICE FURNITURE, Typewriters and Supplies Business in Central City with Fine Windows and Show-room, desire PRACTICAL and CAPABLE PERSON with Capital, to develop same.—Write, Box 14087.

Machinery for Sale.

LINOTYPES FOR SALE.—Model No. 1, overhauled and converted to Model No. 4 with regard to vice, jaws, etc., very little used since; double letter, universal mould (Nonpareil to Pica), two magazines, and two sets of matrices.—Apply, Box 14078.

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

STANDING PRESS, 5-ft. high, to press 22 by 15; £7 net (Wood and Iron).—Write, E. Garner, 446, East Park-road, Leicester. 14048

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

THREE STOKES and SMITH MODEL "D" WRAPPING MACHINES.—Maker's specification says "Capable of making boxes ranging from 1⅛-in. to 8-in. in length, 1⅜-in. to 4-in. in width, ¼-in. to 2¼-in. in depth, and producing with one operator 7,000 to 9,000 tight wrapped lids or boxes in eight hours."—Apply, Cadbury Bros., Ltd., Engineers' Office, Bournville. 14075

Machinery Wanted.

THREE-HOLE THREAD STITCHER, must be in first-class condition.—Full particulars, to Box 14051.

Patents, etc.

THE Proprietor of British Patent No. 148,864, dated April 1st, 1914, relating to "DRIVING MECHANISM for PRINTING PRESSES," is desirous of entering into arrangements, by way of a licence or otherwise, on reasonable terms, for the purpose of exploiting the above patent and ensuring its practical working in Great Britain.—All inquiries to be addressed to B. Singer, Steger Building, Chicago, Illinois. 14085

Lloyd Memorial (Caxton) Seaside HOME.

The annual meeting of the Lloyd Memorial (Caxton) Seaside Home was held at St. Bride Institute on Saturday, when a satisfactory balance sheet was presented to the collectors and subscribers. In the absence of the president, Lord Hambleden, Mr. T. E. Naylor took the chair. The report on the past year's working showed that the income was £8,333, and the expenditure £8,188, leaving £145 to be carried forward. The Peace Memorial Wing Fund was being gradually augmented, and stood at £11,248. There are now no less than 12,000 weekly subscribers on the registers. All workers in the printing and allied trades are invited to participate in the work and in the benefits of this institution Information may be had from the secretary, Mr. H. F. Parker, 80, Blackfriars-road, S.E.1.

United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MARCH 22, 1923.

Postal Rates to the Fore.

THE subject of postal rates continues to be a cause of discontent to the printing trade, whose representatives are in several directions showing commendable pertinacity in efforts to effect an easing of the situation. The Joint Industrial Council still keeps an active eye on the matter, and in the House of Commons last week Mr. C. W. Bowerman brought the matter forward—though he received only a reply assuring "careful consideration"—when he asked the Postmaster-General whether he is aware of the urgent necessity for reducing the postal rates, especially on printed matter; and whether, in order to diminish unemployment in sections of the printing and allied industries and also stimulate the general trade of the country, he will take steps for this purpose as soon as possible. Again, the Agricultural Trades Association of the United Kingdom, in which Colonel H. Rivers-Fletcher (vice-president of the Federation of Master Printers) is actively interested, is interviewing the Postmaster-General this week to point out the necessity for a reduction of postal rates on catalogues and on small packets sent by parcels post. The deputation will point out the unfair position in which producers in this country find themselves as compared with those who supply seeds and bulbs from the Continent. Even firms in Holland are having their catalogues printed and posted from Germany in order to secure the advantage of the depreciated exchange.

* * *

Picture Postcard Postage.

THE case for further concession in regard to the postage on picture post cards was put with much skill and force by Sir Adolph Tuck in introducing the deputation to the Postmaster General on Tuesday. Sir Adolph told how the raising of the rate to 1d. in 1918 knocked off some 30 per cent. of the prosperous British picture post card trade, whilst the *coup de grace* was given to the industry in 1921, when the increase to 1½d. destroyed fully 50 per cent. more, and left the picture post card business but a shadow of its former self—to the detriment of the country's trade, of the country's employment resources, and of the postal revenue. Sir Adolph was able to adduce a striking example in the case of France, where the reduction of postage on picture post cards to 10 centimes, little more than a farthing—with half of the address side of the card available for correspondence—resulted not only in saving the French picture post industry but also in bringing about a marked increase in the postal revenue. Urging that the country was certainly in favour of concession (as indicated by the large number of replies in the Tuck competition), Sir Adolph pleaded that the picture post card should be given separate status under the postal regulations, and that 10 unrestricted words should be allowed for ½d. Any consequent loss, on account of reductions in 1d. and 1½d. correspondence, would, he said, be more than outweighed by the gain accruing to the postal revenue. It is regrettable that the new Postmaster-General—after Sir Adolph Tuck's appeal, backed up by others who accompanied him in the representative deputation—expressed himself unable to promise any immediate amelioration of the position. It is a big point gained, however, that the man at the head of our postal services has publicly recognised the unsatisfactoriness of the five-word limit, and has also shown himself alive to the need for cheaper postal facilities generally. Every printer will heartily applaud Sir William Joynson-Hicks's admission that "A return to the penny and half-penny postage will be the greatest boon that the Post Office can give to the people and trade of this country."

* * *

Colour Printing from Germany.

THE Federation of Master Printers is calling the attention of the Board of Trade to circulars which have been received by a number of firms in this country offering colour printing, produced in Germany, without any indication of its Continental origin appearing on the work. An official reply has been received to the effect that the regulations at present existing do not prevent this. Such being the case, there is very evident necessity for pressing for legislation which shall amend the Merchandise Marks Act in such a way as to prevent such flagrant evasion of the intention of the Act. The Merchandise Marks Bill discussed last week in the House of Commons deals only with agricultural produce, but the further Bill, which will deal with other merchandise, will, it is hoped, be introduced as a Government measure later in the session.

* * *

Gradually Improving Trade.

PRINTERS are experiencing great difficulty in finding sufficient work to keep their machinery going. Business is reported as patchy and hand-to-mouth. Every day must plough its own way and the next day fend for itself. That the general condition of things is much improved as compared with last year is sufficiently evident from the fact that enough work dribbles in daily to keep the wheels running without much short time. Unemployment is bad enough and an almost intolerable burden on trade funds; but even here the figures issued by the Board of Trade are improving every month.

* * *

Papers in Demand.

THERE is a big demand for vegetable parchments and greaseproofs at the present time. Belgian mills are booked up for a month or so ahead. Stocks in this country are not large, and do not remain long in store. It is reported that there is a slight improvement in the demand for kraft, of which commodity large imports have recently come to hand. Prices are firm, and stiffening. Strawboards are in the same category, with a rising list price.

Personal.

VISCOUNT BURNHAM, Lord Riddell and Sir James G. Owen are amongst those who are expected to attend the annual dinner of the Papermakers' Association to-morrow. Presidents and secretaries of all the important employers' associations in the allied trades are also be present.

THE Marchioness of Londonderry has accepted the presidency of an influential ladies' committee to assist the chairmanship of the Prince of Wales at the Diamond Jubilee dinner of the Newspaper Press Fund, at the Hotel Victoria, on Thursday, May 10.

MR. W. HOWARD HAZELL was amongst the speakers at the very successful annual meeting of the Association of Master Printers of South-East London, held on Tuesday at London Bridge. A report will appear in next week's issue.

MR. E. E. ALEXANDER, M.P., will conduct a party of ladies round the Houses of Parliament in connection with the annual meetings of the Federation of Master Printers in London in May. There is every indication that the number of visitors to London for the forthcoming gatherings will constitute a record.

IT is rumoured that Mr. A. G. Gardiner and Mr. H. W. Massingham, the well-known London journalists, are joining the Labour Party.

MR. EDWARD HILL has been appointed managing director of Messrs. Hill, Siffken and Co., Ltd., the well-known poster and showcard specialists.

MR. FRED E. BUSSY, the organiser of a number of exhibitions and a director of Associated Newspapers, has been appointed managing director of Wembley Amusements, Ltd., the concessionaires for all the amusements at the British Empire Exhibition.

MR. WALTER MEAKIN, who is to be the new president of the National Union of Journalists, is a well-known and popular Fleet-street figure. He is 44, and made his reputation as a writer on the *Manchester Guardian*, and has for the last six years been on the *Daily News*.

MR. JAMES LUMSDEN has been the recipient of a handsome testimonial from his colleagues on the staff of the *Leeds Mercury* on his resigning the editorship of that paper following its change of proprietorship.

MR. J. E. THORNTON, who recently resigned the managership of the *Yorkshire Post*, has recently been presented with a silver tea service and a silver tray, and Mrs. Thornton with a diamond brooch, by the directors and staff of the *Yorkshire Post* and allied papers.

MR. EDWARD DAVISON, who for two years edited the *Cambridge Review*, has been entrusted with the editorship of the *Challenge*, which is now being issued in a revised form.

MR. F. M. CARSON (Richard Herring and Co., Ltd.), the president of the National Association of Wholesale Stationers and Paper Merchants during the year just completed, has been elected president of the Southern District of the National Association. Mr. Carson has previously occupied this post.

AS RETIRING president, Mr. Carson will preside at the annual dinner of the National Association on May 2nd at the Connaught Rooms.

MAJOR FRANK H. BOWATER has been elected captain of the Paper Trade Golfing Society, in succession to Mr. A. Dykes Spicer, and will preside at the annual dinner of the Society on April 25th, at the Trocadero Restaurant.

MR. H. S. L. SLATER (the chairman) and Mr. Horace Slade have been formally re-elected directors of the Associated Paper Mills, Ltd.

Newcastle Municipal Printing.

A Striking Example of Waste.

The Newcastle Education Committee has for some years been running a printing plant of its own, and recently the Committee has been investigating the administration of their small printing works. At a meeting last week, Sir George Lunn presented a report on the subject. In the course of this he stated that there were sixteen persons in the printing department, nine of these being females and one an apprentice. There was a "general manager" with a salary of £330 a year and in the printing shop a "working foreman," with four men under him, who was paid a special salary, two of the men also receiving pay above the standard rates of the district. In the bookbinding department only one man was employed. He was called a working foreman and was also paid an extra wage. The rest of the binding staff were women.

A sub-committee recommended that the grade of "working foreman" should be abolished and that the weekly wages of the working printers should not include any extras, that the working week should remain at 44 hours instead of 48, because the hours of the other workers in municipal departments were fixed at 44. The sub-committee also recommended that no payment should be made whilst an employee was away from his work, except in respect of the recognised holiday payments paid in the trade.

Councillor W. Locke, a member of the Labour Party protested against these reforms and stated that this was "the thin end of the wedge to get the department out of existence."

Sir George Lunn replied that the investigations had been spread over three months and that they had found a state of affairs not very creditable to the Education Committee or to those responsible for the printing department. It was in the interests of the department and of the Education Committee that the printing department should be run on proper business lines. He pointed out that in 1921 the workers in the department had lost 71 days for which they were paid, and in 1922 51 days, quite apart from the regular holidays. He asked if there was any private printing shop where a man could be absent from his work for this length of time and receive his wages.

On a vote being taken, the report of the sub-committee was adopted by 10 votes to 5

Standardising Process Blocks.

Uniform Thickness and Bevel Wanted.

In response to a deputation from the Federation of Master Printers, the Federation of Master Process Engravers has been considering the practicability of introducing a greater degree of uniformity in regard to the making of process blocks. The deputation put forward a request for a standard thickness of metal and a standard bevel to all blocks, asking that all copper and zinc process blocks should be 16 gauge, and that all stereos and electros should be pica thickness and that the bevels of all plates of minimum size and above should be 9 points and that of those under minimum size should be 6 points.

It is very apparent that such standardisation would be helpful to the printer who prints from unmounted plates, but the Council of the Federation of Process Engravers pointed out that whilst this was apparently the only benefit that could accrue, the expense to the block maker would be quite appreciable in his year's accounts It was obviously impossible to give any promise along these lines at that meeting, as the request meant such a radical alteration from the course being pursued at the present time, but the Council considered that the matter would be well worth discussing at the annual meeting next month, when members will have an opportunity of considering the question.

ADVERTISING, properly conducted, and adequately carried out, was the surest and best means of reducing costs, said Mr. Austin Reed last week in an address upon "Some Retail Trade Problems," at the Clothing, Outfitting and Woollen Trades Exhibition.

Trade Union Matters.

L.S.C. SUPERANNUATION.—The new superannuation scheme of the London Society of Compositors, providing for pensions up to £2 a week, is to come into effect next month. Members have by an overwhelming majority (8,837 to 1,190) replied in the affirmative to the following question: "Are you in favour of the following proposition:—That subject to the levy reduction of 9d. which is to take effect on the first Saturday in April, the ordinary subscription of full members, removal members and members out of the trade, be raised on the same date by 1s., which sum shall be set off to the credit of the Superannuation Fund, for the purpose of providing the proposed new scales of benefit to members declaring on the Superannuation Fund after December 30th, 1922, such new scales of benefit to take effect on Saturday, April 7th, 1923?"

L.S.C. MEMBERS have also agreed, by a majority of 4,168 (6,955 to 2,787), to double the quarterly "set-off" for the Political Fund.

THE London Society of Compositors have temporarily turned down the Typographical Association's request for a conference to consider the amalgamation of the two unions. The superannuation allowance is the chief difficulty.

TYPOGRAPHICAL ASSOCIATION RULES.—The Executive Council of the Typographical Association have been notified by the secretaries of the Federation of Master Printers and the Newspaper Society that the proposed amendments to the Association rules have been referred to a special committee for consideration, and that as soon as this committee has examined and reported on the amendments arrangements will be made for a conference on the subject.

COMPOSITORS AND STEREOTYPERS' DIFFERENCES.—At a recent meeting of the Executive Council of the Typographical Association, a report was given of a conference with the Stereotypers' Society on the question of which union is entitled to perform the work of imposing plates on Parker boards and by the waxing process. The stereotypers submitted "That where members of the T.A. are at present doing stereotyping work they be allowed to continue while employed on the job at present engaged on, but that all such members shall receive stereotypers' wages and hold a temporary working card in the Stereotypers' Society, and that no fresh member of the T.A. be allowed to do stereotyping." The stereotypers also claimed the right to follow plates and mount and impose them, and that if T.A. members did such work they should charge stereotypers' rates, viz., 9s. per week extra. The Typographical Association have decided that these proposals cannot be accepted, and that the right of Typographical Association members to undertake the imposition of plates of all descriptions must be maintained.

AT Bath on Wednesday of last week Cecil Alfred Howes (32), of 20, Herbert-road, Bath, was remanded on bail charged with converting to his own use within the past six months the sum of £145 0s. 3d. belonging to the Bath branch of the National Union of Printing, Bookbinding, Machine Ruling, and Paper Workers.

Testing Blotting Paper.

Recent tests made by the Bureau of Standards, Washington, have included blotting paper. The Klemm strip method of testing blotting paper has always been criticised on the ground that it does not sufficiently take into account the thickness of the sample nor the value of the blotter, in connection with repeated blottings. Some stocks that show a high initial absorption will fail under subsequent applications of ink.

The U.S. Government specialists have come to the conclusion that bulk is not the whole thing in blotting paper, but that fibre content and the amount of ash present are of importance. Out of this has come a practical testing method which will give relative results. Thus far the work has been confined to papers used for blotting writing inks, and there remains to be examined the type of blotters used for desk covers which are less absorptive, more compact and more durable.

DIVIDENDS AND REPORTS.

RAPHAEL TUCK AND SONS.—Interim dividend on the ordinary shares at the rate of 8 per cent. per annum for the six months ended October 31st, payable on March 29th. A similar dividend was declared a year ago.

OLIVE AND PARTINGTON.—In 1922 a trading profit of £47,697, less provision for taxation, was made and £13,616 was received in interest and fees. The debit balance brought forward reduces the amount available to £34,036, but the preference dividend and directors' fees only require £10,600, and a credit balance of £23,436 is carried forward.

NEW COMPANIES.

ALEXANDER GARDNER, LTD. — Capital £12,500 in £1 shares; to acquire the business of a bookseller, printer, publisher and stationer carried on by A. Gardner, at 9, Gilmour-street, and Dyers Wynd, both in Paisley. Private company. First directors: A. Gardner, A. Gardner, jun., and R. Renton. Registered office: 9, Gilmour street, Paisley.

JOBSONS, LTD.—Capital £2,500 in £1 shares (700 7½ per cent. participating preference and 1,800 ordinary); to adopt agreements with James Berkeley and Co., Ltd., and B. H. Grimwade, and to carry on the business of advertising agents, manufacturers, merchants, factors, printers, publishers, engineers, etc. Private company. First directors: F. D. Bailey, R. H. Dutchman, E. M. F. Jobson, B. H. Grimwade, C. Kingsley and C. H. Travis. Registered office: 19-21, Fore-street-avenue, E.C.2.

RAYS AGENCY, LTD.—Capital £1,000 in £1 shares; advertising contractors and agents, printers, photographers, publishers, stationers, etc. Private company. Subscribers: R. S. Eastly and W. Wood. Subscribers appoint directors. Registered office: 19, Cecil court, Charing Cross-road, W.C.2.

LONDON ADVERTS, LTD.—Capital £100 in £1 shares; to carry on the business of general advertisers, contractors and agents, etc. Private company. First directors: Mrs. K. Rowthorn and Miss M. K. Rowthorn. Registered office: Station road, Blockley, Worcester.

SALES AND ADVERTISING SERVICE, LTD—Capital £1,000 in 500 shares of £1 each and 10,000 shares of 1s. each; to carry on the business of advertising contractors and agents, etc. Private company. Subscribers: H. C. Cove and E. A. Hicks. Registered office: 30, Great James street, Bedford-row, W.C.1.

KING'S SHIPS PUBLISHING CO., LTD.—Capital £100 in £1 shares; to take over the publishing rights of book known as "The King's Ships." Private company. First directors: F. Fawcett, R. L. Beamish and R. B. Davies. Registered office: 31, Craven street, Strand, W.C.

ALL-WEATHER MOTOR MAPS, LTD.—Capital £5,000 in 4,000 ordinary shares of 5s. each and 4,000 10 per cent. participating preference shares of £1 each; to develop, manufacture, sell and exploit a process for the treatment of maps, plans, diagrams and all printed matter with a preparation to prevent deterioration due to exposure to weather and other causes, etc. Private company. First directors: A. D. Collins and W. H. Overton. Registered office: Caxton Works, Caxton-road, Wimbledon, S.W.

I. LABWORTH AND CO., LTD.—Capital £6,000 in £1 shares; to take over the business of a box manufacturer carried on by I. Lebedkin at 337, Hackney-road, N.E., as "I. Labworth and Co.," and to carry on the business of manufacturers of and dealers in boxes, receptacles, cases, cabinets, packets, tubes, bags and packing devices, etc. Private company. Subscribers: I. Lebedkin and Mrs. T. Lebedkin.

A. DAVIS AND CO., LTD.—Capital £1,000 in £1 shares; to take over the business of cabinet case makers and stationers' sundries manufacturers, carried on at 12, Commercial-street, Birmingham, as "A. Davis and Co." Private company. Directors: C. Wright, E. A. Clive and E. C. Davis. Registered office: 131, Conybere street, Birmingham.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

KING BROS. AND POTTS, LTD. (printers, St. Leonards)—Satisfaction to the extent of £650 (being balance outstanding on February 6th, 1923, of debentures authorised February 10th, 1913, securing £1,000.

JOHN HIGHAM AND CO., LTD. (printers, etc., Hyde, Ches.).—Issue on February 27th, 1923, of £750 6s. 2d. debentures part of a series already registered.

PERIODICAL PUBLISHING CO., LTD. (Covent-garden, W.C.).—Debenture dated February 14th, 1923, to secure £9,200, charged on the company's property, present and future, including uncalled capital. Holder: J. W. Potter, 2, Fenchurch-avenue, E.C.

THOMAS DE LA RUE AND CO., LTD.—Satisfaction in full on January 4th, 1923, of charge dated September 22nd, 1922, securing all moneys due or to become due from company to L.C.W. and Parrs Bank.

MANETTE PRESS, LTD. (music printers, etc., London).—Satisfaction to the extent of £3,000 on February 8th, 1923, of debenture dated November 30th, 1920, securing £4,500.

HUDSON, SCOTT AND SONS, LTD. (printers, decorators, etc., Carlisle)—Satisfaction to the extent of £500 on October 13th, 1922, of debentures dated April 1st, 1920, securing £2,200.

GILCHRIST BROS., LTD. (photo process engravers, etc., Leeds).—Mortgage on certain property in Leeds, dated February 16th, 1923, to secure all moneys due or to become due from the company to National Provincial and Union Bank of England, Ltd.

V. SIVITER, SMITH AND CO., LTD. (engravers, Birmingham).—Satisfaction in full on February 9th, 1923, of debentures dated December 16th, 1920, securing £4,000.

ELTON PUBLICITY, LTD. (London).—Debenture dated March 1st, 1923, to secure £200, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: L. Elton, Granville Park Works, Brettenham-road, Edmonton, N.18.

ST. GILES PUBLISHING CO., LTD. (London).—Particulars filed of £2,000 debentures authorised October 16th, 1922, charged on the company's property, present and future, including uncalled capital; the whole amount being now issued.

"BRIGHTON HERALD," LTD. — Particulars filed of £6,000 debentures authorised February 12th, 1923, charged on the company's undertaking and property, present and future, the amount of the present issue being £4,150.

BRITISH AUSTRALASIAN, LTD.—Satisfaction in full on February 13th, 1923, of debenture dated December 2nd, 1910, securing £2,500.

BRITISH AUSTRALASIAN, LTD.—Particulars filed of £3,000 debenture authorised February 13th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

A Paper Agent's Affairs.

The first meeting of creditors was held on March 8th, before Mr. Walter Boyle, Senior Official Receiver, at the London Bankruptcy Court, under the failure of C. H. H Scott, who formerly traded as a paper agent at 150, Strand, under the style of Scott Bros, and more recently was a partner in a gown and costume business carried on at Vere street, Oxford-street, W., under the style of "Rochelles." In reporting upon the debtor's history, the chairman said in March, 1920, the debtor and his brother started business as Scott, Bros., paper agents, on borrowed capital. The partnership was dissolved in July, 1920, under terms that the debtor took over and continued the business. He did so, but made a loss throughout and closed down in March, 1921, to join Mrs. Court in the Vere-street business. The latter concern was successful and he was able to pay off some of the debts of the paper business; but owing to heavy advertising expenses and the bad season of 1922 the partners were made bankrupt with liabilities £2,732 against assets valued at £856. Mr. D. Hart, accountant, was elected trustee to wind up the estate in bankruptcy.

Re Arthur L. Houghton.

The first meeting of creditors was held on March 13th, before Mr. Walter Boyle, senior official receiver, at the London Bankruptcy Court, under the failure of Arthur Leopold Houghton, paper agent, Guildford-avenue, Surbiton, lately carrying on business at 83, Upper Thames street, and 58, Ludgate-hill, E.C. The chairman reported that it appeared from the debtor's statement that a previous failure was recorded against him in 1916, but the debts were paid in full, and the receiving order was rescinded. He started business as a paper agent in 1918 at 19, Ludgate-hill, but closed it down in October, 1918, owing to a serious illness, which debarred him from doing anything until February, 1921. He then restarted at 83, Upper Thames-street, but for lack of capital gave up those offices in October, 1921, and was allowed to use a friend's offices at 58, Ludgate-hill, where he carried through what business he could in buying for cash. He was now engaged as a traveller in the trade. The liabilities were roughly estimated at £1,500, to 30 creditors, and the only assets were book debts to realise £25 and stock £15. The failure was attributed to loss of £1,500 by Stock Exchange speculations and of £400 by racing.

The debtor said speculations was not the word; he had lost £1,000 by investing in paper stock and £500 by investments in shares. It was to depreciation in the value of those investments that his present position was to be attributed.

The case was left in the hands of the official receiver to be wound up in bankruptcy.

"The Price Book, 1923, for the Printing and Allied Trades," by F. G. Shepard. London: King and Jarrett, Ltd., Holland-street, Blackfriars, S.E.1. Price 7s. 6d.

To know his costs and to be in a position to charge prices that, whilst reasonable to his customer, will at the same time yield a sufficient profit to cover his expenses and provide a margin, is of great importance to every printer, and every means that will help him to a clear vision of his costs of production should be welcomed. "The Price Book" is a book peculiarly adapted to instruct the printer in the matter of costing, covering as it does the whole routine of the craft in its various departments, and giving not only the cost of production in the average office, but the prices of the machinery and plant that is required to turn out the finished work. The book deals with the management of the printing office, methods of estimating, and other details in a clear and concise manner. It gives information of value regarding the composing and machine departments, whilst the process, electro and stereo, binding, ruling, lithographic, copperplate, collotype and die-stamping sections are also dealt with fully, and charges worked out to aid the estimator in his work. The section dealing with process work goes most fully into the subject and describes the numerous items of plant required, together with their cost. For printers who are thinking of establishing a process department in their works the information given should prove invaluable. The other sections of the business are dealt with in a similar exhaustive manner and the particulars given are of practical utility to the man who desires to run his business on business lines. Printers are often at a loss to know where a particular paper desired by a customer is to be purchased, and to help them in this way there is a list of water-marked and named papers which gives the names and addresses of the various makers and, in most cases, their telephone number, and this will be of the greatest service when ordering. To give some idea of the comprehensive character of this list we may note that it occupies no less than 180 odd pages of the book. A useful list of abbreviations is also given, and throughout the volume there are various tables of quantities, wages, etc., that will be found serviceable in estimating work. The book contains over 530 pages, about 8¼ ins. by 4 in., each brimful of information, and the employer or manager who desires to keep abreast of the times will find the "Price Book" an indispensable adjunct of his office. It is a work that can be thoroughly recommended to all engaged in the trade.

Satz-und Druckmuster, 1923 (Sample Book of Composition and Printing, 1923).

The *Deutscher Buch-und Steindrucker* (Berlin, S.W., 61, Teltowerstr. 32), has published under the above title a collection of printing specimens which should be of interest to all printing craftsmen, whether they be concerned mainly with typographic or with pictorial work. About 80 samples represent a wide range of printing and the graphic arts, and make up a paper-covered volume of about 2 lbs. in weight. The book is neatly produced, and includes some splendid specimens of offset, intaglio, Manul and similar prints. The publishers inform us that a money order for $1 will bring the volume post free to any address. We can recommend this interesting sample book to all lovers of the printing art who want to see what Germany is doing in this direction.

Messrs. Linotype and Machinery Limited send us a calendar for 1923 in the form of a very fine piece of book printing, which should serve to draw furthur attention to the great capabilities of the Linotype in this field of work. Entitled "1523 to 1923," this calendar chronicles under their respective dates many of the most important events of the printing trade between 1523 and the present time, and it is embellished with a series of quaint and interesting woodcuts illustrating the "Twelve Ages of Man," designed by Thielman Kerver for one of his Books of Hours published in 1523. The whole of the type matter is Linotype composition—Benedictine series of type—and the book is printed on a Miehle two-revolution by George W. Jones, at the sign of the Dolphin, Gough-square. We think this volume does much to justify the claims of the publishers when they say that "in going to Francisco de Benedictis, the fifteenth century printer of Bologna, for a type model, and to Thielman Kerver, the accomplished Paris printer, for the illustrations for this calendar, type designer, wood engraver, and printer have not only bridged over four hundred years in a very charming typographical presentment, but have given demonstrable evidence that by their marriage or 'fused union' in the printing office, the Linotype composing machine and the Miehle two-revolution printing press give printed work with all the characteristics which make the works of the late fifteenth and early sixteenth century typographers still so much desired by competent judges of pure typography."

The Printing Crafts Guild.

Mr. T. H. Cunane on "Paper."

Under the auspices of the Printing Crafts Guild, a lecture by Mr. T. H. Cunane, entitled "Paper: From the Forest to the Printing Works," was delivered before a large audience at the College of Technology, Manchester, when Mr. Charles W. Gamble, director of printing, occupied the chair.

The lecturer first showed the fibres of various papermaking materials and explained their values and usefulness, pointing out that the cotton fibre, owing to its canals, was most suitable for the making of blotting papers. He then showed by means of illustrations the forests from which pulp wood is obtained and the processes employed right to the pulp running on the papermaking machine, the whole forming a very instructive lecture.

In the discussion which followed, Mr. H. Holme asked if any paper made on a machine was equal in all ways to handmade.

President John Taylor suggested that a paper made from wood was more liable to changes under varying atmospheric conditions than one made from esparto. Also, he suggested, it might be possible to standardise the coating of papers, as certain classes affected the inks. If there were a standard formula for art papers he did not think the makers would suffer.

Messrs. Charles W. Gamble, W. M. Menzies, Kerr and several others also asked questions.

Mr. Cunane replying said there were upon the market very good imitations of handmade paper, but he failed to see how any machine could give the peculiar shake necessary to felt the fibres, as was done in handmades. The latter papers were of equal strength each way, whilst the former papers had a greater strength in one direction. Owing to the shortness of the esparto fibre it was used for good papers, the liability of stretching and contracting being reduced to a minimum. If papers were kept in a constant humid atmosphere there would be less complaints from the printer about cockling and plucking. Shortage of casine or too cold a press-room and very stiff inks would cause plucking. The best atmosphere for the storage of papers was from 70 to 75 degs. Fahr., and the printer should endeavour to allow new paper to mature from three to six weeks if he desired to obtain the best results. Many pressmen complained of electricity in paper, therefore certain mills had adopted an apparatus for extracting a large portion of the electricity. Usually the cause of excessive electricity in some papers was the over-heating of the first cylinders on the papermaking machine; also the stretching and contracting of the paper whilst passing through the machine set up electricity. As to standardisation of papers, there were many things against its introduction, as all the makers claimed to supply the best, and naturally each firm was waiting for the other firm to adopt a standard. Then there was the printer to consider, because one would say that a certain paper was too hard, whilst another firm would say it was too soft. For many years there had been a persistent effort to standardise the sizes of papers, but the papermaker could not do so owing to printers demanding so many special sizes.

Wee Mac.

An out-of-the-ordinary and suggestive article by Mr. Stacy Aumonier, the well-known novelist, appears in the March *Pearson's Magazine*, where he tells how his ideas are born.

Drummond Pension Association.

The annual meeting of the Drummond Pension Association was held on Saturday, March 10th, Mr. C. J. Drummond, M.B.E., J.P., presiding.

It was heard with regret that the hon. secretary felt he could no longer "carry on," and Mr. H. Mundy was appointed as his successor. The other officers were unanimously re-elected, amongst the number being: Rt. Hon. C. W. Bowerman, M.P.; Mr. C. J. Drummond, Mr. J. Mortimer, Mr. T. E. Naylor, Mr. W. Vandy, and Mr. G. Tams.

Since its formation, the Association has been enabled to hand over to the Printers' Pension Corporation the handsome sum of £3,929. The Association has now nearly 1,000 votes at the disposal of the members. At present there are 428 members, but the Committee are anxious to see this number raised to 1,000.

Honorary members can join at any age, but others must be under the age of 50, but the earlier one joins the greater will be his share of the votes. Any subscriber to the Printers' Pension Corporation can join by paying a small entrance fee and 2s. 6d. yearly, or, if desirable, become a life member.

All the officers give their services gratuitously, and the whole of the money collected (except for postal and printing expenses) is handed over to the Printers' Pension Corporation.

Further particulars can be had of the hon. secretary, Mr. H. Mundy, 52, Arcadian-gardens, Bowes-park, N.22.

The imports of wall-paper into Chile average about 500 tons per annum. Cheap grades with showy designs are preferred.

Trade Notes.

KELLY'S DIRECTORIES. — On behalf of Kelly's Directories, publishers of the Post Office London Directory and other directories, the Imperial and Foreign Corporation offered on Monday 500,000 7½ per cent. cumulative preference shares at par. The present issue will rank immediately after the existing £40,100 4 per cent. debenture stock and the £200,000 5 per cent. first cumulative preference shares.

AN action for libel brought by Mr. Clarence Charles Hatry, Upper Brook-street, W., against Messrs. Walbrook and Co., Ltd., printers, and the National Champion Press Syndicate, Ltd., proprietors and publishers of the *National Champion*, was withdrawn in the King's Bench Division on Monday, after the allegations had been unreservedly withdrawn and an apology tendered. Counsel said a certain payment would be made.

A TEST football coupon case resulted in fines being imposed at Bow-street on Monday against Frederick Reader, 27, newspaper proprietor, of Twickenham, and Robert Shaw, 27, his manager, the former being fined £45 and £10 10s. costs, add the latter £15. Coupons were headed "credit only," but the remittances were required to be posted by a certain time to reach the office after the matches had been played. The magistrate said that in his view where a bookmaker's client was required to part with his money before the bet was "on," it was just as much ready money betting as the ordinary street betting.

A CONFERENCE is to take place between the London Master Printers' Association and the Paper Workers' Union (London Central Branch) to consider the rates for stitching and binding machines.

THIS week's council meeting of the London Master Printers' Association has an agenda of over 25 items, including such subjects as the Linotype and Monotype piece scales, rates for stitching and binding machines, the Rating of Machinery Bill. Notice is also being called to the retirement of Mr. E. R. Alexander from the presidency of the East and North-East Master Printers' Association and from the council of the L.M.P.A.

THE annual dinner of the Cambridge and District Master Printers' Association was held on Tuesday. The president and secretary of the Federation were prevented by other engagements from attending, and Mr. W. Willett, assistant secretary, represented the Federation.

A BOHEMIAN concert, under the auspices of the South London Auxiliary, will be held at the "Horns," Kennington, on Friday next, commencing at 7.30 p.m. The event will constitute a "Bank of England Night," and the chair will be occupied by Mr. C. H. Roud. This is the last concert of the season to be held by this Auxiliary, and an excellent programme has been arranged.

PROCESS ENGRAVERS' CONFERENCE. — The Federation of Master Process Engravers has decided to hold its annual meeting in Manchester this year. It has been provisionally arranged for the meeting to be held during the second week in April, Wednesday and Thursday, April 11th and 12th being the days selected.

PRINTERY FIRE.—Damage estimated at £20,000 was caused by a fire which totally destroyed the printing works of Messrs. Cheney and Sons, Banbury, last week. The works were established a century ago.

THE *Irish Times* publishes particulars of the fine new premises built for Messrs. Alex. Thom and Co., Ltd., Iona Printing Works, Dublin.

THE Newspaper Workers' Club and Institute, Gunpowder-alley, Shoe-lane, E.C., are running a Billiards Week for the benefit of St. Dunstan's, starting at midnight on Sunday and concluding to-morrow (Friday), when Willie Smith and Claude Falkiner have generously promised to play 600 up on even terms.

ALLEGED FAKED INTERVIEW.—At the hearing of the appeal on Monday of Bernard Pomroy, Mr. Percival Clarke, on behalf of the Director of Public Prosecutions, called attention to a sensational article which appeared in the *Sunday Illustrated* on March 11th. It was headed "Bernard Pomroy's Secret. Amazing interview with London taxi cab murderer in the condemned cell, by one who visited him." No such thing ever occurred, said counsel, and from full inquiry by the authorities, he said, the article was pure imagination — pure invention. The Lord Chief Justice suggested that the Director of Public Prosecutions should consider whether the matter should not be thoroughly examined.

ROYAL LITERARY FUND.—At the annual meeting of this Fund last week at Stationers' Hall, E.C., it was reported that for the year ended December 31st £3,140 was distributed amongst 36 applicants, compared with £3,330 in 1920. Since the foundation of the society in 1790 £197,677 had been distributed to authors and dependants of authors who were in need. The total income for the year was £5,552.

THE *Lancet* will conclude the 100th year of its existence in October next, when it is proposed to hold a dinner in celebration of the event.

THE Irish printing trade loses a prominent representative by the recent death of Mr. P. P. Curtis, editor of the *Irish Printer*.

THE death occurred last week of Charles Holme, founder and for 25 years editor of the *Studio*. He was in his 75th year.

MR. WALTER MONTGOMERY JACKSON, who was reputed to have made more money out of publishing than any man of his generation, died of heart failure at Gibraltar on Monday, aged 60. Mr. Jackson was associated prominently with the publication of the "Encyclopædia Britannica" and of encyclopædias, etc., in Spanish for the South American market.

MR. RICHARD SAMUEL CARTWRIGHT, of Kingston-mansions, Clapham-road, S.W., retired publisher, late of Johnson's-court, Fleet-street, E.C., publisher of the *Novelette* and the *Family Novelette*, who died on November 24th, left estate of the gross value of £102,054, with net personalty £91,564. The testator left £100 each to the Printers' Almshouses, Wood Green, N., and the Unsuccessful Candidates' Fund of the Printers' Almshouses. All his copyright and interest in the stories appearing in the *Novelette* and the *Family Novelette*, published by him, to his daughter Florrie Pattison.

MR. ALFRED TURNER, of Scalby, Scarborough, author and journalist, formerly editor of the Yorkshire *Evening Post*, and subsequently acting editor of the London *Evening News*, who died on December 13th, left estate of the gross value of £14,864, with net personalty £13,058.

SCOTLAND YARD detectives are investigating the theft of £3,950 in Bank of England notes from Mr. J. Barton, of Park-avenue, Wood Green. Mr. Barton trades under the name of H. Baldwin and Co., stationers and account book makers, and has business premises at Paul-street, E.C.

THE portion of the Britwell Court Library sold during last week realised £63,336. Of this amount, Dr. Rosenbach, of Philadelphia, spent £53,641.

A NEW Fascista newspaper, the *Impero*, has been started in Rome.

THE Académie Francaise has adopted the English word "interview" as a new French word.

A PROPOSAL is afoot to establish in Paris the largest Braille printing works on the Continent for the printing and free distribution of literature for blinded sailors and soldiers of the Allies. Mr. William Nelson Cromwell, of New York, president of the American Blind Relief War Fund, has acquired a building for the purpose.

GOTHENBURG JUBILEE EXHIBITION. — In connection with the Jubilee Exhibition at Gothenburg, Sweden, this summer (to include an international conference of master printers), a monthly magazine is being published in Stockholm. Entitled *Kosmos*, it is produced in four languages in parallel columns, Swedish, English, German and French, and contains much interesting matter. Central premises have now been acquired—Drottninggatan 58, Stockholm—to house the editorial department of this journal and also a *Kosmos* Information Bureau. (Telegrams: Kosmosbureau, Stockholm).

THE *Cambridge Bulletin* for February, 1923, has just been issued and contains an interesting list of recent and forthcoming publications of the Cambridge University Press, also a table of Cambridge books for 1922.

THE extension of the hours up to which printed paper packets that are prepaid ½d. only may be posted, for despatch on the day of posting, or for local delivery by the first post of the day following, is now in effect throughout the country. The latest time of posting at a head office, or other principal post office, is not earlier than 4.30 p.m. The various organisations, such as the Master Printers, the Envelope Makers and the Wholesale Stationers, who have agitated in this direction, deserve credit for the response now made by the Postmaster-General.

THE possibilities of using rubberised paper instead of leather are being considered by manufacturers of travelling trunks and bags.

An Usher-Walker Night.

Another Successful Printers' Pension Effort.

A grand bohemian concert was held at the "Horns," Kennington, on Saturday, by the South London Auxiliary of the Printers' Pension Corporation, the chair being occupied by Mr. H. H. Walker. Previous to the concert a dinner was given by Mr. Walker to the committee of the Auxiliary and their ladies.

The secretary, in proposing a vote of thanks to Mr. Walker for his duties in the chair, referred in appreciative terms to the splendid record the Walker family had for its work in connection with the Printers' Pension Corporation. Their chairman's father, he pointed out, had been connected with the Auxiliary for thirty-five years, and had held the record for the highest amount raised, namely, £185. Their present chairman, he was pleased to announce, had now beaten his father's record, and had got together no less a sum than £210. (Cheers.) However, there was no one more pleased than Mr. Walker, senior, to know that his record had been broken. He was, by the way, supporting his son in the chair.

The vote of thanks was seconded by Mr. R. R. Gibbs, who said he was pleased to see their chairman following his father's footsteps in furthering the best interests of the charities they all had at heart.

The vote of thanks was accorded musical honours.

In his reply, the chairman thanked the proposer and seconder for the nice things they had said about himself and his family. He was indeed proud to have created a record, although that would have been impossible without the assistance given him by the committee and friends of the Auxiliary.

The musical items were contributed by the following artistes:—Fred Rome and Marion Ruth (cameo conversations); Tom Burrows (conjuring entertainment); Miss Florrie and Elsie Loveland (humorous duets); Miss Nora Bancroft, Mr. Chas. True, Wilfred Stracey, and Mr. Ernest Jose (accompanist).

TO demonstrate our confidence and at the same time guarantee the efficiency of the

"Monometer" Melting and Refining Furnace

for Printers over any other system at present on the market, we have decided to place installations on a first payment of 25% of the price of same, and to spread the balance over a period of twelve months.

The "Monometer" Furnace never wears out.

"Monometer" Furnaces installed twelve years ago are to-day equal to new, and we have never had to replace a pot.

Wholesale Stationers.

Annual Meetings of the National Association and Council.

The annual general meeting of the National Association of Wholesale Stationers and Paper Merchants and the annual meeting of the National Council were held on Thursday, March 8th, at 11, King's Bench Walk, Temple, London, Mr. F. M. Carson being in the chair.

Annual Report.

The report for the past year referred to some of the more important subjects which had been dealt with.

Postal rates and regulations, which are of vital importance both directly and indirectly to the trade, have received the most careful consideration of the Association. Pressure has been brought to bear on the Postmaster-General in three directions, viz.:—(a) To reduce the general postal rates of the country, and in this respect the efforts of this and the kindred associations have met with success. (b) To vary the present regulations as to the time limit for posting packets despatched at printed matter rates; and (c) To re-introduce the Inland Sample Postage Rates to enable the British trader to be placed at least on an equality with the foreigner.

Full advantage has been taken by members of the insurance schemes inaugurated by the Association in respect of fire, workmen's compensation and employers' liability, which all show a considerable saving in premiums, the insurances already effected against fire alone covering a very considerable sum.

Serious efforts have been made by the Association to introduce a ton weight rate basis for shipments of paper. Material reductions in the rates have been obtained, and the principles for which the Association is striving will be pursued as soon as the time is opportune for the re-opening of negotiations.

Many questions have arisen during the year concerning the operation of the Paper Trade Customs adopted by the Association in conjunction with the allied associations, and codified as from January 1st, 1922. These have been dealt with satisfactorily, as also have various points arising therefrom which have from time to time been submitted to the Association by various kindred bodies.

One of the most serious problems with which the Association has been confronted is the question of the increased trade which is being attempted direct with the consumer. The Association has closely concerned itself in the matter, and in certain instances its efforts have met with considerable success, the attitude of the mills in the cases in question fully justifying the reliance which has been placed upon them to distribute their goods through the legitimate and proper channel of the wholesale stationer. In addition to the home trade, the foreign and colonial trades in this respect have been fully considered.

The position of the trade as regards the printers has been carefully considered, and a conference has recently been held with the Federation of Master Printers, as a result of which certain proposals have been put forward.

The Association has secured substanttal reductions in rates for shipments via certain English ports, which must necessarily have an important bearing on the fixing of rates generally by the shipping companies.

In conclusion the report states that throughout the year the Association has kept very close scrutiny on all matters affecting the general interests of the trade. In spite of the adverse conditions which have been, and still are being, experienced in the trade, and the serious crisis of the last 18 months, it has been fully realised by all who have given the matter their serious consideration that a strong and representative association is of vital importance, and is the only manner—with well-organised bodies surrounding it on all sides—by which the trade can hope to retain its all-important place in the commerce of the country.

The report was unanimously adopted.

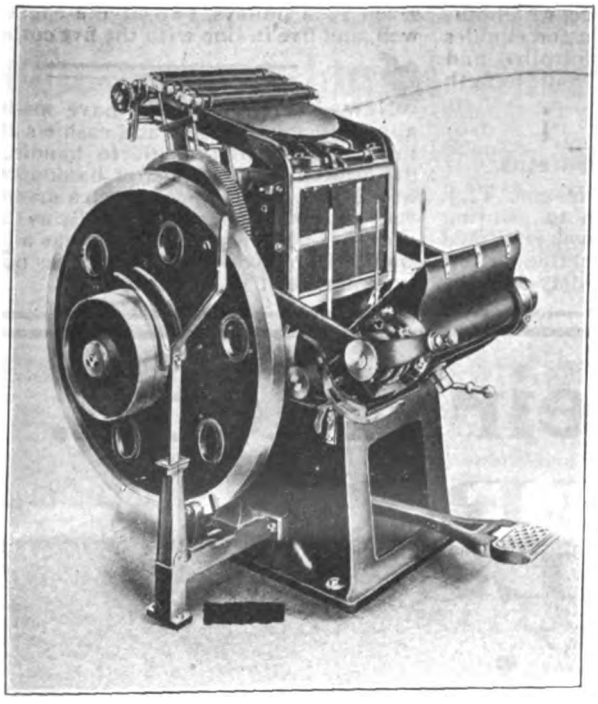
New President.

Mr. A. Dykes Spicer (Messrs. Spicers, Ltd.) was unanimously elected president of the National Association and chairman of the National Council for the ensuing year.

Mr. W. E. Adlard (Messrs. Evans and Adlard) was unanimously re-elected vice-president and it was the unanimous wish of the meetings that Mr. F. Garrett (Messrs. R. T. Tanner and Co., Ltd.) should continue to fill the office of hon. treasurer.

It has been arranged that the annual dinner of the National Association shall take place at the Connaught Rooms, on Wednesday, May 2nd, and arrangements for this function are being proceeded with immediately.

Indian Customs Duties.



The question of the revised schedules of tariff valuations which have been brought into effect by the Indian Government for the purpose of levying customs duties in British India, and the fixed valuation per lb. imposed in connection therewith, was further considered by the National Council, and a strong case is being prepared by the Association on behalf of the trade to place before the Indian Government through the High Commissioner for India in London,

The National Council duly appointed the representatives of the National Association to serve on the joint committee which it was agreed, at the Joint Conference with the Federation of Master Printers held on February 7th, should be set up to deal with matters of interest to both parties; and it is hoped to arrange with the Federation of Master Printers for a meeting of the joint committee to be held at an early date.

The question of the Scandinavian Convention Conditions of Sale was very fully considered, a committee being appointed to deal with the matter.

A hearty vote of thanks to Mr. F. M. Carson (the retiring president) for the able way in which he had conducted the business of the Association and for the excellent services rendered by him during his year of office was unanimously carried with acclamation.

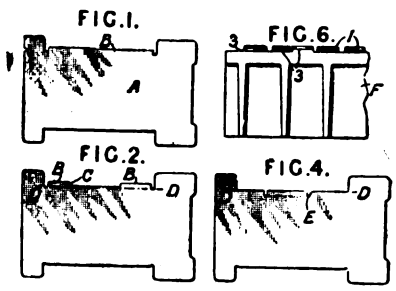
New Inventions

Curved Stereo Plates.



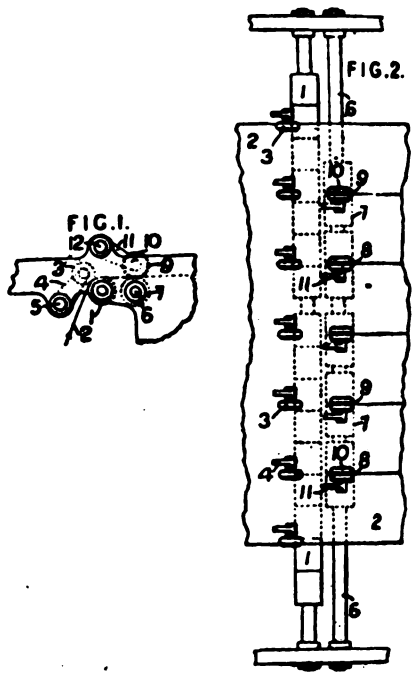
An invention by Linotype and Machinery Limited and T. R. G. Parker relates to machines for finishing curved stereotype plates of the kind described in specification 27031/13, in which the plates are conveyed through the machine by reciprocating fingers moved into and out of plate engaging position respectively during their active and idle strokes, improved means are provided to prevent movement of the fingers into operative position if the plate is inaccurately positioned on the runway. In a plan of one side of the machine as shown a trip lever 9 in line with the

runway along which the plate 7 is moved, is fixed to a shaft 10. To the shaft 10 is also fixed an arm 11 carrying a block 12, which is normally held by a spring in position to be engaged by the tail piece 17 of the plate traversing finger 4, at the end of the idle stroke of the finger-carrying bar 3, to turn this finger into the operative position shown. If a plate is positioned to the rear of its correct position it depresses the trip lever 9, and consequently the block 12, so that the latter is out of the path of the tail piece 17, and the finger 4 remains in the inoperative position.

Type-Bar Matrices.

In an invention by Mergenthaler Linotype Co., the characters of type bar matrices are

formed directly in the edge of the matrix instead of at the bottom of a routing notch, as heretofore. The type characters 1, Fig. 6, are thereby formed directly on the edge of the slug body E, instead of on pedestals 3, and "smutting," or the transfer of ink from the pedestals to the printed sheet, is avoided.



The matrix blank A, Fig. 1, is provided on its character edge with a raised portion B, in which a shallow notch C, Fig. 2, is then formed. The notch C does not extend to the final edge D, D of the matrix, and is for the purpose of removing the hard edge of the metal. The character impression E, Fig. 4, is then punched in the bottom of the notch C, and the edge of the blank is milled down to the edge D, D. Another invention by the same company relates to the making of matrices having two or more characters, and means is provided for preventing the partition which separates adjacent characters from being drawn down during the punching operation, so that it stands below the operative edge of the matrix. The blank A, Fig. 1, is provided with a raised portion B located between the two character zones. After the formation of the routing notches C, Fig. 3, and the punching of the characters E' the portion B is dressed down level with the edge of the blank.

Photo-Mechanical Printing.

Mr. M. Sperati has an invention that relates to the process described in the parent specification wherein a negative is treated in a bath of bichloride of mercury and ammonia to make the image portions more absorbent to water and more repellant to ink, and is then converted into a printing surface by resensitising with bichromate and exposing it from the back, the negative is treated, after exposure and washing, with a re-agent, such as a solution of iodine in potassium iodate, which imparts a clear colour to the image and enables the inking operation to be controlled, and which also imparts compactness and strength to the gelatine image layer.

Printing and Slitting Apparatus.

An invention patented by Messrs. T. J. Mills and E. T. Morris relates to printing machines of the type in which a web is printed and slit by a plurality of adjustable slitters into any number of sections of widely differing widths, and comprises the combination of a plurality of slitters slidably mounted on a shaft, a pulling roller, and a plurality of pulleys slidably mounted on a shaft and adapted to press the web against the pulling roller so that the web can be slit into widely differing widths without altering the pull upon it. The web 2 passes over the pulling roller 1 and is slit by circular cutters 8 carried by sleeves 7 adjustably mounted on the shaft

6, the cutters 8 co-operating with cutters 9 on narrow rollers 10 carried by arms 11 adjustable along and about a shaft 12. The web is pressed upon the pulling roller 1 by rubber-faced pulleys 3 carried by arms 4 adjustable along and about a shaft 5, Fig. 2, showing seven such pulleys, two at the edges of the web, and five in line with the five cutters 9.

NEW £1 Treasury notes have made their appearance in London, and cashiers are finding them a little difficult to handle. They are printed on thin paper of bank-note crispness, and stick together in such a manner that they cannot be counted so easily as the older notes. The new paper money has a herring-bone watermark, which gives the notes the appearance of transparency.

Envelope Makers & Manufacturing STATIONERS.

Mr. J. Leonard Spicer Elected President at the Annual General Meeting.

Mr. James Gallie, J.P., presided at the annual general meeting of the Employers' Federation of Envelope Makers and Manufacturing Stationers, which was held on March 8th at the Federation's offices, 10, Salisbury-square, London, E.C.4.

Annual Report.

The 5th annual report mentioned that the Federation has still further strengthened its claim to represent "an industry with interests, processes, and methods peculiar to itself." During the past year trading conditions had been tending toward normal, and the highly-priced stocks, which had been left as the result of rapid deflation in the hands of customers and distributors of the products of the industry, would appear now to have been dispersed. The past year has been a period of something approaching stabilisation—it is true on a level higher than pre-war values—but there has been a stabilisation of cost of raw material, of rates of wage, of carriage charges, which has enabled the manufacturer to market his products with a knowledge of his costs, and has enabled both distributor and consumer again to buy in the reasonable belief that the period of continuous variation in the value of stocks has to some extent ended. The result is most readily seen in the record of the exports of the products of the industry. It is true that the improvement shows almost entirely in the shipments to the Colonies, but the disturbed political conditions existing everywhere on the continent of Europe have there delayed the economic recovery, the beginnings of which are evident at all events in the English-speaking countries.

Under the heading of Corporation Profits Tax, the report contained the following: An arrangement has been concluded with the Inland Revenue Authorities under the terms of which members are entitled to treat their subscriptions to this organisation as a trade expense, not liable to Corporation Profits Tax. The agreement is somewhat complicated in its character, but the essential principle is that the payment to be made by the Federation, if any, is only based on that proportion of its income received from members liable to pay the tax. The agreement, therefore, benefits those members liable to the tax without any injustice being inflicted upon that proportion of the members who, trading as private concerns, are not liable to this particular impost.

Postal rates and regulations are among the matters which have been closely watched by the Federation during the past year, and in regard to outlook envelopes the report says: It is much regretted that during the year the Australian Post Office failed to carry out the arrangement which the Postmaster General had hoped to be final, under the terms of which the restrictive conditions of the International Postal Conference were not to be put into operation as between the English-speaking countries of the world. The matter is not yet finally closed and it is still hoped to nullify the effects of the resolution so far as the English-speaking peoples are concerned.

In regard to sample post, in co-operation with organisations in kindred industries, pressure has been exerted on the Post Office to secure the restoration of the Inland Sample Post. A number of untoward incidents drew attention to the position created by the fact that the British Post Office under its international arrangements was willing to deliver foreign samples to British consumers at very much lower rates than those available for British samples carried to the same consumers at inland rates. The reductions in postal rates made last year have led to reductions in postal revenue, the use of postal facilities not having increased to the extent anticipated when the reductions in rates were conceded. Under these conditions the Postmaster-General has been very chary of making any further concession which even looks like reduction in rates until after the end of the financial year. It is, however, hoped that the case made out in regard to British samples is so unanswerable that this rate is likely to be reconsidered as soon as the Postmaster sees any possibility of reductions.

Commenting on the imports and exports of stationery during the past year, the report observes that it is very satisfactory to note that the imports of envelopes, notepaper and pads still remain at what must be regarded as a low figure, whilst the exports during last year, although not returning to the high figures for 1920, at the same time show a considerable increase over those recorded during the lean period of 1921.

The opportunity is taken in the report to invite the co operation of members of the Federation in finding apprenticeship berths for disabled men who, having received a year's institutional training, it is now desired should be placed in factories to receive three years' workshop training. This note is specially addressed to those members having binding departments, as apprenticeship vacancies are urgently needed by the National Trade Advisory Committee of the Printing and Kindred Trades for a number of disabled men partially trained in the operations of that department.

The new classification of goods carried by merchandise train having been completed, the traders are now engaged in negotiation with the railway companies for the fixing of rates which shall produce the income to the railway companies laid down in the provisions of the Railways Bill. A very strong traders committee has been formed and upon this committee the secretary of the Federation has been appointed to serve. The many problems involved in the revolutionary changes brought about in railway rates and conditions by the passage of the Railways Bill are receiving continuous attention.

On the motion of the chairman, who commented upon the comprehensive character of the report, seconded by Mr. H. A. Mead (Fuller Mead, Ltd.), the report was unanimously adopted, as was also the statement of accounts, the adoption of which was moved by Mr. T. Owen Jacobsen, and seconded by Mr. Arnold Godfrey.

New President.

Mr. James Gallie moved that Mr. J. Leonard Spicer be appointed president for the ensuing year, and in doing so he cordially acknowledged the great help he had received from Mr. Spicer during the two years of his (Mr. Gallie's) presidency.

Mr. Walter Shaw (Messrs. Castell Brothers, Ltd.), in seconding the resolution, referred to the difficulties which would have to be faced during the coming year, but the Federation were getting the right men to undertake the direction of affairs.

The resolution was cordially carried, and Mr. Spicer, in accepting office, observed that if the duties of vice-president were not more onerous than they had been during the past year it would not be a hard post to fill. Their retiring president had done all the work, and the Federation were indebted to Mr. Gallie for his unremitting services. The speaker looked forward to better times, both in their own particular industry and for the country generally.

Mr. W. F. Sinclair (Wm. Sinclair and Sons, Ltd.), proposed the election of Mr. T. Owen Jacobsen, J.P. (Jacobsen, Welch and Co., Ltd.), as vice-president. This was seconded by Mr. J. B. Browne (Manchester Envelope Co.) and carried unanimously.

Mr. Frank Appleton (Messrs. Pirie, Appleton and Co., Ltd.,) who bears a name well known in the envelope manufacturing industry, was appointed treasurer in succession to Mr. Jacobsen.

Thanks to Mr. Gallie.

Mr. Leonard Spicer proposed a resolution of thanks to Mr. James Gallie for his services to the Federation during the two years he had occupied the presideney. He spoke in warm terms of the efficiency with which Mr. Gallie had carried on the work and to the great self-sacrifice which was involved in making fortnightly journeys from Edinburgh to London in the interests of the Federation. The heartiest and deepest thanks of the members were due to their retiring president, who had been a source of great inspiration to them all.

Mr. Jacobsen seconded the resolution, which was heartily and unanimously carried.

Mr. Gallie, in acknowledging the resolution, spoke of the valuable friendships he had formed during his term of office and the consideration and kindness which he had unfailingly received from the council, the executive committee and all the members. He also acknowledged the valuable assistance given by the secretary (Mr. Armstrong) and the good work which had been loyally performed by the members of the staff.

Mr. Leonard Spicer endorsed the remarks which Mr. Gallie had made with reference to the secretary and the staff, and a formal resolution of thanks was passed to them.

Paper Convention.

Programme for the Association and Technical Section Meetings.

The present week is an important one for British papermakers and paper technologists. The seventh general conference of the Technical Section will be held to day, Thursday, March 22nd, at 26 and 27, Farringdon street, London, and the annual general meeting of the Papermakers' Association on Friday afternoon at the same place, followed in the evening by the annual dinner at the Connaught Rooms, 7 p m.

Captain W. E Nuttall (the chairman) will preside at the technical conference, and Mr. Leonard Tod over the proceedings of the Association.

The programme of the Technical Conference is as follows:—

MORNING SESSION.

10—10.45 a m.—Meeting of executive committee of the Section.
10.45—11.30 a.m.—Annual general meeting.
11.30 a.m.—General conference.
11.30—12.15.—Paper, "Methods of Testing the Strength of Pulps. A Contribution to Standardising the Methods."—R. W. Sindall, F.C.S.
12.15—1 p.m.—Discussion.

AFTERNOON SESSION.

2.30—3.15 p.m.—Paper, "Automatically controlled Hydraulic Power Transmission as Applied to a Paper Mill."—J. W. Rose.
3.15 p.m.—Discussion.

Shipping Paper for Export.

In an address to the Export Trade Class at Toronto University Extension course, Mr. A. L. Dawe made the statement: No matter how ridiculous the shipping instructions are, it is sound procedure to follow them.

It was stated that the reputation of Canada as to packing and shipping was favourable in foreign markets. This was an advantage over the United States as there were unsettled claims for millions standing against United States mills for faulty packing on export business secured by them immediately after the armistice.

In dealing with the packing question Mr. Dawe cited an order received from a buyer in Belgium who requested that shipment of a certain kind of paper be wrapped in small bundles giving length, breadth and weight. This seemed to be an unusual request in connection with this particular kind of paper, and on investigation it was found that the Belgium buyer was ordering these goods for an importer in South America and the destination was some hundreds of miles inland. The shipment had to be carried to this buyer on the backs of mules. Another case was given where a buyer in India requested that the bands on the bales be painted red. Upon investigating this seemingly peculiar request it developed that the purchaser required this for more ready identification.

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

"Fryotype" Melting Pot

SAVES LABOUR. SAVES MONEY.

A "Fryotype" Melting Pot is not a luxury; it is a necessity. It is not an expense; it is an economy. Nearly 200 Printers have installed these Melting Pots during the past 12 months, and while you are reading this they are saving labour, time, gas and metal.

Send for descriptive folder and learn how you, too, can save money.

The Sizes of Printing Papers.

Recommendation as to their Simplification, made after Investigation by U.S. Bureau of Standards.

Particulars of the data regarding paper sizes used by printers and others, compiled after an important investigation by the Bureau of Standards, Department of Commerce, Washington, U.S.A., were published in our issue of February 15th. In view of those carefully ascertained data, and as a result of a nation-wide and thorough inquiry by questionnaire carried out by the Committee on Simplification of Paper Sizes, the Bureau issues the following recommendations and explanations.

Four Sheet Sizes Recommended.

The committee recommend to the Bureau of Standards of the Department of Commerce that production of book papers be simplified to four sheet sizes of 26 by 29, 25 by 38, 32 by 44 and 35 by 45½, and their doubles, to cover virtually all general printing, publishing and advertising requirements.

The committee also recommends that the sheet size of 30½ by 41, and its double size, be adopted and recognised as a standard for the use of book publishers. The result of the inquiry made by the National Association of Book Publishers among its members and leading non-members warrants this recommendation.

Sizes for Stitched Booklets, Catalogues, House-Organs, Magazines.

The following table gives the most popular trimmed sizes for booklets, catalogues, house-organs and magazines, and the untrimmed folded sizes for circulars and folders that cut and print without waste from the four recommended sheet sizes:

Booklet Trimmed Size	Sheet Size	Double Sheet Size
3 x 6	25x38	38x50
3⅛x 6¼	26x29	29x52
3⅛x 8⅝	35x45¼	—
3⅝x 5⅛	32x44	44x64
3⅝x 6½	32x44	44x46
4 x 9⅛	25x38	38x50
4⅛x 6	25x38	38x50
5⅛x 7⅛	32x44	44x64
5⅛x 8⅝	35x45½	—
6 x 9⅛	25x38	38x50
6⅞x 9⅛	26x29	29x52
7⅛x10⅝	32x44	44x64
8 x 9⅛	—	¼ of 38x50
8⅛x11	35x45½	—
9⅛x12⅛	25x38	38x50
10⅝x15⅞	32x44	44x64

Note.—The trimmed page sizes that cut without waste from 30½ by 41 and 41 by 61 are 3½ by 6⅜, 4⅜ by 7½, 7⅜ by 9⅞.

SIZES FOR UNSTITCHED AND UNTRIMMED CIRCULAR.

Page Size	Sheet Size	Double Sheet Size
3⅛x 6⅛	25x38	38x50
3⅛x 6⅛	26x29	29x52
3⅛x 8⅝	35x45½	—
4 x 5½	32x44	44x64
4 x 7⅛	32x44	44x64
4⅛x 9⅛	25x38	38x50
4⅛x 6⅛	25x38	38x50
5½x 8	32x44	44x64
5⅛x 8⅝	35x45½	—
6⅛x 9⅛	25x38	38x50
8 x11	32x44	44x64
8⅜x11⅞	35x45½	—
9⅛x12⅛	25x38	38x50
11 x 6	32x44	44x64

Note.—The untrimmed page sizes that cut from 30½ by 41 and 41 by 61 are 3¾ by 6¾, 5⅛ by 7⅝, 7⅝ by 10¼.

The trimmed page sizes allow ⅛ of an inch trim at head, ¼ of an inch trim at front and bottom. The smaller page sizes allow ⅛ of an inch trim at top, front and bottom. Tolerance of ⅛ of an inch in finished work should be permitted.

The 35 by 45½ Inch Size.

In regard to the 35 by 45½ inch size, it should be noted that some mills make this size 35 by 45 and other mills 35 by 46. A checkup with bookbinders shows that the correct size for an 8½ by 11 trimmed booklet and catalogue, and its half size 5⅛ by 8⅜ booklet or catalogue, should be 35 by 45½ to cut without waste. A very large proportion of the returned questionnaires asked for the 35 by 45½ sheet, from which 8½ by 11 booklets and catalogues can be cut. This sheet is comparable to the bond paper size from which 8½ by 11 letter-heads are cut without trim and waste.

With the adoption of the 35 by 45½ sheet size, the 33 by 46 sheet (page size 8 by 11⅛) being so close, it is obvious that the few present users of 33 by 46 can easily swing to the new size, 35 by 45½, which cuts an 8½ by 11 trimmed page size.

The 28 by 42, 28 by 44 and 33 by 46 Inch Sizes.

The 28 by 42, 28 by 44 and 33 by 46 inch sizes comprised but 6½ per cent. of the literature surveyed. It should be noted that printers or lithographers still requiring these sizes will find no difficulty in securing service on these items during a period of readjustment.

In view of the success of the National Association of Purchasing Agents in popularising the catalogue size, 7¾ by 10⅝, and the booklet size, 5¼ by 7⅝, both cutting without waste from the 32 by 44 sheet (included in the committee's recommendations), it can, we think, be assumed that the demand for the 28 by 42 and 28 by 44 sheets will, in a large measure, shift to 32 by 44.

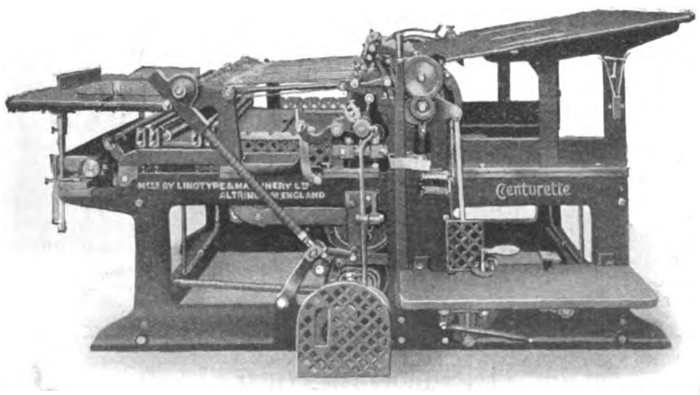

TABLE A.

Sir,

Kindly place our name upon the register of members of the ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED, as from .....192.....to.....192..... and so on from year to year, until notice of discontinuance in writing be given prior to the termination of any year's Subscription, and upon the following terms and conditions:—

CONDITIONS:

The Subscription is annual, payable in advance, and may commence at any time.

All information is obtained from the most reliable sources, but it must be distinctly understood that it is furnished in strict confidence, and is for the sole use of the Subscriber, and is not to be divulged to a third party. The Subscriber will be held responsible for any loss or damage arising from the breach or non-observance of this condition.

Subscriptions are received, all Debt and Status Enquiry Books, etc., are issued, and information is given on the distinct understanding that the Office is not to be held responsible for damage or loss arising from want of sufficient or accurate information furnished to Subscribers, and it is agreed between the Subscriber and the Office that no proceedings shall be instituted against the Office by reason of any information furnished or omitted to be furnished, and the Subscriber further agrees not to give credit in sole reliance upon any information received from the Office except upon his own responsibility.

The Solicitors to whom collection of any debt is transferred by the Office shall be entitled to exercise discretion as to the form of procedure to be adopted in each case, and the Subscriber agrees to ratify all acts done by such Solicitors.

In case of discontinuance, Debt and Enquiry Forms are to be returned to the Office with written notice, before the end of the subscription term

Terms:

Subscription £2 2s. 0d. per annum, entitling the Subscriber to:—

Ten Status Enquiry Forms and ten Debt Forms free of charge.
Further Enquiry Forms during currency of Subscription at 2/- each.
" Debt " " " " " " " 1/6 "
The Collection of an unlimited number of Accounts at the following rates of Commission:—
5% on amounts recovered up to - - £20
2½% on amounts over £20 and up to - £100
1% on amounts over - - - £100
5% on amounts recovered in Ireland, Scotland and the Channel Isles.
Special terms in respect to Foreign Debt collections and enquiries.
Representation at Meetings of Creditors free of charge.
Searches of the Registers (unlimited) free of charge.
Legal Advice by the Solicitors to the Office upon ordinary business matters free.

The 26 by 29 Inch Size.

The 26 by 29 size was included in our recommendations because the surveys showed that 19 per cent. of circular and booklet literature fell into the 3½ by 6¼ page size group. Practically every questionnaire returned asked for this sheet size. This size, we may add, will serve the needs of those who have been using a 28 by 42 sheet for stuffers for 6¾ envelopes.

Standard Roll Widths.

On jobs where a page sheet is required which will not cut without waste from the four sheet sizes recommended, the following roll widths are suggested as a guide for ordering special mill runs: 25, 30½, 32, 35, 38, 41, 44, 45½, 50, 61 and 64 inches.

Fitting such work to roll widths would result in economy in paper manufacturing and distribution, as all book papers are made in standard roll widths and then cut into sheets. Roll widths give a one dimension standard, and sheets may be cut to any practical length required.

The following are the roll widths for bonds, ledgers and flats: 17, 19, 22, 24, 28, 32, 34 and 38 inches.

Cover Paper Sizes Standardised.

The page sizes which will cut without waste from the standard book paper sizes recommended will fit to advantage the standard cover paper sizes of 20 by 26 and 23 by 33. These cover sizes were recently successfully standardised through the co-operation of the United Typothetæ of America and the National Association of Purchasing Agents, and have been endorsed by the Cover Paper Manufacturers' Association.

Standard Bond and Writing Paper Sizes.

For general office and factory form and letterhead printing it is recommended by the committee that the sizes 17 by 22, 17 by 28 and 19 by 24, and their doubles, be decided upon.

The sizes in the Table A are those which cut and print without waste from the sizes recommended.

Special Committee for Bond and Ledger Paper Specialties.

The committee further recommended that a special committee should be appointed to meet with the Simplification Committee, for the purpose of making a special set of standards for bank cheques, drafts, customers' cheques, pocket cheques, insurance policy forms, legal forms, forms for mortgages, bonds, etc., also tariff forms, railroad forms, blank book, loose-leaf ledger and bond paper forms, and other work coming within the range of those classes of printing and lithography.

This report, as will be observed, contains a great deal of data supporting the committee's recommendations. The committee hopes that these data will prove helpful not only to paper manufacturers and merchants, but also to printers, stationers, lithographers, publishers, and also to makers of printing machinery. The report will, in addition, serve as a guide and help to buyers of printing matter. It is not the purpose of this report to discourage originality. It seeks to bring about economies in printing, publishing and advertising. The report demonstrates that out of the standard sizes of paper recommended can be cut practically all sizes and forms required.

The adoption of this report by the Bureau of Standards of the Department of Commerce is recommended by the Committee.

"The Three Arts."

Mr. Lewis Hobday, Dover, has presented to the Technical Library of the Papermakers' Association, a copy of an old book entitled "The Three Arts, or a concise and interesting view of the nature and history of papermaking, printing and bookbinding, being designed to unite entertainment and information concerning these arts with which the cause of literature is peculiarly connected." Printed at the Sussex Press, Lewes, and published by J. Baxter in 1809, it contains three engravings and a short but captivating description of the three processes as they were carried on over 100 years ago. It is amusing to note that the illustration of the Sussex Press establishment on the cover of the book combines a lottery office and the sale of patent medicines with the other functions of a printer and stationer.

Mr. J. Leonard Spicer.

The New President of the Envelope Makers' Federation.

For many years Mr. James Leonard Spicer has performed in a quiet way much valuable work in the paper trade and elsewhere, and his election as president of the Employers' Federation of Envelope Makers and Manufacturing Stationers is some reward for his labours.

Born in 1873 at Bexley, Kent, he is the second son of Mr. James Spicer, son of the original James Spicer who gave his name to the firm as James Spicer and Sons when that concern was founded in 1865. Mr. Leonard Spicer was educated in the first place at a preparatory school at Brighton and later went to Leys School, Cambridge. His educational equipment was further added to by a sojourn of 15 months on the Continent, when he familiarised himself with foreign languages and methods of business.

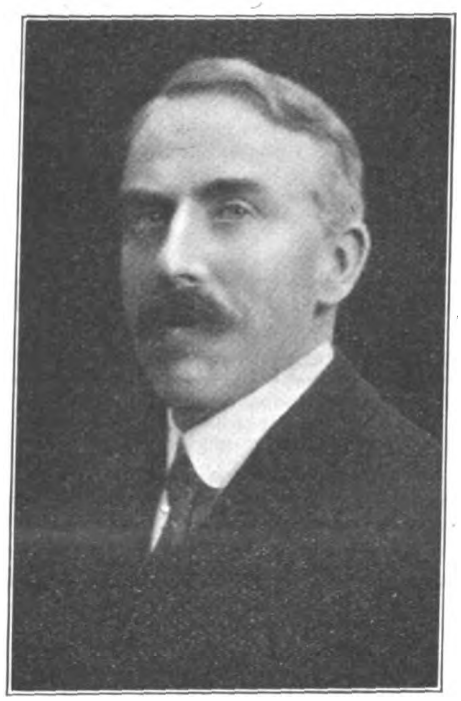

Photo: Oscar Hardee, London.

MR. J. LEONARD SPICER.

On completing this part of his training, Mr. Spicer spent four years in the shipping trade, and he might have continued along those lines but for the fact that the firm of James Spicer and Sons was developing to such an extent that his services were required in Upper Thames-street. Accordingly he entered the paper trade in 1896, being connected with the export side of the business. Subsequently he directed his energies on the "writings" side of the business, and for some years now has been engaged in developing the manufacturing stationery section. Mr. Spicer was taken into partnership in 1900, and when the business was converted into a company in 1910, he became one of the directors, his fellow-directors being the Right Hon. Sir Albert Spicer, Bart. (chairman), Sir Howard Spicer, K.B.E., Mr. A. Dykes Spicer and Mr. Douglas Spicer. With the amalgamation of James Spicer and Sons, Ltd., with Spicer Brothers, Ltd., which was realised last year under the present style of Spicers Ltd., Mr. Leonard became a director of the new board.

In the course of his career, Mr. Spicer has travelled extensively. In addition to several visits to the Continent and America, in 1914 he toured Australia and New Zealand, calling at the various branch houses of the firm. When the war broke out he was half-way across the States, and on his return to this country he threw himself heart and soul into the great efforts which James Spicer and Sons, Ltd., made to serve the country in this great crisis. In conjunction with his elder brother, Sir Howard Spicer, he helped to organise five or six factories which were devoted to the manufacture of gas masks, a proviso (against enemy attacks) of the very first importance.

Possessing, in common with other members of the family, a spirit of public duty in a high degree, Mr. Leonard Spicer has given much time and labour to organisations associated with the paper industry, as well as to educational and other movements outside. At one time he represented his firm on the Association of Wholesale Stationers. His connection with the Employers' Federation of Envelope Makers and Manufacturing Stationers began from the inception of this organisation in 1918, he, as the representative of his firm, being one of the founders. It is a curious coincidence that on the same day that Mr. Leonard Spicer was elected president of this Federation, his cousin, Mr. A. Dykes Spicer, was made president of the National Association of Wholesale Stationers and Paper Merchants. Since its foundation, Mr. Leonard Spicer has done much to assist in developing the work of the Federation, of which he was vice president during the two years of Mr. James Gallie's presidency. In the handling of labour problems his experience and tact have been invaluable, and have earned for him the esteem of the union leaders. As chairman of the Interim Industrial Reconstruction Committee, which was set up to deal with questions connected with the manufacturing stationery industry, he has also been of great service.

Outside the paper and stationery industry Mr. Leonard Spicer has given up much time on behalf of education. He is chairman of the Borough Polytechnic, a position he has held since 1905, while in the district of Bromley, where he lives, his assistance in the direction of various religious and benevolent movements has been eagerly sought and as willingly granted.

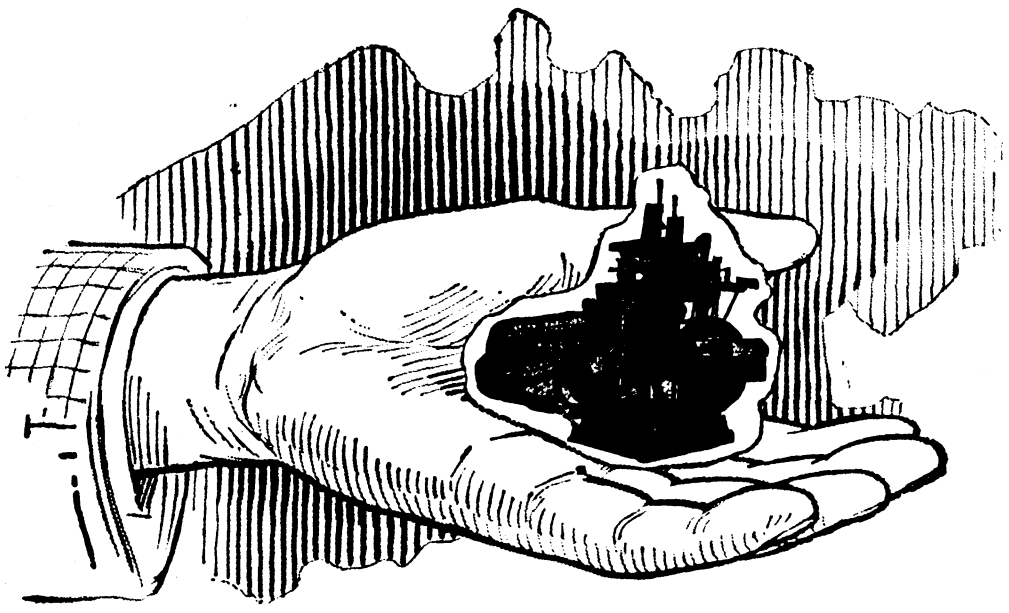
In 1901 Mr. Spicer married Miss Lloyd of Denmark Hill, and there are three children, a boy and two girls.

Paper and Printing Ink.

Reasons of Certain Results.

In an exhaustive paper on the relationship of paper to printing ink, presented at the annual meeting of the Canadian Pulp and Paper Association, Mr. B. G. Ransom specified some of the requirements of paper and the reasons of certain results.

He explained, for instance, that in the rotogravure process of printing, the best results are obtained by the use of super-calendered stock, 40 or 50 pounds, of faint cream tint. Dead white makes the picture too hard. When the paper is not properly calendered, the ink has a tendency to sink into the paper and the finished print lacks the required gradation in tone.



The principal paper troubles in printing are caused by improperly wound paper, one side of the roll being tighter than the other. This first produces wrinkles on the printed sheet and finally breaks the web. All pasters in the roll of paper should be eliminated if possible, or carefully made of non-meltable paste such as dextrine. Calender marks are also the cause of considerable delay. The paper used in gravure printing is subjected to a harder pull on the press than is ordinarily encountered, and therefore should possess a higher tensile strength.

Another difficulty which is not infrequently encountered is the presence of free acid due to the bleaching materials not being properly neutralised at the end of the bleaching process. In some cases it may be due to an excess of alkali which was added to neutralise the acids from the bleach; when this condition occurs the cylinders, after running a few hours, possess a rough surface due to the interaction of the copper with the acid or the alkali.

The rapidity of drying of news-print ink depends entirely on the absorption of the ink by the paper. The composition of the paper is therefore of essential importance. As is known, ground wood pulp has an affinity for printing ink, while sulphite pulp has not; still news-print always contains a certain proportion of sulphite pulp. Another difficulty in printing which can be assigned to the paper is the varying thickness of the news-print. If the stock varies from 28 to 32 pounds, as often happens, the printed matter may be badly blurred on the lighter weight sheet because the rolls are set for the heavier weight sheet.

Paper used in poster printing must be absorbent so that the ink dries quickly. It must also be non-fading to produce the best results. The papers that are used in book printing are of many different kinds and the ink used in the printing must be adapted to suit the paper.

Trade Notes.

PARTNERSHIP has been dissolved between N. R. Alexander and C. S. Coleman, printers, 10, Coleman-street, E.C., under the style of The Cheltham Press.

LUDLOW TYPECASTER.—A conference was arranged to be held on Tuesday between the London Master Printers' Association and the London Society of Compositors to discuss certain proposals put forward by the L.S.C. concerning conditions and wage rates in respect of the Ludlow Typecaster.

THE conference held on Friday between the L.M.P.A. and the National Society of Operative Printers and Assistants on rates for stitching and binding machines was adjourned after a six-hour sitting.

THE 101st election of pensioners, 1923, in connection with the Printers' Pension Corporation is to be held at the Connaught Rooms, on Saturday, April 7th, the poll commencing at 1 p.m. and closing at 3 p.m.

MESSRS. T. F. SALISBURY and F. Taylor, who carry on business in Palatine-buildings, Victoria-street, Manchester, as commercial and general printers and stationers, were the plaintiffs in an action against Harold Joseph Seligman, St. Peter's-square, Manchester, also a commercial and general stationer, at the Lancashire Chancery Court at Manchester last week. The plaintiffs sought an injunction to restrain the defendant from carrying on business in breach of an agreement made with the plaintiffs. Judgment was reserved.

PRINTING TRADES ALLIANCE.—The Printing Trades Alliance held a dinner at Anderton's Hotel, Fleet-street, on Saturday night, Mr. A. H. Farmer presiding over a large company. Mr. C. E. Allen, proposing the toast of the Alliance, said that trade unions to-day had become essentially political organisations, and as such were a danger both to the State and the individual. Mr. Harry Dubery, Labour Advisor to the Allied Pianoforte Industries was one of the speakers.

PRINTING CRAFTS GUILD.—The popularity of the firm of Messrs. J. Robertson and Co., Ltd., printers by every process, St. Anne's-on-Sea, was proved on Saturday last when about 70 members of the Guild travelled over 100 miles to visit these works, which are situated in an ideal position close to the sea shore. Messrs. Robertson are the only persons in this country who publish a newspaper by the offset process—the finely illustrated *Blackpool Times*—and Guild members were much interested to see this and other work in operation, and carried away a deep impression that ideal conditions bring forth all that is best in the craftsman.

MR. JAMES BARR, the well-known author and journalist, died last week in a nursing home at Putney.

MR. H. R. WHATES, for many years Parliamentary correspondent of the *Birmingham Post*, and previously for nine years assistant editor of the *Standard*, died at his residence near Hounslow on Sunday.

DEATH OF MR. W. VERNUM.—We regret to announce the death of Mr. W. Vernum, which took place on Friday. Mr. Vernum, who had been in indifferent health for nearly twelve months, was a prominent member and a warm and loyal supporter of the Printing, Bookbinding and Kindred Trades Overseers' Association. At the time of his death he was in charge of the bookbinding department of Messrs. C. and E. Layton, a position he had occupied for a period of seven years.

SIR GEORGE TOULMIN, of Preston, one of the proprietors of the *Lancashire Daily Post*, the *Preston Guardian*, the *Blackburn Times*, and the *Burnley News*, twice chairman of the Press Association, Ltd., honorary treasurer and a former president of the Newspaper Society, who died on January 21st, aged 65, left estate of the gross value of £73,828, with net personalty £62,814.

THE late Mr. James Edwards Catty, of Regent's Park, and of Bexhill-on-Sea, of Messrs. Mansell, Hunt, Catty and Co., Christmas cracker and paper capsule manufacturers, left £6,184.

UNDER the will of the late Miss Gertrude Page, a certain annual sum has been placed at the disposal of the Society of Authors, Playwrights, and Composers to be employed on behalf of literary or journalistic workers resident in the United Kingdom, particularly for the purpose of providing a change of air or temporary help in cases of sickness, where these needs cannot otherwise be met. Forms of application can be obtained from the offices of the Society, No. 1, Central-buildings, Tothill-street, Westminster, S.W.1.

LONG SERVICE ON "THE TIMES."—To the record of long service on *The Times* staff must be added the names of Mr. Frederick Maude and Mr. William Richardson, who are retiring on pension on March 28th, Mr. Maude, a machine-minder in the press room, is in the fiftieth year of his service and the sixty-fifth year of his age. Mr. Richardson, who is an assistant in the press room, is also in the fiftieth year of his service, but in the sixty-seventh year of his age.

SOME important new documents concerning William Caxton's residence at Cologne were announced last week by Mr. A. W. Pollard, on behalf of Lieut.-Colonel J. G. Birch, at the meeting of the Bibliographical Society at 20, Hanover-square.

THE annual concert of employees of the *Daily Telegraph* in aid of the Lloyd Memorial Convalescent Home, Deal, was held on Saturday evening at the Bridge House Restaurant, London Bridge. Lieut.-Colonel E. F. Lawson presided, an excellent programme being contributed to by, among others, Miss Mabs Manchester, Miss Hilda Burkin, Miss Dorothy West, the Matt Trio, and Mr. Syd Hammond. Mr. Ralph Baker proposed a vote of thanks to the chairman, who, in reply, emphasised the good work the institution was doing, mentioning that in 1921 1,679 patients were treated, whereas last year the number increased to 2,361—944 men and 1,417 women. Thanks to generous support, the "plate" amounted to £98.

WILLIAM RICHARD MASON (37), electrician, of High-road, Wood Green, son of a local tradesman, was sent to prison for six months' hard labour at Wood Green Police Court on Friday for stealing £3.950 from the house of Mr. Joseph Barton, stationer and account book maker, of Park-avenue, Wood Green.

HENRY BANNERMAN AND SONS, LTD., MANCHESTER.—Since 1890 the businesses of Henry Bannerman and Sons, Ltd., and the Bannerman Mills Co., Ltd., although under the same management, have been carried on as separate concerns. Now, for family reasons, and with a view to concentration of control, these private companies are being amalgamated under the style of Henry Bannerman and Sons, Ltd., who will also take over the Bradford-road Manufacturing Co., Ltd. In conformity with the law's requirements, the latter and the Bannerman Mills Co., Ltd., will be voluntarily wound up, the businesses being taken over *in toto* by Henry Bannerman and Sons, Ltd. No change in management will be involved, Sir Charles W. Macara, Bart., retaining his positions as chairman and managing director.

DUBLIN RAID.—Members of the Criminal Investigation Department raided two houses in North Great Georges-street, Dublin, last week, and seized the printing plant of the *Republican Bulletin*. They also seized large quantities of Republican literature. Fourteen women found in the premises were searched and arrested, as was also a man described as head of the Republican Publicity Department.

GERMAN UNEMPLOYMENT FIGURES.—An increase in unemployment generally in Germany is reported for January. In the printing industry this is not very marked, the returns showing that out of 62,403 trade union members 8·4 per cent. were unemployed at the end of January as against 8·0 per cent. at the end of December last, though in January a year ago the percentage was only 1·3. Of 96,773 bookbinding workers 4·5 per cent. were unemployed in January, as compared with 2·7 per cent. in December and 1·1 per cent. in January, 1922.

PLAYING CARDS FOR U.S.A.—The Assistant Secretary of the U.S.A. Treasury, is sending an announcement to collectors of customs regarding the internal revenue tax and customs duty on imported or so-called toy playing cards, in which it is held by the department that such miniature playing cards are dutiable as playing cards under the provision of Paragraph 1,312 of the Tariff Act of 1922. The Secretary of the Treasury has directed collectors of customs to detain future importations of such cards until the internal revenue tax is paid and also to require internal revenue tax payment on those cards now in customs' custody.

NOTICE of proposal has been given by the Paper Box Trade Board (Northern Ireland), dated February 19th, 1923, to vary by reduction the general minimum time-rates and piece-work basis time-rates for female workers.

THE first number of the *Chicago Tribune* was issued on June 10th, 1847, when 400 copies were pulled on a Washington hand press worked by one of the editors, and in commemoration of its 75th birthday the newspaper has issued an interesting souvenir volume.

THE American Bible Society has placed the largest single Bible order ever given by any organisation in the United States, perhaps in the world, to a firm in New York City. It is for 1,500,000 volumes of Scriptural portions, consisting of the Gospels of Matthew, Mark, Luke and John, the Book of Acts, and the Book of Proverbs, in English and Spanish.

THE *Caslon Circular and Typefounder* for February serves not only to display the merits of Caslon types but also to convey some interesting reading matter.

Paper Bag Machines.

Several interesting devices have been invented for producing paper bags as food containers in large quantities, and one of these machines introduces a new method of producing single bags, lined bags, or double-lined bags at will. In fact, it is claimed, says *The Times* (Trade Supplement), that this machine will make any class or shape of paper container delivered open or collapsed. The principle on which the containers are manufactured is entirely rotary.

Broadly speaking, the invention consists in forming a bag or container of any desired tubular shape by the provision of a rotary mandrel to which the blank is fitted. The mandrel revolves at an adjustable speed in contact with a certain number of stationary resistances or abutments. These are shaped and located relatively to the mandrel portion along which the folds are to be performed. As the portion of the blank from which these folds are to be produced comes into contact with these shaping surfaces consecutively they are formed until the bottom of the bag has been completed by the last of the abutments with which it has come into contact.

This makes a very secure and almost air-tight end to the bag, and the object of the machine is to simplify the manufacture of containers, increase the output, and materially to cheapen the mechanism hitherto employed for similar purposes. The speed of making the bags is stated to be about 40 or 50 a minute, and the container, when made, can be filled by any of the ordinary food-filling mechanisms generally employed for this purpose.

TO demonstrate our confidence and at the same time guarantee the efficiency of the

"Monometer" Melting and Refining Furnace

for Printers over any other system at present on the market, we have decided to place installations on a first payment of 25% of the price of same, and to spread the balance over a period of twelv e months.

The "Monometer" Furnace never wears out.

"Monometer" Furnaces installed twelve years ago are to-day equal to new, and we have never had to replace a pot.

Fine Rally of S.-E. London Printers

Annual Meeting of the Association.

The eighth annual general meeting of the Association of Master Printers of South-East London, held at the Bridge House Hotel, London Bridge, on Tuesday of last week, called forth a good attendance of members, and the whole of the proceedings, both business and social, were notable for the cordiality and enthusiasm displayed. An address by Mr. W. Howard Hazell (president of the London Master Printers' Association) was a feature of the occasion, and there were present—besides those connected with the South-East Association—Messrs. J. R. Burt (W. and N.-W. Association), J. D. Wise and F. H. Cole (South-West), W. J. Boyle (Central Districts), W. J. Mizen (North), and W. Whyte (secretary, L.M.P.A.).

Commencing soon after six, with Mr. J. R. Brigenshaw in the chair, the meeting first occupied itself for upwards of an hour with the annual business agenda, including reports of the past year's work and the election of officers for the coming year.

A Good Year's Work.

The report of the secretary, Mr. F. Mason, was very satisfactory, showing as it did that there is now in South-East London a live master printers' organisation, with increased attendances at meetings, and a growing membership which already totals 170.

The report was cordially adopted, the chairman remarking that its satisfactory character spoke volumes for the work accomplished by their secretary.

The report of the treasurer, Mr. H. H. Norman, was also a healthy one, mention being made of considerable increases, both in receipts and in expenditure, whilst there remained a small balance on the right side.

The treasurer's report having been adopted, Mr. Brigenshaw announced that the next business was the election of officers. He took the opportunity to thank those who had attended their meetings and expressed his indebtedness to the secretary, treasurer, and committee, for assistance given to him as president. He acknowledged also the ready help that had always been forthcoming from 24, Holborn.

There was only one nomination for the presidency. Mr. Dawe proposed Mr. G. Poulton, and this proposition, seconded by Mr. Mason, was unanimously carried.

Mr. Poulton accordingly took the chair vacated by Mr. Brigenshaw. He made brief expression of thanks for his election, and also paid a high tribute to the value of Mr. Brigenshaw's work during his term of presidency.

Messrs. J. Griffiths and F. H. Dawe were elected vice-presidents.

Mr. F. Mason was re-elected secretary, the new president making further appreciative reference to the large amount of work for the Association accomplished by Mr. Mason.

Mr. H. H. Norman was re-elected treasurer.

Address by Mr. Howard Hazell.

At this point in the proceedings Mr. W. Howard Hazell made his appearance and was very cordially received. As he had to hurry on to another meeting, a break was made in the business to give him an opportunity of speaking, which he did, delivering a brisk and stimulating address.

Mr. Hazell, who made eulogistic reference to the new president as a strong man well able to advance the objects of the Association, stressed the fact that virile local associations were essential to the authority and power of the Alliances and the Federation, close co-operation being necessary if they would cope with opposing influences and deal with difficulties as they arose. He had heard foolish printers say they did not see what return they got for their subscriptions. They might make the same remark with regard to their fire insurance; and no printer in his senses would go without insurance. The multifarious activities of the London Master Printers' Association and the Federation had already accomplished much, and those activities had had much more far-reaching effects than the average printer realised. The very existence of their organisation had prevented a good many difficulties and restrained a great many movements inimicable to their interests. He advocated an increased subscription, a strong reserve fund, and a larger staff of officials, so that they might be enabled to embark upon many lines of activity not possible at present. He referred with satisfaction to the growth of the spirit of friendship amongst employing printers, and recalled that at their first annual dinner only about 30 people gathered round the table, whereas the recent banquet in London was attended by between 200 and 250. Mr. Hazell went on to urge the need, in view of the increasing cost of all services and all material, that printers should lose no opportunity of increasing the efficiency of their factories. They must study new methods and new machinery, and by moving with the times reduce their costs of production, without necessarily reducing wages, and thereby increase the demand for their products. He concluded with a note of optimism, remarking that, bad as things are at the present time, he believed they had passed the bottom of the slump. Let them forget the losses and troubles of the past and look hopefully to the future. If it were possible to get a spirit of optimism into a trade or into a nation things at once began to improve. People extended their activities in various ways, and the demand for various commodities increased. Therefore let them take an optimistic outlook, improve their methods, and get ready for a slow but steady improvement in the printing industry in London. Let them rely on their Association, strengthen it, work for it in every way, believing that by wise and strong co-operation they would be able to accomplish a great deal more than by blind and senseless competition.

Mr. Hazell's address evoked hearty applause, and a vote of thanks was accorded him on the motion of Mr. Dawe.

Routine business being resumed, the following were elected to constitute the committee: Messrs. G. Neves (Woolwich), H. R. Grubb (Croydon), H. Starkey (Erith), J. Lack (Dartford), J. Bryant (Lewisham and Greenwich) and C. Northam (Norwood).

Mr. Poulton was strongly pressed to continue as a representative of the S.-E. Association on the Council of the L.M.P.A., but declined to do so. Messrs. Brigenshaw, Mason and Bates were re-eleced to this service and Mr. Dawe was elected as fourth representative.

Mr. Burt, as a member of the L.M.P.A. Council, interposed that he thought he could say on behalf of the Council as well as on his own behalf that the Council would be exceedingly sorry to lose Mr. Poulton as a representative of the S.-E. Association.

The business of the evening concluded with the election of a new member, and several other minor items. It was announced that at the next meeting of the Association Mr. Frank Colebrook would deliver an address on "Photo-Litho and Letterpress: Their New Inter-relationship." Approval was also given to a suggestion that arrangements be made for a party representing the S.-E. Association to pay a visit to a paper mill—details to be announced later.

A Pleasant "Social."

The agenda ended, light refreshments were served, and a concert programme with a number of short speeches interspersed served to while away happily another couple of hours or so.

Contralto songs by Miss Connie Dawe were enthusiastically applauded, special pleasure being expressed at the fact of her being the daughter of a member of the Association. Miss Winifred Vaughan also won much favour, giving songs at the piano and acting as accompanist. The humorist of the evening was Mr. Alfred Ricardo, and a good reception was given also to humorous songs by Mr. Wilson Martell, under whose direction the concert was arranged.

Fraternal greetings were conveyed to the Association from other district associations in a series of addresses, brief and bright, by Messrs. Burt, Boyle, Mizen and Wise.

After a vote of thanks to past and present officers, moved by Mr. Wellard and seconded by Mr. Cutts, to which Messrs. Mason and Norman responded, Mr. J. J. Keliher proposed in very cordial terms a vote of thanks to the retiring president, Mr. Brigenshaw, and the proceedings came to an end with Mr. Brigenshaw's response.

MESSRS. GEORGE PHILIP AND SON, LTD., the well-known firm of map-printing specialists, of 32, Fleet-street, London, send us a copy of a booklet containing examples of maps excellently produced by the "Waxtype" engraving process carried out at their works.

MESSRS. HEWS, GREENFIELD AND CO., formerly of Bridge-place, S.W., is now located at 41-43, Moor-lane, London, E.C., under the title of the Regent Paper Works.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The usual monthly meeting of the Association was held on Tuesday of last week at the headquarters, St. Bride Institute, Bride-lane, E.C.4, the chair being occupied by Mr. A. Chadwell (president). The balance-sheet for 1922, which was placed before the members, gives further evidence of the Association's steady progress, notwithstanding the handicaps of a somewhat difficult year and the calls that have been made on the funds.

The minutes of the previous meeting were read and confirmed.

The balance-sheet was next submitted, and in moving its adoption the president commented on the fact that they had experienced quite a satisfactory year. On the expenditure side of the account members would see that they had not forgotten the claims of the various charities connected with the trade. Apart from those there was also a donation of £100 towards the fund on behalf of one of their members who unfortunately had become incapacitated. This donation, which loomed large on the expenditure side of the account, was granted with especial pleasure and with the thorough unanimity of the members. Mr. Chadwell also referred to the outgoings which they would have to meet in connection with the Central London Printing School, an object which, however, he considered was a very commendable one.

Mr. W. H. Longley (treasurer) thought they would have to go a little more cautiously in the future, as they did not stand quite so strong financially this year as they did at the beginning of last. He was afraid they were often imbued with a tendency to let their hearts run away with their heads. As a guardian of the Association's funds, he hoped that, when voting money away, members would not forget also that they had certain liabilities.

Mr. A. J. Latimer asked if their finances were sufficiently strong to meet their liabilities to the full if there was a sudden call on the funds.

Mr. Longley was afraid that that could only be done at the present time by drawing upon their War Savings Certificates. He would rather have the prospect of meeting their liabilities from their current banking account if called upon to do so.

On the proposition of Mr. J. Parker, seconded by Mr. S. Huggins, the balance-sheet was unanimously approved.

The members next considered the annual dinner, which, it was decided should take place in November, the stewards selected for this event being Messrs. W. M. Forsyth, A. J. Latimer and A. E. Wood.

Mr. Huggins pointed out that as the members' informal dinner, which was held on a Monday night, had been such an unqualified success, they might repeat the idea again next year and make it take the place of their Saturday night function.

In the discussion which followed, most of the members expressed the desirability of continuing the annual dinner and ladies' night, and of holding it on a Saturday as hitherto.

Mr. H. Filkins then proposed that the Association hold two dinners next year; namely, the annual dinner (ladies' night) to take place on a Saturday, and the members' informal dinner to be held on a Monday night.

The proposition was seconded by Mr. W. Bishop and agreed to.

A hearty vote of thanks to the chairman brought the meeting to a close.

Printed Books for Russia.

The Chief Literature and Publication Department of the Commissariat for Education, which also deals with the permission to import into Soviet Russia books printed abroad, has issued a regulation prohibiting the import of books bearing without authority, either on the wrapper or on the title page, the name of a Russian as well as a foreign town as the place of publication—such as Berlin Petrograd, Berlin-Moscow, Kiev-Leipzig, and so on. The right to print on any book the name of a Russian town as the place of publication is only permitted to such publishing firms as are registered with the Chief Literature Department (Glavlit).

Technical Board Examinations, 1923.

The Stationers' Company and Printing Industry Technical Board, Stationers' Hall, E.C.4 announces that, subject to a sufficient number of candidates making application, the Board will arrange for examinations in the following sections of the printing industry at Stationers' Hall: Monday, May 7th, at 6.30 p.m.—Costing, Printers' Assistants, Letterpress Machine; Tuesday, May 8th, at 6.30 p.m.—Composing, Paper; Wednesday, May 9th, at 6.30 p.m.—Lithography, Estimating, Stereo and Electro; Thursday, May 10th, at 6.30 p.m.—Binding, Reading, Warehouse, Order Clerks.

The Technical Board awards certificates, medals and prizes on the result of the examinations, but a candidate having obtained a first-class certificate or prize is not eligible for a similar award in the same section. There are no age qualifications for examinations other than stated below. A special examination may be set for bookbinders above 21 years of age. An entrance fee of 1s. 6d. has to be paid by each candidate.

In the Composing, Machine, Lithography and Bookbinding examinations, the following conditions must be observed: Candidates must be between the ages of 17 and 21 and have regularly attended a course of instruction at a technical school; it is suggested that candidates should not present themselves for examination until they have attended at least a third year's course of instruction at a technical school; candidates must bring with them to the examination an example of their practical work, certified by their instructor.

Applications and entrance fees must reach the hon. secretary at Stationers' Hall not later than April 28th, 1923.

Moscow Printers' Conference.

At a recent conference of the Moscow Printers' Union—says the *Russian Information and Review*—there were present 425 delegates representing 18,000 workers in State, departmental, and private enterprises.

The report of the executive committee showed that the wages of printers now covered the average Moscow workers' monthly cost of living expenses. Energetic measures had been taken by the executive to maintain and increase wages, and it had also been successful in reducing overtime and piece work to a considerable extent.

Thirty disputes between workers and factory administrations had been investigated and settled, and the committee is now engaged in working out a single collective form of agreement. The unemployed, numbering 500, have also been granted additional relief.

The committee has carried out much work in the supervision of creches, of the protection of juvenile workers and general labour protection in various enterprises.

The cultural department has seen to the establishment and regular working of the workers' clubs and libraries. In the central trade school there are 200 students, a school for linotypists has been organised, and all the places the committee had at its disposal in higher educational establishments have been filled. Special allowances have been granted to the students of the workers' faculties and other measures have been taken to render the economic condition of these students more satisfactory.

MR. HERBERT A. STUKINS terminates his partnership with the International Art Paper Co., Manchester, at the end of the present month and is going into partnership with Mr. John Lockett, paper importer and exporter of 374-378, Corn Exchange Buildings, Manchester, on March 1st. The firm will trade under the style of Lockett and Stukins.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investment, Miscellaneous,

Representatives:
London—Mr. STANLEY J. GILLIS, 58, Shoe Lane, E.C.4
Lancashire and Yorkshire—Mr. W. C. FOSTER, 1, Duncan-street, Higher Broughton, Manchester.
Scandinavia and Finland—Mr. DAVID AAMO, 2, Hollænderdybet, Copenhagen, C.
France and Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, Brussels.
United States—LOCKWOOD TRADE JOURNAL Co., 10 East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, MARCH 29, 1923.

Printing and Posting Abroad.

THAT there is strong public opinion on the side of the printing trade in respect of the objection to British business houses printing and posting their publicity matter from the Continent is further evidenced by the outcome of the recent protest against the methods of the Free Church Touring Guild. It will be remembered that the Joint Industrial Council of the Printing and Allied Trades, through its joint secretaries, Messrs. A. E. Goodwin and A. E. Holmes, pointed out to the Guild that whilst the British printer makes no plea for protection, it is very unfair—with serious unemployment in the printing trade—that a concern in this country should take advantage of depreciated Continental currencies to print and post on the Continent their circulars inviting Britishers to spend their holidays abroad. The management of the Free Church Touring Guild having declined to alter their policy in this connection, healthy British feeling in the matter has been given expression by the resignation from the Guild's executive of Dr. Scott Lidgett (the president) and several vice-presidents, including Sir Donald Maclean and Dr. F. B. Meyer.

Personal Records.

A NUMBER of personal records have been set up during the past week or two in the paper industry. First we have Mr. C. R. Seddon, who was last week elected the president of the Papermakers' Association, an office which he combines with that of president of the Federation. Mr. Seddon has been a tower of strength in the paper industry for many years, and that he should have this further honour bestowed upon him is only due reward for very valuable work. Then we have the re-election of Captain W. E. Nuttall as chairman of the Technical Section. In that capacity during the past year Captain Nuttall has rendered valuable service to the industry as a whole, for anything that promotes efficiency in paper manufacture must be reflected in larger and better output at lower cost. The building up of a sound body of technical and skilled workers is a splendid aim, and must ultimately benefit the whole industry in this country. Then we might here also refer to another personal achievement connected with allied associations, and established by members of the house of Spicer. Thus by a curious coincidence, on the same day, namely, March 8th, Mr. J. Leonard Spicer was elected president of the Employers' Federation of Envelope Makers and Manufacturing Stationers, while Mr. A. Dykes Spicer was appointed to a similar position at the head of the National Association of Wholesale Stationers and Paper Merchants.

The Strawboard Market.

STRAWBOARD prices are still hardening, according to the weekly lists issued by merchants. To-day's quotations stand round about £10 5s. per ton for small orders from store. This hardening tendency is reflected in the imports of Dutch strawboards for February, which reached 232,496 cwts., as against 53,760 cwts. a year ago, and 306,943 cwts. in January. Obviously there are good stocks coming into store, from which it may be inferred that prices are going to keep up their present level for an indefinite period. Meantime, it cannot be claimed that there is any considerable improvement in the home demand for foreign strawboard. Enquiry among boxmakers and bookbinders does not provide any information of a hopeful character. Trade in those industries is slow and the outlook far from bright until something like normal prosperity is restored to trade and commerce generally.

British Boxboards.

BRITISH manufacturers are keeping home-made boxboards well to the front by sampling and advertising. A strong feature is made of the increased bulk and improved folding or creasing capacity of the British board. The colour, too, is a decided advantage. In point of price, the home board has nothing to fear from foreign competition if all the factors of quality and utility are taken into account.

Price of Fancy Papers.

A REDUCTION is announced in the price of book end papers, trunk linings and fancy box papers of English manufacture. Compared with foreign linings and marble papers, the British products show distinctly to advantage. Boxmakers and bookbinders are wakening up to the fact that there are mills in our midst capable of providing them with an efficient and much cheaper substitute for the more expensive fancy papers. The English product is supplied both in flat sheets and in the roll.

Bond Paper Progress.

THE steady development in the demand for bond papers is one of the pronounced features in the slow evolution of paper progress. The typewriter as an indispensable business unit is driving away the pen and the fountain pen is becoming a domestic contrivance to the detriment of the steel nib. In direct consequence bond papers are substituting heavy-weight vellums and fine writings, while domestically smooth vellums are finding favour in place of the rough antiques and parchments which make fountain pen writing a source of annoyance. In face of all the change, the steel pen nib and hand or machine-made T.S. account book papers reign supreme in the ledger world. The question arises, should the papermaker make paper to suit the pen or should the new fountain pen industry solve its own problems by overcoming the obstinate refusal of his product to function on certain given types of surface. Fundamentally a steel nib cuts into the paper, a gold irridium point rides on the surface.

P.M. & O.A.: Manchester Centre.

Music Printing Discussion.

At the March general meeting of the Manchester Centre of the Printers' Managers and Overseers' Association, Mr. R. Wright, works manager, Messrs. John Walker and Co., Ltd., Warrington, was admitted to membership, after which the usual business was transacted. Later, Mr. J. G. Gyngell read a paper on "Music Printing."

Mr. Gyngell stated that there were only four towns which made a speciality of music printing, and they were Leipsic, London, Glasgow and Montreal. It was generally admitted that the best work was done at Leipsic, although London and Glasgow were close rivals. Music printing was the speciality of a few firms, who, therefore were responsible for the bulk of the output of this class of work, but lithographers doing a general business were occasionally called upon to print from plates supplied. Music plates were made of pewter, and the stave formed by means of a tool having five cutters, tools of different widths being used for various sizes of music. One cutter marked off the bars, and a steel point was brought into play for slightly marking noteheads and incidentals; then an ordinary copperplate engraver was used for putting the tails on the notes, crescendoes, diminuendoes, rests, etc. When all the music was finished, hardened steel punches, two and a half inches long, were used for punching the words or verses into the plate. Nearly 80 per cent. of the music plates were stamped, only such things as ties and tails being engraved. The plate being finished, a razor blade was drawn across the surface to remove any burrs caused by the punching. The plate was then rolled up with an ordinary composition roller covered with green ink, thus leaving all the lines and music white. The reader having marked the necessary alterations, the portions of the plate requiring attention were hammered out from the back, and then the revises made. For the pulling of transfers the plate was smeared all over with ink, which was well rubbed in, and afterwards the surplus scraped off with a piece of stout cardboard about two inches square, and cleaned with a rag dampened with a weak solution of pearl ash, a final polish being given to the plate by means of the palm of the hand covered with whiting. A tank containing boiling water gave the right heat for the plates for transfer pulling. A sheet of good machine-finished printing paper was damped, either by a sponge or in the damping book, and when the plate was sufficiently cooled this damped paper was laid on, a clean sheet of paper placed over the top, next the usual copperplate blanket—which should be clean—and then the whole was once pulled through the press with a good steady pull. If too much pressure was used, the pewter would bend out of shape; or, should a second pull be given, the impression would be blurred. The transfer was next lifted from the plate, kept at an even moisture and laid on a clean polished stone, slightly warmed, with the positions of each page previously marked off on it, and pulled once through the press under a good strong pressure. When the paper was taken off the stone the transfer was gummed up, a few drops of nitric acid being added to the gum, and allowed to dry. The object of adding this acid was to give to the stone a slight etch, which went a good way towards clearing off any scum where the plates had been kept some time in a damp place and not properly protected. After the gum had been allowed to dry the stone might be washed and rolled up, not rubbed, and treated as an ordinary litho job.

Messrs. Thos. Rignall, Chas. N. Knowles, J. Winstanley, E. Garrett and F. Scouler took part in the discussion.

When replying, Mr. Gyngell said that ink manufacturers did not make music ink, but he would give the recipe to any inquiring members. The best way to find register was to mark the sheet by folding—no squaring up by parallel ruler to be done. When small runs were required and backing up had to be done immediately, a mixture of half each of paraffin and machine oil rubbed over the glazed size of a sheet of good thin brown paper was effective for preventing offset. Where Germans excelled was in having the title pages engraved on stone, Germany possessing the finest engravers in the world. At the present time thousands of pounds' worth of band music for England was being printed in Germany.

WEE MAC.

Northampton Printing Exhibition.

There was held from Wednesday to Saturday of last week an interesting printing exhibition at the Northampton Public Library. It was arranged by a sub-committee of the Northampton Town and County Master Printers' Association—consisting of Mr. W. G. Meredith (chairman), Mr. J. Dickens, jun., Mr. E. J. Tebbutt, Mr. W. W. Hadley, Mr. G. Hoare and Mr. W. J. Beeby (secretary)—and was designed to show the different kinds of printing work done in the town and district and the innumerable intricate processes connected with all branches of the trade—letterpress, litho, offset, newspaper printing and so on.

The exhibits, the display of which was well planned by Mr. W. Travis, principal of the Northampton School of Arts and Crafts, covered a wide field, there being many contributions rrom local printing houses, also small exhibits by Messrs. Linotype and Machinery Limited, and the Lanston Monotype Corporation.

On the opening night Mr. F. Heckford, of the well-known firm of John Dickinson and Co., papermakers, gave an account of "How Paper is Made." A notable feature of his interesting talk was a little practical demonstration at the beginning. With a small frame such as was used in making paper by hand in many parts of Northamptonshire a few generations ago, he actually made a sheet of paper.

Other interesting lectures delivered during the course of the exhibition were one by Mr. Geo. Hoare, "All About Engraving and Blocks for the Letterpress Printer," and two by Mr. R. B. Fishenden, M.Sc.Tech., entitled respectively, "Type and Its Use in Commercial Printing" and "Progress in Offset Printing and Photo-Lithography."

Trade Union Matters.

AMALGAMATION SCHEMES.—The subject of further amalgamation amongst trade unions in the printing trade is brought to the fore once more by the holding of a conference at Leicester on Friday, when the General Council of the Trades Union Congress considered the practicability of the amalgamation of all trade unions in the printing group. The conference decided that the General Council of the Trade Union Congress be requested to ask the Printing and Kindred Trades Federation to draw up a scheme providing for the general amalgamation and a further scheme for sectional amalgamation, the two schemes to be submitted to a further conference of trades in the printing group, and a vote taken.

MANNING THE MIEHLE VERTICAL.—As a result of negotiations between the Platen Printing Machine Minders' Society, the Printing Machine Managers' Trade Society and the Printing and Kindred Trades Federation of the United Kingdom relative to the manning of the American Miehle Co.'s Vertical Press, it has now been decided by the executive committee of the last-named of these three bodies that the press shall be controlled by the platen minders.

MR. R. W. TURNER has resigned his position as election agent to the Typographical Association. At a special conference of North Bucks Divisional Labour Party it was unanimously agreed to retain his services as organiser and agent for that division.

PSEUDO "RELIEF ENGRAVING."—Advertising printed stationery as "Relief Engraving" when the process used is not what is generally understood to be used in engraving is challenged by the United States Federal Trade Commission as an unfair method of competition. The commission in its complaint against a Buffalo firm charges the respondent with using a method that results in printed stationery, manufactured by them, having the appearance of stationery that has been impressed from an engraved plate. The Commission alleges, however, that the cost of the method so used by respondents is much lower than when engraved plates are used. It is also alleged that the respondents' relief engraving will not retain its original attractive appearance, as will impressions from engraved plates.

Personal.

VISCOUNT HAMBLEDEN and the partners in W. H. Smith and Son (Mr. C. H. St. J. Hornby, Mr. A. D. Power, and Mr. W. H. D. Acland) entertained at dinner, at Claridge's Hotel, last week, a party of directors and chief officers of railway companies, to mark the seventy-fifth anniversary of the firm's connection with the railway bookstalls.

MR. STANLEY BALDWIN, Chancellor of the Exchequer, was the guest of the Press Club on Saturday night, and jocularly outlined what he thought would be a popular Budget.

THE annual dinner of the Papermakers' Association which was held on Friday evening at the Connaught Rooms, was a big and important affair.

VISCOUNT BURNHAM proposed the toast of "The Papermaking Industry and the Papermakers' Association," to which Mr. C. R. Seddon (the new president of the Association) responded.

CAPTAIN NASH was responsible for "Our Allied Industries," a toast which was replied to by Sir Andrew Caird.

THE toast of "The Visitors," (given by Sir Frederick Becker) was acknowledged by Sir James G. Owen, president of the Newspaper Society.

AMONGST those present were: Mr. R. A Austen-Leigh (president, Federation of Master Printers), Mr. A. E. Goodwin (secretary, ditto), Mr. A. E. Holmes (secretary, Printing and Kindred Trades' Federation), Mr. F. M. Carson (ex-president, National Association of Wholesale Stationers), Mr. J. S. Elias, Mr. W. R. Codling (H.M. Stationery Office), Mr. F. L. Armstrong and Mr. T. W. McAra.

MR. R. A. AUSTEN-LEIGH is paying a visit to Scotland this week and was to attend the annual meeting of the Scottish Alliance of Master Printers at Edinburgh on Tuesday.

MR. H. BETHELL attended a special meeting of the Barrow Master Printers' Association on Tuesday as representative of the Organisation Committee of the Federation.

UNDER the auspices of the Derby Master Printers' Association, Mr. Chas T. Jacobi, formerly managing partner of the Chiswick Press, lectured on Friday evening last on "Typography as Applied Generally to Commercial Printing," a report of which lecture we hope to publish next week.

GENERAL W. WRIGHT BEMROSE presided over a good attendance, and the address, which was illustrated by lantern slides, evoked cordial expressions of appreciation.

REPRESENTATIVES from all parts of the constituency were present at the adoption of Mr. G. A. Isaacs (who is general secretary of the National Society of Operative Printers and Assistants) as the Labour candidate for the Gravesend Division, at a meeting at St. Andrew's Hall, Gravesend, on Saturday afternoon.

MR. HERBERT PAYNE, of the firm of Messrs. Dawson, Payne, Elliot and Co., printers' engineers, Otley, Yorks, who topped the poll with 1,171 votes at the election of Otley District Councillors on Saturday, represents the third generation of the family serving the town in that capacity. His grandfather—the late Mr. David Payne—who was the means, along with the late Mr. Wm. Dawson, of introducing the printing machine industry to Wharfedale, was a member of the old local board, whilst his father—the late Mr. Fredk. Payne—was chairman of the Waterworks Committee and vice chairman of the Council for several years.

MR. JAMES L. GEDDES and Mr. James Shaw were re-elected directors of the Culter Mills Paper Co., Ltd., at the recent annual meeting of the company.

SIR JOHN IRWIN, the well-known Dublin papermaker, who is chairman of the committee of the Companions of St. Patrick, attended the annual St. Patrick's Day banquet in Dublin.

De La Rue Combine.

Debenture Stock Guarantee.—Injunction Granted.

Lord Ashmore, in the Court of Session, Edinburgh, pronounced judgment in an application for an injunction by the Edinburgh Investment Trust, Ltd., 1, North Charlotte-street, Edinburgh, against Walter Wood Birrell, The White House, Barnet, and others, the board of directors and the secretary of J. A. Weir, Ltd., papermakers, Forth Mills, Kilbagie, Alloa, to restrain the respondents from granting, on behalf of the company, any guarantee or any other obligation in connection with the repayment of the capital of the £800,000 8 per cent. convertible mortgage debenture stock of Thomas De La Rue and Co., Ltd., and from charging the freehold and leasehold lands, buildings and other immovable assets of the company by way of specific charge, and their remaining assets by way of floating charge, to secure such guarantee or operation.

The ground on which the injunction was sought was that the granting of the guarantee and relative security would be ultra vires of the respondents and would be prejudicial to the interests of the petitioners. The respondents, on the other hand, submitted that the application for an injunction was not justified in respect that what they had done and what they proposed to do in relation to the guarantee and the security were within their powers and were in the interests of the company.

Lord Ashmore granted an injunction in the terms asked for. He said it was right to explain that no imputation of bad faith had been made by the petitioners against the directors, and that it had not been averred or suggested that the directors had any other object in granting the guarantee and giving the security than to promote the joint interests of the four companies concerned.—Warrillows, Ltd.; Thomas De La Rue and Co., Ltd.; Charles Goodall and Sons, Ltd., and J. A. Weir, Ltd.

Esparto Paper Mills, Ltd.

The Esparto Paper Mills, Ltd., has now offered for subscription, through the Hedley Trust, Ltd., £300,000 of six and a half per cent. first mortgage debentures at 99, and £200,000 eight per cent. cumulative preference shares of £1 each at par. The debentures are redeemable at 102½ per cent. by means of annual drawings, the whole being so redeemable in October, 1964. They can also, after October, 1929, be redeemed at that price on six months' notice. They constitute a fixed first mortgage on the company's heritable property, works and fixed plant and machinery, and a floating charge on all the other assets, including the uncalled capital. They form part of a total authorised issue of £750,000. The preference shares are part of a total authorised issue of £500,000, and the company has, further, an authorised ordinary share capital of £1,000,000 in £1 shares, of which £200,000 is issued or contracted to be issued.

The company was formed in February last year to take on the business of esparto paper mill owners, and has acquired, or is in process of acquiring, the Carron Grove Paper Co., of Denny, Scotland, the net assets of which are valued at £792,600, or, including the net proceeds of the present issues and surplus of cash in hand, and after deducting bankers' or other advances to be repaid, at £849,600, or more than two and three-quarter times the present issue of debentures, and about two and three quarter times the issue of preference shares. The average profit of the Carron Grove Co. for the past seven years is certified at £77,100, or sufficient to cover the interest on the present issues with a wide margin.

Uncertain French Paper Market.

Owing to existing circumstances, uncertain as those in 1917–1918, French papermakers cannot quote a fixed price and accept orders without specified terms. The future of the paper industry, therefore, is obscure and no one can make a forecast, says *La Papeterie*.

Paper Duties in India.

Revised Tariff Valuations.

Notification No. 1042, issued by the Department of Commerce of the Government of India on February 15th, contains the revised Tariff valuations for use in assessing the import duties on paper and manufactures of paper imported into India. In each instance the duty is 15 per cent., but the tariff valuation varies as shown below:—

		Rs.	A.	P.
Paper and articles made of paper and papier mache, pasteboard, millboard, and cardboard, all sorts, and stationery, including ruled or printed forms and account and manuscript books, drawing and copy books, labels, advertising circulars, sheet or card almanacs and calendars, Christmas, Easter and other cards, including cards in booklet form, including also waste paper and old newspapers for packing except old newspapers in bales and bags, but excluding trade catalogues and advertising circulars imported by packet, book or parcel post (see No. 93) and also excluding the descriptions given below:—	ad val.			
Old newspapers in bales and bags ... cwt.		8	8	0
News printing paper, glazed and unglazed ... ... lb.		0	2	6
Printing paper—				
Real Art ... ... lb.		0	7	6
Imitation Art, machine finish, supercalendered, ivory finish, account book (printing) antique, stereo, litho, poster, cartridge, cover paper and machine-glazed pressings		0	4	9
Other sorts, including coated papers and flints	ad val.			
Packing and wrapping paper—				
Nature brown, Manilla machine-glazed and unglazed, sulphite envelope, kraft and imitation kraft ... ... lb.		0	3	6
Tissues, white and coloured	ad val.			
Writing paper—				
Bond, bank, and also white and coloured, glazed and unglazed ... ... lb.		0	7	6
Creamlaid and wove .. .. lb.		0	6	0
Other sorts, including hand-mades and loans	ad val.			
Straw boards ... ... cwt.		11	8	0

Mexican Paper Duties.

The new tariff provisions in the Mexican Budget Law for 1923, which came into force as from January 1st, include the following, the duties being leviable per kilog., "legal" weight, in pesos and cents:—

Paper of any kind, white, of the natural colour of the pulp, or dyed in the pulp, weighing up to 50 grammes per square metre, 0.21.

White paper weighing more than 50 grammes, but not more than 100 grammes per square metre and containing: More than 40 per cent. of mechanical wood pulp, 0.12; more than 75 per cent. of mechanical wood pulp, 0.05.

Advertisements, printed, engraved, or lithographed, on paper or board, without frames or rods, and catalogues and advertisements in pamphlet form, 2.50.

Advertisements on paper or cardboard, framed or mounted on rods which are not of fine metals or of common metal, gilt or silvered, 2.50.

Paper cut in strips not exceeding 10 cms. in width, 0.60.

White or coloured paper in strips, reels or folded, suitable for cigarettes, 0.75.

Paper with sheets of cork, 1.00.

Paper with monogram, letterheads or billheads, 2.50.

Paper, white or coloured, in flat sheets, suitable for cigarettes, 0.60.

Geographical and topographical maps and nautical charts; wall pictures for schools, unframed; drawing books and copybooks for primary schools; books in paper bindings; newspapers for reading but not imported as packing paper, and printed books for primary education even if bound in boards, free

Music, printed or manuscript, bound in board, leather or cloth, not specially mentioned, 1.50.

Books bound in board, leather or cloth, not specially mentioned, 0.06.

Paper envelopes with monogram, name or heading, 2.50.

IMPORTS of paper into Russia from January to October last amounted to 47,370 tons, valued at 10,506,000 gold roubles.

Paper Mills & Foreign Competition.

In the House of Commons last week, Mr. Harry Becker asked the President of the Board of Trade if he would state how many paper mills were shut down in England and Scotland through foreign competition, and how many men are unemployed from this cause.

Mr. Betterton: I have been asked to reply. I regret that I have no information as to the number of paper mills shut down at the present time. Among the 61,000 workpeople insured against unemployment in the paper-making and staining trades, the total number registered as unemployed at February 26th, was 4,528, or 7·4 per cent. It is not possible to say in how many of these cases the lack of employment was due to foreign competition.

RUBBER latex papers are being turned out by Messrs. W. Howard and Son, Ltd., Chartham Mills, Canterbury, with an appropriate watermark. This consists of a figure representing the rubber flowing from a tree into a cup, and the words "Howard Rub-Tex Kent." Various high grade papers are made with the addition of the latex, including account book paper, loose-leaf ledger paper in appropriate sizes, and cream wove for various purposes. The printing and writing effects on the Rub-Tex papers are excellent. Terms have been arranged to enable the wholesaler to sell at mill price.

Large Stocks always on hand for Immediate Delivery.

Care of the Workers' Eyes.

Thames Paper Works Example.

Further evidence of the interest of the directors of the Thames Paper Co., Ltd., Purfleet, in the welfare of their workpeople is forthcoming in an article in *Industrial Welfare*, by Mr. Douglas P. Boatman, entitled "Care of the Workers' Eyes." Herein the writer describes the methods adopted. His attention was first called to the subject at Purfleet by the managing director, who thought it might be well to consider the question of eyesight under their welfare work.

The article proceeds: This letter raised the whole question of a systematic examination of the employees' eyes, and of the supplying of glasses or other optical assistance where necessary. In turning my attention to this subject I first of all attempted to formulate the advantages which would accrue—(*a*) to the firms, (*b*) to the workers themselves from the carrying out of such a scheme.

Advantages to Employers.

I came to the following conclusions:—

From a purely business point of view the firm has a supreme interest in the efficiency of its employees. Its reputation is built up on the quality of the work which is turned out. Anything which increases the efficiency of the workers, therefore, and enables them to turn out better work, improves the reputation of the firm and increases its chances of success in the open market.

The correction of optical defects by glasses would increase the efficiency of the workers in three ways:—

(1) In some cases, directly: by improving the vision and enabling the workers to perform their jobs more accurately.

(2) In many more cases, indirectly: by removing eye-strain, and consequently getting rid of headache—a constant source of poor work and absence, especially among girls.

(3) In all cases by improving the general comfort of the workers, both on and off duty, which enables them to put their best into their work.

Benefits to Workers.

To the workers themselves the scheme would mean:—(1) Their work would be easier and more pleasant; (2) Their eyes would be kept in good condition; (3) Increased earnings where payment by results is in operation; (4) Reading and other occupations undertaken in leisure hours would be rendered more comfortable and agreeable.

For all these reasons, therefore, it is obvious that the examination of eyesight, and the supplying of spectacles is eminently suitable for consideration as welfare work.

It was at first suggested that a testing-room should be fitted up at the works, and that every employee should be examined. From the point of view of pure efficiency, this arrangement would have been undoubtedly most successful. But it was found that there was in the minds of some of the workers a suspicion that this examination was to be conducted for the purpose of weeding out the optically unfit and discharging them from their jobs. This suspicion was, of course, entirely unfounded; but the Welfare Committee, on which the workers were well represented, had to recognise its existence. It was decided, therefore, to explain the scheme to the employees and to ask those who wished to avail themselves of it to send in their names. In this way a list of about 200 names was compiled—all of these people voluntarily stating that they wished to be examined. Roughly 150 of these employees were sent along to me for examination at my sight-testing rooms at Grays. The others were dealt with in London, near their own homes.

Varying Conditions.

Before commencing the examinations under this scheme, I had the opportunity of visiting the works of the Thames Paper Co. at Purfleet, and making a careful study of the conditions under which the workers were using their eyes for the various operations. These conditions vary greatly. The men who unload coal, wood pulp and waste paper on the wharves, do not have to concentrate on fine details; but their eyes are subjected to irritation from coal dust in the atmosphere, and also from the glare of sunlight on brilliant days. In the rotary boiler house, where the raw material is mixed with water and boiled up; and in the continuous beater house, where the mixture is churned to a fine consistency, the work is rough and does not tax the visual powers. On the other hand the machine setters and others who have to look after the complicated machinery which is used in the making of the cardboard, have to use their eyes in a very exacting manner. Again, the girls who work on the ingenious machines which bend and shape the card for packing cases, have to concentrate in varying degrees. I was able to make detailed notes on all these points, and found that they were most useful in dealing with the actual employees who consulted me.

An appointment list was arranged for three days in the week, while the scheme continued. Each employee to be tested was given an appointment card, and a definite half-hour was reserved for his or her case. The employees were carefully examined in exactly the same manner as private clients would be, and records were kept on index cards. In addition, a general report was sent along to the Welfare Committee for every case examined.

Financial Arrangements.

The following financial arrangements were adopted: A fee of 5s. was charged for examination in every case. If glasses were found to be necessary the employee was given the opportunity of obtaining them and a choice of terms was offered. He could either be fitted with steel utility spectacles at a specially low price, comparable to hospital rates; or he could obtain any other style of fitting at a discount of 15 per cent. off the usual prices. The sight-testing fee was paid by the Welfare Association, which also made a grant of 5s. towards each pair of spectacles supplied.

50 per Cent. Defectives.

The number of employees examined was 151. Of these, 74 required optical treatment. Seventy pairs of spectacles and eyeglasses were supplied. In five cases lenses were fitted to the employee's own frames; and in two cases new frames were supplied to the employee's own lenses. In one case, where the employee was engaged on special work necessitating the counting of very fine meshes in wire gauze, a watchmaker's eyeglass was supplied. In a few cases, also, it was found that the eyes were not in a healthy condition. It was then, of course, recommended that the employee should consult an ophthalmic surgeon or go to an eye hospital for treatment.

The Thames Paper Co. have now decided to make these arrangements a permanent part of their welfare work. In future, employees who wish to have their eyes examined will hand in their names to the Welfare Committee, who will arrange appointments for them. In this way the worker will be given assistance in obtaining glasses, and the firm will have a definite report as to the state of his or her eyes.

It is obvious that the supplying of optical assistance to over 70 employees (quite apart from those who were examined in London) must have helped to make working conditions more pleasant and to promote efficiency.

It is not claimed that this scheme is flawless, but it is a practical arrangement, which has worked—and given good results.

Argus Social and Athletic.

The *Argus* and *Financial News* Social and Athletic Club held a whist drive and concert at Anderton's Hotel on Tuesday, the 20th inst., about 200 members taking part. A twenty hand "drive" was keenly contested, the prizewinners being Mrs. Curtis, Miss Patterson, Mrs. Clark, Mr. Wheelhouse, Mr. Flaxman and Mr. Stoddart.

A capital programme of music was afterwards submitted, Mr. Harry Woodcock occupying the chair. The following artistes contributed in a manner which was much appreciated: Miss Moore, Miss Mary Arkell, Miss Shettle, Miss Harvey, Miss Hutch, Miss Sully, Messrs. C. Moore, Gill and Dan Bryant.

The Club's next event will be a carnival dance to be held at the Holborn Town Hall on Tuesday, April 17th.

Paper Bag Machines.

Mr. A. C. Coty, the inventor of the paper bag machine bearing his name, has been engaged upon a number of other kindred inventions. Among them the Coty sack machine is designed especially for cutting heavy rope or string paper or very heavy kraft paper used in the manufacture of cement and flour bags. Another new patent is an innovation on a bottomer of rotary design, and there is a further newly designed bottomer which puts both ends in a valve bag with one operation. Another patent is on a machine which makes "flat and square" grocery bags of all sizes at high speed. There is again a new design tuber for cutting heavy paper at high speed, and an automatic self-opening device for the manufacture of grocery bags.

MESSRS. W. B. AINSBURY AND CO., paper agents, 61, Hanging Ditch, Manchester, have recently been appointed as sole selling agents in the Midlands and North of England for the paper department of Messrs. Ekman and Co., Gothenburg, Sweden.

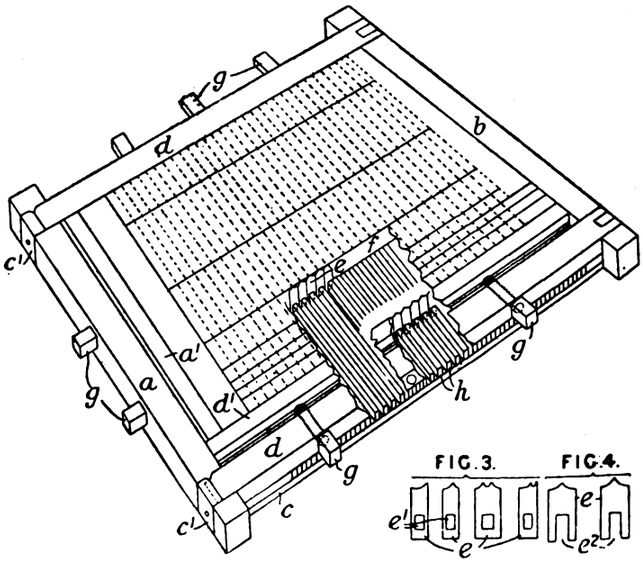
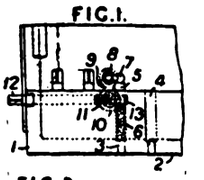
Finishing and Cooling Printing Plates.



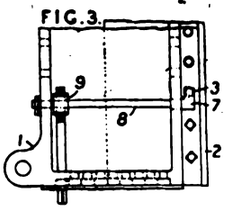
Messrs. R. Hoe and Co., Ltd., have patented apparatus for cooling curved sterotype plates, in which the plates are supported on their curved surfaces on a movable carrier by which they are immersed in, and removed from, the cooling bath. The cooling apparatus may be used alone or in conjunction with a plate-finishing mechanism, one form of which is described. The cooling apparatus shown comprises a tank 65 and a rotary plate carrier adapted to support two plates and comprising spaced heads 68, 69 integral with a hub 70 and carrying rods 82 to support the plates on their surfaces when in their upper position outside the tank, and rubber covered bars or pipes 83 to support the plates when in their lower position in the bath. The hub 70 is driven by a chain 92 from a shaft 89 carrying a gear 90 meshing with the worm wheel 60 of the plate-finishing shell 9 and the gear 90 and sprocket gears 91, 77 are of such a size that the hub 70 makes half a revolution during one revolution of the shell 9 so that a plate

remains stationary in the bath while the previously cooled plate is delivered on to a standard 87 and the next plate is transferred from the shell 9 on to the bars 82. During the delivery of the cooled plate it is dried by a current of air passing from pipes 85, 86 on to both sides of the plate. To prevent the entry of cooling water into the bearings of the hub 70 and the adjacent parts of the finishing mechanism, the hub 70 has a closed outer end 71 and its inner end is provided with a groove 79 in which engages a plate 80 secured to the tank 65. The plates are fed from the finishing to the cooling apparatus by spring controlled dogs 33 on a rack bar 32 reciprocated by gears 30 on a stud 29 on which is also fixed a small gear 31 meshing with a fixed rack 34. The stud 29 is carried by a rod 27 secured to a block 26 on a rod 25 connected to an arm 24 fast on a shaft 22 carrying a worm sector 21. A worm 20, movable into and out of engagement with the sector 21, is carried by a shaft 17 mounted in a bearing 16 carried by an arm 14 loose on a continuously rotating shaft 15, which drives the worm 20 through bevel gears 19, 18. Stationary rods 4 extending between fixed heads 3, 5 support the plate during its passage into and from the finishing shell 9 and when a plate is placed on the bars in readiness to be pushed into the shell, it engages a roller 13 on the arm 14 and presses the worm 20 into engagement with the sector 21 against the action of a spring 48 thereby operating the feed rack 32. When the plate is pushed into the shell, the worm 20 is moved from the path of the sector 21 by the spring 48 and a spring 47^1 on the shaft 22 returns the rack 32 to its initial position. The shell 9 is driven by a worm 59 operatively connected to a driving shaft 43 on closure of a clutch 57 by depressing a hand lever 58 resting on the clutch lever 44. To prevent starting of the shell while a plate is being delivered thereform, a latch plate 41 loose on the shaft 43 is connected by link 40 and bell crank 38 to a spring rod 36 acting to press the latch 41 beneath a lug 44^1 on the clutch lever 44 but when the rack 32 is in its normal position an arm 46 on the shaft 22 engages the end of the rod 36 to withdraw the latch 41 as shown in Fig. 1. To prevent entry of a plate into the shell while the latter is rotating, the closing of the clutch 57 acts through the connections 54, 53, 52, 50 to raise a pin 49 into the path of a plate and thus prevent actuation of the arm 14. While being finished the plate is held in engagement with the shell between a fixed bar 10 and a spring pressed bar 11 which is released at the end of a revolution of the shell by a wedge 62 engaging a cam on the frame.

Leads and Rules.



In an invention patented by Mr. E. Rowe, integral rules and interlinear spaces *e*, Figs. 3 and 4, made type-high and in sections of various widths and lengths, and having one or more line, dotted, or ornamental printing-faces, are provided for building up either the horizontal or the vertical lines in a ruled forme, in conjunction with ordinary type-high brass rules for the perpendicular lines, or threaded by rectangular holes e^1, Fig. 3, or slots e^2, Fig. 4, on guide rods *h*, Fig. 1, in which case cross rules *f* stand on the rods *h* and are correspondingly less than type-high. The cross rules *f* are provided with different printing faces on the two edges. Corresponding elements without printing faces are provided for use as quads and leads. The sectional rules with dotted printing faces



can be used as leaders and for the blank columns in time-tables. Chases.—The chase shown in Fig. 1 is provided with lower side bars *c* fast to the head and tail bars *a*, *b* to receive the guide rods *h*, and with upper side bars *d* hinged to the tail bar *b* and engaging spring catches c^1 on the head bar *a* to secure the rods *h*. Locking-up bars a^1, d^1 are adjusted by screws *g* passing through the head bar *a* and the side bars *d*.

Machine Inking Apparatus.

An invention patented by Messrs. J. Y. Foster and F. Foster relates to the contact of the duct-blade of inking apparatus for printing machines with the duct roller which is adjusted at a plurality of points along its length by a series of plungers spring supported in a bridge piece on the ink trough and adapted to be pressed individually on the blade by means of cams or levers carried on cross shafts rotated by suitable mechanism operable from one or both ends of the ink fountain. In the arrangement shown, each

plunger 3 is guided in a socket 4 in a bridge piece 1 secured to the fountain above the duct-blade 2, and is supported by a spring 6 with the enlarged head portion 5 in contact with a cam or lever 7 on a shaft 8. The latter has an arm 9 with an eyed collar 10 containing a circular block 11 which has a threaded aperture engaged by the threaded portion 13 of an operating rod 12. By this means, backlash in the adjustment of the blade is avoided. In a modification, the cross shafts 8 may carry toothed quadrants operated by the rods 12. Further, instead of providing coil springs around the plungers, similar springs may be provided around the rods 12 or around the shafts 8, and the plungers pivotally connected to their operating cams in any suitable manner.

PAPERMAKING PRIZES.—In connection with the papermaking classes held at the Dartford Technical Institute the prizes given by Mr. Arthur Baker have been awarded as follows: 1st, P. H. Selves, *Daily Telegraph* Paper Mills, Dartford (Cross and Bevan's "Papermaking"); 2nd, A. G. Cooper, Imperial Paper Mills, Gravesend (Sindall's "Paper Technology"). Both students had secured first class certificates at the City of Guilds of London Institute.

to Advertise in the *British and Colonial Printer and Stationer!* The following is one of many unsolicited testimonials we have recently received.

Under date of May 10th Mr. E. P. Woodman, Managing Director of the Fisher Bookbinding Co. (1912), Ltd., writes:—

"We are sure you will be pleased to hear that through the advertisement that we have in your old-established paper—the *British and Colonial Printer and Stationer*—we have received numerous enquiries from all parts, and have been successful in securing some very good orders, which proves conclusively that your Journal circulates amongst those who are in search of manufacturers who can carry out their orders to their satisfaction, and, of course, give their customers faith in the work they undertake to bind.

"It may also interest you to know that we are very busy, and, from what we can see of it, the whole of the Printing and Bookbinding Trades will soon be in a flourishing condition, which is much to be desired after the slack period we have all gone through for the past two years.

"We wish you continued success with your Journal."

British Paper in Australia.

Some Views on the Tariff.

Mr. H. E. Poole, a director of Messrs. B. J. Ball, Limited, of Australia, whom he is representing in London, has a very close acquaintance with the paper trade of Australasia, and he has been good enough to furnish the *World's Paper Trade Review* with some observations regarding the tariff arrangements which are now in force in the Commonwealth. Before giving these, however, a few personal particulars of Mr. Poole himself will be of interest.

An old journalist, who has travelled far both in his native country and in other parts of the world, Mr. Poole takes a wide and enlightened view of affairs. He is by instinct a man of vision and he brings to bear upon all his activities experience gained in many fields. Before he entered the paper trade 12 years ago, Mr. Poole had made many excursions in journalism. A thousand miles north of Queensland he ran a bi-weekly newspaper which gained considerable popularity. He has also published a book devoted to the mining industry of Queensland, under the title of "Resourceful Queensland," which was distributed at the Franco-British Exhibition, the Queensland Government giving an order for 50,000 copies of this work. His literary bent is very decided, and when only 21 years of age he obtained first prizes for poem, short story and essay in open competitions in South Australia. Then he is editor of the very striking house organ of B. J. Ball, Ltd., "Appertaining to Paper," which has a very distinctive character.

A man of ideas, with a facile pen, Mr. Poole readily resorts to the printing press for the expression of his views. Thus his experience in marketing papers is set forth in a booklet entitled "Selling American Papers in Australia."

Apart from his activities in journalism and paper salesmanship, Mr. Poole has done a good deal of organisation and propaganda work in other directions. Two years ago, when in Melbourne, he was invited by the Australian Advertising Convention to give an address at one of the public sessions in Sydney on the subject of advertising. Then, during the war, in connection with the Red Cross, he was instrumental as honorary organising secretary in raising the magnificent sum of £40,000, which demanded an enormous amount of time and labour.

Ramifications in Australia.

The rise of Messrs. B. J. Ball, Ltd., who are paper and cordage merchants, with branches in Sydney, Melbourne, Brisbane and Auckland, has been phenomenal, and Mr. Poole has been associated with the firm since within four years of its commencement, now only 16 years ago. With Mr. B. J. Ball he started trading in paper as B. J. Ball and Poole, but when the business was converted into a limited company a few years back, the more concise title of B. J. Ball, Ltd., was adopted.

The firm have established a very large business in the Commonwealth, in connection with which Mr. Poole has travelled very extensively. In 1917, when it became impossible to obtain English papers, he went to America and established connections there. The war period saw prices of papers rush up to extraordinary heights, but at least one firm of British manufacturers resisted the temptation to do anything in the way of profiteering, and Mr. Poole speaks in the very highest terms of the attitude of Messrs. Wiggins, Teape in this regard. Not only at this time but throughout the ten years that B. J. Ball, Ltd., have represented the English firm in Queensland, the business has been carried on in a manner which is a striking tribute to English methods. Mr. Poole is able to quote the case of another English firm which in spite of a fire and the occurrence of the war, continued to carry out its contracts without seeking to alter its prices.

The 70,000-ton-a-year Warren Co., of Boston, U.S.A., and the Wheelwright Co., of the same city, two agencies secured by Mr. Poole for his company, were also striking illustrations of the "business as usual" policy—for their products were kept at a comparatively even level during the hectic period of profit-making.

Mr. Poole came to this country some six months ago with a view to re-establishing old connections and inaugurating new ones. His company has, of course, been buying in the English market for many years, but this commercial intercourse was interrupted by the war. Messrs. B. J. Ball, Ltd., are particularly concerned with fine papers, which are not manufactured in Australia, and it is the object of the directors to maintain an office in London under the control of one who is acquainted with the requirements of Australian consumers.

Two National Policies.

Mr. Poole explained to a representative of the *World's Paper Trade Review* the fiscal policy of the Commonwealth.

At the present time the Australian tariff provides for a duty on foreign printing paper (including news-print) of £3 per ton, while British is free. Other rates of duty are: Manifold, 10 per cent. foreign, British free; wrapping, £10 per ton foreign, £8 per ton British; writing paper, 15 per cent. foreign, 5 per cent. British; cartridge, blotting, and duplicating paper, etc., £10 per ton foreign, £8 per ton British; surface papers, etc., 10 per cent. foreign, British free; gummed paper, 30 per cent. foreign, 20 per cent. British; cover papers, 40 per cent. foreign, 30 per cent. British; boards, 40 per cent. foreign, 25 per cent. British; manufactured stationery, 40 per cent. foreign, 30 per cent. British, and so on.

There is one special provision in the Australian tariff which is interesting as illustrative of the policy of protection. Certain goods, such as bag reels, etc., are allowed to be imported free of duty if used under departmental by-laws for manufacturing purposes. Paper for printing, however is not considered under this head. An interesting possibility, from the writing paper manufacturers' point of view, is the provision for the increase of duty on writing paper after July 1st to 30 per cent. foreign and 20 per cent. British. This surely must be purely for revenue purposes, for it seems unlikely that Australia will be able to make anything but the lower grade writings for generations to come, if ever.

The New Zealand tariff is much simpler than the Australian. For instance, all British and Canadian printings, writings, covers, flints, box enamels, and gummed papers are duty free, whereas the same lines in foreign manufacture are subject to 20 per cent. duty, in addition to which there is a provision whereby any depreciation in exchange is balanced by a corresponding duty imposition. This latter provision is also embodied in Australian legislation.

In regard to boards, in New Zealand all are free, whether British or foreign, and the same applies to greaseproof and parchment papers.

Papermaking Experiments.

Concerning the manufacture of paper in Australasia, Mr. Poole said:—

There are some extensive paper mills established in Sydney, Melbourne, and in New Zealand. Here excellent kraft wrappings, glazed sulphites, cartridge papers, cover papers, some news-print, and low grade cream laids are made.

Besides all this, the Government Bureau of Science and Industry has an experimental plant in Western Australia, where they are testing our own woods and grasses.

Up to the present, most Australian paper is made from imported pulps, though there is little doubt about the capabilities of many of our woods and native grasses for papermaking purposes. Besides these there is Megasse (the fibre left after crushing the cane), from the sugar mills, thousands of tons of which are burnt in the mill furnaces. Again, vast quantities of straw, from our wheat growing areas, are now burnt on the fields. But the difficulty is that this raw material and the necessary water are seldom to be found in close proximity. Moreover, it is an established axiom in Australian labour circles that "where an industry cannot pay a living wage, the industry must go." No one can quarrel with this axiom; but it often kills an industry, for be it remembered that the living wage is fixed by that governing other established industries which have long passed the costly experimental stage.

Should you endeavour to make pulp in North Queensland, for instance, where you have the native grasses and water, you would have to pay the highest wage for rural workers, and you would pay freight on one of the most expensive and steepest railways in the world, and have it handled on to ships manned by the highest paid sailors in the Empire by labourers drawing more than skilled workers' wages, and then stand the freight of a 2,000 miles voyage to a paper mill. Mr. Campbell, a most enthusiastic worker in paper research, is faced with these difficulties in endeavouring to establish the pulp industry in the Cairns district.

It must be remembered that our great difficulty is water. I was astonished the other day while visiting a mill in the Midlands to find the reservoirs being continually replenished from drainage from the surrounding country. In Australia our soil is frequently 60 ft. deep, on to which the rain falls, and into which it disappears as into a sponge. Our artesian bores yield highly mineralised water, quite unsuited for papermaking; and apart from this, water secured in the coastal districts by well-sinking would be too expensive, and small in volume.

I believe it would be possible to establish papermaking in some of the mountain districts of Victoria, and in Tasmania; for one of the big paper mill managers of the U.S.A. assured me that he had made splendid paper from eucalypts, one of our most famous hardwoods.

So that, summing up, our tariff is more revenue producing than protective. By the way, it might be remembered that all of our duties are *ad valorem*; in other words, we pay duty on duty (so that 20 per cent. *ad valorem* means 24 per cent. actual). Furthermore, our tariff is designed especially to foster trade with Great Britain, which is our most favoured market, both sentimentally and practically.

British Empire Exhibition.

The Papermaking Exhibit.

Progress is being made with the development of the proposal for a composite papermaking exhibit at the British Empire Exhibition at Wembley next year. The outlines of a scheme have been prepared, and were submitted at the general meeting of the Papermakers' Association on Friday last. Mr. C. R. Seddon, the president of the Association, is very keen about the proposal, which, if carried out, will form one of the most interesting sections at Wembley.

It is decided that the industry as a whole should be responsible for providing the space and power required for the papermaking machine which, it is hoped, will be erected. The cost of the space required will be something like £2,000, while electric power, steam power and water will, it is estimated, cost another £1,100.

The provision and erection of the papermaking machine itself will run into £5,000, and it is proposed that the various papermaking engineers in the country should be responsible for providing the plant. The running of the machine will, if the scheme goes through, be undertaken by individual sections of the industry, material and labour coming from this source. The idea, for instance, is that the news makers should operate the machine, say, for a month, and that other sections should take charge for similar periods, making different classes of paper. It goes without saying that an exhibit of this elaborate character will form a very substantial advertisement for the papermaking industry of this country, for the whole process, from the reception of the pulp to the completion of the finished sheet, is bound to arouse the interest of visitors to the exhibition. As some twenty millions of people are expected at Wembley, the identity of papermaking with the staple industries of the United Kingdom will be firmly established.

The handling of paper, however, will be carried a further stage, for no doubt the printing paper manufactured on the spot will subsequently be passed through the printing press and the news sheets sold on the ground. It will doubtless be an education to many people to see with what rapidity the raw material can be transformed into paper, and this, in turn, converted into a newspaper for immediate sale. So comprehensive and striking an exhibit is bound to impress both home and foreign visitors.

It is also hoped to obtain, in connection with the paper and stationery section, working examples of machines for the manufacture of envelopes, paper bags and boxes. Printing and bookbinding are also included in the scope of the scheme for demonstrating the complete operation of manufacturing paper and its conversion into printed books.

SOME expense accounts prove costly to their compilers.

ANNOUNCEMENT!

THE LANSTON MONOTYPE CORPORATION LIMITED have always endeavoured to introduce labour-saving machinery that is a marked advance on plant already in use; that will produce better quality results, and at the same time give greater output.

After much research and effort covering a prolonged period, an entirely new High-Speed Automatic Cylinder Machine is presented to the Craft which takes a sheet 12½" × 20" and runs up to a speed of 4,000 impressions per hour, handling all grades of stock from a thin Manifold to Cardboard.

The machine, which will be known as the MILLER "HIGH-SPEED" *is built along the lines of established practice* which alone makes the high out-turn possible, which fine output cannot be attained by any other machine of its size and character.

For a particular class of work, certain printers prefer a cylindrical to a platen impression, and to all such we definitely say that in their own interests they should see the MILLER "HIGH-SPEED." The first of these wonderful machines will be on view at our Showrooms during the next few days.

Our Offices and Showrooms are at

43/44 FETTER LANE, LONDON, E.C.4

THE ALLIED PAPER TRADE PROTECTION SOCIETY, LIMITED.

A Specialised Trade Protection Office for Paper Makers, Merchants, Agents, Wholesale Stationers & Allied Trades.

OBJECTS AND POINTS OF VITAL INTEREST TO THE TRADE.

Enquiries. Precise up-to-date Status Reports furnished by this Society which operates exclusively in your trade.

Collection of Accounts. Trade protection specialisation makes it possible for this Society to render a valuable service in the connection mentioned and, through up-to-date and efficient methods, costs are reduced to a minimum.

Insolvencies. This department will be under the control of an accountant with 15 years' experience in this class of work, and fullest investigations will be conducted and Meetings of Creditors attended free of charge.

The Society will be controlled by a directorate to be elected from the principal houses in the Trade.

Managing Director, Accountant & Valuer: PARKIN S. BOOTH.

New display type is expensive—in initial cost and subsequently in composition and distribution. And it is new only once

When you have a Linotype you will avoid heavy bills for new display and body founts, your composition charges will be far less, and distribution nil.

The Linotype will give you new type for *every* job—and not merely type but composed type, ready for make-up and printing.

And as regards make-up: Do you know how simple, safe, and speedy it is where Linotype matter is concerned? The machine leads its own matter; and, as every line is a complete unit, much larger quantities can be handled at a time than is possible with movable type.

Unlimited supplies of decorative material can be cast on the machine; lines can be repeated as many times as required, so that a job can be printed as many "up" as required to reduce long runs on the presses.

The Linotype can be equipped to suit your immediate needs. You can install it with one magazine only or as many as eight; with one distributor or as many as four.

These are but a few of the advantages you will gain when you have a Modern Linotype. Come and see the machine for yourself, and bring samples of your work with you.

Average Tearing Strength of Commercial Paper.

By ARMIN ELMENDORF, M.S., M.E.

In determining the strength of any material the aim is to test the material for the particular physical or strength property which measures its durability in service. Paper, for example, may be tested in tension, in tear, by repeatedly folding it or by bursting it.

Paper fails more often by tearing than in any other way. It is for this reason that data on the average tearing strengths of commercial papers are of great importance.

Every manufacturer is, of necessity, interested in the merits of his goods. If, for example, the tearing strength of a kraft paper of a certain weight made by a particular manufacturer falls below the average tearing strength of competing papers, it is to the interest of that manufacturer to improve the quality of his kraft. He must know both the toughness of his product and of competing papers, so that when modifying his manufacturing process he knows when the paper is being improved. The tearing strength value which measures toughness and durability is, therefore, of vital interest to every manufacturer.

Purchasers of paper are fundamentally interested in strength and, therefore, in the durability of the goods they buy. Assuming the same price, purchasers call for strength tests to determine the relative values of papers they buy. The tables presented in this article were prepared with the object of furnishing purchasers and papermakers with reliable strength data, so that they can make comparisons and can pass judgment on the merits of a particular brand of paper.

Many terms are in use to express the merits of a piece of paper from the point of view of service. Durability, toughness, bursting strength, tensile strength and tearing strength are frequently spoken of. In actual practice these properties are usually combined, but it is commonly accepted that a piece of paper which resists tearing better than another piece of paper is more durable and, therefore gives better service. This is eminently true of most papers.

Tests of all kinds made on paper show, moreover, that tearing strength is the best measure of toughness.

The tests which furnished the data for the tables included were all made on the Elmendorf Tearing Tester* by the U.S. Testing Co. of New York with the co-operation of Mr. J. H. Houghton of the Thwing Instrument Co. From six to ten manufacturers supplied samples. In each case four tests or tears were made on each sample.

In making the tests, it was felt that the standard humidity of 65 per cent. was higher than that to which paper is normally subjected in the interior of buildings that are heated during a large part of the year. During very severe winter weather when there is a considerable difference in temperature between out-of-doors and the interior of a heated building, the humidity within a building frequently drops down to less than 30 per cent. It was felt, therefore, that a humidity of from 45 per cent.-48 per cent. represented a fair average of interior conditions to which paper is subjected. All of the tests therefore reported herewith were made at this humidity. Other tests made under standard humidity conditions also will be published subsequently.

The curves shown in Fig. 1 show the distribution of the tearing strength values of kraft papers obtained from six different manufacturers. It will be seen from the distribution of the points that there is considerable variation in the products made by different manufacturers, and that in so far as data obtained to date are concerned, there is a slight upward tendency in the curve, showing that the tearing strength is not directly proportional to the weight, but increases at a more rapid rate.

Table 1 was prepared from curves A and B in Fig. 1. It is believed that the intersections of the curves, with the various vertical lines representing weights, give a more accurate measure of the tearing strength of each particular weight of paper than can be obtained from the computed average of the tests made on that particular weight. With a very large number of test specimens the two values should be identical. The results obtained in this way are shown in Table 1.

FIG. 1.—TEARING STRENGTH OF COMMERCIAL KRAFT PAPERS OF VARIOUS WEIGHTS. SAMPLES FURNISHED BY SIX DIFFERENT MILLS. TESTED AT 45-48 PER CENT. HUMIDITY.

TABLE 1.

Kraft Papers (Samples Furnished by Six Mills). Grams Tearing Strength.

Weight lbs. per ream. Basis 24×36.	With Grain.	Across. Grain.	With / Across. ×100
20	22	26	80
30	41	48	83
40	65	74	86
50	92	103	89
60	121	136	89
70	151	170	89
80	185	204	91
90	220	240	92

It will be seen that the tearing strength across the grain is considerably higher than

the strength with the grain. The ratio of the latter to the former ranges from 80 per cent. to 92 per cent., with an average of slightly under 90 per cent. There is considerable significance attached to the ratio of the two strength values, because the higher this ratio, the more uniform the product. A paper, of course, is most likely to tear in its weakest direction. Unless a test indicates the weakness, it may be misleading in the case of papers that are not uniform. It is felt that this is one of the great advantages of the tearing test in comparison with most other physical tests on paper. The tearing strength in the machine direction can be made quite independently of the test across the machine direction. Further tests may slightly modify the results given in Table 1, but it is felt that the extensive tests that have been made are reliable and that the tables prepared have considerable value.

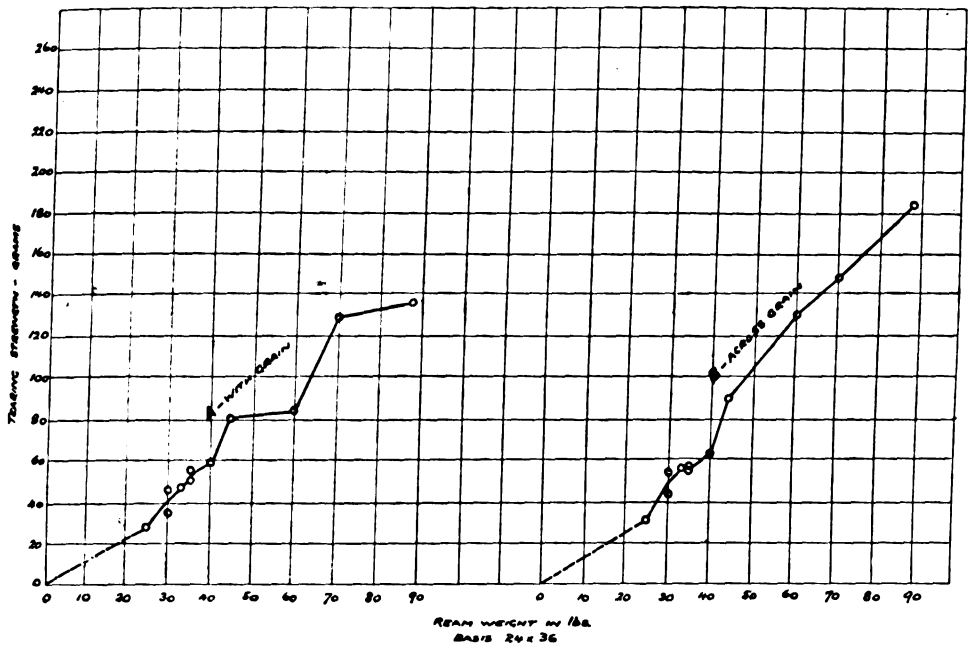

FIG. 2.—TEARING STRENGTH OF COMMERCIAL KRAFT PAPERS OF VARIOUS WEIGHTS, ALL FURNISHED BY ONE MILL.

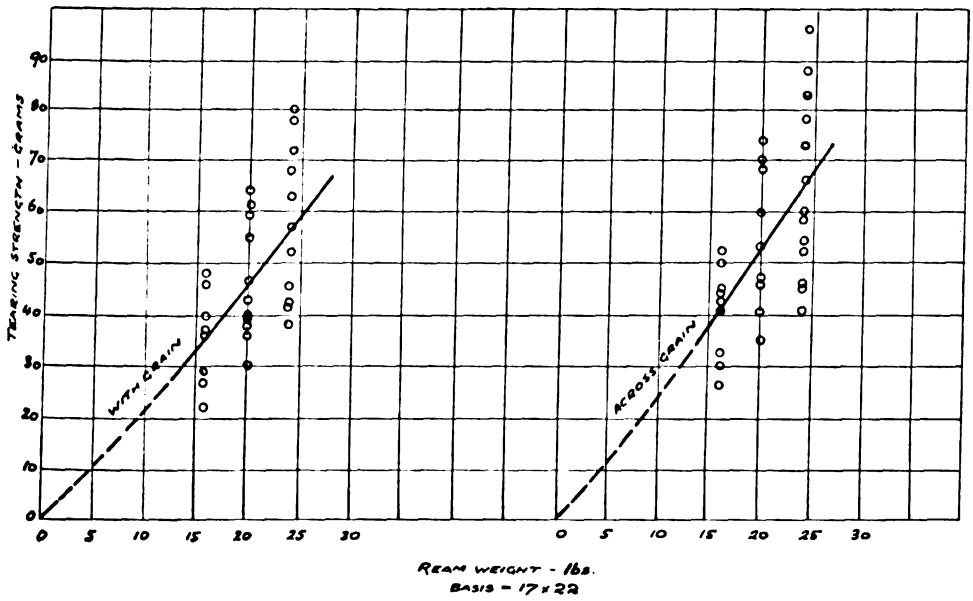

FIG. 3.—TEARING STRENGTHS OF BOND PAPERS OF VARIOUS WEIGHTS. SAMPLES FURNISHED BY TEN DIFFERENT MILLS.

The two curves shown in Fig. 2 differ from those in Fig. 1 in that all papers tested were furnished by the one manufacturer. Here again pronounced superiority in the tearing strength across the machine direction is evident.

The great difference in toughness or tearing strengih of bond papers furnished by different manufacturers is graphically shown in Fig. 3. It will be seen, for example, from the across-the-grain strength curve that the tearing strength of a 24-lb. paper sample furnished by one manufacturer is about twice as great as the strength of the corresponding paper furnished by another manufacturer. From the purchaser's point of view, the loss sustained by purchasing the latter sheet would be very undesirable. By using the tables and curves, such a loss is unnecessary. If the purchaser buys only those papers whose strength values lie above the curve, he is sure of obtaining a sheet superior to the average.

Table 2 is based upon results plotted in Fig. 3. It is seen that the ratio of the with-the-machine-direction to the across-the-machine-direction is somewhat less than 90 per cent.

TABLE 2.
Bond Papers (Samples Furnished by Ten Mills).
Grams Tearing Strength.

Weight lbs. per ream. Basis 17×22	With Grain.	Across Grain.	With / Across ×100
16	35	41	85
20	46	52	88
24	57	65	88

TABLE 3.
Ledger Papers (Samples Furnished by Ten Mills).
Grams Tearing Strength.

Weight per ream. Basis 17×22.	With Grain.	Across Grain.	With / Across ×100
24	48	52	92
28	70	77	91

Table 3 gives the average tear values of ledger paper samples furnished by ten different manufacturers. The ratio of the tearing strength in the machine direction to that across the machine direction is slightly over 90 per cent.

It is felt that the work done by the U.S. Testing Laboratory, in co-operation with Mr. Houghton, represents a distinct contribution on behalf of the manufacturer and purchaser of paper. The tables given furnish a basis for judging the durability value of a paper by the manufacturer or of a paper under consideration by a purchaser. In order to judge this quality, it is only necessary to determine the tearing strength of the samples submitted by the manufacturer and then to compare results with those given in one of the three tables included. If the tear values exceed those given and humidity conditions are approximately the same, the purchaser then knows that he is getting a sheet superior to the commercial average.

MR. HENRY LING, papermakers' agent, 30-32, Ludgate-hill, E.C.4, has a number of paper specialties at his command. He covers a wide range of papers, from "news" in sheets and reels to arts and imitation arts. In a neat folder, he has just sent out some very excellent samples of pure esparto cream-laid wove, which is stocked at London wharf in a variety of sizes and weights. The imitation art paper which is included in the set is a very serviceable printing paper, and is also obtainable from stock in a variety of substances. Another line in which Mr. Ling specialises comprises wrappings of all descriptions.

WALL-PAPER is now specially made in narrow widths for the purpose of decorating dolls' houses, covering boxes, etc.

The Only (Mechanical) Melting & Refining Furnaces

The WORLD'S LARGEST MAKERS of MELTING & REFINING FURNACES

All Monometer Productions are Manufactured by —— VICKERS LTD.

Mixing of Type & Stereo Metals.
Dispenses with to-day's high cost of skilled Stereotypers.

The only efficient and Fool Proof Mechanical Mixer (Patent).

It is practically impossible for the most experienced stereotyper to mix Type Metal Alloys thoroughly—

The "Mechanical" Mixer (Patent) of the Monometer breaks up the antimony crystals and molecules, turns the metal clean over and presses the alloys through the perforated mixing disc—thereby producing the most homogeneous metal, producing stereo-plates and type with clear sharp-cut letters without sinks or segregations. **Results :—Greater output, efficiency, and all-round economy.**

Temperature Control
(Fool Proof).
The "Monometer" is the only Automatic Temperature Control (Patent) for all Ferrous and Non-ferrous Metals.

Acknowledged during the Great War by the Government Metallurgical Expert to be absolutely essential to avoid burning and overheating of metals. **Thousands installed.**
Overheating causes oxidation and separation of tin and antimony alloys.

Non-Oxidation
(Monometer Patent).
48½ lbs. of metal saving per ton of Metal melted over any other competitive Melting Pot guaranteed.

The Hot inert gasses pass over the metal, and are held in the second chamber before passing out into the flue pipe ; therefore, dross formation is eliminated.

No other system can or is allowed to claim this **"Monometer" Patent Improvement.**

Gas Consumption.
Simplest and most efficient.
NO SPOT HEATING.

We guarantee the lowest gas consumption of any Melting Pot on the market

WE GUARANTEE GREATER EFFICIENCY, GREATER ALL-ROUND ECONOMY, GREATER OUTPUT THAN ANY OTHER KNOWN MELTING FURNACE ON THE WORLD'S MARKET.

Recommended by the Board of Trade (*re* Poisons Lead Fumes Act).

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE.—Balance dividend of 2½ per cent., making 5 per cent. for the year ended March 31st, 1923 (against 6 per cent. for previous year).

ASSOCIATED NEWSPAPERS.—Interim dividend for the quarter ended March 31st, 1923, of 2s. per share, that is at the rate of 40 per cent. per annum, less tax, on the deferred shares.

NEW COMPANIES.

T. SHEPHERD AND CO., LTD.—Capital £1,000, in £1 shares; printers, stationers, etc. Private company. Subscribers: T. Shepherd and Mrs. M. Pimm. Registered office: 36, Southwark-bridge-road, S.E.1.

BRITISH AND CONTINENTAL MUSIC AGENCIES, LTD.—Capital £2,000, in £1 shares; music publishers, sellers, printers, agents, etc. Private company. Subscribers: B. Fieldman and F. W. Goodwin. Registered office: 125, Shaftesbury-avenue, W.C.

TRADE STUDIO (BLOCKS), LTD.—Capital £100, in £1 shares; to manufacture blocks for The Trade Studio, Ltd., and to carry on the business of colour, process and half-tone engravers, stationers, printers, lithographers, stereotypers, electric photographic printers, photo-lithographers, advertising agents, etc. Private company. Subscribers: W. Shillabeer and C. Pepper. Registered office: 97, Queen Victoria-street, E.C.

COCKERELL, WILLIS AND BELLIERE, LTD. (LONDON).—Capital £3,500, in £1 shares (2,000 preference and 1,500 ordinary); booksellers, proprietors and publishers of newspapers, printers, etc. Private company. First directors: Lieut.-Col. F. P. Cockerell, R. C. Willis and E. L. Bellière.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

JOHN WILLIAMSON CO., LTD. (printers, etc., London).—Satisfaction in full on February 1st, 1923, of charge dated March 17th, 1922, securing all moneys due or to become due from the company to the London Joint City and Midland Bank.

PIONEER PRESS, LTD.—Satisfaction to the extent of £380 on February 10th, 1923, of charge dated January 13th, 1921, securing £1,000.

PIONEER PRESS, LTD.—Further charge on the company's undertaking and property, present and future, including uncalled capital, dated March 2nd, 1923, to secure £250. Holders: C. Burchall, 69, Earl-street, Plumstead, S.E.18; and A. McQueen, 75, Macoma-road, Plumstead, S.E.18.

ALLIANCE BOX CO., LTD. (Warrington).—Debenture dated March 15th, 1923, to secure £50,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Branch Nominees, Ltd.

TEE AND WHITTEN AND J. MEAD, LTD. (manufacturing stationers, etc., London).—Satisfaction in full on various dates from September 30th, 1919, to September 30th, 1922, of debentures dated December 18th, 1912, securing in all £800.

SAMUEL JONES AND CO., LTD. (gummed papermakers, etc.).—Transfer dated March, 1923, of an instrument of charge under Land Transfer Acts dated September 23rd, 1920, to secure £15,000 owing under original deed, charged on 51-71, Peckham-grove, S.E. Holders: London Assurance, 1, King William-street, E.C.

BANKRUPTCIES, etc.

Re LUDGATE LTD., printers, stationers, etc., 36, King-street, Covent Garden, W.C.—The report of Mr. G. D. Pepys, official receiver and liquidator of this company, has been issued to the creditors and shareholders. The winding-up order was made last May upon a creditor's petition, and accounts have been lodged showing liabilities £25,395 against assets valued at £13,354, and a deficiency of £43,435 with regard to contributories. According to the report Ludgate Ltd. was incorporated as a private company on April 8th, 1918, with a nominal capital of £2,000, subsequently increased to £100,000, and its objects were to carry on the business of manufacturers of and dealers in loose-leaf books, office machinery, equipment and supplies, stationers, printers, boxmakers, etc. The company was promoted by Mr. G. E. Whitehouse, the sole proprietors of the Ludgate Co., of Edinburgh, in order to open up an agency in London through which the goods of his Edinburgh business could be sold and to expand the business generally as circumstances justified. Mr. Whitehouse was appointed general manager at a salary of £500, eventually increased to £2,000 per annum. In June, 1918, the company purchased from Mr. Whitehouse the selling agency rights of the Ludgate Co. of Edinburgh throughout the City and County of London and adjoining district within 30 miles, the consideration being £1,000 in shares. Then in June, 1919, Mr. Whitehouse sold to the company the stock patents, trade marks, goodwill and other assets of the Ludgate Co. of Edinburgh for £13,141, payable as to £3,981 in cash and the balance in shares. Following this purchase the company appears to have carried on a substantial business and during the year ended March 31st, 1920, a net profit of £6,640 was made. The accounts for the following year disclosed a net profit of £1,876, but subsequently heavy losses were made on the trading. The failure of the company is attributed to heavy depreciation in value of stocks in 1921 owing to trade depression, reduced turnover in same year due to same cause, shortage of capital, and mismanagement by certain of the company's officials. Mr. Pepys concluded by stating that until all the creditors' claims have been verified and admitted and the collection of book debts completed, it is not possible to say what the dividend payable to creditors will be. There is no likelihood of a return of capital being paid to the shareholders.

A CORRESPONDENT has sent us a copy of the Free Church Touring Guild circular which has been printed and posted in Germany. These circulars have been widely distributed throughout the country, and we referred to the matter in a leaderette in our issue of February 15th.

Standard of Government Printing.

SUGGESTIONS TOWARDS IMPROVEMENT.

Attention recently drawn to the subject of the standard of design and workmanship accepted in the printing done by and for the Government, showed plainly that this printing, which makes up an important aggregate amount, and necessarily exerts an influence on the printing styles adopted in printing generally, left much to be desired when judged by the best canons of the present day.

As the outcome of a conference held in 1921 between representatives of the British Institute of Industrial Art and members of the Industrial Art Committee of the Federation of British Industries, there was formed a special committee of the Institute to consider and report: (1) As to the nature of the influence exercised on the standard of British industrial art by the Departments of Government concerned with the purchase of supplies, the placing of contracts, and the execution of works; (2) whether there was any action which the British Institute of Industrial Art could usefully take to co-operate with the authorities concerned in improving and strengthening that influence, having due regard to the interests of national economy. The chairman of the special committee was Sir Hubert Llewellyn Smith, G.C.B., chairman of the Institute, and the other members were Sir Kenneth Anderson, Bart., K.C.M.G., Mr. F. V. Burridge, R.E., Sir Cecil Harcourt Smith, C.V.O., Mr. Charles Tennyson, C.M.G., Mr. F. W. Troup, F.R.I.B.A., and Major A. A. Longden, D.S.O. This committee, which held eight meetings and conferred with representatives of the Office of Works, Board of Trade, Board of Education, the Royal Mint, the Stationery Office, the Post Office and the Admiralty (Stores), have now issued a report which is published by H.M. Stationery Office, price 9d. net., and which is of considerable interest to printers.

In regard to Departments contracting for supplies, the report states that the method of proceeding by tender has many advantages. Makers learn from the detailed specification the precise character (design, colour, materials, etc.) of the goods wanted, and if the designs in the specification are good artistically their educative influence on manufacturers may be widely beneficial. Nevertheless, the committee point out that exact specifications tend to perpetuate obsolete designs and conditions, to cramp initiative, and to form a barrier in the path of progressive improvement. They are of opinion that in the case of printing, amongst other things, specifications prescribing the actual design should not be circulated for tender by a public authority, except after careful consultation with competent experts who are closely in touch with the actual industry. Further, whatever care be taken in drawing up designs and specifications, this method naturally does not afford the stimulus to originality and invention on the part of British industrial artists which would result if competitors were accorded some degree of freedom either to submit their own designs or to deviate within certain limits from the prescribed pattern.

"Model" Designs Suggested.

To overcome these objections, the committee suggest that in all cases in which such a course is practicable a "model" pattern or design should be attached to the specification to indicate clearly to the manufacturer the type of article which it is sought to obtain. This "model" pattern or design and all the terms of the specification should be worked out with the greatest care in consultation with the best technical and artistic advisers available. It should, moreover, be clearly set out in the invitation for tenders that competitors are permitted and encouraged to deviate from the "model" by submitting alternative patterns or designs, provided that they comply with all the technical conditions set out in the specification, and also that the deviations do not involve any increase of price. In order to ensure the fulfilment of the last-mentioned condition, which (especially in the present state of national finance) is absolutely essential, the committee propose that all competitors who submit alternative or modified designs should be bound also to quote a price for supplying the article in accordance with the "model" design or pattern, or, if in any case a competitor feels unable to tender for the "model" to satisfy the Department by other evidence that the modification has not increased the price.

In regard to special classes of printing and design in which the question of time was of minor importance, whilst the quality of type, display, etc., was specially important, *e.g.*, certificates, memorials, posters, catalogues, monographs, etc.—it appeared to the committee that this was a matter in which the council of the Institute might from time to time be of considerable assistance either to the Stationery Office or to the Departments which entrusted that office with the execution of special printing of the class here referred to.

The designing of stamps—for the use of the Post Office, Inland Revenue, Customs and Excise, Ministry of Health, Ministry of Labour and the National Savings Committee—is a matter in which the special committee ventured to suggest, for the consideration of the Postmaster-General, the desirability of instituting some special advisory machinery analogous to that which had been recently established by the Royal Mint to deal with the design of new medals and coins.

Technical Advice to Contracting Departments.

The committee regard it as being of the highest importance that all contracting Departments concerned with the supply of articles in which the demand of design and craftsmanship is important, should be able to command the services of competent technical advisers both in drawing up specifications and in judging competitive tenders. This would be even more important if their recommendation were adopted for permitting greater elasticity in tendering, and it applied with at least equal force to Departments concerned with the supply of services, *e.g.*, printing.

Government Contracts.

Contracts were placed with the following firms during February:—

Crown Agents.

PAPER.—J. Dickinson and Co., London, E.C.

H.M. Stationery Office.

CARBON PAPER, Contract for the Supply of—Waterlow and Sons, Ltd., Dunstable.

STENCIL PAPER.—P. and J. Arnold, Ltd., London, N.

WITH the April number, *Current Opinion* the official organ of the Industrial League and Council, starts on its second year of life. High tribute is paid to its work this month by such people as Viscount Burnham; Sir Ernest Benn, Bart.; Mr. Geo. H. Roberts, M.P.

Typography in Commercial Printing.

Mr. C. T. Jacobi Lectures at Derby.

Under the auspices of the Derby Master Printers' Association, Mr. Chas. T. Jacobi (formerly managing partner of the Chiswick Press) attended the Derby Technical College on March 23rd and delivered a public lecture, illustrated with lantern slides, on "Typography as Applied to Commercial Printing."

General W. Wright Bemrose occupied the chair and introduced Mr. Jacobi to a large audience which followed the lecturer's remarks with keen interest and evinced much appreciation of the information and advice contained in the address.

Simplified Typography Advocated.

Mr. Jacobi contrived by word and by example—with the aid both of the screen and of specimens of printed work—to make a strong plea for the adoption of more simple methods in commercial printing. He recalled the bad old times of heterogeneous founts with a superfluity of rules and ornaments, and displayed interesting examples of the paradoxically-named "artistic" printing of the time. These he contrasted with modern specimens—many produced at the Chiswick Press under the speaker's own direction—and pointed out the beauty of effect obtainable with a few varieties of well-chosen type carefully arranged, with the avoidance of decoration other than that of a character closely allied to the type employed. Some fine examples of title pages were thrown on the screen, and the principles of page-design were explained with due emphasis upon the importance of well-proportioned margins. Slides showing types used at various periods in the history of printing served to familiarise the student with the good and bad points of letter design, and the lecturer selected a few faces as being specially suitable for bookwork and for adaption to commercial printing; those so mentioned including the Imprint, Cloister, Kennerly, Plantin, Baskerville and Garamond.

Choice of Paper and Cards.

An important detail touched upon was the choice of paper and cards for printing. The speaker advocated the preservation as far as practicable of the natural texture of the paper. If a highly finished surface was necessary, as in a case where half-tone blocks were used, he advised the choice of a dull or matt finish rather than a bright or polished one. He suggested also that for use in books or pamphlets paper of a cream shade was preferable to that of a dead white or deep tone.

Mr. Jacobi referred to the facilities available to-day in the direction of technical education and contrasted these with the general absence of such opportunities in his own early days. In urging his hearers to keep in touch with the latest developments and movements in the printing industry he pointed out the necessity for reading the trade journals and other technical literature.

Sale to Company Set Aside.

An application was made on March 26th to Mr. Justice P. O. Lawrence, sitting as Bankruptcy Judge in the Chancery Division, arising out of the failure of D. Dombroski, who traded at 261, Cambridge-road, Bethnal-green, under the style of Davies, Lazarus and Co., cardboard box manufacturers.

Mr. Comyns Carr appeared for Mr. A. G. White, the trustee under the bankruptcy, and asked the Court to declare that an agreement dated January 1st, 1922, between the bankrupt and Davies, Lazarus and Co., Ltd., whereby the former purported to transfer to the latter all the property and assets to which he was entitled in connection with the business, was a fraudulent conveyance and void as an act of bankruptcy. A summary of the report of the official receiver and liquidator appeared in the *British and Colonial Printer and Stationer*, of December 21st last.

After hearing evidence and arguments by counsel, the learned Judge held that the bankrupt was hopelessly insolvent when he made the transfer to the company—a transfer really to himself in another name, and it was clear that such transfer was a fraudulent conveyance, and consequently void under the Bankruptcy Act. The trustee had succeeded in his motion, which was granted accordingly.

North London Master Printers.

The Bohemian Concert.

North London master printers are fortunate in possessing such a member as Mr. F. J. Collins, of Finchley, who was able to provide such an excellent evening's amusement and so take printers away from their worries for a little while. So said Mr. D. A. Whitehead, of Muswell Hill, in proposing a vote of thanks to the organiser of the Bohemian concert held by the North London Master Printers' Association at the Central Library Hall, Holloway-road, on March 21st.

A large number of visitors included Mr. W. Howard Hazell (president, L.M.P.A.), Mr. Alfred Langley (vice-president, L.M.P.A.), Messrs. J. R. Burt and J. E. Jones (West and North-West), Messrs. J. D. Wise and F. H. Cole (South-West), Mr. W. J. Boyle (Central), and Mr. W. Whyte and Mr. F. Hedger from No. 24. Mr. L. F. Hunt, North London's president, occupied the chair.

Address by Mr. Howard Hazell.

Mr. Hazell in his informal talk said this was his first visit to North London printers, and he expected there were present wise printers and otherwise, as no doubt some belonged to the Association and some did not. In these days of trade unions and customers' organisations it was necessary that all should join the local association, so that there could be a strong force to deal with any trade questions or difficulties that might arise and in this way many things could happen that would not be heard outside the council-room. The associations were able to look after the interests of the printers in many ways which no doubt all Federation members would be only too ready to acknowledge. Some criticised because the association did not do all it ought, the members of the council knew full well the difficulties, and sometimes wished all printers of London could meet so as to understand all the care of detail that was gone into on their behalf. Members of the local associations should make an endeavour to pay a visit to the London School of Printing, the finest school of printing in this country, for here ideas could be got that would help to make their own factories better equipped and with new ideas and new methods master printers would better be able to deal with many of their troubles. In concluding, Mr. Hazell advised his hearers to look forward to the future hopefully, to believe in the association, to work for it. In his year of office as president he would like to see every master printer a member of the L.M.P.A.

A vote of thanks to Mr. Hazell was proposed by Mr. W. J. Mizen who, with a number of lady helpers, had arranged for the catering in an excellent manner.

The Monometer Patents.

Monometer furnaces have been brought to a high state of efficiency, combined with economy, owing to the following heating arrangements:—

Coal-gas fired or producer gas—atmospheric high pressure or air pressure.

Petrol gas, petroleum oil, paraffin oil, fuel or mixed oils—gravity or high and low pressure systems.

The Monometer Manufacturing Co. (1918), Ltd., Savoy House, 115-116, Strand, London, W.C.2, from whom full particulars may be obtained, also supply complete plants for converting present systems to any of the above methods of heating. It is not a case of experiment, as the Monometer methods were thoroughly tested and supplied during the war to Government factories, leading engineers, metal melters and for a wide range of industrial purposes.

Paper Film Exhibition.—Messrs. Wiggins, Teape and Co.'s film on papermaking, taken at the Hele Mills, Devon, on the occasion of the visit of the Prince of Wales, was shown at the Royal Picture House, Bradford, on Thursday March 22nd, under the auspices of the Bradford Master Printers' Association. Mr. S. N. Cozens-Hardy, of Withnell Fold Paper Mills, Chorley, gave an interesting and instructive lecture during the projection of the the film, and over 400 master printers and employees witnessed the display with very great interest.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investments,
Miscellaneous,

One Insertion **3/0**
Three Insertions **6/0**
For every line exceeding three lines **1/.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion **1/6**
Three Insertions **3/0**
For every line exceeding three lines **6d.**

Sales by Auctions, Tenders,
Patents for Sale,
Legal and Final Announcements

Per line **1/0**

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Fleet, London.
Telephone: 8407 City.

Situations Vacant.

WANTED, in a large Publishers' Bindery in the Provinces, a WELL EDUCATED GIRL accustomed to the Making of Estimates and General Office Work; only those who have had good experience in such work need apply.—Write, with full particulars, Box 14086.

Situations Wanted.

ACCOUNT-BOOK BINDER (all-round), single-handed, seeks permanency; town or country.—Box 14081.

APPRENTICE.—It is desired to apprentice well-educated, intelligent youth, 16 years old, to the Printing Trade, either Compositor or Machine or both; London office preferred.—Address, W.C., 241, Evering-road, Upper Clapton, E.5. 14072

ASSISTANT ENGINEER and DESIGNER seeks Position, London or Provincial (age 25); good technical training; eight years experience workshop and drawing office of large City Printing House with all types of machines and plant maintenance work; good commercial knowledge.—Box 14076.

BINDING OVERSEER seeks re-engagement; practical all-round; good organiser and disciplinarian; London or Provincial.—Box 14080.

EDUCATED Young Man wants Position as CLERK or SECRETARY to Master Printer, has practical workshop experience and a working knowledge of M.P.F. Costing System.—Box 14073.

GENTLEMAN, aged 23, good education and appearance, requests Position as ASSISTANT REPORTER; excellent references.—Write, Box 14070.

NEWSPAPER ENGINEER and MACHINE OVERSEER desires change; evening or weekly preferred; vast experience with up-to-date High-speed Rotary and Stereotyping Machinery.—Box 14055.

OVERSEER Machine Department (Letterpress), desires re-engagement; experience of High-class Half-Tone, Three-Colour, Book and Catalogue work; excellent testimonials.—Box 14057.

PHOTO-LITHOGRAPHY.—Gentleman with exceptional practical experience of all branches desires change; all latest methods, half-tone, colour, etc.—Box 14084.

PRINTING, STATIONERY.—MAN (27), 10 years' experience, desires Engagement; Inside Salesman and Part-time Traveller.—A. Wright, 13, Grove-place, Shelton, Stoke-on-Trent. 14094

PRINTER (Comp. and Machine) seeks situation; General and Commercial Work; could assist Two-feeder (News) Machine.—L., 1, Seafield-road, Ramsgate. 14092

PRINTER, educated, wide experience, practical and theoretical knowledge, seeks Post as MANAGER'S RIGHT HAND; good business and technical references.—Box 14091.

STATIONERS' ASSISTANT, 15 years experience wholesale manufacturing trade, desires Position of Trust; highest references.—Write S., Box 14083.

Partnerships and Financial.

OFFICE FURNITURE, Typewriters and Supplies Business in Central City with Fine Windows and Show-room, desire PRACTICAL and CAPABLE PERSON with Capital, to develop same.—Write, Box 14087.

Businesses Wanted.

STATIONERY AND ALLIED BUSINESS Wanted to Purchase up to £1,500, London or Southern County.—Particulars to Arnold and Co. (London), Ltd., 143, Cannon-street, E.C.4. 14089

Machinery for Sale.

COPPERPLATE PRESSES, "D" ROLLERS, all iron, in working order, for sale cheap to clear.—Box 14093.

FOR SALE, Second-hand ENVELOPE FOLDING MACHINE, LEADER, 3⅛ by 5⅛, good running order.—Box 14088.

LINOTYPES FOR SALE.—Model No. 1, overhauled and converted to Model No. 4 with regard to vice, jaws, etc., very little used since; double letter, universal mould (Nonpareil to Pica), two magazines, and two sets of matrices.—Apply, Box 14078.

QUAD DEMY TWO-COLOUR OFFSET MACHINE, by Mann; fitted with CAMCO Feeder, Delivery Pile and all Latest Accessories; little used, installed about one year only; for sale at considerable reduction, delivery May-June next.—Apply, R. W. Crabtree and Sons, Ltd., Leeds. 14056

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

THIRTY-TWO PAGES New "VOGTLAND," 4 Reels, Stereotype Rotary Machine, height of paper 22-in., width 31 or 35-in., with new "Autoplate-Junior" Stereotyping and complete Electrical d.c. outfit, £5,600.

TWENTY PAGES New "VOGTLAND," 2 Reels, Stereotype Rotary Machine, height of paper 21¼-in., width 31 or 35-in., with extra colour arrangement for printing advertisements or illustrations in colours, with complete Stereotyping and a.c. Electrical outfit, £3,600.

SIXTEEN PAGES Second-hand FRANKENTHAL, 2 Reels, Stereotype Rotary Machine, in very good condition, height of paper 24¾-in., width from 31½ to 41-in., with complete Stereotyping and Electrical d.c. outfit, £1,200.

EIGHT PAGES Second-hand DUPLEX Printing Press, in very good condition, for printing newspapers of 2, 4, 6 and 8 pages, height of paper 22½-in., width variable up to 34⅝-in., £900.

OFFSET Machine, Second-hand, "VOGTLAND," in very good condition, printing surface 29 13/16 by 39 5/16-in., with Universal feeding apparatus, £1,000.

BABY OFFSET Machine, Second-hand, in very good condition, size of paper, 12 3/10 by 20½-in., with Universal feeder, £350.

TWO-REVOLUTION Machine, JOHANNISBERG, Second-hand, in very good condition, with 4 Forme Rollers, size of paper 29 by 41½-in., £600.

All prices f.o.b. English port, including packing. All above machines can be delivered at once.—Please apply, Hansen and Skotvedt, Kristiania. 14090

Machinery Wanted.

THREE-HOLE THREAD STITCHER, must be in first-class condition.—Full particulars, to Box 14051.

BOARDS
LEATHER, WOODPULP & STRAW.
DEXTRINE
AND
COLD GLUES.
Free from objectionable SMELL in using and after use.
Replaces ANIMAL GLUE and SIZE.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, APRIL 5, 1923.

Circulars from Abroad.

IT is gratifying to find that the practice indulged in by certain British firms of posting from the Continent circulars, etc., destined for recipients in this country is at last to be dealt with by legislation. Sir William Joynson-Hicks, Postmaster-General, stated in Parliamentary debates last week that, with regard to this practice of posting abroad, he is having a Bill prepared to deal with the matter, which he hopes to introduce at an early date. As legislation appears to be the only thing that can put a stop to these attempts of individual business concerns to economise at the country's expense, printers will view with approval the endeavour to prevent a practice which not only robs our own postal service of its dues but also puts an unfair advantage into the hands of the British printer's foreign competitors.

* * *

Picture Post Card Postage Grievance.

SIR ADOLPH TUCK does well to follow up his recent deputation to the Postmaster-General by writing to the Press on the subject of the restriction of picture post card messages to five words of courtesy or convention. Whilst some of the points discussed with the Postmaster-General were admittedly open to debate, the one postal regulation about which not even the P.M.G. himself had a single good word to say was the restriction in regard to the nature of the five words permissible. As Sir Adolph Tuck points out, the circulation through the post of millions upon millions of picture post cards at the ½d. rate of postage for five words is stopped by a useless limitation, which is strangling the picture post card industry, with the natural accompanying loss of revenue to the Post Office. This baneful restriction, as Sir William Joynson-Hicks himself and a former Postmaster-General have admitted, is but a departmental question, and can be done away with by him as the department chief by a stroke of the pen. We re-echo the oft-repeated protest against this impracticable as well as irritating restriction, and hope Sir William may yet see his way to exercise his prerogative in the matter, thereby earning, we believe, the censure of none and the approval of many.

* * *

Employment.

SOME encouragement may be derived from the published statistics concerning unemployment, although the rate of progress in the absorption of workpeople is woefully slow. According to the *Ministry of Labour Gazette*, employment in the paper trade during February remained fair on the whole, though there was a decline in the hand-made branch. In the printing trade employment was generally slack, but showed a slight improvement on the whole as compared with the previous month, except with lithographic printers, who reported a decline at most centres and much short time; it was reported as very good with electrotypers and stereotypers in London. In the bookbinding trade employment continued bad on the whole, though a slight improvement on the previous month was reported in London and at Leeds. The figures furnished under the Unemployment Insurance Acts show a slight improvement compared with the previous month in all the allied industries. In papermaking and staining, out of a total number of 61,000 insured workpeople, 4,528 were unemployed at February 26th, representing a percentage of 7·4, or a decline of 0·1 compared with January 22nd. In manufactured stationery the total unemployment affected 4,794 workpeople out of 70,200 estimated workpeople. The percentage in this case was 6·6, a decline of 0·1. In both instances there was a small increase in unemployment among females, but this was offset by greater employment among males. There were 14,023 unemployed persons in the printing, publishing and bookbinding section out of a total estimated number of insured workpeople of 213,150. The percentage unemployed works out at 6·6, or a decline of 0·3 in the month. It is interesting to note that as against the total percentage of unemployment in the three sections of the industry, the figure for the whole of the industries mentioned in the *Ministry of Labour Gazette* is 11·8.

* * *

Selling Paper.

SOMETHING new in relations between papermakers and wholesale stationers is being introduced by a certain British mill, which is establishing definite minimum selling prices for a selected number of wholesale houses only. These prices allow of 25 per cent. profit on the selling price, and if any case of "cutting" is brought to the notice of manufacturers they intimate their intention of stopping supplies to the offending house. Another feature of the new arrangement is that there is no intention of identifying the mill with the new watermark nor of including it in the mill price list, adding it to the sample sets, or putting mill labels on the reams. The papers in question are strong cream wove banks and bonds, and in placing the new quality on the market it is hoped the terms indicated will at once meet the desires of the wholesale houses and make for improved business.

THE annual dinner of the Printers' Managers and Overseers (Parent) Association—arranged for Saturday, April 14th, at the Holborn Restaurant—promises to be most successful, well over 300 acceptances having already been received.

IN view of stocktaking, Spicers, Ltd., are offering various lines of papers and envelopes of exceptional value. The papers include banks, writings, tissues, tinted and esparto printings and pressings, coloured wrappings, krafts and parchment browns, and art papers. With the amalgamation of the two sides of the house of Spicer, the service of Spicers, Ltd., is very wide and exhaustive.

THE one great need of this age is to get the right idea about work and its relation to life.

Digitized by Google

Personal.

The Prince of Wales has consented to take the chair at the Diamond Jubilee Dinner of the Newspaper Press Fund, which is to be held at the Hotel Victoria, Northumberland-avenue, on Thursday, May 10th.

Lord Burnham, as president of the Fund, is appealing for contributions.

Sir Maurice Low, chief correspondent of the *Morning Post* at Washington, and brother of Sir Sidney Low, the former editor of the *St. James's Gazette*, was last week invested with the knighthood conferred upon him last year.

The Court of the Worshipful Company of Stationers has elected as Renter Wardens Mr. J. R. Riddell, principal of the London School of Printing, and Mr. Alfred Langley, vice-president of the London Master Printers' Association—two appointments which will, we think, be very generally approved.

Under the auspices of the East Ham and Upton Park Auxiliary to the Printers' Pension Corporation, Mr. E. W. Whittle, general secretary, Printers' Managers and Overseers' Association, is to preside at a bohemian concert next Saturday, April 7th, at the Harmonic Hall, "Green Man," Upton Park, E. The concert commences at 7.30.

After 58 years' service with the John Dicks Press, Mr. Richard Beard, a member of the composing staff, has just retired. At an informal gathering of his colleagues he was presented with a case of pipes and tobacco.

Printers' Costing.

A Costing Examination is to be held at Stationers' Hall at 6.30 p.m. on Monday, May 7th.

Enrolments are now being made at the London School of Printing for the Summer Term Costing Class, which is held on Wednesday evenings during May and June. This short-term class is especially formed for giving those holding executive positions an opportunity to study the principles of scientific costing. Intending students should make application to the Principal for enrolment without further delay. The fee is 21s. for the term. Students may sit for examination, on the results of which a diploma is awarded.

Sorbonne Book Conference.

Printing and bookbinding should be prominent in the proceedings of the International Congress of Librarians and Booklovers which opened on Tuesday morning at the Sorbonne under the presidency of M. Louis Barthou. Lord Crewe, the British Ambassador, was represented at the conference by Mr. Ronald Campbell, one of the Secretaries of the Embassy. Previous conferences were held in 1900 and 1910, but this is the first at which not only librarians but also book collectors, authors, publishers, printers and all others interested in the production of books have been also invited.

An exhibition of bookcraft from its beginnings is being held in the Pavillon de Marsan at the Louvre; a collection of French works from 1870 to the present time is being shown at 27, Rue de Berri; three other exhibits of binding, music printing and technical work are being shown at other places; and the Dutuit collection of printed books and MSS. is on view at the Petit Palais.

The Anglo-Canadian Wax Paper Co., Ltd., of 5, Tudor-street, E.C.4, have been appointed sole agents for Great Britain for the aluminium foil manufactured by Messrs. R. V. Neher, Ltd. The above firm also specialises in wax papers printed in one or two colours and in all sizes of sheets or coils. Messrs. The Anglo-Canadian Wax Paper Co., Ltd., will be pleased to supply prices and particulars of these products to all interested.

A Tribute to Lord Northcliffe.

"Natsopa" Memorial Unveiled.

There was unveiled on Saturday a memorial to the late Lord Northcliffe, placed in the grounds of the "Natsopa" Home, Wellsborough, Leicestershire, by members of the National Society of Operative Printers and Assistants. The Rev. Arthur Taylor, vicar of St. Bride, Fleet-street, dedicated the memorial, which consists of a rose garden, in the centre of which is a cairn of granite bearing a bronze plaque of Lord Northcliffe and an inscription which reads:—"Erected to the memory of Viscount Northcliffe by members of the National Society of Operative Printers and Assistants in his employ. Born July 15th, 1865. Died August 14th, 1922."

At the unveiling, which was performed by Mr. Thomas Marlowe, chairman of Associated Newspapers, Limited, Lord Riddell presided, and was supported by Lord Waring, Sir Andrew Caird, Brigadier General Mildren, Mr. C. W. Bowerman, M.P., Mr. A. E. Holmes (National Printing and Kindred Trades Federation), and others. One hundred workmen from the offices with which Lord Northcliffe was associated, and which had contributed to the memorial, were present.

Mr. Marlowe said the memorial was erected by those who were in the employ of Lord Northcliffe, not because he was a statesman or publicist, for they were thinking of him only as a good employer. He never knew Lord Northcliffe display so much emotion as when he suspected that some humble worker in his employ had been unjustly treated. This memorial was a remarkable tribute from nearly 1,800 members of the N.A.T.S.O.P.A., who, in spite of differences of opinion on other matters, had united in this. The site was chosen by the Northcliffe chapels as the fitting place for the memorial, for the home was opened in 1920 by Lord Northcliffe, who was president of the institution until his death.

As a journalist he (Mr. Marlowe) found Lord Northcliffe always very kind, tolerant, and generous. The whole profession of journalism in this country owed Lord Northcliffe gratitude for improvement in the conditions of their employment.

NEW SOUTH WALES
Cardboard Boxmakers' Association

Presentation to Mr. J. R. Firth.

A graceful tribute was paid to the services of Mr. J. R. Firth, as chairman of the N.S.W. Cardboard Boxmakers' Association, at the concluding meeting of the Association for 1922, when, as a mark of the respect and esteem of the members, a presentation of a silver tea and coffee service was made to Mr. Firth.

In appropriate terms, the presentation was made by the Hon. Wm. Brooks, M.L.C. The references to the valuable services rendered by Mr. Firth were also warmly endorsed by Mr. Fielding (of J. Fielding and Co., Ltd.), and by Mr. Price (manager of Jno. Sands, Ltd.) Among those present were Mr. Geo. Simpson (of Simpson, Lonsdale, Ltd.), Mr Turner (of Turner and Henderson, Ltd.), Mr R. G. Nall (of R. G. Nall, Ltd.), Mr. Butterfield (of Butterfield and Lewis), Mr. Hendy (of P. J. Firth, Ltd.), Mr. McSweeney (of Jno. Sands, Ltd.), Mr. Wishart (of Robertson and Wishart, Ltd.), Mr. Bartlett (of R. G. Bartlett and Co.), Mr. Dixon (of J. Fielding and Co., Ltd.), Mr. Edenborough (of Wm. Brooks and Co., Ltd.), Mr. Tyrer (of R. G. Nall, Ltd.), etc.

Mr. J. R. Firth, who is the managing director of P. J. Firth, Ltd., Sydney and Newcastle, also of P. J. Firth (Queensland), Ltd., Brisbane, and P. J. Firth Propty., Ltd., Melbourne and Adelaide, has been chairman of the N.S.W. Boxmakers' Association since 1914, when the Association was first formed, and during the war and since has represented the association on many conferences regarding tariff matters, etc. Mr. Firth also represented the association on the Wages Board from 1914 to 1917 inclusive.

Mr. Firth represents the box trade on the committee of the Master Printers' Association, of which the Hon. Wm. Brooks, M.L.C., is president.

Trade Union Matters.

Journalists' Conference.—At the conference of the National Union of Journalists at Portsmouth on Friday, Mr. W. Meakin, Central London, was elected president and Mr. T. K. Sledge (Leeds) vice president for the coming year. An interesting discussion arose on the recommendation from South Wales that the union should discontinue its affiliation with the Trades Union Congress. It was eventually decided to take a ballot of the members on the question, but the conference agreed to recommend them to vote in favour of affiliation. In his presidential address at the opening of the conference Mr. T. A. Davies (Cardiff) protested against the adoption by certain British newspapers of the worst features of American sensationalism. Referring to divorce reports, he said he hoped Parliamentary action would be taken to check the prostitution of the British Press by sensationalism of the most degrading and mischievous kind. He added: "If not—and I say this with a due sense of responsibility—I hope the N.U.J. will support any of its members who refuse to undertake tasks which are revolting to every man with a clean mind and who has a regard for the honour and integrity of his calling." The Executive Council of the Union unanimously passed the following resolution at a meeting following the annual delegate meeting:—"This Council welcomes the warm approval with which the delegates received the statement made by the ex-president in his conference address deploring the emphasis given in certain newspapers to the unsavoury details of divorce and crime cases, and urges the organisations of newspaper proprietors to give serious consideration to the prejudicial effect of this practice on the honourable reputation which the British Press as a whole has won for itself in the estimation of the public."

Typographical Association Expulsions.—The official circular of the T.A. publishes a long list of members who have been expelled because of non-payment of arrears of subscriptions. The list includes 34 members at Liverpool, 21 at Winchester, 10 at Truro, 9 at Reading, and 6 at Belfast. A list is also published of members in 25 branches of the Association who will be expelled if their arrears are not cleared off by April 12th.

At a delegate meeting of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, at Cannon-street Hotel, London, on Monday, it was decided to grant £100 from the union funds to the paper workers in East Anglia. It was stated that the agricultural workers in East Anglia, in consequence of their exceedingly small wage, were invading the paper mills and tending to lower the standard of wages

The Bookbinder

Notes and News.

The State of Trade.

A slight improvement in trade seems to have been manifested within the last few weeks. Bookbinding inquiries have been more numerous, and some large orders have been placed. There is promise of brighter business in the immediate future, but prices are still very keen. Publishers are also becoming a bit more enterprising, and there is a good number of new books in the press. Miscellaneous commercial bookbinding continues quiet but better than a month ago. It remains to be seen what effect the season will have upon the trade. Normally the slack period is approaching, but there has been such abnormal slackness during what should have been the busy period, that seasonal tendencies are not to be reckoned with. Quite possibly the improvement which has set in will be maintained and developed despite the approach of summer.

Machines that Gum-Tip and Perforate.

The demonstration of a new machine devised to gum-tip and perforate sets of sheets for typewriter use has caused a considerable amount of interest in the trade and given rise to numerous inquiries. Hitherto work of this class has been mainly in the hands of a few firms with some poor imitations in other quarters. In spite of the fact that the demand for a tipping and perforating machine has existed for years, it is only now that an efficient model has been devised.

The Materials Market.

The market for bookbinding materials has remained practically unaltered since last month. Leathers are firm at the following prices:—Glazed skivers, 4½d. to 6d. per square foot; pastegrains, 5d. to 7d. per square foot; embossed skivers, 6d. to 7d. per foot; thin red basils, 7d.; stout red basils, 9d.; coloured basils, 9d. to 10d. per foot; roller basils, 6d. to 8d. per foot; fair basils, 8d. to 10d.; rough fleshes, 8d.; rough goat, 10d.; rough morocco, 10d. to 1s. 1d.; rough calf, 1s. to 1s. 3d.; fair calf, 1s. 6d. to 1s. 9d.; coloured calf, 2s.; anglo-russia, 1s. 9d.; hard grained goat, 1s 9d. to 2s.; pigskin, 1s. 3d., 1s. 6d. and 1s. 9d.; morocco, 2s. to 2s. 3d.

Miscellaneous Supplies.

Fabrics remain firm and stable. Gold leaf is exhibiting an upward tendency. Marbled papers are in poor demand, and are quoted at prohibitive figures as compared with English lining papers. The standard price for good quality Scotch glue is round about 45s. per cwt. Dry and wet paste have reached rock bottom levels, and show no tendency to change. Book-edge locks and brass fittings have declined again, and may be taken as finally fixed for the rest of the year. Dutch adhesives are meeting with a good reception from boxmakers and bookbinders who have given the imported product a trial, but there is nothing in this line that cannot be obtained from quite a number of home sources.

Reductions in Threads.

Messrs. Smyth Horne, Ltd., announce a reduction in the price of some of Coats' first quality sewing threads. Extra strong Bear brand stitching thread in 1,200 yard cones is now listed at 31s. 3d. per dozen No. 1 and 28s. 3d. per doz. No. 2. Linen thread 35s. 4d. cord is now 47s. 6n. doz., and 40s. 3d cord, 50s. 6d. per doz. Extra Glace, 1,000 yard reels, is listed at 10s. 10d. No. 24, 12s. No. 30, 19s. 1d. No. 40, 9s. 5d. No. 50 and 7s. 10d. No. 60, less 15 per cent. The reduced charges will be much appreciated by users of book-sewing machinery.

British Strawboards.

White lined British strawboards are offered from stock at the following figures: 6 oz., £15 10s. per ton; 8 oz., £14 per ton; 10 oz., £13 10s. per ton; 12 oz., £13 per ton. Bulk for bulk, the English board works out infinitely better than the foreign variety, so that it is possible to specify say, an English 8 oz. against a foreign 12 oz. The boards are well made, free from odour and possess a pleasing colour and finish. Unlined British strawboards are quoted £12 per ton up to 12 oz. substance, and again there is the advantage in bulk to counteract the slight difference in price.

Dutch Strawboards.
